No one new author has made a sudden sweep this year to the first rank. Several suggest a future by a present. Miss Anne Douglas Sedgwick bloomed unseen until the *Century* published "The Rescue" and the Century Co. brought out the "Confounding of Camelia" and the "Dull Miss Archinard." These three novels have had no run, but they have added Miss Sedgwick to

those who so write that their work is literature. The canary-bird loves of "Hezekiah's Wives," by Miss L. H. French, go in this short list. Yet the atmosphere is of the English novel list, not the American. Not so the "Story of Mary MacLane." It would have been published nowhere else. Many think it should not have been possible anywhere. But if you are catholic you can admire both, for this, too, is a document which lays bare the dumb misery of platoons of American girls, none the less real because imaginary, grotesque. This and the "Confessions of a Wife" are really the only books of sex this year. Women detest this feminine revelation. They feel it a betrayal. It began well. It broke down after marriage, it being easier for most people to articulate affection before than after wedlock. Our plain-spoken English speech does not express what is easier in Latin tongues and Eastern languages. For myself, I would rather be one of the "Misdemeanors of Nancy," by Miss Eleanor Hoyt, than the object of these letters. "Nancy" is nearly perfect,—too finely framed for a big sale. Of first books, turned out by three and twenty, is "The Late Returning," by Miss Margery Williams, a vivid tropical story, short, hot, and penetrating, which prefigures surprising work in the future. "The Decoy" is another first book, by a man, Mr. Francis Dana, which wrestles awkwardly, but with

SIR A. CONAN DOYLE.

effect, with New England spiritualism. It has a definite purpose. This appears in the "Things that Are Cæsar's," of Mr. Reginald Kauffmann, whose "Jarvis of Harvard" gave no hint of the very serious treatment of the difficulties which environ the convict seeking work and finding none.

These two belong to a growing group of American novels,—for the most part, however, without definite aim,—which seek to give the moving show. Journalism has a large share of this attention, because journalists are men trying to write, some of whom write. "Many Waters," by Mr. R. Shackleton, photographs a paper like the *Journal* just as Mr. John Graham, in the "Great God Success," took his man into the New York *Sun* office. Neither get anywhere. This is the difficulty with the mining family which have struck it rich in "The Spenders" (Mr. H. L. Wilson), the "Russells in Chicago"—Boston in the West—"The Minority" (Frederick Trevor Hill), a novel of trusts, the "Thirteenth District" (Brand Whitlock), an Illinois political fight and failure,—these all describe. They do nothing more. Reportage does not make a novel.

When "Josiah Flynt"—Mr. Josiah Flynt Willard—gives the tramp as he has never been given before and probably never will be again, it is of small moment that "The Little Brother" has a rudimentary plot. Mr. F. Hopkinson Smith has the same advantage added to long training

M. MAETERLINCK.

the conduct and contents of a story when he brings "Oliver Horn," a Southern boy, to New York forty years ago and sets him at work studying art. Exaggerated as his method is, Mr. Fuller gives the distinctly local habitation and name of "art" in Chicago "Under the Skylights." Clara Morris' (Mrs. Harriott) "A Pasteboard Crown" compensates for crude story by accurate knowledge, and, as is the habit of the feminine author, says boldly what men hesitate to express. "Sir Richard Calmady" had this characteristic, but it has also that power of continuous consecutive characterization which lifts a story out of the ordinary. It may almost be said to share alone with "The Valley of Decision" the elevation of manner which belongs to the higher walk of the novel. "Scarlet and Hyssop," for all its moralizing, lacks this altogether, and Mr. E. F. Benson is still left with "Dodo" as the only work for which he will be remembered.

Two paths of past success each year sees trodden anew—sacred and historical. Few see that the technical difficulties of the storyteller increase as his framework is fixed. Mr. Aaron Dwight Baldwin turns into dullness itself the "Gospel of Judas Iscariot," and Mrs. Rosamond D. Rhone has retold, with patient minute care, "The Days of the Son of Man." Dr. Paul Carus touches with sentiment the "Crown of Thorns."

"Belshazzar" has been done with archaeological accuracy by Mr. William Stearns Davis, but while it is well to be accurate, it is indispensable to be interesting. This lacks. "Hohenzollern" has this, though Mr. Cyrus Townsend Brady lacks knowledge, and is now and then bumptious

in his note. "Jezebel" has about it no shred of the original, except the proper names; but Mr. Lafayette McLaws keeps his story moving, and that is more than to have your gods and weapons of the right date. There is nothing after all quite so unreal as an historical novel like "The Assassins,"—Mr. Nevill Myers Meakin,—which is worked by machinery instead of imagination.

#### THE ENGLISH STORY WRITER'S STYLE IS BEST.

The advantage which the English novel has in the same task is that it almost always is better written. The journalist, Mr. Hugh S. Scott, who issues a novel or two a year as "Henry Seton Merriman," has no special power in the Polish story, "The Vultures," or in its Spanish companion, "The Velvet Glove." These are both carefully studied; though no more than a round dozen of American stories; but they are well written. They read well. They have not the slips which even men of note have with us. So with the very commonplace stories of a princely Italian family, "A Roman Mystery," and of English society, "The Just and Unjust," which Mr. Richard Bagot has added to his list—they enjoy a certain level of expression unknown in the average American novel.

Throughout the American fiction of the year this lack is apparent. Whether it be the newspaper or the absence of a certain selection in speech bred by a highly organized society, through all the round of prose expression the American lacks style, something which the Englishman,—more stupid, less facile,—manages to acquire.

## EDWARD EGGLESTON.

BY ROSSITER JOHNSON.

WHEN the Authors' Club gave a reception to Edward Eggleston, on the occasion of the publication of the first volume of his most important work, "The Beginners of a Nation," one of the speakers said Dr. Eggleston had discovered the perfect way to write history. This was, to write first all the fiction that he possibly could, and after that, by logical necessity, whatever he wrote would be truth. The jest was in reality more than a jest; for, in fact, Dr. Eggleston, after writing a great deal of fiction—some of which has a world-wide reputation, and had been translated into several foreign languages,—set himself at work upon those early periods of

American history about which the least is known, and was so skillful and conscientious in his research that he has come closer to the truth, and revealed more of it than was before unknown to the general reader, than any of his predecessors.

He was born in Vevay, Indiana, in 1837. His father was a lawyer from Virginia, who died when Edward was very young. Delicate health prevented the boy from going to college, but did not prevent him from acquiring a fine and thorough education. At the age of twenty he became a Methodist preacher in Indiana, riding circuit, after the fashion of those days. A little later he was the general agent of the Bible Society in

Minnesota. The nature of his work there, or at least some of its incidents, is indicated by a story that he once told me of being overtaken in his travels on foot by a snowstorm, and wandering about the prairie until he was lost and sat down in despair, but, rousing himself to one more effort, succeeded in reaching a house, and found that he had traveled in a circle. These vocations were not very remunerative, and he was obliged to do something in addition to support his family, the additional pursuits being, as he expressed it, "always honest, but sometimes undignified." From this work he advanced naturally to the profession of an editor, and was so successful from the first that when he edited the *Sunday School Teacher*, in Chicago, its circulation rose quickly from 5,000 to 35,000. A little later he had some connection with the *New York Independent*, but passed from that to the editorship of the newly established *Hearth and Home*. Here, when a serial story was wanted, he recalled his boyhood days in Indiana, and partly from memory, partly from imagination, produced "The Hoosier Schoolmaster," which was published, with realistic illustrations, and made an immediate success. "The End of the World," "The Circuit Rider," and other stories followed rapidly. It was not alone the Western picture that made the strength of his first novel, but the peculiar shrewdness of old Mrs. Means, and the striking originality of the boy who wished to "belong to the church of the best licks," that gave it a Dickens-like distinctness that fixed it in the memory of every reader. He told me, when I asked him, that his account of the device by which the schoolmaster drove out the boys who had barred the door against him was imaginary. But it is a curious fact that Horace Greeley, in his "Recollections," tells exactly the same thing as actually happening in his boyhood. I believe Dr. Eggleston had not read the "Recollections."

It has been laid down as almost an axiom that only a rich man can write history effectively, because of the costly research and the slow returns. But Dr. Eggleston, in that work to which he was most devoted, showed once more that some things can be done as well as others. He did not hesitate to expend freely whatever he had for the necessary research, and when funds were giving out, he laid the history aside and wrote something that would bring immediate returns. This was his reason, for instance, for writing "The Faith Doctor."

The doctor had all the qualifications for an admirable talker; a genial personality, a pleasant voice, a picturesque head and mobile face, a vast abundance of interesting facts at command, including a great many that were new even to

DR. EDWARD EGGLESTON.

(Who died at Lake George on September 2.)

the best educated of us, and a command of language that gave a rhythmic flow to his words. While the object of his search was solid and significant fact, he had a keen sense of humor and an eye for the picturesque which caused him to pick up all the incidental plums by the way.

Of that which he considered his crowning work, two volumes have appeared: "The Beginners of a Nation" and "The Transit of Civilization." Something had been done on a third, but how much I do not know. I fear we shall look in vain for the man to take up the work and continue it in the spirit and manner with which he had so far carried it on.

"In seclusion and remote from men  
The wizard hand lies cold,  
Which at its topmost speed let fall the pen,  
And left the tale half told.  
Ah! who shall lift that wand of magic power,  
And the lost clew regain?  
The unfinished window in Aladdin's tower  
Unfinished must remain!"

## TYPICAL PARTY PLATFORMS OF 1902.

[The Massachusetts Democratic platform, as adopted last month, was written by Hon. Josiah Quincy, and is a document of exceptional merit and value from the party standpoint. We therefore reprint it herewith. The Connecticut Republican platform, as supplemented by the speech of Senator O. H. Platt before the Connecticut convention, in exposition of current Republican doctrines and claims, may well be reprinted also, to give the other side its turn.—THE EDITOR.]

### I.—THE MASSACHUSETTS DEMOCRATIC PLATFORM.

**T**HE Democrats of Massachusetts in convention assembled, reaffirming their allegiance to the fundamental principles of Democracy, invite the support of all opponents of modern Republican policies, and make the following declarations upon questions which now demand public attention and require speedy legislative action.

In the place of the Republican policy of fostering and protecting great monopolies by legislation, at the expense of the people, we demand protection for the people against the abuses and exactions of monopoly. We make no warfare upon any legitimate corporate business which is willing to sustain itself without governmental favors, and to submit to reasonable governmental supervision and regulation, but the supremacy of the State over its corporate creatures must be asserted and maintained, and they must conduct their business with due regard to the vast public interests in their charge.

Exorbitant tariff duties are producing a surplus which is to-day locking up in the Treasury money which our business needs urgently require; these should be reduced to a reasonable revenue basis.

Free raw material is the only sound foundation for the manufacturing supremacy which this country is seeking; we again demand that the duties upon such material, so injurious and unfair to the industrial development of this commonwealth, shall be wholly removed. We demand particularly free coal, free iron ore, free wool, and free hides, and we condemn the Republican policy of sacrificing great New England interests to its political exigencies. We favor any honest policy of reciprocity with other nations, and we particularly demand the passage of a liberal measure of reciprocity with Canada.

The present tariff is protecting great trusts and making exorbitant profits upon the necessities of our people, while selling their products to foreign markets at much lower prices than the prices exacted here. We demand the repeal of all tariff duties upon articles whose production is controlled by trusts. This is the one simple, practical, and immediate remedy which will at

least limit the exactions of monopoly; it can be applied while further legislation is being formulated and discussed. The Federal Government can at least allow the people to purchase their coal and their meat, which have been rising toward prohibitive prices, without paying tribute to the coal trusts and the meat trusts.

A decent regard for the interests of the people requires that both sides to a great industrial controversy should accept the principle of arbitration. We condemn the arrogant refusal of the representatives of the anthracite coal combination to submit to arbitration their differences with their employees as the cause of vast loss and injury to the general public.

As we declared a year ago, "The people of Cuba, for whose welfare we have made ourselves trustees, are plainly entitled to the most favored commercial relations with this country." The refusal of the present Republican Congress, under the dictation of selfish special interests, to give Cuba, through proper tariff concessions, a living chance of establishing a stable and efficient government, under her own flag, was a shameful betrayal of our national honor. While she is entitled, whenever it is her own desire, to enjoy the advantages of a full political union with this country, and consequently freedom of trade with us, such a union should never be forced upon her by bankruptcy deliberately created by our actions. We denounce the small measure of relief which some Republicans were willing to grant as utterly inadequate to meet the situation in which their representatives left Cuba.

We are opposed to all forms of governmental subsidies to favored interests or classes, whether on land or on the sea.

We reaffirm our opposition to colonial imperialism in every form, and again demand that our government shall declare its purpose to give to the people of the Philippine Islands, at the earliest possible date, their independence under the protection of this country.

The action of the Federal Government has proved inadequate to adapt Boston Harbor to the rapidly growing requirements of commerce, and

to maintain its relative position with other ports ; we believe that the business interests of this State now require that the commonwealth, in conjunction with the city of Boston, should join in this work of improvement, and hasten and extend it.

We favor stringent laws to prevent the use of the patronage of corporations to influence legislation and political action ; corporations should be prohibited from giving employment to persons recommended by office-holders or members of political committees, and recommendations by them for such employment should also be forbidden.

Emphasizing the above matters as those now demanding most immediate consideration, while reaffirming our support of the reforms in State government and legislation embodied in our last platform, including responsible executive government, restriction of special legislation, proper system of referendum, primary elections, direct nominations, elections of the United States Senators by the people, progressive labor legislation, including an eight-hour law, home rule for cities, we confidently appeal to the people to support our candidates.

## II.—THE CONNECTICUT REPUBLICAN PLATFORM, WITH SENATOR O. H. PLATT'S STATEMENT OF REPUBLICAN POLICY AND DOCTRINE.

We heartily approve and applaud President Roosevelt's vigilant care of the country's interests, domestic and foreign. We share his pride in the magnificent work of the American soldier and sailor and the American administrator in the country's new dependencies, and his resentment against their unpatriotic traducers, and we favor his nomination for the Presidency by the National Republican Convention of 1904.

We believe, with Lincoln, Garfield, Blaine, McKinley, and Roosevelt, in a protective tariff that wisely fosters American industries and safeguards American wages. We oppose a general revision of the tariff at this time as both inopportune and unnecessary. If, in any schedule, import duties are found that have been notoriously perverted from their true purpose to the inordinate enrichment of corporations, monopolistic in fact or in tendency, we look to a Republican Congress to apply, in its wisdom, the needed corrective without impairing the principle of protection.

We believe, with William McKinley and Theodore Roosevelt, in the policy of trade reciprocity as the natural supplement of tariff protection, and the key with which to unlock the world's markets for the surplus products of American fields and American mills. Especially we commend the President's efforts to perform a plain duty, and obtain for this country a lucrative commerce by arranging a judicious reciprocity treaty with Cuba. And we also commend and thank the chairman of the Committee on Relations with Cuba, our honored and beloved Senator O. H. Platt, for his earnest support of the President in these efforts.

The Republican party has ever recognized the value and dignity of labor, which is the founda-

tion of our national wealth, prosperity, and happiness, and sought to enact such legislation as would safeguard the true interests of labor, and it will continue to favor all measures justly calculated to secure that end.

We believe that great aggregations of capital commonly called "trusts," while necessary for the economic conduct of large business and commercial enterprises, should be subject to such supervision, State or national, as will safeguard public and private interests.

[The above are all the planks of the platform that relate to national issues. Those paragraphs of Senator Platt's speech before the convention that deal with questions of national interest are printed below.]

### SENATOR PLATT'S CONVENTION SPEECH AT HARTFORD.

Let us, then, turn our attention to the wider field. Shall we endorse or condemn the Republican administration so gloriously begun by William McKinley, so grandly continued by Theodore Roosevelt? The United States has enjoyed six years of unexampled prosperity. That prosperity has been coincident with Republican administration. During that period our career has been one of uninterrupted development, progress, and glory. In whatever contributes to domestic prosperity and happiness, and to international influence and helpfulness the United States has, under Republican administration, reached high-water mark. Six years ago the business of the country was in the depths of depression. National credit was shaken to its foundations. Its people were largely unemployed, discontented, and unhappy. We were

lightly esteemed by the nations of the earth. A short six years, and what do we behold?—prosperity in business surpassing all former periods, unequalled national credit, all our workmen employed at better wages than ever before in our history, the people contented and happy, our voices the most persuasive and potent in the councils of the nations. In wise administration, in substantial development, in international influence, we lead the world to-day. What other issue does the Republican party need to present? How can it better commend itself to the support of the people of the United States than by patient continuance in this well-doing? Nor is our national prosperity and glory accidental. Our country has always prospered under Republican rule; it has always languished when so unfortunate as to come under the sway of the Democratic party. The one overwhelming issue of this campaign is the endorsement of the Republican administration of William McKinley and Theodore Roosevelt.

Recognizing the force of this, our opponents are indulging in a most frantic hunt for some other issue on which to go before the people. There is a fascination in hunting when there is game to be found and secured, but it is dull and tiresome sport where there is no game to be either found or secured, and this hunt of the Democratic party for a new issue must be both dull and tiresome. When we restored the gold standard and reestablished the credit of the nation on solid foundation, its free-silver issue disappeared with the clouds. When we gave Porto Rico popular and representative government, when we put down rebellion in the Philippines, established civil government there, clothed its inhabitants with all the rights guaranteed to our own citizens by the Constitution, we started it on the road to popular and representative government; its paramount issue of imperialism became but a dissipated fog.

We have wrought a grand and glorious work in the Philippines, and the people now know it. No nation in the long annals of history has ever accomplished so much for justice, for civilization, for the advancement of humanity, in a conquered territory as we in the Philippines. It is marvelous beyond the dream of the philosopher or the prediction of the prophet. The example of a semi-barbarous and warlike people pacified, and in four years transformed into a people seeking to regulate their own affairs under the sovereignty of the United States, and under our promise of self-government to the full limit of their capacity, is not to be found elsewhere in the world's history. That it has been accomplished against virulent opposition and attack

upon both our military and civil administration only attests the wonder of its consummation.

For once in its history it is apparent that the Democratic party is ashamed of the issues upon which it has so recently sought power. The mere mention of free silver, anti-expansion, and anti-imperialism, which but a few short years since constituted the entire stock in trade of the Democratic and Populistic partnership, is most distasteful, and so it now has started on its vain and vexing hunt for other issues with which to delude voters into its support. Thus in all Democratic journals, and from all Democratic platforms, we now hear the cry "revise the tariff, down with the trusts." On this subject the Republican party has something to say, and says it frankly.

The Republican party stands for a protective tariff. The Democratic party is against a protective tariff. Protection has brought prosperity and filled our land with happiness, and when the time comes for either a complete or partial revision of the tariff, the interests of the country require that it shall be revised along the lines of protection and not for the establishment of free trade. Whenever and however there shall be tariff revision, it should be a revision which will not destroy our home market or take away work from our own workmen to give it to the workmen of foreign countries. Tariff revision should be attempted only when it will not seriously disturb the business of the country, or check our developing activities. When that time shall come, and the need shall be apparent, the Republican party may be relied upon to undertake this work. Tariff schedules are not sacred. The principle of protection should be held sacred in the United States. The Democratic cry for tariff revision which is sounding through the country is pitched upon one key: the destruction of protection, which is the main factor of our prosperity.

With regard to great aggregations of capital, indefinitely called trusts, all men know that business cannot now be conducted successfully in the United States with the limited capital of former times; that to attempt it would result in wide-spread disaster and misery, and that even if it were possible to reestablish old trade conditions the consumers would necessarily be compelled to pay enhanced prices for the needed articles of consumption. Other nations were first to seize the opportunities which steam and electricity offered in extending business operations throughout the field of the world which had been previously limited by slow correspondence and transportation. The United States was forced by the changed conditions of trade to do business upon a larger scale, and that could only be done with augmented capital. Business thus con-

ducted, honestly and fairly according to the common judgment of mankind, is not only a necessity, but a blessing.

But great aggregations of capital result in enormous power, and there comes with that power the temptation to do business unfairly, and without due regard to the rights and interests of the great body of our people. The difference between the Republican and Democratic parties in the matter of trusts may be stated thus: The Democratic party proposes to destroy trusts and the business conducted by them; the Republican party proposes to regulate trusts and the business conducted by them, so that no unfair advantage shall be taken of the people of the United States, and to the full limit of its constitutional power it will carry out this policy. The Republican party does not set itself against business or the capital needed to develop business; it does set itself against capitalistic monopoly or extortion. The Democratic party, true to its traditional policy of destruction, has apparently but one, and only one, remedy for evils arising from the improper management of business carried on by great corporations, and that is to put all articles manufactured by corporations which have the supposed ability to control prices on the free list, thus destroying at one blow protection to our industries and the business pursued by the trusts.

No more fatuous policy could be conceived. We deny that the tariff is the mother of trusts, we affirm that the tariff is the parent of prosperity. Upon the Republican policy of regulation as against the Democratic policy of destruction, we appeal confidently to the good sense and sober judgment of the thinking people of the United States. It will be a sad day for our workmen if ever in an attempt to punish and destroy our trusts the work now performed by them shall be transformed to the workmen employed by foreign trusts. And right here it may be observed that no plan has ever been proposed by the Democratic party relating either to tariffs or trusts which would result in the employment of an additional workman in the United States, or in the enhancement of the wages of labor. What then can be said of Democratic profession of sympathy for wage-earners but that it is a hollow pretense,—in a word, demagoguery. Upon this subject the Republican party has no more courageous, intelligent, or honest exponent of its principles and policies than Theodore Roosevelt. Read his utterances upon this subject and be assured that he speaks for the Republican party. From the at-

tempt to sway the people of the United States by appeals to prejudice, the Republican party appeals to reason.

Right alongside the policy of protection, going hand and hand with it, is the policy of reciprocity, a reciprocity which shall extend and not curtail our trade; which, on the whole, will give us wider markets without seriously crippling our own. This reciprocity has been aptly denominated the handmaid of protection, and whenever and wherever reciprocal trade arrangements with foreign countries can be made which will result in more widely extended markets without serious injury to the business of this country, the Republican party is bound by the expressed views of its late President, in what may be termed his farewell address to the American people, as well as in the explicit declarations of President Roosevelt, to sanction and ratify such arrangements. Democratic reciprocity is but another name for free trade. Republican reciprocity is entirely consistent with protection.

I must speak to you feelingly in behalf of reciprocal trade arrangements with our nearest neighbor, Cuba. I would make such arrangements along the lines which I have indicated,—a reciprocity in trade between the two countries mutually advantageous to each, a reciprocity whereby we would extend our own trade and at the same time benefit the industrial interests of Cuba. That this is entirely practicable I do not for a moment doubt. Cuba, more than any other nation, is related to us. It is a child rescued and adopted by us. We are both its liberator and its sponsor. It is neither for her interests nor for ours that Cuba should become a part of our nation; it is both for her interests and ours that she should find prosperity in independence, and stability growing out of that prosperity. If ever one nation was obligated to deal justly and liberally with another, we are obligated to deal justly and liberally with Cuba. We can help Cuba in the maintenance of her independence with great benefit to ourselves. We can enable her to start on a career of self-supporting nationality without perceptible injury to any American industry and with manifest benefit to all. There are times when popular prejudices and fear obscures the most important issues and prevents wise legislation, but the second sober thought of the American people sweeps away the barriers erected by prejudice and fear, and allows the voice of conscience, and justice, and wise policy, to be heard. I believe that the time of dealing justly with Cuba has only been delayed, and will surely come.

Photographed for *Cotton's Weekly*.

THE NEW UNITED STATES STEAMSHIP "MAINE," OUR FASTEST BATTLESHIP.

## TWENTIETH-CENTURY TYPES OF SHIPBUILDING.

**ON** September 17, Secretary Moody accepted the new battleship *Maine*, a vessel specially interesting to Americans in the historic associations with her name, as well as from the fact that it was demonstrated, by a trial trip in the last of August, that this latest addition to the American navy is the speediest battleship we have ever had, and one of the most powerful in the world.

The new *Maine* was built by the Cramps, of Philadelphia. The contract requirements for speed were more exacting than for any battleship previously ordered by the United States Government, and the finally revised figures show that the fine vessel exactly reached the necessary speed, —18 knots an hour. It is necessary to remember, in comparing this speed trial with the figures given out for European battleships, that an American battleship has a very different task in proving its pace from that set for an English or German fighter. The latter are equipped with picked coal, and the speed made over a mile of smooth water is credited to the vessel. The United States requires the new fighter to steam out to sea and speed over a triangular course of 40 miles of blue water, with the run of coal in its bunkers, and under service conditions generally.

This battleship is a much more powerful vessel than her unfortunate predecessor. She is 388 feet long, with 72 feet of beam, and 12,300 tons

displacement. Her coal bunkers carry normally 1,000 tons of coal, which can be doubled on occasion. The tremendous main battery consists of fourteen 12-inch rifles and sixteen 6-inch rapid-fire guns, while the secondary battery has twenty-four rapid-fire guns of smaller caliber, and two torpedo tubes are provided below the water line; the armor reaches 12 inches in thickness on the turrets and barbettes. There is provision for a crew of 40 officers and 511 men.

On an opposite page is shown, by way of contrast with this twentieth-century type of naval unit, Lord Nelson's famous battleship *Victory* as she appeared in the Coronation Naval Review. Great Britain has reconsidered her unfavorable judgment on the very last experiment in naval warfare, the submarine boat; a third illustration shows the trial of a new English vessel of this type, as presented in *Black and White*.

THE YACHT "ARROW": THE SWIFTEST VESSEL AFLOAT.

A wonderful exhibition of speed was given on the Hudson on September 6, by Mr. Charles R. Flint's yacht *Arrow*. The little vessel surpassed, indeed, any speed previously made for a nautical mile, and may fairly be put on record as the fastest vessel the world has seen to this day. Mr. Flint was desirous of putting the *Arrow* to her best paces, and the trial was made

From *Black & White* (London)

**THE OLD "VICTORY," LORD NELSON'S BATTLESHIP - A STRIKING CONTRAST WITH THE "MAINE."**

(As she appeared in the Coronation Naval Review on June 26. The yards are manned in the old-fashioned salute, to welcome the arrival of Edward VII.)

THE NEW ENGLISH SUBMARINE

A NEW ENGLISH SUBMARINE TOGGING AHEAD ON ITS TRIAL TRIP IN STOKES BAY.

under the fairest conditions, and with a care that gives it an official accuracy, the course having been marked out by the experts of the Coast Survey.

The best previous performance of the *Arrow* was a sprint at the rate of 36 statute miles an hour. In this country the yacht *Vamoose* had made a speed of 24 miles an hour, the torpedo boat *Porter* a speed of 33 miles, and in England, the turbine boat *Viper* had reached 42 miles in a private trial; while the swiftest German torpedo boat had come within a fraction of this speed.

On September 6, the *Arrow* was stripped for the fray, and fed with several tons of the finest anthracite egg coal, in order that no power might be lost in imperfect combustion. Both of her boilers were utilized, instead of the single one ordinarily used. At the stage of the tide known to maritime people as "high water slack," the vessel dashed into the course, and covered the nautical mile in the astonishing time of 1 minute

and 32 seconds, or at the rate of 44.13 statute miles an hour.

Mr. Flint's wonderful boat is a twin-screw yacht 130 feet long, with a beam of only 12½ feet; the displacement is 78 tons, and the two engines can develop 4,000 horse power. What such a power means in this slip of a boat can be imagined when one remembers that the screw engines of the *Great Eastern* of over 20,000 tons displacement, and therefore more than 250 times the displacement of the *Arrow*, developed only 4,000 horse power.

One of the most gratifying features of this remarkable exhibition, so far as it had any practical significance as to torpedo-boat possibilities, was the excellent behavior of the little vessel under the fearful strain. She ran straight and true, with comparatively little vibration, and no ominous wake. With such an enormous power driving so light a vessel this is perhaps the most remarkable feature of the trial.

Photographed for *Collier's Weekly*.

MR. CHARLES H. FLINT'S BOAT "ARROW," THE FASTEST BOAT AFLOAT.

(On September 6, the *Arrow* steamed over a measured course of a nautical mile in 92 seconds, or at the rate of 44.13 statute miles an hour.)

# OUR PUBLIC PLEASURE GROUNDS.

BY M. O. STONE.

(Secretary Park Commission, Rochester, N. Y.)

**F**IFTY years ago there were no great public parks in this country, and most of the large park systems have been developed within the last twenty-five years. Of the 159 cities of the United States, each having a population of 25,000 or more, there are 37 that have no public parks. The population of these cities ranges from 25,000 to 42,000. Forty-three cities with from 30,000 to 102,000 inhabitants have parks, the smallest park area being three-fourths of an acre, the largest 48 acres, and the average park area for each of these 43 cities is 10 acres.

The number of cities having parks and park systems varying in size from 50 acres up to Greater New York's grand system of parks, comprising about 7,000 acres, is 79. Up to about 1866, when Central Park began to show some degree of finish and beauty under the wise direction of park commissioners of high character and intelligence and the almost magic touch of those great landscape gardeners, Frederick Law Olmsted and Calvert Vaux, public pleasure grounds were generally considered undesirable, if not unattainable, luxuries. But at this time the question of park making was not being seriously considered in many cities. Soon after Central Park was opened to the public it became immensely popular, and was visited by thousands from all parts of the country. From this time municipalities seemed to gradually realize that liberal expenditures for the purchase and improvement of public pleasure grounds were not only legitimate, but were demanded in the interests of public welfare. In some cities a few strong men worked persistently for parks, contending in many cases against local newspapers, prominent business men, and a united saloon influence.

## PARKS ENHANCE REAL ESTATE VALUES.

But in the end the park promoters were successful. Probably not one of the cities that did not take kindly to the creation of public parks when the agitation was at its height, but finally accepted the idea, would, if it were possible, part with its parks for twice their total cost. It has been found in some cities that the parks have earned money for the taxpayers, and from a financial point of view are good investments. Attractive parks now occupy large areas that for

years were obstructions to the extension and material prosperity of many cities; and, as these unsightly and waste places were gradually improved and beautified, the value of land in those neighborhoods soon began to rise. Twenty-two officials, representing parks in thirty-three cities, state that real estate near their park territory has increased in valuation greatly beyond the average increase in other parts of their cities. Ten years ago the Board of Park Commissioners of Boston reported that the increase in the value of lands near the "Back Bay" system had been over 300 per cent.; during the same time the value of lands in the rest of the city had increased in value but 18 per cent. Land values have also risen enormously near Central and other New York parks; and everywhere, though perhaps not to such an extent as in Boston and New York, appreciation in the value of real estate near parks has steadily increased, and must continue to do so as parks are developed and grow more beautiful. Many park systems are but partially improved, and some years may be necessary to show their value in this direction.

The improvement and beautifying of any section of a city by the erection of handsome buildings, especially when surrounded by beautiful grounds, immediately causes surrounding property to become more valuable, and attractive public parks in a still greater degree have the same effect. The phenomenal growth of our cities during the last ten years should arouse municipalities to the necessity of securing land for park purposes before the most desirable tracts are taken for residential and manufacturing purposes. There is little reason to fear that rapidly growing cities will obtain more park lands than will be required, and the danger of delay in buying is illustrated in many cities which find, when they are forced to consider the question of providing public parks, that the cost of procuring suitable land has increased enormously; in some cases the most desirable tracts, that could have been bought at reasonable figures a few years ago, cannot now be secured at prices that will permit of their acquisition for park purposes. There are in many cities large open spaces near poor and overcrowded sections which should be taken at once for park purposes and for great playgrounds.

## PRIVATE GIFTS FOR PUBLIC PLEASURE GROUNDS.

Perhaps there is no way in which men of wealth could so directly benefit so large a number of people as by gifts of land for public pleasure grounds. Magnificent sums are given to colleges, libraries, and other public institutions. Why should not money be as freely given to create great parks for the betterment of "all sorts and conditions of men"? The accumulation of great fortunes has been made possible only through the toil of those who most need the pure air and rest afforded by large rural parks. The largest gift of land in this country for park purposes was that of 3,717 acres to the city of Los Angeles, Cal. Hartford has received by gift 830 acres; Minneapolis, 790 acres; St. Louis, 435 acres; Cleveland, 395 acres; Springfield, Mass., 360 acres; Allegheny, 313 acres; Toronto, Ont., 225 acres; Detroit, 194 acres; Worcester, 150 acres; Peoria, 140 acres; Omaha, 130 acres, and Providence, 121 acres. A few other cities have received donations of land for parks varying in amounts from 2 to 90 acres.

## MUNICIPAL PARK FINANCE SYSTEMS.

It would be impossible to overestimate the value of public parks to the physical and moral health of the people. The great urban pleasure grounds are coming to be considered as essential to a city's welfare as are pure water, well-lighted streets, public baths, and public schools, and the park officials of three-fourths of the cities which have public parks say that the greater part of their taxpapers favor liberal appropriations for the purchase of park lands, their improvement and proper maintenance. The legislative branches of nearly all city governments grant appropriations for the maintenance of their parks, the park departments annually stating to them the amounts deemed necessary. In some cases maximum amounts have been fixed by State legislatures beyond which appropriations cannot be made for parks in those cities. The parks of Hartford and San Francisco are annually provided with funds raised by a tax of not less than one-half of a mill on each dollar of value of all property taxable for municipal purposes. Paterson, N. J., maintains her parks with an annual appropriation obtained from a tax of two-fifths of a mill levied on assessed valuation of taxable property. Minneapolis receives her annual appropriation for parks through a "Board of Tax Levy," with a limit of one mill on the assessed valuation of property to be taxed.

The parks of Peoria, Ill., are maintained from an annual tax levy of six mills, which provides her parks with the most liberal appropriation

granted in this country. There are 330 acres in the four parks of Peoria. The method by which the parks of Paterson are annually maintained would undoubtedly be the best one for nearly all cities. The fixing of annual park appropriations would cease to be subject to the caprice or political bias of city councils, and park boards would be assured of certain amounts annually, thus being in a position to act intelligently and upon business methods.

## EFFICIENCY IN PARK ADMINISTRATION.

The wonderful results in making and maintaining parks that have been accomplished everywhere by park commissions when entirely free from hurtful political influences, have attracted general attention and praise. In many cases large park areas have been secured, while funds necessary for their development and annual maintenance have been quite inadequate. But, fortunately, nearly all park boards have succeeded in conducting their departments on business principles.

Competent superintendents have usually been secured and retained. These superintendents have employed and discharged park laborers with little dictation from any source, and honest, intelligent service has been the natural result. Men employed in planting and caring for trees, shrubs, and flowers ought to be something more than ordinary unskilled laborers, and should be trained to do special work.

A very large proportion of the money expended for the improvement and maintenance of parks is used for labor, and this labor cannot be honestly and carefully performed when partially under the direction of outside influences. If the same degree of efficiency and application of business principles had always been found in the various departments of our city governments as has prevailed in most of the park boards of this country, many municipalities would not now be carrying burdens of indebtedness so great as to suggest the possibility of bankruptcy. Of the thirty largest park systems in the United States, twenty-five are under strictly non-partisan commissions; in the other five cities the administration of park work is less under the control of political organizations than any other departments of the city government, and but two of these have park commissions.

## ECONOMICAL MANAGEMENT BY COMMISSIONS.

The management of park affairs under commissions largely accounts for the economical and satisfactory development of our largest park systems, and the feeling is general that full value has been received for all park expenditures. In

30 cities representing the finest parks of this country, the average annual tax rate per \$1,000 for park improvement and maintenance has been, for the last five years, 40 cents. The rate for each of these cities varies from 13 cents in Cincinnati, with 422 acres of parks, to \$1.33 in Peoria, with but 330 acres of parks. Choosing 10 cities that have especially fine park systems, and whose park commissions have been independent of corrupting influences, we find that their tax rate on \$1,000 has been but 30 cents. In these 30 cities the average annual cost per capita for improving and maintaining parks during the last five years has been 34 cents. It should be remembered that park commissioners, usually busy men of affairs, have given years of gratuitous service in this work, but have often received harsh and unjust criticism. While the position of park commissioner is everywhere considered an honorable one, and the organizers and members of park boards are generally men of broad and philanthropic aim, their official lives have been filled with many vexations.

The work of laying out and improving parks is being done in nearly all cities under the direction of efficient landscape gardeners. Commissioners accept the plans made by these men and endeavor to acquire lands and improve them as directed by their retained advisers. These plans require large expenditures of public money, and as years are necessary for plans to materialize, partly because of lack of funds and because trees and shrubs and good roads will not spring into existence in a year or two, some citizens are unreasonable and demand results that only time and fair appropriations of money can accomplish.

#### SIMPLICITY AND RESTFULNESS IN LANDSCAPE EFFECTS.

Because of the constantly increasing expenses of modern municipalities, and through an imperfect and crude understanding of legitimate park needs, it is difficult in many cities to secure annual appropriations large enough for anything beyond the bare maintenance of the parks. This condition of things in so many cities should lead to the making of parks where the strong features are quiet landscapes with great stretches of meadow, and where the naturalistic planting is restful to all the senses. The cost of developing and maintaining great urban pleasure grounds where the pastoral idea is uppermost is very much less than for the making of those that are more pretentious and artificial. Park roads and walks must be made and a few buildings erected; but the true artist limits their number to the bare necessities of the case, and conceals them as far as possible by skillful planting. Rare trees,

shrubs, and plants in profusion are costly and too frequently are out of harmony with their surroundings. Large plantings of a limited variety of hardy trees and shrubs, naturalistic in their broad effects, cost very much less to grow and properly care for than the rare and striking ones. In some of our most attractive parks effective plantings have been made of great masses of dogwoods, viburnums, sumacs, and other native shrubs; these are easily, quickly, and cheaply grown, and are always pleasing. The parks that the American public enjoy best are those that have cost the least to improve and sustain.

#### HARMONY IN DESIGN THE GREAT DESIDERATUM.

These are the great public pleasure grounds created by men who have worked lovingly and wisely on Nature's canvas, having clearly in their minds pictures of one harmonious whole that could only be realized after many years. In some cities it has been difficult to prevent the placing of many things in public parks that were not considered in the original designs, and the question is continually arising as to whether there shall be a strict adherence to the carefully prepared plans of those who have for years studied the essentials of great parks. There should be no difference of opinion in this matter. When plans drawn by professional landscape gardeners of acknowledged ability are accepted, they should be closely followed. From a business point of view, nothing less can be done.

#### THE POLICING OF PUBLIC PARKS.

In many large park systems the police forces are small. On Sundays, holidays, and special occasions immense throngs gather in the parks, yet the order generally maintained is good and the harm done to everything that beautifies is slight. The development of a strong public sentiment which frowns upon depredations and hoodlumism in public parks has apparently kept pace with the growth and embellishment of the parks. When park property has been injured, the offenders have not always been found among the so-called "lower classes." Women riding through parks in their luxurious carriages have been known to order their coachmen to gather flowers, and have calmly directed the despoiling of shrubs and trees.

A little more than one-half of the parks of this country are policed by men under the control of and paid by the park departments. In the other cities regular policemen are detailed for park duty. In four good-sized park systems there are no regularly detailed police, but from the employees of each park are chosen a sufficient number who are commissioned as special peace officers.

# THE SOUTH AND HER HISTORY.

BY DAVID Y. THOMAS.

AT the last meeting of the American Historical Association that body was invited to meet in Nashville next time, whereupon the question was at once raised, "What interest is there in history in the South?" The question was put in all sincerity, and some members of the association manifested a desire to go South for one of the annual meetings, if only assured that the interest there would justify it. However, it was felt that the rule of rotation laid down for the locality of the meetings, "East, West, Washington," could not be departed from to the disadvantage of the East, and that Nashville would have to take her chances with the West in future. In the meantime the writer would like to put forward a few facts in answer to the above inquiry.

The question is one which had already presented itself to the writer, himself a Southerner, nor had he found the most satisfactory answer. He had often heard the complaint that the South had been misrepresented and misunderstood by some historians; that the part she played in the formation and building of the nation had been minimized, while that of the North had been magnified; and that the representation of her course in the events leading up to the Civil War had been grossly unjust. Of late a protest has been heard from a State so far north as New York against the partiality of writers from a section still farther east. If the charge is true, where lies the fault? Why has no one come forward with a scientific array of cold and convincing facts? Not all historians are lineal descendants of the unjust judge; they seek the truth and endeavor to confine themselves to it. Unfortunately, however, a few men who, mainly for purposes of revenue, have essayed to write histories, the smaller histories concerning which the charge referred to is most frequently heard, will need to clear themselves of the suspicion that they are related to the person just mentioned. When men, North or South, for that matter, in any age or clime, start out with preconceived notions and pet theories, and ruthlessly reject everything which tends to subvert them, or with a determination to please a particular constituency, they will never become historians, no matter how many so-called "histories" they may write. The muse of history is the companion of Truth, whatever the cost of

keeping her company. But the truth with regard to history is not always an open book, seen and read of all men; it must be sought in the byways and hedges. Dropping the metaphor, history is a matter of record, made up of facts, not opinions and theories alone. If the historian cannot find the record, his account must be mythical; if he finds only a part, his account is likely to be distorted, be his intentions ever so honest. If the South should be bidden by the oracle, as was Phæon, the Sophist, to consult the dead, whither could she turn for the record of their wisdom? What has she done to put that record before the world?

In explanation, but not justification, of the paucity of historical works in the South, Mr. Thomas Nelson Page has said, in substance, that she has been too busy making history to stop to write it. Then, if the schoolboy is perfectly familiar with the *Mayflower*, but never heard of the *Discovery* or the *Good-Speed*, who is to blame for it? For many years the South studied the problems of government with a passion, and consequently has left a lasting impress on the constitutional law of the nation, but her work in writing the story of those studies and their application, and of her struggle with nature and the savages, is yet to be done. Unfortunately, the materials necessary for this work have not always been carefully preserved, and many of those still in existence have not been made easily accessible to the student. What is more natural, then, than that occasional mistakes should be made by those attempting the story? But a brighter day is dawning.

In a few instances sufficient interest has been aroused to induce the State governments to lend a helping hand. As far back as 1882, the Legislature of Maryland began to make biennial appropriations of \$4,000 for the publication of her Colonial and Revolutionary Archives. The appropriations have amounted to \$36,000, and have resulted in the publication of nineteen volumes. In 1896, \$15,000 was given for the work of preparing a roster of her volunteers in the Civil War. Virginia has published a calendar of her "State Papers." One might reasonably have expected their publication in full from a State which played so important a rôle. She also has copies of the documents in the Public Record Office,

London, relating to her history in the seventeenth century. Besides this, copies of the records of some of her early and more important counties have been made and deposited in the State Library at Richmond. North Carolina has published seventeen volumes of her Colonial Records; also, a "Complete Legislative Manual and Political Register" of the State, and a pretty full military roster down to, and including, 1898. In 1892, South Carolina appropriated \$6,500 to secure copies of her Colonial Records in England, of which there are now thirty-six folio volumes in the office of the Secretary of State. It is to be hoped that they will be printed soon. Her military history has been brought down to the Mexican War, and a roster of her Confederate soldiers is now being prepared. A "Roster and Itinerary" of her soldiers in the Spanish-American War has already appeared. An Historical Commission, to serve without pay, has been appointed to collect material from any available source. Georgia has spent about \$10,000 for collection, but nothing for printing. Unfortunately, the copy of her Colonial Records was burned in 1893. An appeal will be made to the Legislature to have them copied again.

Some of the newer States also are waking up to the importance of their records. Alabama was the first to begin the preservation of the history of the Civil War. A Superintendent of Army Records was appointed in 1863; but the end of the war, and the consequent change of government, left matters in great confusion. A part of the work already done was lost, but some of it has been recovered. A few years since a commission was appointed to report upon historical material. February 27, 1901, a Department of Archives and History was created by the Legislature, and a director appointed, with a salary of \$1,800, and \$700 for contingent expenses. Mississippi has appropriated \$2,000 to be used for publication under the direction of the Historical Commission appointed by the president of the Historical Society. Texas has sent a commission to the city of Mexico to look after documents there.

It is doubtful if the Solons who have been so busy making history would have found time to do even this much, had not the members of the historical societies proved their relationship to a certain widow by their importunities. Just what credit is due to them in each particular case cannot easily be determined, but several societies have been untiring in their efforts. The Maryland society edits and looks after the publication of the archives mentioned above. In addition to this, it has done good work in the publication of documents and of careful

on sources. The "Calvert Papers" are the most important published so far. The society now has more than thirty volumes to its credit. The Society for the History of Germans in Maryland has issued two volumes. The Johns Hopkins University "Studies in Historical and Political Science" are too well known to need comment.

The Virginia Historical Society was founded in 1831, and was chartered three years later, but in 1882 it had published only thirteen volumes. Since then it has taken on new life. In the decade 1882-92 eleven volumes appeared. In 1894 the society began the publication of the *Virginia Magazine of History and Biography*, a quarterly of one hundred and twelve pages. It is largely devoted to documents, but considerable space is given to genealogies of only local interest. A catalogue of the manuscripts in the possession of the society has lately been published. The *William and Mary (College) Quarterly*, edited by President Lyon G. Tyler, is doing much to supplement the work of the *Virginia Magazine of History*. The *Lower Norfolk, Virginia, Antiquarian*, and the *John P. Branch Historical Society Papers* of Randolph-Macon College, are publications worthy of note.

From 1857 to 1883 the South Carolina Historical Society published four volumes. In 1891 new life was infused into the society, and it is now pushing its work before the Legislature. January, 1900, witnessed the birth of its official organ, *The South Carolina Historical and Genealogical Magazine*. The most commendable feature about this quarterly is that it is largely devoted to documents. One might prefer to have such papers in volumes devoted to nothing else, but when they cannot be had that way, it is better to have them in a magazine than not at all.

The Georgia Historical Society was founded in 1839, "for the purpose of preserving and diffusing information relating to the history of the State of Georgia in particular, and of American history in general." It has done something in the way of collecting, but very little in the way of diffusing this information. Only five volumes can be set down to its credit. These, however, contain pages of considerable importance. The last, issued under the auspices of the Savannah Chapter of the Daughters of the American Revolution, contains the Proceedings of the first Provincial Congress, and of the Georgia Council of Safety, 1775-77. The society is fortunate in having for its librarian Mr. Hardin, a member of the Legislature, who will press upon that body the imperative need of funds.

The Alabama Historical Society was organized in 1850, but up to 1876 had published only a few pamphlets. The *Alabama Historical Regis-*

ter was published under its auspices, 1879-84, with a total of twenty-nine numbers. In 1898 the society took on new life, and now issues *Publications*, the third volume of which is out. These consist, for the most part, of prepared papers, but some documents are included.

The Mississippi Society was organized in 1890, but did nothing much except in the way of collecting until reorganized in 1897. It now enrolls a large and enthusiastic membership. Annual publications will be issued, three volumes of which have already appeared. It is the policy of the society to foster local affiliated organizations to facilitate the work of collecting material, and to arouse a more general interest in historical study. The contemplated work of the commission already alluded to is, judging by the tentative outline of its report, the most extensive of any that has come to the notice of the writer. Manuscripts, papers, and documents pertaining in any way to the history of Mississippi, such as archives and political papers, whether foreign, federal, of other States, or domestic, records of counties, municipalities, churches, colleges, benevolent institutions, industrial organizations, and literary remains of distinguished men, will receive attention. Prehistoric works, Indian remains, and places of historic interest, such as forts, battlefields, and historic houses, also will fall within its scope. In collecting manuscripts, pamphlets, etc., an effort will be made to index and bind them in such a way that they will be "available for almost immediate consultation by all interested parties." It is hardly necessary to add that the commission does not expect to finish its work in a day, nor in a year.

Apparently the youngest society is that of Texas, which dates only from 1897. Several gentlemen, long prominent in the political and educational life of the State, were instrumental in effecting its organization, and under their inspiration the society has developed rapidly. Its official organ, the *Quarterly of the Texas State Historical Society*, is of about the same scope as the magazines already mentioned. The regents of the State University have provided a fireproof vault in the university library for the use of the society.

Several other States have organizations, in name at least. That of Louisiana published two volumes about fifty years ago. Since then it appears to have remained inactive most of the time, but is now said to be "in a state of hopeful vigor." It has recently undertaken to interest Congress in the publication of the documents now in Paris relating to Louisiana and the Mississippi Valley, a work which should elicit the sympathetic help of all interested in history. Since its birth, in 1858, the Tennessee Historical

Society has published only a few pamphlets of minor importance, but it has done a valuable work in the way of collecting. A catalogue of the manuscripts in its possession reveals the whereabouts of some important ones which, it is to be hoped, will soon be laid before the public. The *American Historical Magazine*, published at Nashville under the auspices of the Department of History in the Peabody Normal College, will devote one number annually to the interests of the society. The Kentucky society does not appear to have published anything since 1882. The Filson Club, of Louisville, has done an invaluable service to Kentucky history, mainly in the way of collecting material. Its last publication, No. 16, relates to Boonesboro. The Missouri society has recently secured the valuable collection of Mr. F. H. Sampson, of Sedalia, who for nearly thirty years has been engaged gathering historical material relating to Missouri, chiefly since Louisiana was purchased. The collection numbers over seven thousand, and will be made the nucleus of a great historical library which the society hopes to build up.

Two other societies deserve special mention. The Southern Historical Society, with headquarters at Richmond, began the publication of its *Papers* in January, 1876, and has issued twenty-eight volumes, all of which are concerned with the Civil War. Some of the later ones are of special value, being made up largely of reprints from Southern daily and weekly papers. The Southern Historical Association was organized at Washington City, April 24, 1896, by a number of distinguished gentlemen, statesmen and educators in particular being prominent. Its *Publications* are issued bi-monthly, and make a very interesting volume.

Very few of these societies have libraries of any consequence, though two or three number as many as five thousand volumes to their credit. In this respect Georgia leads. The society occupies Hodgson Hall, a brick stuccoed building fronting Forsyth Place in Savannah. The ground floor is used for the meetings of the society; the second is given up to the library, and contains twenty-three thousand volumes, besides many pictures, curios, old newspapers, and several valuable manuscripts. The society also has an endowment of \$2,100, the income from which is not to be expended until the endowment reaches \$50,000. Unfortunately, however, there has never been any income. It is due to two noble women, Mrs. Hodgson and her sister, Miss Telfair, to say that Hodgson Hall was erected by them and presented to the society as a memorial to the former's husband.

A few comparisons may be of interest, though

not very much to our credit, and may prove an incentive to better things. A bibliography of the historical societies in the Southern States in 1890-92 covered only 38 pages in the Report of the American Historical Association. That of Rhode Island alone covered 13; Pennsylvania, 44; New York, 55; and Massachusetts, 155. Whether the relative amount would be changed now the writer cannot say, but the Southern societies certainly could make a more creditable showing than they did ten years ago. However, this is not intended to encourage them to judge of the value of their material by its mass.

One of the most potent forces which have brought about this increased interest is the position taken by our colleges and universities in regard to historical study. Ten years ago the instruction given in this subject was shamefully deficient. The writer could name colleges of acknowledged respectability, with enrollments of from two to three hundred, and with property worth several hundred thousand dollars, which gave little or no attention whatever to it. Where it was noticed at all, the work generally was made a side issue to other departments. But happily those very colleges now have full departments of history and political economy, and others are following their lead as rapidly as their limited means will allow. The interest in several has become so great that the students maintain historical societies and issue publications. Those published by the Southern History Society of the Vanderbilt University have taken high rank as historical papers. A similar work is being done by several colleges in North Carolina.

Thirty years ago, in an address before the Georgia Historical Society, Dr. Richard M. Arnold said: "While it was and is our duty to collect material for the history of the late great contest between the North and South, this is not the time for publication. . . . Those who come after us have a high and holy task to perform. May they worthily fulfill it." If, as Professor Burgess says, the history of the United States from 1817 to 1858 can be written only by a Northerner, because the victor can and will be more liberal, generous, and sympathetic than the vanquished, and because the Northern view is, in the main, correct, it follows, for those very reasons, that the history of reconstruction must be written by Southerners, who were the ultimate victors in that life-and-death struggle. It is for that work, now one of the richest fields for investigation in American history, that the younger generation is being trained. The scientific spirit of the universities has largely di-

vested them of inherited passions and prejudices, and they are going at the task of writing history with a simple desire to discover and tell the truth. At least one such book, "The Reconstruction of Mississippi," by James Wilford Garner, 1901, has already appeared. That it is fair and adequate in its treatment is attested by both Northern and Southern reviewers. A similar work is waiting to be done in several other States. Doctors' theses dealing with such subjects are appearing every year.

The writer does not mean to convey the impression that no historical works of importance were produced by the old South. A few books of this kind, which deserve to rank with the best of their class, may be set down to her credit. But of late there has been a greater awakening to the importance of historical study, and within the last few years several notable books have appeared dealing with some period of Southern history. Dr. Alexander Brown's services in bringing to light the records relating to the settlement of Virginia have already met with deserved recognition at the hands of scholars. Of the regular State histories, perhaps the most important is that by Mr. Edward McCrady, of Charleston, whose third volume brings the story of South Carolina down to 1780. A history of the Southern Confederacy on the diplomatic side, first given by Dr. J. M. Callahan as the Albert Shaw lectures on Diplomatic History at the Johns Hopkins University, was published last year. Another, dealing with the same subject on the financial and industrial side, by Prof. J. C. Schwab, was issued as one of the Yale Bi-centennial Publications. From which it appears that the interest in Southern history is not altogether local.

For another proof that the South is interested in history the writer would call attention to the fact that for several years Southern men, as fellows and scholars, have been prominent as historical students at some of the best Northern universities. The Justin Winsor prize, given by the American Historical Association for the encouragement of historical research, was awarded last year to a Southerner at Columbia University, Mr. U. B. Phillips, for his study on "Georgia and State Rights." And when the daily papers in the South devote columns, and even whole pages, to matters purely historical, as do the *Nashville American*, the *Chattanooga Times*, and the *Charleston News and Courier*, we must believe that the interest is not confined to a few students, but that it is more or less general.

## LEADING ARTICLES OF THE MONTH.

### BRITISH CRITICISMS OF THE BALFOUR CABINET.

MR. BALFOUR'S reconstruction of his cabinet seems to have given very small satisfaction to his own party, or indeed to any one else. The most angry complaints are to be found in the *National Review*, the one Unionist organ. The editor gives a prominent position to an article by a contributor who signs himself "A Conservative," and who speaks his mind with emphasis. His chief complaint is that Mr. Austen Chamberlain has not been made Chancellor of the Exchequer in order that Mr. Joseph Chamberlain, the one statesman of commanding influence in the ministry, should have the powerful support of his son in the plans which he cherishes for drawing closer the bonds of empire. Instead of Mr. Austen Chamberlain, Mr. Ritchie is Chancellor of the Exchequer, and Mr. Ritchie is inert, a believer in shibboleths, and incapable of thinking out for the nation a new course of economic policy. Mr. Balfour's zeal for reform has evaporated at the first obstacle. Lord Halsbury and Lord Ashbourne have defied his wishes. It counts eighteen ministers, practically the same ministers, against twenty of Lord Salisbury's cabinet. It remains unwieldy, incapable of vigorous action, and out of touch with the country and the party, which is beginning to resent the appropriation of all offices by the members of a small clique.

#### THE NEW APPOINTMENTS.

The changes that have been made are by no means for the better. Lord Londonderry's appointment as President of the Board of Education affords the exact measure of Mr. Balfour's zeal for efficiency. The appointment was made as if to illustrate the absolute defiance of tradition and experience which is characteristic of Mr. Balfour's changes. Mr. Gerald Balfour has been allowed to remain at the Board of Trade, where his record may be summed up as one of apathy and inaction. Mr. Wyndham, who is full of promise, but who never gives any performance, enters the cabinet. Lord Selborne, under whom the navy has gone backward, and Mr. Brodrick, who has done little for army reform, retain their respective offices. Lord Cadogan has returned from Ireland without adding to his reputation, and the government's policy continues to be the negation of strength and determination. At the best, the new government will be a government of stagna-

LORD LONDONDERRY.  
(President of the Board of Education.)

tion, tempered by such jobbery as its refusal to intervene in the London and Globe scandal. At its worst, if severely tried, it may wreck the party. Mr. Balfour's lack of foresight in foreign policy is proved by the permission which he has given to Mr. Brodrick and Lord Roberts to attend the German manoeuvres, which are being held in Poland under circumstances peculiarly distasteful to every Pole. The nation is weary, not of the policy of the government, but of its inadequate performance.

#### AN EDITOR'S VIEWS.

The editor of the *National* is quite as emphatic. New blood, he says, is conspicuous by its absence. The age of the members of the new cabinet averages fifty-four and one-half, as against fifty-seven in its predecessor. There is no reason to suppose that the new cabinet will be stronger and bolder in its policy than its two predecessors, and it has been received by the country with indifference or aversion. At least half a dozen of the old cabinet might have been dispensed with, without any loss to the ministry or to the coun-

try. North Leeds indicates the discontent with which the great constituencies see the choice of Mr. Balfour as premier, and the complete indifference of the ministry to administrative reform. There is a fixed belief in Ulster that slowly but surely the government of Ireland is being surrendered to the Roman Catholics. Mr. Wyndham and Lord Cadogan have managed to make Ulster believe that loyalty does not pay, and all classes and sections are united in opposition to the government. Mr. Sloan's election is a spoke in Mr. Balfour's wheel. It is a thousand pities that Mr. Brodrick and Lord Roberts should be brought into a local quarrel in the German Emperor's train. The Russian heir-apparent refused to attend the manoeuvres, although he was first asked. This visit will not add to the popularity of the government in the country, and it will probably result in dust being thrown into the eyes of the British war minister and the commander-in-chief.

#### The Test of Efficiency.

"Calchas," in the *Fortnightly Review* for September, reviews in a very hostile spirit the changes which Mr. Balfour has made in his ministry. Apart from the appointment of Mr.

Austen Chamberlain, his readjustments are commonplace, pointless, and inept. The present opposition, even without Mr. Morley, Sir William Harcourt, and Sir Henry Campbell-Bannerman, would supply a ministry with a larger number of efficient than are to be found in Mr. Balfour's cabinet. "Calchas" deals faithfully with Lord Rosebery's absurdly inadequate speech on the North Leeds election, which "Calchas" says was a stupefying surprise to the victors hardly less than to the vanquished. After long immobility in national conviction, there can be little doubt that the nation is now prepared, as it has never been before, to change, and to change constantly, until it gets a ministry to its mind. A new political world has come into existence since 1900. The war has destroyed much which was in the national repute, the prestige of British shipping has been almost extinguished, and on the diplomatic side it has been discovered that the German Empire as the bed rock of England's external relations is a rotten foundation. England has completely lost the reputation of technical preëminence in industry and commerce. For the first time, perhaps, for two or three centuries there is no longer a department of national life in which anything like the old leadership of English intellect is recognized by the world.

#### THE ATLANTIC SHIPPING COMBINE.

THE "Morganeering" of British shipping is still a subject of discussion in the English reviews.

Mr. Edmund Robertson, M.P., contributes to the *Pall Mall Magazine* for September a lucid exposition of the shipping "combine." The following is his brief summary of the gigantic deal:

"The new company then will become the owner of all the shares in all the companies, and will, through its ownership of the shares, direct and control the combined fleets of all these concerns. It is important that this peculiarity of the 'combine' should be kept steadily in mind, for a good deal depends upon it. The flag of each company, whether British or American, will be the same as before, but a foreign corporation will be the owner of all the shares in all the companies."

The great difference between the British-American and the German-American mergers,—the retention of the control of the German companies in German hands,—is one of necessity rather than choice. Mr. Robertson says that the German companies were prevented by their subsidies from entering the combine on the same terms as the English companies.

MR. GEORGE WYNDHAM.  
(Chief Secretary for Ireland.)

## AMERICAN RAILROAD INTERESTS.

The motive for the deal was simply that the venders thought it to their advantage to sell, and the purchasers to theirs to buy. Nothing more occult than this. The advantages of the combine were truly stated by Mr. Russell Rea, M.P., who said that the origin of the movement was in the business necessities of the great American railroads deriving their revenue mainly from carrying American produce across the continent to be shipped to Europe.

"The old system, under which each railroad company made its own arrangements with the various steamship companies, is said to have produced intolerable confusion and embarrassment in the handling of cargo. When, some time ago, certain of the trunk lines pooled their interests and became one association with one mind and one policy, the organization of sea traffic, on lines corresponding with the organization of the land traffic, became a business necessity. It was a vital matter for them—the associated railroads—'to be able to direct the movements of freight steamers, to allot their ports, and fix the dates of their sailing.'"

## THE FIRST STEP IN TRUST REGULATION.

PRESIDENT ROOSEVELT'S utterances on the trust question have been approved by many conservative journals which have offered scant encouragement to the ordinary anti-trust propaganda. Thus, the *Bankers' Magazine* for September, which has no sympathy with those who seek to "make a political issue of an evolution in economic science," strongly endorses the policy of publicity advocated by the President as a first step in the regulation of the trusts. The inventors and promoters of the trust system, it declares, are themselves largely responsible for the darkness covering their operations. It is undeniable that the trust managers gained temporary advantages, in many cases, by keeping secret many details of organization.

Public hostility was excited, according to the *Bankers' Magazine* writer, more by the prospect of great profits under the trust system than by any real or supposed faults in the system itself. This brought about the interference of the state for purposes of taxation. It was a spirit of greed that dictated much of the anti-trust legislation now on the statute books, and the trusts have resisted the attack in a similar spirit. They have often appeared to defy the law.

The narrow motive of securing information, for the state or for individuals, as to the money-making capacity of particular trusts is no part of the President's purpose in advocating publicity.

"It is to show the effect on the industries of the country and the general welfare of the people of a system of business which seeks to do away with competition. The public ought to take very little interest as a whole in the individuals or cliques of speculators who happen to be in control or to be quarreling over some money-making proposition. The real question is of the general or universal effect of a business system on the prosperity of the whole people. It is a waste of time to call attention to exceptional financial success on the part of individuals when it is the underlying system that should be examined.

## WHY PUBLICITY IS DEMANDED.

"Those who manage trusts have, no doubt, in a great measure, pursued a policy of concealment. They have been excusable on account of the manner in which they have been attacked. Public prosecutors, often excited by demagogical motives, with the desire of popularity, have attacked corporations and trusts without preliminary investigation of the ground or knowledge of the law. Most of these suits by public prosecutors have resulted in ridiculous failure. But in consequence it has been given out as an excuse for failure, which was in most cases anticipated, that trusts have a mysterious capacity of resistance impervious to the weapons of the law. Like the mediæval dragon, they are armed at all points. But all this is nonsensical. It is no doubt true that as new conditions arise in any branch of human activity old laws become inadequate, but there never has yet been a time when legislators have failed to adapt the law to new conditions when these conditions were understood. The first step is to understand them.

## PUBLICITY IN THE CASE OF BANKS.

"To discover the real nature and purpose and meaning of such an economical activity as a trust, it would appear to be better to study it in its ordinary normal existence, and not when stirred up to an unusual kind of life by hostile attacks. The publicity which the President refers to is the publicity of the general operations of a trust, similar to that now required by law as to the general operations of a national bank. The legitimate business of a bank is not hampered by the publicity, nor is any secrecy necessary to the inception of business or as to private dealings necessarily revealed. Publicity of this kind is the trail which shows that business, secret enough while doing, after it is finished, was done according to law. This trail is so complete in the case of a bank that if it indicates violations of law, it becomes impossible to deny or evade sequences of them. But it was many years

a code of laws suitable for the guidance of the banking business was formulated. The perfection of this code is the result of continual amendment. In regard to so recent a development of industrial method as trusts and combined corporations, it cannot be expected that suitable laws will be enacted in a moment. Time and trial will be necessary. But, as the President says, the people must learn what these so-called monsters really are, and not suffer themselves to be misled by the scare utterances of the enemies of the trust, or of those who seek to use them as a political issue.

"The utterances of the President are far in advance of the usual party platform which, lacking real knowledge, joins in the scare outcry as the easiest and safest political course."

#### WHAT ORGANIZED LABOR HAS LEARNED.

UNDER this title Mr. Raiph M. Easley, secretary of the National Civic Federation, sketches in the October *McClure's* the progress of trades-unionism in the United States, and sums up the most important lessons that have come to the organizers of labor through hard experience. The first system of regular annual conferences and joint agreements was arranged in the year 1865 by the United Sons of Vulcan, employed in boiling pig iron. The present rapid advance of organized labor is shown by a doubling in membership within the past three years. Mr. Easley sees, too, a marked improvement in the character of the unions, their broadening policies, the conservatism of their leaders, and the resulting joint conferences and agreements with employers based on mutual concessions. He gives many recent evidences of this improvement in the situation, such as the recent joint agreement between the American Newspaper Publishers' Association, and the International Typographical Union, and the Printing Pressmen's Union, for five years. He shows how the president of the International Longshoremen's Union, Mr. Daniel J. Keefe, actually hired non-union men to replace strikers who had broken a union contract. Mr. Easley says that non-union prejudice is dying out. In the Iron Moulders' Union, for instance, only twenty-five of the thirteen hundred agreements to-day restrict employment to union men. The characteristics of the walking delegates are improving, the best labor leaders are resolutely opposing any breaking of labor contracts, and they are, too, denouncing the sympathetic strike.

#### A LABOR CREED.

Mr. Easley gives what he calls "the revised creed of organized labor," constructed from the lessons of practical experience.

"1. Strikes are bad, and should be a last resort.

"2. Scales of wages should be determined by mutual concessions in conferences with employers rather than by a demand submitted by the union as an ultimatum.

"3. When thus determined, this scale becomes a contract, which is not only as sacred as any business contract, but the violation of which by the union is also the most disastrous blow that can be struck at the principle of unionism.

"4. Sympathetic strikes are unwise, because they violate contracts, bring injury to friendly employers and the friendly public, and arouse public opinion against the organization.

"5. It is not essential to a contract that non-union men should be excluded from employment along with union men, provided they receive the same pay.

"6. The union should attract the non-unionist by persuasion, not force, into membership.

"Violence in conducting a strike alienates the public, brings the courts and the militia to the support of employers, and reacts disastrously upon the union.

"8. Unionists should welcome new machinery.

"9. Unions should abandon arbitrary restrictions on output, and direct their attention to questions of hours of labor and rates of pay.

#### THE RELIEF SYSTEM OF THE MINE WORKERS.

MANY contradictory statements have appeared in the newspapers relating to the distribution of the relief fund among the striking anthracite mine workers. Very few attempts have been made, however, to ascertain just what system of accounting is employed in this distribution. The clearest statement of the matter that has come to our notice is contributed by Dr. Walter E. Weyl to *Charities* for September 6.

As Dr. Weyl points out, the relief system of the miners differs from that of charitable organizations in that its central idea is "militant rather than charitable." That is to say, the object in view is the winning of the strike, rather than the prevention of suffering. The principle of absolute equality in the distribution of the fund has been discarded for the principle of distribution in accordance with the needs of the applicants.

"The funds received by the national organization were divided among the three districts of the anthracite regions in proportion to the number of mine workers in each, but each of these districts redistributed its quota according to the

requirements of the various locals composing it. Even here a rough approximation seems to have been made to the number of mine workers in the various locals, although some of the locals demanded less than their share, while others, it is claimed, have hitherto refused all aid whatsoever. In the distribution of relief no discrimination has been made against non-union miners, who receive the same amount of aid as the union miners.

#### PAYMENT IN GROCERY ORDERS.

"The system of accounting appears to be both simple and effective. The district officers have printed order books in the shape of check books, with detachable orders and stubs. A local makes a requisition for one or more of these books, and when relief is granted the name of the recipient and the amount granted are written upon the order and upon the remaining stub. The order which the miner receives is not convertible into cash, but is accepted by the local grocer in payment for flour, potatoes, meat, canned goods, etc. The grocer fills out the amounts and prices of the goods received upon the obverse of the order, and both grocer and miner sign this statement, thus minimizing the danger of allowing the grocer and miner in collusion to convert the order into cash and subsequently into whiskey. The grocer or other small local merchant surrenders the filled-out order and receives his payment in the form of a check. The local union thus retains the original stub, the order accepted by the miner, the miner's receipt for the groceries purchased, and the stub of the check paid to the grocer. The local auditing committee reviews the workings of the system, and the district officials have equally the right to inquire into the distribution of the funds.

#### FOOD THE CHIEF ITEM.

"The reduction of the expense of relief is carried to a fine point, and relief is granted in a manner faintly suggesting Becky Sharp's famous plan of living on nothing a year. There are many men in the district who will not accept relief, and many others to whom it is not granted. The great army of those who have left do not, of course, receive relief, and men who have obtained work in the region also go without assistance. A corresponding reduction is made for miners or other mine workers who receive aid from relatives or friends, or whose daughters are employed as servants, mill hands, or otherwise."

After making such deductions, the amount granted bears an approximate proportion to the food requirements of the striking population. A

certain sum is allowed each single man, an additional sum for a wife, and still another sum for each child or other dependent, varying according to the age and requirements of each. Relief rarely takes the form of rent or clothing, and nothing is paid on account of fuel, since coal for that purpose may be picked from the culm heap.

#### EGYPT FOR THE EGYPTIANS.

ENGLAND'S administration of Egypt has been so frequently cited as an object lesson of what colonial government should be, that the observations of an American traveler just now have a peculiar interest to all American citizens who are concerned, as we all should be, in the successful administration of our newly acquired American dependencies. There is, therefore, a special timeliness in the article on "The Egypt of To-day" contributed by Prof. J. W. Jenks, of Cornell University, to the first number of the *International Quarterly*, the successor of the *International Monthly*. Professor Jenks briefly relates the disasters of the political and financial history of Egypt as a Turkish province, and describes the ingenious system under which, since 1882, the country, while nominally under the authority of the Khedive, has been virtually a British protectorate, if not actually a British dependency. The Khedive pays to his master, the Sultan of Turkey, an annual tribute of about \$3,375,000. An advisory cabinet of six ministers, each in charge of a department, is nominally, in the name of the Khedive, the law-making body. There is also the legislative council, to which proposed laws are submitted for advice. There is a general assembly meeting every two years, but the only power possessed by this body is that of making suggestions relating to the welfare of the country. The most important official of all, however, is an English financial adviser, who, without a vote, sits with the cabinet, must be given full information, and must be allowed to give advice. In each department there is also either an English adviser or an English permanent secretary, who must be given full knowledge of the working of the government, and must be permitted to make suggestions. These all act under the leadership of Lord Cromer, England's diplomatic agent and consul-general. There is an English army of occupation of some five thousand troops holding the citadel whose guns command the Khedive's capital, and this, it may well be believed, lends effective support to the advice of the English officials. Furthermore, the Egyptian army itself is trained and com-

carry the burden, through the various works mentioned, as well as through various other helpful measures, educative and otherwise, has also been very greatly strengthened. The principal of the debt has been comparatively little lessened, but there have been greatly added expenditures in works of public improvement, while the strength to carry it has been doubled.

#### SOCIAL BETTERMENT.

The improved financial situation, however, was not the only phase of the Egyptian question that interested Professor Jenks. Since 1894 the surplus revenues have enabled the government to take measures of social reform which, in his opinion, may in future be dwelt upon by writers with even more emphasis than questions of finance. Lord Cromer and Lord Milner have both insisted that their government of Egypt is for the benefit of the Egyptians, and that their intention is to teach the Egyptians as rapidly as possible how to govern themselves. Professor Jenks is convinced that this training in self-government is actually being effected, and apparently as rapidly as possible.

Take, for instance, the training in the schools. Before the English occupation great masses of Egyptians remained ignorant. Over 91 per cent. of the males and almost 99½ per cent. of the females could neither read nor write. Until within the last five years public primary education for the poorer classes, aside from the mere learning of the Koran, was almost unknown. At the present time public schools are being established everywhere, and grants in aid of these schools are paid in proportion to the attendance and the records made by the pupils. Likewise, certain positions in the civil service can be filled only by those who hold certificates from schools of certain grades. As a consequence there has been a great awakening of interest. Most of the teachers of these public schools are Mohammedan, and the schools are non-Christian in their instruction. The Koran is still used as a text-book for many purposes, but the education is practical in its general nature. The children are taught, besides reading and writing, the elements of the sciences, and they choose either French or English as the foreign language which they will learn, and that in which they will receive instruction in the more advanced studies where Arabic text-books cannot readily be provided. It is a noteworthy fact that while, in the earlier days, French was the language more frequently chosen, nearly all the pupils are now selecting English. There are also provisions for training in law, medicine, agriculture, engineering, etc. The law school is the most popular,

while the agricultural college,—although the basis of Egyptian wealth and prosperity is and must always be agriculture,—suffers from lack of pupils. Female education has not been neglected, and Professor Jenks says that we may expect in the near future that instead of 99½ per cent. of the women being unable to write, a very large per cent. of the mothers of the country will be able to give their children the rudiments of education at home, and with the added intelligence and wider outlook on the world's affairs that will come from their own reading, they will be able to start their children in the direction of the higher civilization.

#### THE ADMINISTRATION OF JUSTICE.

The relations of the official class to the peasantry have greatly improved in the score of years that have elapsed under English occupation. Professor Jenks alludes to the former practice of collecting taxes from the villagers before the crops were ready for harvest and compelling them to borrow the money from a lender who went about with the tax collector expressly for the purpose, the coming crops being assigned to this Shylock. Furthermore, when the cultivator had paid his tax, he was never certain that there might not be further assessments during the year. As a rule he had no tax receipt, which was a quit-claim for any specified time, and with his ignorance and lack of support from the government officials, he simply paid what he could when the tax-gatherer appeared, and paid again when the proper official made a second demand. All this has been changed. The taxes, while being reduced, have been fixed; the amount is absolutely determined from year to year, and the time of payment is known. When the peasant has paid the tax, he is given a receipt which secures him from further demands until the next regular period.

Similar results, he says, are found in connection with the courts. In former times the judges had their private rooms, where they received suitors bearing gifts before the case was tried. The larger present usually decided the case in the giver's favor. Some of the more conscientious judges received equal amounts from both sides, and then paid back the bribe to the suitor losing the case, thus insuring impartiality, as they thought. But this qualified system of bribing was rare; ordinarily the larger purse won. While among the native judges and the lower courts there are still traces of this system, Professor Jenks finds that, on the whole, corruption is dying out, and, to a considerable extent, has already vanished. He said there is never any accusation brought against the fair dealing of the European judges in th

higher courts, save that it is thought that they are at times slightly swayed by prejudice in favor of the Europeans or in favor of Christians. This is, however, admitted by the Egyptians themselves to be not corruption, but only a natural prejudice, and even this is not charged except in the rarest cases. So far as the Egyptian judges are concerned, there is a rigid system of inspection of cases in the lower courts by English officials; and unjust judgments are now very likely to be discovered. If discovered, they are certain to be upset; and the unjust judge, if there is evidence of corruption, is punished. This even-handed justice between rich and poor is another one of the boons of liberty for which Egypt thanks the Englishman.

In dealing with criminals, many reforms have been introduced. Whereas formerly prisoners of all grades, first offenders and hardened criminals, were placed together and worked together, the prisoners are now classified, with the idea of protecting the younger from the evil influence of the hardened criminal. Lighter sentences are provided for first offenders, and there are other suitable gradations of punishment. A reform school for child offenders has been established, which educates the children in trades.

#### ALFRED BEIT, THE CRÆSUS OF SOUTH AFRICA.

A BRIEF character sketch of Alfred Beit, the associate of Cecil Rhodes, and the largest diamond merchant in the world, appears in *Everybody's Magazine* for October, from the pen of Chalmers Roberts. Alfred Beit is only about forty-five years old, and a bachelor. People say he is worth \$375,000,000. He came of a Hebrew family in Hamburg, went to college, and served an apprenticeship in a Hamburg bank. After this apprenticeship he went to Kimberley and rapidly built up a fortune in the diamond fields. From the time that Rhodes consummated his great consolidation of the Kimberley diamond mines in 1889, he and Beit were in close business association, and Beit is one of the executors of the famous Rhodes will. The South African millionaire is also much the largest shareholder in the Rand Mines, Limited. He has never been at Johannesburg but three or four times, and on one of these visits he gave a great ball to three hundred friends, one of the most sumptuous entertainments ever seen, where every lady present was given a valuable diamond as a souvenir. This is entirely apart from his usual character, for he is a modest, retiring man. Mr. Roberts says he can be sometimes seen sipping a lemonade in one of the great restaurants in a quiet manner; and that although the newspapers have

much to say about him in the matter of his purchase of old masters, his subscriptions to the opera, his gifts to charity, there is remarkably little gossip about him personally.

Mr. Beit is very small in stature, and when he was seen, as it often happened, in company with

MR. ALFRED BEIT.

Mr. Rhodes, the contrast was almost ludicrous. He is as thorough and precise as Mr. Rhodes was general and heedless of details. He is very blonde, with prominent eyes of steel blue, and is almost dandyish in his dress. Both Rhodes and Beit began their fortunes with the consolidation of the diamond mines; but while Mr. Rhodes left off fortune-making, and began imperial schemes, Mr. Beit will never reach the point where he has money enough. He seems to have no social ambition, and is perfectly satisfied with the work of adding to his immense possessions in every country of the world. These are generally mining properties, but he possesses controlling interests in many street-railway systems in South Africa, Mexico, Chile, and Portugal. The actual figures of Mr. Beit's wealth are probably known to no man; but it is certain that he is one of the richest men in the world, and almost the only man to whom the Rothschilds are willing to play second fiddle, as in the great De Beers Company, where

his holdings much exceed their own. "Those who do come to know him find him personally a very sunny-tempered man, well read, well traveled, well groomed, by no means the typical millionaire of fiction or the stage. He has keen artistic tastes, as his house well proves. His picture gallery is supposed to contain one of the best collections in London. The house, which is in no way overdone, as London mansions so often are, holds a collection of Louis Seize furniture which is said to be unequalled."

#### AUSTRIAN EXPERIMENTS IN STATE SOCIALISM.

THE state socialistic work which is undertaken by Austria in Bosnia and Herzegovina is described in the *Monthly Review* for September by Mr. L. Villari. This activity shows itself in many ways. It has increased, by means of loans advanced by the Landesbank, the number of peasant proprietors to 15,000. It is also making every effort to institute agricultural improvements, and to establish a number of model farms, which are schools of agriculture. But the most curious experiment that has been made is the establishment of government hotels. Herr Von Kallay was very anxious to attract tourists to Bosnia, and as the ordinary landlords would not take the risk of building hotels, the government has built them on its own account. These hotels are plain, comfortable, and well managed, and are sufficiently popular at certain seasons to be crowded by tourists, who have come chiefly from Austria-Hungary. Where there are no hotels, board and lodging are provided at the gendarme stations. Herr Von Kallay has even created a state watering-place, Ilidze, with three good hotels, a casino, and charming grounds; a narrow-gauge railway has been constructed throughout the country, and on the whole M. Villari thinks that the government has done very well in its experiments.

#### COLOMBIA THE VICTIM OF BAD FINANCE.

IN the September number of the *REVIEW OF REVIEWS* (page 357) some account was given of the Colombian revolution. The wretched financial conditions that prevail in the country were outlined, and the writer (a contributor to the *Missionary Review of the World*) predicted that the attempt to return to a sound currency will be more trying to the Colombian people than any financial question that they have ever tried to solve in the past. A similar opinion is expressed by a writer in the *North American Review*

for September, Señor E. A. Morales, who is himself a citizen of Colombia.

Señor Morales shows that the annual revenues of the government (averaging about \$14,000,000 for a population of 4,500,000) were more than sufficient to save the country from ruin, if properly administered, but so seriously were the public funds misapplied that the judges and magistrates of the important Department of Panama were left without one cent on account of their salaries for a period of two years.

"The war budget, which in the administrations prior to 1886 never reached the amount of half a million of dollars yearly in time of peace, went on increasing until it aggregated the enormous sum of nine and a half million dollars (in round figures) in the two years' term of 1897-98, —say, more than one-third of the revenues, calculated at \$28,224,000, for the same term.

"While the War Department has been expending such a considerable portion of the revenues, other branches, like the external debt, have been completely obliterated from the budget, and the interests on said debt, which in years preceding 1886 were always considered as sacred engagements even in time of war, were entirely neglected. I consider it no exaggeration to assert that some have not been paid for over twenty years.

"The internal debt, the proper study of which would require much labor, because of the diversity of the forms under which it has been contracted, has increased extraordinarily by claims for recognized services which have not been covered, supplies, loans, and expropriations, and for military recompenses. That has been one of the means selected to give protection to the partisans of the government.

#### THE FLOOD OF IRREDEEMABLE PAPER.

"As I observed before, it was not possible to maintain this system with the ordinary revenue, and it became necessary to have recourse to the emission of irredeemable paper money and the institution of monopolies. The estimated deficit of \$1,312,016 for the period 1887-88 increased to \$3,435,498.70 in 1897-98, being one-eighth of the revenues. Although the persistence of an ever-growing deficit in the budget of the country would demand the application of the proper remedy or rigorous economy from any statesman, in Colombia these means were not adopted, because the provoking lithographic machines were ever and ever ready to cover the deficiencies.

"The terrible and inevitable consequence was not long in making itself felt, for the reason that the economic laws are not to be trifled with with impunity. The paper money of compul-

sory circulation suffered a depreciation ; and, as its exchange value fell, the government found itself obliged to issue a larger quantity in order to obtain the same benefit previously obtained for a smaller quantity ; for this new deficiency it was forced to make a new issue, which caused the same disastrous effect ; and this evil went on growing daily in alarming progression. On the other hand, as the taxes, rents, and contributions were payable, according to tariffs established by law, in the depreciated paper, the intrinsic value of these revenues dwindled in the proportion of the rise in exchange. So that the proceeds of the rents should maintain the intrinsic value estimated in the budget, it would have been requisite to change the tariffs daily in order that they might be always in accordance with the fluctuations of the paper money.

"The exchange which fluctuated ten points at the utmost when the system was established began to vary a hundred points in 1899, and by the year 1900 the fluctuations were counted by the thousand points.

"Commerce, all industries, and even the very life of the nation were highly affected by this situation, as may be easily understood when it is known that one American dollar is equivalent to fifty dollars in Colombian notes. Private credit completely disappeared on account of these violent fluctuations, and as it was and is still prohibited to stipulate any other currency but the notes in private contracts, commerce had to choose between inaction and bankruptcy."

#### AMERICAN DEMOCRACY VS. SCIENCE.

MR. CARL SNYDER'S recent article in the *North American Review* upon American inferiority in science has greatly impressed a French writer, M. Jean Jussieu, who, in *La Revue* for August, does what Mr. Snyder did not attempt,—namely, gives the reasons why America is inferior in scientific attainments. M. Jussieu has just returned from a lengthy stay in the United States, during which he paid special attention to American universities.

M. Jussieu will have none of the argument that America is too young a country to have attained distinction in science and art.

"It is not imagined, I presume, that the little European comes into the world with science in-born or infused? What is the cause, then? That the discoveries of European savants are not immediately made known in the United States? Not at all. There are quantities of European reviews in every university or library of any importance. Whether they are read or not is another matter. The opportunity is there. . . .

In America there are as many means of doing scientific work as in Europe, or more. The use is not made of them that might be made."

#### TOO MUCH DEMOCRACY THE CAUSE OF AMERICAN INFERIORITY.

The French writer has no doubt that the real cause of American scientific inferiority is the too great triumph of democracy.

"The idea of the moral equality of citizens . . . brings about in most minds the idea of intellectual equality, which is a profound error. The result is the *bourgeoisisme* (!) not only of a class, as in France, but of the whole nation. . . . Democracy insures the triumph of utilitarianism. The formula of both is the greatest happiness for the greatest number. Now, the value of a principle depends entirely upon the person who adopts it."

In the mouth of the majority this principle has merely come to mean : "So long as I do not interfere with another's action, there is no reason why I should work for him rather than for myself."

"It is easy to see what this means in the mouth of any one of average intelligence ; it is the end of all spirit of disinterestedness, not only in science, but in art and in morality."

#### THE CHILDREN RULE.

Men who will not sacrifice themselves for another man will hardly do so for an idea, a precept. Worldly success, the money-making ideal, has fettered and will fetter American science. The only scientist honored is he whose books sell in quantities ; as a consequence, the scientist must appeal to an inferior public, write "amusing" books, but not books of high scientific value. The professor must make his lessons amusing. Thoroughness is ignored. "There is never anything finished," nothing *soigné*, says M. Jussieu.

"In the United States, it may be said, the school governs science, the masters govern the school, the parents govern the masters, the children govern the parents,—therefore the children govern the science."

This he considers good neither for the children nor science.

#### OTHER CONSEQUENCES OF TOO MUCH DEMOCRACY.

All these millions "given" to American universities are often given because they have first been begged. There is a strong tendency to choose as university presidents men and women with large fortunes, nominally because any one in such a position ought not to be troubled about financial matters, but really because millionaires consort with other millionaires, and the wealthy

president will be better able to secure gifts and endowments for his university.

Again, there is far too much attention paid to athletics. A director of football at an American university gets \$6,000 a year; a coach, \$1,500 for ten to twelve weeks' work, with board and lodging. Sports occupy a preposterous amount of space in American papers. New York pays its teachers fairly well, but worse than any other form of work not purely mechanical. No other State pays them nearly so well.

#### AMERICAN SCIENTIFIC WORK MERELY ANALYTICAL.

The true scientific spirit, according to Herbert Spencer, is the synthetic spirit, which sees likenesses where the common mind only sees divergences. It is this which M. Jussieu considers is almost wholly lacking in America. Here scientific works are almost always merely analytical,—statistics, compilations, etc., requiring an altogether lower order of intelligence.

"Modern positivism has been little understood in America. Two very different propositions have been confounded: basing science on facts, and making science consist in facts."

M. Jussieu concludes by remarking that nothing is further from him than to wish to cast a stone at America. He merely tries to explain that the state of science here is a necessary result of the social conditions. In America "every one must, willingly or unwillingly, enter the unbearable democratic mill." The American professor must waste endless time on social distractions; the scientist can with difficulty avoid doing likewise. What waste of time! What strength spent in futile details!

#### TEACHING AGRICULTURE IN THE PUBLIC SCHOOLS.

THE advantage of some form of agricultural instruction in the rural and village schools, to which is committed the training of about 70 per cent. of the public-school children of our land, hardly seems to require demonstration. It is a fact, nevertheless, that in many parts of the country next to nothing has been done in this direction. Educationists, however, are alive to the pedagogical value of this kind of training in elementary schools; a paper contributed by Superintendent Joseph Carter, of Champaign, Ill., to the September number of the *Kindergarten Magazine* gives many excellent reasons for the inclusion of the subject in school programmes and at the same time offers helpful suggestions to teachers.

Some of the latter we quote in the following paragraphs:

#### A HINT AS TO WHAT SHOULD BE TAUGHT.

"Teach the children the lessons of the soil. Tell them the wonderful story of its origin, or, better still, let them tell you what they have seen in the field, and by the brook, and then you give them the charming explanation. Tell them why men plow, and what are the reasons for cultivating the soil, and what methods of cultivation are beneficial and what are decidedly injurious. Tell them how the physical condition of the soil may affect its fertility; and tell them what elements have been taken from the soil when it is worn out, and how to replace them. Tell them the marvelous story of the important discovery of modern times, a discovery which places in the hands of every farmer a means, completely under his control, of drawing from the atmosphere the free nitrogen of the air, and of fixing it in any field he may wish to enrich.

"It is a story of minute organisms which are in the soil,—or if they are not there, the farmer can put them there,—which locate themselves upon the roots of certain plants, and give these plants power to store up in their roots, to be left in the soil, its most valuable constituent of plant food—nitrogen. Tell them what the tassel and the silk of the corn are, and why one is at the top of the stalk and the other very much below it. Tell them why the blossoms of corn, oats, rice, and wheat are colorless and odorless, and why the blossoms of cotton and the clover are so beautifully colored, and why they have such exquisite perfume. Tell them what the bees and the bumblebees are doing, and of what superlative importance they are to the existence of many plants, and how they are most industriously serving man a little by the honey they make, but vastly more in other ways; for they not only increase his apple, peach, and pear crop, but they also aid in adding fertility to the soil."

All of which presupposes, we fear, a richer equipment on the part of the instructor than is now possessed by the majority of our country school teachers.

#### EFFECT ON SOCIAL IDEALS.

Professor Carter is enthusiastic over the results to be hoped for when once the system is fairly at work:

"Who can doubt the practical value of teaching these things to those who are to be the future farmers of this land? Think how it would brighten the dull monotony of the lonesome little country school to teach the children to understand the things about them; the weeds by the roadside and the harm they do; the birds in the hedge and the good they do; the honeybee and

the white clover, the bumblebee and the red clover, and the great value of the work they accomplish; the angle worm in the field and its work. These things for the child, and more complex things for the young man and the young woman of the farm, how they would change the mental and spiritual attitude of the future farmer toward his vocation! Instead of being either the discontented drudge longing to get to town, as he so often is, or of being the hard-fisted, grasping land grabber, which some, alas! are, he would be a student working joyously and happily and successfully in that greatest of all laboratories—a well-kept farm."

#### WILL OUR CITIES BE A MASS OF SKY-SCRAPERS?

MR. BURTON J. HENDRICK contributes an article on "The Limitation of the Production of Sky-scrapers" to the October *Atlantic Monthly*. Mr. Hendrick says that the imaginative pictures of our great cities as they will appear twenty-five or fifty years hence, as masses of sky-scraper office buildings twenty to thirty stories high, is not a true one. He says that natural causes have brought a pause to the production of sky-scrapers in New York City at least, and that in future there will be rather a decrease, relatively, in their production.

This is brought about, he says, by the factors of light and air. The tenants that occupy great office buildings are willing to pay liberally for light and air, and it is readily seen that if a street is lined on both sides with twenty to thirty story buildings, a majority of the rooms in these buildings will not have their quota of light and air. This is so true that nowadays, when a company erects a huge structure in New York City, it finds it necessary to buy or lease the adjoining property to insure against the erection on this adjoining property of sky-scrapers similar to its own. Dr. Hendrick gives a number of examples where this has been done in New York City, and he shows that this process will prove a constantly growing limitation to the production of sky-scrapers. In other words, whenever a very tall building goes up nowadays, it is apt to make it certain that adjoining lands will be used for lower structures permanently.

#### PLAINNESS IN SKY-SCRAPER ARCHITECTURE.

This is, from an architectural point of view, highly desirable, because the constructors of sky-scrapers have found out by experience that it is practically useless to attempt ornamentation of the huge office buildings, and have come down to an absolutely plain and monotonous façade as the

most practical type. Formerly there were attempts at galleries and efforts to lessen the apparent height of a building by widening the windows. The later structures do not show such devices.

Copyright, 1922, by A. L. Gifford, Tompkinsville, N. Y.

THE FULLER BUILDING IN NEW YORK CITY.  
(One of the most striking examples of sky-scraper architecture.)

"It was found, among other things, that highly carved balconies at the eighteenth and twentieth stories were not additional attractions to tenants; and that Mansard roofs paid no rent. The sky-scraper, in its latest manifestation, therefore, con-

sists of a succession of prosaic stories, one upon another, the whole rising sheer from earth heavenward, its monotony unrelieved by the slightest ornamentation. The largest office building in the world, the Broad Exchange, at the southeast corner of Broad Street and Exchange Place, New York, rising to a height of twenty stories, and occupying 27,000 square feet of ground space, is the final word in what may be called the modern economic system of office construction. The building was erected by a syndicate of operators as a speculative enterprise, and represents invested capital of not far from \$7,500,000. Of that \$7,500,000 hardly a dollar has been spent in non-productive ornamentation; the whole operation has been conducted with an eye single to rental income."

#### A GREAT CATTLE KING OF MEXICO.

S. G. ANDRUS tells of the greatest of the Mexican ranch kings in the October *National Magazine*. Don Luis Terrazas, of Chihuahua, owns between 20,000,000 and 30,000,000 acres of land, 8,000,000 acres of which are the finest grazing land in Mexico. His brand-marks are on a million head of cattle, half as many sheep, and several hundred thousand horses.

When one leaves El Paso on the Mexican Central train, he starts on the ranch of Terrazas, and rides through it for a hundred and fifty miles, gazing all day on Terrazas' cattle, sheep, and horses fattening on the rich para grass. On the ten mammoth ranches of the cattle king some 10,000 men are constantly employed, and something like 100,000 acres of his estate are under cultivation. Mr. Andrus says that Don Luis, it is estimated, is probably worth \$200,000,000 to \$300,000,000, Mexican money, and has enormous holdings of bank stock and factory stock in addition to his pastoral wealth. He is a close friend of President Diaz, and a power financially and politically. Mr. Andrus says there is a great future for the grazing industry in Mexico, and that it will come into powerful competition with the cattle-raising in our Southwest. At present about 70 per cent. of the Mexican cattle are sent to the United States. Señor Terrazas has done a great deal to foster and promote the cattle industry of his country, inducing the government to remove the tax on blooded cattle, and importing blooded bulls from the States by the carload. He is teaching the Mexicans to use dressed meats. They are the greatest meat-eaters on earth, but kill their beef one hour and eat it the next. Don Luis has built in Chihuahua a large modern packing house, the only one in Mexico. This packing house is

manned by American workmen and superintendents.

Don Luis is a sturdy man of seventy-three, but still supervises personally his vast interests. He knows to the last detail the factors of income and outgo. Just now he is intent upon the problems of irrigation, and has recently spent \$300,000 in constructing four reservoirs to save the loss of cattle that always comes in a dry season.

#### THE NAVY'S GREATEST NEED.

IT is a strange but undeniable fact that what many naval officers and experts regard as the American navy's most urgent need at the present time is hardly understood at all by the general public. The press gives full information about the ships and guns, but very slight consideration is given to the manning and officering of these ships and guns,—or, as the French say, the *personnel*. It is the purpose of Lieut.-Com. Roy C. Smith, writing in the *North American Review* for September, to inform the public on this latter phase of the naval problem, and to show the need of men transcends in importance the need of material equipment.

Lieutenant-Commander Smith makes so strong a case that we wonder how Congress could so long have remained blind to the real seriousness of the situation. The facts of the matter, as stated by this officer, are briefly as follows: The number of officers and men in the navy is limited by law. While the tonnage of the navy has doubled and trebled, the number of sea-going officers has not been increased at all, and that of the enlisted men only to a limited extent. Each session of Congress, as a rule, sees an increase in the tonnage, while the increases in the men have come only at rare intervals, and there has been no increase of officers. The *personnel* act of 1899 made, it is true, a slight increase, but the vacancies thus created, owing to a lack of graduates, have never been filled. It is as if a line of merchant ships had ten vessels in its service, all suitably manned, and then gradually increased its fleet to thirty vessels; but as each new ship is added its officers and men were drawn from the older ships, without any increase of the total number. How long could this sort of thing go on?

It is a fact that Congress at its last session provided for an addition of 3,000 enlisted men, bringing up the total of enlisted men and boys to 28,000. It is explained, however, that this number was thought to be temporarily adequate only because it was expected that a number of ships would be out of commission or laid up for

repairs. The total completed tonnage of the navy on January 1, 1902, was 481,967 tons. This would give a ratio of 60 men per 1,000 tons of shipping. Taking into account the authorized tonnage as shown by the last Navy Register, this same ratio would require a force of 45,000 men and boys for the 750,000 tons.

#### HOW SHALL THE SHIPS BE OFFICERED?

The problem of officers is far more grave. As already stated, there has been no increase whatever in the number of sea-going officers since the days of wooden steamers. It is estimated that a period of twelve years is required to make an efficient lieutenant, beginning at boyhood. Commander Smith thus describes the difficulties in which the navy now finds itself:

"In the report of the chief of the Bureau of Navigation, already referred to, it is shown that 1,026 additional line officers will be needed by the time all the ships then authorized shall be finished, and the estimate is stated to be at least 30 per cent. smaller than the practice abroad for ships in commission. As the navy then consisted of 1,042 line officers, counting the cadets doing sea duty, it meant that the number of officers would have had to be doubled in about three years from that time, or in two years from now. The 1,042 officers then on the list had been in training anywhere from four to forty-eight years. In the next two years an equal number must be added to the list to bring up the total strength to a minimum of efficiency! The problem is an impossible one. It means that there has been great shortsightedness in the past, but with that we are not now concerned.

"For the future, while 1,026 trained officers cannot be provided in two years, still something may be done, and it should be done at once, for every year of delay means the chance of national humiliation, which may, however, possibly be avoided by acting now. From the figures quoted,—that is, 2,068 officers and 750,000 tons of shipping,—and as in the case of the enlisted men they are an exceedingly moderate estimate, made by considering the individual ships and the practice of foreign nations, the proper ratio of line officers to tons of shipping is seen to be about 3 officers per 1,000 tons. This does not mean that all the officers are required for sea duty. There are some technical duties in connection with administration and the preparation of ships that will always require some officers to be ashore. Also, a small reserve will be needed to allow for sickness, leave, and the interchange of duties. The total figure quoted above,—that is, 2,068 officers,—was made up of 1,479 officers, or 71 per cent., at sea; 425, or 21 per cent., on shore

duty; and 164, or 8 per cent., as a reserve. The total, as has been seen, amounts to 3 officers per 1,000 tons, which ratio should be authorized by law, as has been recommended in the case of the enlisted men, 1 officer for every 20 men, 3 officers and 60 men for every 1,000 tons of completed and authorized shipping, the tonnage to be ascertained at the beginning of each fiscal year, and the quotas of officers and men to hold for that year. The above refers only to line officers, though the same reasoning applies equally to the staff corps."

The only feasible means of relief would seem to be an immediate increase in the Naval Academy appointments. It is first of all necessary, however, that Congress and the people should be aroused to the urgency of the matter.

#### THE ENGINEER'S PLACE IN THE BRITISH AND AMERICAN NAVIES.

THE British Admiralty order of January 9 last, directing that in future certain machinery is to pass from the charge and control of the engineer officer to that of the gunnery or torpedo lieutenants, respectively, is the subject of an article by Mr. Charles M. Johnson in the *Engineering Magazine* for September.

#### THE ENGINEER'S GRIEVANCE.

Mr. Johnson thus sets forth the present state of things in the British navy:

"Every reading man knows that for many years the engineering department of the navy has been in a more than unsatisfactory condition; it has been in a state of partial collapse. It is not from one public paper alone that the trumpet sound of danger has come. Every correspondent who has been permitted to accompany the ships on the summer cruise or in the autumn manoeuvres, has to a greater or less extent, played on the same note. Some, like Mr. Rudyard Kipling, have not hesitated to 'call a spade a spade.' They have manfully and impartially endeavored to bring home to the 'man in the street' the deplorable weakness and inefficiency of this branch of the navy. Public men of all classes have joined in protest against this paralyzing state of affairs in Great Britain's first and only line of defense.

"And what has been the result, as far as the Admiralty is concerned, of all this great consensus of thought and opinion? Has it succeeded in removing one single disability from, or in adding even 1 per cent. of either officers or men to, this dangerously undermanned branch of the service? Has it strengthened the hands of the chief engineer by giving him a staff of

better-trained units, although no added numbers? Has it in any way met the need of the engineer for greater authority and more control over his staff? In fine, has the board done anything to meet this widespread and public demand for reformation in the engineering department of the navy?"

"If," says Mr. Johnson, "these questions were put to the Lords of the Admiralty, they would doubtless be answered in the affirmative, but "as a member of this overworked, undermanned, slighted, barely tolerated class, I not only answer it in the negative, but I must go further and charge the Admiralty with deliberately sacrificing the national interests and the empire's safety to the professional interests and prejudices of their own class—the sailor element."

#### NO REPRESENTATION AT HEADQUARTERS.

The reason, says Mr. Johnson, of the new order is not far to seek. All the four sea-lords belong to one or other of the sections to which by the new order is to be committed the care and maintenance of the machinery and weapons taken away from the engineer, who from their first introduction into the service has had them in charge.

"The Admiralty have for years set their faces resolutely against increasing the engineer staff. Why? Because if they permitted the engineer department to grow to its legitimate proportions, —proportions corresponding to the multifarious duties which naturally and properly belong to it, —it would quickly equal in numbers, if it did not surpass, the sailor element. When we remember that in the present day everything is done as far as may be by mechanical means,—that is, by the engineer, and that all the sailor is left to do is to fight the guns and keep the ship clean,—are we not naturally surprised to find that the ratio between the sailor and the engineer branches respectively is as 4 to 1? Again I ask, why? Because command of men means power, and needs authority to wield that power. The engineer has no executive or military authority,—he is a civilian! He can do nothing to reward or punish any member of his staff."

#### A VITAL QUESTION.

Mr. Johnson asks, "Is machinery of any sort likely to be as efficiently handled, to give as good results, or to last as long in the hands of amateurs as in those of experts?" A naval engineer, before he is considered competent to undertake the independent charge of machinery, must spend five or six years in the workshops at Keyham; then for some ten years he acts as as-

sistant engineer at sea under the orders of a superior engineer. After this he is considered eligible for an appointment in charge of the machinery of a gun or torpedo boat. This training cannot be contemplated for the executive officer in the new order.

#### A WELCOME CONTRAST.

It is pleasant to turn to Mr. Walter M. McFarland's paper upon "The Naval Engineer of the Future," which immediately precedes Mr. Johnson's gloomy article. Mr. McFarland was for a long time an engineer in the United States navy, and gives an account of the much happier state of things prevailing there. Criticising Mr. Johnson's article, he says:

"It seems to me that Mr. Johnson has missed the point that the Admiralty regulation transferring certain strictly engineering work to executive officers is really an admission that military titles are not inconsistent with engineering duty, and that consequently this move should be looked upon as an admission, although a half-hearted and very unsatisfactory one, that the claims of the engineers are just. In view of the outcome in the navy of the United States, which is well known to all students of the subject, it seems to me that this recent Admiralty regulation should really be a source of some satisfaction to British engineers, but it should not cause them to relax their efforts to secure their proper standing."

#### ONE REALLY STRONG CIVILIAN.

Mr. Johnson is always careful to exclude Lord Selborne and Mr. Arnold-Forster from his criticisms, on the ground that, being civilians, they cannot do anything except act on the advice of experts. The present fortunate state of things in the American navy is chiefly due to President Roosevelt's initiative when he was Assistant Secretary of the Navy. "A really strong civilian has no difficulty at all in getting at the facts of these technical matters," says Mr. McFarland.

#### AN AMALGAMATION.

The reform introduced by President Roosevelt is really an amalgamation between the engineer and the executive officer. To quote his own words:

"Every officer on a modern war vessel in reality has to be an engineer, whether he wants to or not. Everything on such a vessel goes by machinery, and every officer, whether dealing with the turrets or the engine-room, has to do engineer's work. There is no longer any reason for having a separate body of engineers, responsible for only a part of the machinery. What we need is one homogeneous body, all of whose

members are trained for the efficient performance of the duties of the modern line officer. The midshipman will be grounded in all these duties at Annapolis, and will be perfected likewise in all of them by actual work after graduation. We are not making a revolution; we are merely recognizing and giving shape to an evolution which has come slowly but surely and naturally, and we propose to reorganize the navy along the lines indicated by the course of the evolution itself."

#### THE SEA THE ONLY BATTLEFIELD.

**A** HITHERTO unsuspected corollary of M. Bloch's doctrine, that the improvement of weapons will render land war on a great scale practically impossible, is dwelt upon by Commander G. A. Ballard, R. N., in the *Journal of the Royal United Service Institution* for August. Every campaign, excepting those which are waged by overwhelming numbers against a comparatively few resolute combatants, will result in stalemate. Granting that this is so, says Commander Ballard, what follows? All future wars will be fought out at sea. Military men have brought their art or profession to such a pitch of perfection that, given forces of comparative equality, it is impossible to do more than bring matters to a deadlock. Therefore the deciding battles of the future will be fought out on the sea, where it is only too easy to fight to a finish. Commander Ballard thus summarizes his own conclusions:

"Firstly, if his ideas prove to be wholly correct, and hostile operations between equally matched armies reach at length a condition of deadlock, the influence of sea power as an alternative force in the mutual relations of states will become not only greater, but paramount. Secondly, if his ideas are only correct in a modified form, the reluctance to face the sufferings of land attack, even when it has prospects of ultimate success, will still heighten the advantages to be derived from resort to the alternative, although in a correspondingly modified form. In either case the results will be beneficial to Great Britain so long as she maintains her maritime strength unimpaired; and, paradoxical though it may seem, if M. de Bloch were even approximately correct in his views, her influence on European politics, although not herself a great military power, will be enhanced rather than diminished by scientific improvements in military weapons. But if his views are correct, the tendency of the future will be toward the development of the sea power of other countries as well; and if England is to maintain her self-

respect and imperial position, she must be prepared to face heavy sacrifices when necessary, or this influence will decay."

#### GENERAL VON GOLTZ ON THE BOER WAR.

**T**HE European reviews continue to discuss the military lessons of the Boer War. The *Deutsche Revue* for August opens with an article on this topic by General von Goltz, the famous soldier who reorganized the Turkish army, and who is looked upon as one of the greatest military authorities in Germany.

#### LESSONS FOR GERMANY.

The general discusses the war solely from the point of view of its teaching value for the German army. He, however, points out that there is much more to be learned from it than tactics and strategy. When a small nation of farmers and shepherds—numbering less than the inhabitants of Munich or Cologne—waged war for almost three years against the first world power, and forces it to put forth the greatest efforts, the matter deserves attention. The nature of the seat of war explains a good deal, but not all. The difficulties of transport, etc., should not be overlooked, but, after all, the area was not large enough to be the sole cause why such a huge army was needed.

How can the reported astonishing shooting of the Boers be the cause? An experienced European officer who went through the war told the general that the average shooting was no higher than in the German army. The tradition has also been long ago destroyed that the Boers met every danger fearlessly. Robust health and a good eye had a good deal to do with success. It is also wrong to seek the explanation in the abnormal unskillfulness of the English troops. While the strategy of the campaign is open to much criticism, the earlier leaders were almost obliged to divide their forces in order to save Ladysmith and Kimberley. As regards the behavior of the English troops, the above-mentioned officer said that they behaved, when attacking, just as did the Germans at manœuvres.

#### THE ARTILLERY.

The first fact which was noticeable is the comparative uselessness of the immense superiority of the English in artillery. This point is even more important than the infantry fights. The German field artillery has been greatly strengthened recently, and in consequence the matter has a double interest. The Napoleonic lesson was that artillery should be massed. The Boer War teaches the contrary. The numerically inferior

guns of the Boers again and again checked the British artillery attack, and the preparation for an infantry attack by concentrated artillery fire proved futile. The explanation is that with modern weapons the danger lies in having the guns too close together, and the lesson is that, unless there is a great deal of room, it is useless to increase the number of guns. An officer who fought at Beaugency—where the cannonade was particularly fierce—said that the noise of the guns at Colenso preceding the infantry attack made the row he heard in 1870 sink into insignificance. Every one thought that the Boers were annihilated, as the dust made by the bursting shells entirely covered the spot where they were. As a matter of fact, hardly any damage was done at all. "The only question is," said he, "if the nerves of German soldiers could stand the strain when such a rain of fire was descending on them. I rather doubt it; but the Boers, it is well known, have no nerves!"

#### THE INFANTRY.

The war has repeated the lesson that a defending army has all the advantage in a frontal attack, and that a bold defender in a good position can hold out against tremendous odds. The same lesson may be learned for infantry as for artillery,—namely, that the old massing methods must be abandoned. At last it has been clearly demonstrated that, with modern weapons, it is impossible to attack without cover. None of these points are new; they were only emphasized.

#### MOUNTED INFANTRY.

The use of mounted infantry was, however, quite new. The resistance which small mobile parties can offer to a huge orderly army, which overruns the land and occupies the towns, deserves close attention. Such a possibility could, however, hardly occur in Europe, as the necessary conditions are absent,—namely, huge space, sparsely-populated country, natural hiding-places, and an immobile enemy. Another point to be noted is that huge numbers are not so necessary in war as is at present considered to be the case. He points out that in the Franco-German War the "war madness" was even more dangerous than the foe to the Germans. It is on such occasions that men like Botha, De Wet, Delarey, and Beyers come to the front.

#### FAILURE AND SUCCESS.

The Boers failed, and one of the chief reasons he assigns is that they defended only, never attacked. Their object was to retain what they had, their opponents' object was to take their country. We learn, says General von Goltz, with

much greater pleasure from the Boers, but we must not overlook the lessons of the English. Why did they win? Because when they go in for a thing they stick to it, no matter how much it costs them. An Englishman wrote him, on the outbreak of the war:

"Africa is necessary for our future, and we cannot allow an enemy to be at the back of our colonies there. If, therefore, 100,000 men are not sufficient to overthrow the republic, we will send 200,000; and if 200,000 are not enough, we will send 300,000."

#### THE CAUSE OF THE WAR.

"Leading English statesmen were of the same opinion, and took the right moment to begin. The American-Spanish war had been used by them very cleverly in order to get into good relations with their American cousins, so that they should not disturb things. The shrinking from war of the Continent, where the great powers kept the balance even by mutual mistrust, was plain to their eyes. The Eastern troubles of the last few years had proved how great powers, even when apparently united, can, nevertheless, paralyze one another. Russia, who could have vetoed the war the soonest of all, was not to be feared because of her peace-loving monarch. Such a moment was not likely to occur again for another hundred years, and Chamberlain and his colleagues were not only quick to see it, but resolved to use it regardless of consequences. That was, perhaps, morally not very beautiful, in any case not very magnanimously managed, but it was logical statesmanship."

#### TOLSTOY THROUGH FRENCH EYES.

"**T**H. BENTZON" (Madame Blanc) contributes to the *Revue des Deux Mondes* a charming paper on Tolstoy, with whom she spent a day during a recent visit to Russia. She describes with what eagerness she went forward to meet the great man who, "tall and vigorous, advanced to meet us; far more remarkable in appearance than any of his portraits would lead one to suppose, for no painter has been able to present adequately the leonine structure of the head, the quaint, powerful aspect of the flowing beard, the rough-hewn features gathered together under the broad forehead of the great imaginative thinker. . . . In the smile there is much kindness, and the homely blouse of the peasant cannot conceal the manners of the *grand seigneur*." She also gives a rapid word-picture of Countess Tolstoy: "One cannot help seeing that here is a woman of the world, affable, gifted with good sense, still youthful (she is twenty-five years

younger than her husband), and while quite able to hold her own with the great man, holding loyally to his side in the moment of peril. The whole woman is summed up in a phrase once attributed to her: "When I first married Count Tolstoy I was very simple in my habits, and I always traveled second class; but as his wife he compelled me to go first. Now he expects me to travel third; I myself prefer my old mode of going second class!"

#### LITERARY JUDGMENTS.

Tolstoy discussed with Madame Bentzon the literature of France. He spoke with bitter irony of the more extravagant symbolistic and naturalistic writers of the present day, but expressed great admiration of the philosophical authors of the nineteenth century, notably of Rousseau. Of comparatively modern French writers he prefers Balzac; and though full of enthusiasm concerning Maupassant, deplors his choice of subjects, considering that the feminine element influences far too much the modern French novelists. He spoke with respect and liking of the thoughtful and sincere work of Edouard Rod, and also of that of the brothers Margueritte. Tolstoy's favorite novelist is Charles Dickens. With him he feels in complete sympathy, for Dickens always took the side of the poor, the humble, and the unfortunate. He reserved all his anger and contempt for Kipling, to whom he even denied talent; but then it must be remembered that Tolstoy has an intense horror of warfare, and this although—or, perhaps, because—he himself took part as a combatant in the Crimean War.

#### RELIGIOUS VIEWS.

During the course of this interesting interview Tolstoy spoke at great length of religion. He is horrified to think that in France the school children are in future to be taught nothing concerning God. He is an ardent Christian, or rather an ardent Gospeller; the four Gospels alone, he says, should suffice for the conduct of life. Countess Tolstoy listens to her husband's religious views in silence; she has remained, in spite of her fine letter apropos of the excommunication of Tolstoy, sincerely Greek-Orthodox, and she refused to copy, when acting as her husband's secretary, a passage in "Resurrection," dealing with the Mass, of which she disapproved.

#### PETTY PERSECUTIONS.

Concerning Tolstoy's future plans, he informed Madame Bentzon that he intended to write a sequel to "Resurrection," but that before he did so he had much to write.—"Enough to take up my time for the next forty years," he said, smiling.

At the present time he is engaged in editing his diary, and he is also writing a "Manifesto on Liberty of Conscience." He spoke with indulgent kindness of those who persecuted him, but his wife, with indignation, read their French visitor a letter from the local pope, or priest, imploring her to insure Tolstoy's conversion before death supervened! In the neighborhood of whatever place they happen to be staying all the popes preach against Tolstoy and his works, and the Archbishop of Simferopol, in the course of a sermon delivered in his cathedral, declared him to be anti-Christ!

#### THE INFLUENCE OF DANTE ON ART.

ONE of the most interesting of the articles in the September number of the *Art Journal* is a discussion of the influence which Dante exercised on the art of his century. Mr. Addison McLeod writes:

"To all who know anything of Tuscan art, the names of Cimabue, Giotto, Orcagna, are household words. Yet the ideas connected with them are apt to be merely scattered and vague, or else the over-emphasized perceptions of some strong mind which has made one of them its especial study. Let it be allowed us to particularize in a general way.

"Cimabue was a painter of purely religious pieces, with no attempt at naturalism, but a very definite seeking after beauty. Giotto was both much wider in scope and intensely realistic in aim: striving by all his powers—imperfect though they were—to paint life as it is. His symbolism, when it comes, is plain and direct, usually expressed in single figures. Next after him comes Simone Memmi. He has made no advance as a craftsman, and has only become more introspective and thoughtful. Then comes the period with which we propose to deal.

#### THE WORK OF ORCAGNA.

"There is a spirit very clearly visible to the visitor in Florence, and though he may connect it with no very definite time, he does with one name, viz., that of Orcagna. It is a spirit, suggestive but unmistakable; betrayed rather by change of mood than change of subject, though it has to a large extent introduced, instead of the painting of life actual, the symbolical treatment of all that connects it with things beyond. Even subjects of a more ordinary kind, however, are given a mystic turn. We notice strange beasts about the fringes of the picture, stray uncouth demons intruding here and there, giving us the feeling that there are gentlemen of their kind in abundance lurking outside. What is the cause

of this new and hardly wholesome atmosphere? Where are we to realize it? Whence are we to trace it? As an artistic influence, how admirable is it?"

#### WHERE ART HAS FAILED.

These are the questions investigated in the article. Mr. McLeod says in conclusion:

"Lastly, why is it that art may never be by intention ugly? Ought she not to try and influence moral ideas, and must she not use all means needful for this?"

"I think all her acts must be ordered with reference to one great end, which is to inflame our spirits by the presentment of what is noble or beautiful. To lead us on by pointing to the heights above, not to the gulfs behind; to encourage us with the waving banner of hope, not flog us with our iniquities; by showing us the best, to inspire us to become the best. It is at once her limitation and her glory. We do not seek out physical ugliness in life; we tolerate it if need be, but we do not seek to perpetuate it, to people the isle with Calibans.

"Dante himself was not a happy man, and I sometimes wonder whether the world is happier for all he has written. But this is not the point. Perhaps the world ought not to be happier for him; but it ought to be happier for its pictures; and it is because of this that men like the Orcagnas have failed.

"It is because of this that modern art has failed, too. In aspiring to teach, she has forgotten how to praise. Her eye has fallen from the star of beauty that used to lead her, and her feet are floundering in muddy waves."

#### WHAT IS ELECTRICITY?

MR. CARL SNYDER gives an interesting account of the discussions concerning the nature of electricity in the October *Harper's*. It is one of the marvels of modern science that it is so impossible to decide definitely what is the nature of the force which is utilized so generally in modern life and industry. Benjamin Franklin thought electricity was a fluid. He assumed that all bodies were normally electrified at all times. If the quantity of electricity was increased, the body would be positively electrified; if decreased, negatively electrified. Electricity seemed to flow from a higher to a lower level, like water. The electric circuit was merely the passage of a quantity of electricity from a positive or negative to a more neutral stage.

Franklin's ideas of the fluid nature of electricity were not contradicted by the important discoveries of his immediate successors, Volta,

Davy, and Galvani. But with Faraday's discoveries of the relation of electricity to magnetism, Franklin's notions become rather crude. Then it was found that light and electricity traveled at the same speed, 184,000 miles a second, and Clerk-Maxwell, the Scotch physicist, came to the conclusion that electricity and light were at bottom identical, — light, short ether waves; electricity, long ones. Sir Isaac Newton had decided that light might best be considered as an incessant hail of bodies so minute as to escape all means of direct investigation. Recently Prof. J. J. Thomson, of Cambridge, England, has taken up again this corpuscular theory of electricity and light, and there is an active discussion among the scientists of the real nature and phenomena of electricity.

#### THE CORPUSCULAR THEORY.

"Prof. J. J. Thomson has found a way to measure the speed of these particules, their weight, or mass, as well,—in a word, to demonstrate that they are real. They seem to be wonderful as well, for they are the smallest things known to man, and it may be that out of them the universe is made. Taking a leaf from Newton's notebook, Professor Thomson calls them corpuscles. It is rather bewildering to be told that these corpuscles may turn out to be electricity, matter, light, the aurora borealis, magnetism, chemical affinity, and various other trifles, all at once.

"These corpuscles have introduced an utterly new conception into the domain of electricity,—that the latter is *atomic* in character, or, according to the new ideas, *atomic in structure*. In order to get at some sort of a working model of the processes which go on in his laboratory, the chemist was obliged to resort to the notion of ultimate units of matter, atoms,—literally, that which cannot be cut. Choosing the lightest of the atoms, that of hydrogen, as a basis, the chemist weighs and measures his atoms of gold or sulphur or iron as if they were so much sugar or salt in his scale pans."

Professor Crookes, studying the peculiar actions which go on in the Crookes tube, the source of the Roentgen rays, was led to believe that the beautiful, velvety, greenish glow inside the vacuum tube which comes when an electrical discharge passes is due to the incandescence of tiny fragments of matter.

#### THE ELECTRICAL UNIT, OR ELECTRON.

Professor Thomson found a way to count the number of corpuscles within a Crookes tube, and, knowing the total amount of electricity they bore, it was merely a problem of very long divi-

sion to calculate the charge on each corpuscle. No matter what the origin of the corpuscles, or the substances employed, this charge is always the same. It is nature's electrical unit. Professor Stoney has labelled it an electron. In studying the relation of the electron to the corpuscle, it seems that the former is only known when associated with the latter, and that matter and electricity are so indissolubly bound up together that they are to all intents one and the same.

"The chemist's atom, in the new view, becomes but an aggregation of electrified corpuscles. The mass of the latter is but a thousandth part of that of the lightest of atoms—that of hydrogen; but a hundred-thousandth part of that of an atom of silver or gold. Clusters of these corpuscles, varying in number and arrangement, but absolutely identical among themselves, build up the different kinds of matter—the eighty or ninety 'elements' known to the chemist. The corpuscles, in a word, constitute primal matter; they are the stuff of which all existing things, a starfish or a planet, a music-box or a mummy, are made.

"(On the other hand, the electrician is invited to see in the passage of a 10,000-kilowatt current but a drift of corpuscles."

Electricity, then, is supposed by these scientists to be a hail of these minute corpuscles, each forming an electron. Lord Kelvin computes the diameter of an atom at one twenty-five-millionth of an inch; a corpuscle is certainly not more than one one-thousandth so large as this, and probably is much less.

#### IS MARS INHABITED?

If we accept the dictum of some scientists, that life cannot be assumed to be anywhere possible under conditions that would render it impossible upon the earth, the problem of the existence of human life on the planet Mars is greatly simplified. This is the basis of Prof. D. G. Parker's reasoning in an article contributed to the current number of *Popular Astronomy*. He asks, "Could we live on any one of the other planets in our solar system without an environment of such conditions as would prove fatal?" As regards the planet Mercury and the sun, the admittedly high temperature seems to leave no other conclusion possible than that the burdens of human life would be simply unbearable. On the subject of Martian life, however, the evidence is not so convincing. Professor Parker disregards the "presumed possibilities" on which is based so much of the current reasoning on the problem, and confines himself to the actual dis-

coveries on which there is substantial agreement among astronomers.

#### THE "CANALS" AND "ICE CAPS" OF MARS.

"It is upon these admitted facts that we take the negative side. Passing over the fascinating philosophy of Flammarion, Proctor, and others, the discovery of Schiaparelli's canals were at first hailed as convincing proof of human workmanship, but this argument was dashed to pieces by micrometrical measurements which showed these lines to be from 20 to 70 miles wide, and in some cases more than 2,000 in length.

"That these are irrigated strips of land made green and productive by liberated waters of melting polar ice caps seems equally untenable. It is true that the changing colors give this theory a look of plausibility. But when we consider what such a theory really involves, one may well hesitate before accepting it.

"Who can seriously contemplate transformations the magnitude of which have no parallel upon this globe. How can we accept the proposition of winters so severe as to form ice caps 70 degrees of arc, followed by summers so tropical as to melt them all away, flooding vast regions far beyond the central zone. Not that the severity of the winter can be doubted, but that it should be followed by a season of so high temperature, while receiving only 43 per cent. of the sun rays which we enjoy, seems wholly improbable.

"The claims of those who picture such water supplies under so high temperature are irreconcilable with other known facts. It is admitted that the planet is without any large bodies of water such as our oceans and seas; that the atmosphere is very light,—less than half the density of ours, even at the highest mountain peaks. This cannot be doubted, as, unlike other planets, Mars is seen to the very surface of the ball. If there were water vapors they would condense into clouds, and these would obscure the observation.

"To create such polar snows and ice caps as are claimed presupposes an atmosphere freighted with aqueous vapors, and it would seem that such clouds could not fail to be detected.

"That such plentiful supplies of watery vapors do not exist is further proven by the fact that there is substantially nothing to originate them. It takes the evaporations of large bodies of water to distribute the needed moisture for sustaining plant and animal life. This is proven from our own experience.

"Three-fifths of our globe is deeply covered with water: evaporations from this are daily carried into the atmosphere in immense quantities and taken by the winds for distribution over

the planet. Even this is found to be insufficient, for vast deserts continue arid and parched, and yield no fruitage whatever.

"If this is our experience, what must it be upon Mars, where no such bodies of water exist to be vaporized."

#### REASONS FOR BELIEVING THAT MARS IS UNINHABITED.

Professor Parker rests his conclusion that the planet is not inhabited upon the following premises :

"1. The moisture, if any, is insufficient. It is admitted that there are no large bodies of water to be vaporized, and the telescope practically demonstrates that there are no clouds suggestive of either snow or rain precipitations.

"2. Without abundance of moisture there would be insufficient vegetation to sustain life.

"3. It is too cold. With a temperature presumably two and one-half times lower than our own, no life known to us could survive; nor does it help the matter to assume, as some have, that there is a blanketing process of heat storage, when facts demonstrate that there is no such blanket.

"4. Accepting the LaPlace theory of relative age, if man has ever dwelt upon that distant world, the period of his allotment has doubtless long since passed.

"5. But the most convincing proof lies in the fact of its greatly rarified atmosphere: being generally admitted to be 100 per cent. lighter than ours, even at the highest mountain peaks. Man lives substantially on nitrogen and oxygen, and here we find his supplies practically cut off.

"Professor Lowell, though an affirmative advocate, after reviewing conditions of the atmosphere, is impelled to admit that 'Beings physically constituted like ourselves would be liable to meet with severe discomforts.'

"Is not this a fatal admission? How can life be long perpetuated under conditions of unbrokenly 'severe discomforts?' To suppose that life exists at all under such dissimilar conditions is to speculate upon some sort of organism having no analogy to our own, and about which we know nothing.

"While it may hardly be consistent with the dignity of scientific investigation to rest a conclusion upon the opinion of others, it is nevertheless interesting to know that some of these reasons have had weight with many of the best minds of the present age. Want of space will forbid quotations, but we invite attention to recent utterances of Professors Newcomb, Young, Holman, and others."

#### WHY DISTASTEFUL FOOD IS UNWHOLESOME.

SOME remarkable experiments to show the comparative digestibility of different foods have recently been conducted by Professor Pawlow upon dogs. These experiments are described by Dr. Romme in *La Revue* for August :

The gullet of the animal was cut in sections and fixed to the neck, so that when it ate, the food merely fell to the ground, and the stomach was divided into two parts, one where no food was allowed to penetrate, the other into which was put the food necessary to keep the dog alive.

The results of the experiments proved that the mere offering to the dog of food which he liked caused an abundant secretion of gastric juice, although, of course, nothing had entered the stomach. If he were given a dainty,—not merely food which he liked,—the flow of gastric juice was much more abundant,—that is, food taken without appetite will fall into a stomach without any gastric juices ready for it. The work of digestion was formerly supposed to go on all right if only you could get the food to the stomach. The Pawlow experiments show that it is either not digested at all or very badly digested.

Again, the brain transmits its orders to the stomach by means of two pneumogastric nerves. Professor Pawlow cut these nerves on a specially "prepared" dog. Then he gave the dog some raw meat, which again, of course, did not reach the stomach; but no drop of gastric juice was secreted. No method of mechanical excitement produced any juice. And if, unknown to the dog, without arousing in him the idea of food, bread or cooked white of egg were introduced into the stomach, they remained hours without causing the least secretion of gastric juice. But after administering extract of meat or milk first, the secretion was provoked.

#### HOW MENTAL DISTRACTION MAY CAUSE DYSPEPSIA.

Clearly, says Dr. Romme, in the poorer classes a man lives far more from his muscles than from his brain,—i.e., the desire for food. It is not a bad thing to be mildly greedy. The reason for dyspepsia being so common among men of letters and the like is that their brain is so much occupied with their work that they sit down to table and eat without thinking of the food taken. The pneumogastric nerves are not called into action, and the gastric juice is badly secreted. Now it is easy to understand why it is bad to be absorbed in a book or newspaper at meals.

As for consumptives with no appetite, and mad folk who often refuse food, the gastric juice may be set in motion in their case by taking milk or broth an hour or so before a meal.

## NATURAL IMMUNITY.

SINCE the bacteria came into public notice, they have shown us that many old theories were fallacies. New problems have presented themselves, and most unexpected discoveries are constantly being made, until bacteriology has developed into a science that involves vital questions relating to both pure science and economic matters. In the last number of the *Centralblatt für Bakteriologie*, Dr. E. S. Loudon discusses current theories concerning the means by which any creature resists the action of injurious elements upon it, and describes experiments in confirmation of the theories.

The cells composing an organism are considered as living, microscopic laboratories, in which the material basis of immunity is produced. According to one theory, the phagocytes, or wandering cells, are the active agents of defense; according to another, immunity depends upon the properties of certain humors produced in the blood. Probably the individual conflict against foreign elements is carried on largely within the limits of the cell, although it cannot be denied that it also goes on outside, in the vicinity of the cells and in the intercellular substance as well.

## REMOVAL AND DESTRUCTION OF HARMFUL ELEMENTS.

The fluid which maintains the immunity of any animal may be resolved into three components, different in character and use, but each supplementing the action of the others. The first (*demon*) opens the attack, so to speak, upon the elements to be destroyed. It affects cell elements foreign to the organism, which have penetrated in any way from the outside, and it is the agent concerned with the removal of cell material which has belonged to the organism but has become useless. It cannot destroy useless cell material, but accomplishes the first step in its removal by uniting with it and converting it into a substance which can be acted upon destructively by another component of the fluid (*alexin*), which in itself is indifferent to cell material except when it previously has been made vulnerable. Besides these, there is a third component (*agglutin*), which cooperates with the other two. The degree of immunity of any animal depends upon the quantitative and qualitative relations of these components. By some it is held that the action of the first component is to stimulate the leucocytes to destroy the harmful elements, and another view of its mode of action is through the affinity existing between it and the alexin contained in the leucocyte.

It has been shown by the chemical reactions to staining fluids that leucocytes vary among them-

selves, but there is no method for isolating a single kind of leucocytes; and, if there were, it would hardly be possible to induce the formation in an animal of a specific solvent for a definite kind of leucocyte; but if an animal is inoculated with an exudate in which one kind of leucocyte predominates, a serum will be produced in response to the stimulus which will destroy all kinds of leucocytes.

Among the cell poisons there is one which is formed in animals if a piece of ciliated epithelium from an animal of a different species is introduced under the skin. The serum of such an animal acquires the power of stopping the movement of the cilia in corresponding cells.

If an emulsion made from the suprarenal body of the guinea pig is injected under the skin of a duck it calls forth a change in the nature of the serum of the duck; the emulsion apparently acts as a poison, and in defense the blood produces something that counteracts its effects. If the serum from such a duck is then injected into a normal guinea pig, it will kill it in a few hours.

It is maintained that man, and every animal as well, has a specific serum (*antihæmolysin*) in his blood which, to a certain extent, will resist the action of any poison tending to dissolve its red corpuscles. It is not supposed that the presence of the *antihæmolysin* lends any greater powers of resistance to the red corpuscles, but that it reacts upon the dissolving poison (*hæmolysin*) and weakens it. Normal serum can destroy the dissolving power of many bacterial poisons.

## ANIMAL LIFE AND CONDUCT.

AS Schiller said, "Hunger and love lead the world;" now hunger and love are simply other names for the fundamental systems of what the moralist calls egotism and altruism, and the most recent discoveries of science have thrown new light on the nature and reciprocal function of these two great motive forces. The question is one of capital importance, not only in biology, but also in sociology and ethics. Both in Germany and in England there is a "Struggle for Life" school, composed of more or less faithful disciples of Darwin, and on the other side various French philosophers who have never given up protesting against the theory which reduces the whole of life to a selfish struggle.

## MIGHT VS. RIGHT.

If it is true that brute force is really the basis of life, then it would be natural to find it exemplified especially in the animal kingdom. Their ethics ought in that case to be purely and simply

the law that might is right. This is the question which M. Fouillée investigates in his article on "The Conduct of Life Among Animals" contributed to the second August number of the *Revue des Deux Mondes*. It has been objected by some biologists that what Schiller said as to hunger, etc., should rather be regarded as the desire of the cell for its own work of reparation and division. A locomotive is not hungry because it requires coal and water to go on running. This is not the place to follow M. Fouillée through his extremely technical discussions on animal phenomena; but he goes on to consider what is the origin of what he calls "society" among animals, by which he means, it is to be supposed, those social habits and tendencies which are by some considered to be based on self-interest, and by others on sympathy.

#### INSTINCTIVE SYMPATHY.

Friendly association is, of course, to be found most highly developed among animals which resemble one another most closely,—indeed, an animal which sees another animal for the first time is troubled in proportion to the unlikeness of the other animal to itself,—provided that comparison is at all possible. Thus, a monkey in the presence of a chameleon exhibits a most ludicrous terror. M. Fouillée attributes the foundation of animal society to the desire that every animal has to have round it beings like itself, this pleasure, frequently repeated, ending in creating an absolute need. He considers, therefore, that it is instinctive sympathy and not selfish interest which plays the principal part in the social life of animals, utilitarian considerations merely strengthening bonds which have been established,—in fact, utilitarian motives, supposing them to exist, themselves presuppose the consideration of the advantages which social life gives.

#### TWO DOG STORIES.

A dog in his relations to man often does things which, if done by a human being, would have the character of moral actions. Thus, there is the story of Romanes' dog, which only stole once in his lifetime. "One day, when he was very hungry," says Romanes, "he seized a cutlet on the table and took it under the sofa. I had been a witness of the deed, but I pretended to see nothing, and the culprit remained for some minutes under the sofa, divided between the desire to assuage his hunger and a sentiment of duty. It was the latter which triumphed, and the dog came and put at my feet the cutlet he had stolen; that done, he returned and hid himself again under the sofa, whence nothing could persuade him to come out." As Romanes says, the par-

ticular value of this story lies in the fact that the dog had never been beaten, so that the fear of punishment could not have been a motive with him at all.

There is another story of a Newfoundland and a dog of another breed who were engaged in quarreling near a jetty. They fell into the sea, and the other dog, being a bad swimmer, began to drown, whereupon the Newfoundland, forgetting his anger, had all his life-saving instincts aroused, and proceeded to bring his late enemy to the bank. Another story is told of two Pyrenean dogs in whom the feeling of property was so highly developed that each of them would defend his plate of food with the utmost valor against any depredations on the part of the other. One of these dogs was cleverer than the other one, and knowing that his companion was very fond of barking and making a fuss when horses went by, would often pretend that something interesting was going on in the distance, and make off at great speed toward it; he would allow himself to be outstripped in the race, and, returning quickly, would eat the other's food.

#### THE PIGEON PUNISHED.

A French pigeon fancier tells a remarkable story of a pigeon collecting sticks for his nest and having been robbed during his absence by another pigeon. Each time, on his return, he would display signs of astonishment, looking all around in a vain search for any sign of the lost sticks. This went on for some time, and then the pigeon laid a trap for the thief; he put down a stick and then pretended to go away, but really watched the nest from a little distance off. When the thief came the lawful proprietor of the sticks fell upon him, and, with beak and wing, administered terrific punishment. The interesting part is that the robber only defended himself in a half-hearted manner, and seemed by his demeanor to admit the justice of his punishment.

#### FEELING TOWARD A NEW RELIGION.

"**ANTICIPATIONS**," by Mr. H. G. Wells, attracted so much attention that the author has been encouraged to begin a new series of articles in the *Fortnightly Review*, entitled "Mankind in the Making." The first paper, which appears in the September number, is called "The New Republic." Its proper title should have been "The New Religion," for almost all of it is devoted to a discussion of what general principle, leading idea, or standard can be found sufficiently comprehensive to be of real guiding value in social and political matters, and throughout the business of dealing with one's fellow-men. Mr. Wells describes his own enterprise as a

attempt to put in order, to reduce to principle, what is at present in countless instances a matter of inconsistent proceedings, to frame a general theory in accordance with modern conditions of social and political activity. He maintains that no religion which at present exists prescribes rules that can be immediately applied to every eventuality. Upon a thousand questions of great public importance religion as it is generally understood gives by itself no conclusive light. The foundation of his new religion, or starting-point, is the desire to leave the world better than we found it.

#### BIRTH AS A RELIGIOUS BASIS.

He then goes back to the foundation of all religions, the bedrock from which every religion has sprung, to which the Church bears witness in the supreme position which it has ever accorded to the Mother and the Child. His first basic doctrine is that the fundamental nature of life is a tissue and succession of births. Love, home, and children are the heart-words of life. The statement that life is a texture of births, he thinks, may be accepted by minds of the most divergent religious and philosophical profession. Life is a fabric woven of births, and struggles to maintain and develop and multiply lives. The departing generation of wisdom, which finds its expression in the meditations of Marcus Aurelius, is based upon a predominant desire for a perfected inconsequent egotism, whereas the new faith, of which he makes himself the prophet, protests against this accentuation of man's egotistic individuality. To the extraordinary and powerful mind of Schopenhauer this realization of the true form of life came with quite overwhelming force, although it seemed to him a detestable fact, because it happened he was a detestably egotistical man. To others less egotistical the recognition of our lives as passing phases of a greater life comes with a sense of relief and discovery. The discovery of the nineteenth century which has been its crowning glory has been to establish the fact that each generation is a step, a definite measurable step, toward improvement. Darwin, he thinks, has altered the perspective of every human affair. Social and political effort are seen from a new view point. Hence the need for formulating what he calls the new republic.

#### A REPUBLIC OF BETTER BIRTHS.

In future we have to judge of collective human enterprises from the standpoint of an attentive study of birth and development.

"Any collective human enterprise, institution, movement, party, or state is to be judged, as a

whole and completely, as it conduces more or less to wholesome and hopeful births, and according to the qualitative and quantitative advance due to its influence made by each generation of citizens born under its influence toward a higher and ampler standard of life."

The essential idea which the new republic is to personify and embody is that men are no longer unconsciously to build the future by individualistic self-seeking, but by a clear consciousness of our coöperative share in the process. Every question,—such, for instance, as the continuance of the existence of monarchy,—would be judged solely from the question whether it ministers or does not minister to the bettering of births and of the lives intervening between birth and birth. The new republican, in his inmost soul, will have no loyalty or submission to any kind and color save only if it conduces to the service of the future of the race.

#### THE FAILURE OF OUR PARTY SYSTEMS.

There is not in Great Britain or in America any party or section, any group, any single politician, whose policy is based upon the manifest trend and purpose of life as it appears in the modern view. Mr. Wells does not believe that any Liberal or Conservative has any comprehensive aim at all as we of the new generation measure comprehensiveness. Hence the new republican cannot be a thoroughgoing party man. We want reality because we have faith. We seek the beginning of realism in social and political life. We have to get better births and a better result from the births we get. Each one of us is going to set himself immediately to that, using whatever power he finds to his hand to attain that end.

#### LONDON'S SUNDAY.

ACCORDING to the symposium which is being conducted in the *Commonwealth* by Canon Scott Holland, Sunday in London is in a bad way. In the current number "A Printer" and a "Tram-Driver" give their views on the subject. "Sunday in the Metropolis," says the latter, "is becoming nothing more nor less than a weekly Bank Holiday:

"As I ride up and down the road I see drunkenness and debauchery on every side. Fathers and mothers unworthy of the name, young men and women with no sense of decency in them, while on every side my ears are assailed with profane language, cursing, and blasphemy.

"The effect on the masses of spending their Sunday as a Bank Holiday, instead of a holy day, is apparent to the most casual observer on Monday morning: they are in a state of bank-

ruptcy, and have to resort to the pawnshop to carry them on until pay-day. I see crowds of people waiting for the pawnshops to open, some of them most respectable people, but because of their manner of spending Sunday they have to resort to this ignominious manner of raising money to carry them on till the end of the week.

"To the tram-worker Sunday brings no cessation of labor. Sunday and week-day, feast-day and fast-day, it is the same; there is no day of rest to look forward to, consequently Sunday is the same as week-day to him and his wife. He having no regular meal-times, his wife has to prepare and take his food out to him, so she is never free to spend her Sunday as a day of rest.

"The London County Council, all honor to them, have, since they have acquired the tramway system in South London, arranged that every driver and conductor in their employ gets one day's rest in seven, one day in which they have nothing whatever to do with their work,—they have neither to ask if they can be spared or to show up for it,—but one day absolutely free, and every man knows which day of the week his rest-day falls upon, as it would be impossible under the existing conditions to have Sunday."

#### THE PRINTERS' SUNDAY.

"A Printer" says:

"I suppose there are still some people who delight in Sunday as a day of faith and worship and good works,—but such people are few and far between, something like Abraham's ten righteous men. I have been going about asking all sorts and conditions of men, 'What do you think about Sunday?' There has been a wonderful degree of unanimity in the answers. Nearly every one has said, in varying phrases, 'It all depends on the weather.' The shopkeeper sells more sweets if the Sunday is a fine day. He is nearly as many in number as the publican, and he keeps open on Sunday for even longer hours than the publican. 'Sunday' to him conveys no meaning except that of larger sales than on other days. And the boys and girls that buy the sweets and drink the ginger beer? For them a fine Sunday is merely a synonym for a fine Bank Holiday. The town publican prefers a wet Sunday. He is busier then. But, wet or fine, his doors are crowded at opening time, and the thirst of a neighborhood comes to be slaked.

"In the printing trade Sunday work is sometimes necessary. I have never heard a printer object to Sunday work on religious grounds. On the rare occasions when exception is taken, the reasons are either frankly economic or personal. The observance of Saturday afternoon is the printer's cult; and nothing else must come in

the way of its exercise. In exchange for the opportunity to attend a football match the Sunday's rest is freely bartered."

#### HOW MUNICIPAL THEATERS MIGHT BE MANAGED.

OUR readers may recall a reference in our August number (page 231) to Mr. William Archer's plea for publicly owned theaters. Mr. Charles Charrington contributes to the *Contemporary Review* for September an article in support of this movement. He says that it would be well if a national and municipal theater league were formed, which would set itself to secure the foundation of municipal theaters in the great towns, and especially in the London boroughs, as well as a great theater for all London. He maintains that in Great Britain, owing to the lack of municipal theaters, not only is the standard of dramatic work below that of other countries, but that it is dearer and less in quantity; above all, that so long as the theater lacks the organization, implicit in the control of the theater of every other country in Europe by the people themselves through their accredited representatives, so long will the weakness of our theatrical management remain inherent and inevitable. "It is not only that the number of times Shakespeare's plays are performed in German-speaking countries compared with the number in England is about sevenfold; but also that, in England, only the plays which admit of the opportunity of great star parts for the actor-manager are performed; whereas, among our neighbors, all the plays, including the great historical cycle, are constantly produced."

#### THEATERS TO BE LEASED.

Every municipal theater, he maintains, would be a repertory theater in which long runs would be impossible. The municipality would never manage the theater itself. It owns the theater and invites tenders for the lease, which is usually granted for five or seven years to a manager, who receives a subsidy and pays no rent. The manager, as a rule, does as he pleases, but he is prevented from using the theater as a mere means of speculation. Prices are kept low, and the programme must be brought out in advance for the whole season. The municipality also has a right of veto upon plays, and can, and does sometimes, stipulate upon the performance of a certain number of classical plays. It also insists upon the payment of standard wages to the employees. Of the great London theater upon which Mr. Charrington would spend \$2,500,000 in order to make

it a model for all subventioned theaters, he has many things to say. For instance :

"Since it would be in a sense a national institution, the King, who has never been lacking in generosity, might give the land, without making the building a court theater, an impossible institution in our democratic country, while the fact that it would be under the control of the London County Council should sufficiently guarantee its conduct on democratic lines as to seating and prices; finally, the subscriptions, which must be unconditional, so that the future of the concern may not be handicapped, will be some evidence of a real demand on the part of influential citizens."

#### THE ARGUMENT ON MORAL GROUNDS.

Mr. Charrington comments incidentally on the opposition to his scheme that may be looked for from "the Nonconformist conscience." He says :

"My own experience, if I may be pardoned an unavoidably egoistic tone, in speaking to a great number of Nonconformist ministers of various denominations, is, that in a great number of cases their repugnance to the theater is due to the scenes they see depicted upon the posters which garnish our hoardings. Now the coarse sensationalism and lubricity that these pictures frequently advertise are among the principal reasons which should lead us to press forward the establishment of a municipal theater ; for, while such a theater would necessarily produce plenty of farces and laughter-provoking plays and other works which would not rank high as artistic productions, an institution for which the people were collectively responsible would probably be as much superior to the average theater of private enterprise in moral tone as the municipal free library is superior to the little circulating library where the penny dreadful is the representative form of literature."

#### HOUSING OF THE RURAL POOR IN IRELAND.

MUCH has been done in Ireland through the agency of the local governing bodies to improve the housing of the laborers. Mr. Gilbert Slater, writing in the *Contemporary Review* for September, describes this work. He opens his article by quoting from Mr. W. W. Crotch's paper on the condition of housing in rural districts of England, in which it is declared that whole countrysides may be traversed without finding a single cottage with a watertight roof available for habitation, while the cottages which do exist are scandalously lacking in sanitary accommodation. Few new cottages are being erected, and the old ones, through lack of repair, have been allowed to become uninhabitable.

The remedy for this, in Mr. Slater's opinion, is to be found in an adaptation of a principle which has been successfully embodied in the Laborers' Dwellings Act of Ireland. He admits that it is socialistic. He says :

"If it is asserted that to provide lands and houses for wage-earners, at a cost that can hardly much more than pay for maintenance and management, leaving the interest and repayment of capital to be paid out of rates and grant, is nothing more nor less than outdoor relief in aid of wages, one cannot deny that, economically speaking, the accusation is true. But speaking ethically and psychologically, it does not follow that the tenant is pauperized, nor that his independence is undermined, nor that he will probably lose in wage an equivalent of what he gains in garden and house-room."

Irish legislation on this subject is a clear embodiment of the principle "that the Irish agricultural laborer is entitled to demand not only that he shall be housed in a manner consistent with human and not merely animal life, but also that with his house he shall be provided with a garden, which can, with proper culture, pay the rent of both house and garden. The laborer who has no cottage, or whose cottage is insanitary, with the help of the signatures of a few friends and neighbors sends his 'representation' to the District Council ; the District Council is required by law to provide the cottage, and encouraged by aid from the Treasury not to evade it duties ; if it does evade them, the laborer can appeal to the Local Government Board."

Next to nothing has been done in England and Wales by the local governing authorities in the way of improving the cottages of the rural poor. Up to May 31, 1900, there were only fourteen cottages built or building. In Ireland at the same date there were 14,888 cottages built or building. Since that date the Local Government Act of 1898 came into force, with the result that in the very first year loans were applied for for the purpose of providing 8,000 cottages. Up to the end of the financial year of 1901 over two millions sterling has been sanctioned for the purpose of rebuilding laborers' dwellings in Ireland. The cost is defrayed by a rate which may not exceed one shilling in the pound of the rateable value of the property. In Ireland the government grants under the Land Purchase acts £40,000 a year to cover cases in which purchasers fail to pay their interest on advances, but as the purchasers seem to have paid up punctually, this sum of £40,000 has been available for secondary purposes, among which that of housing stands first. Cottages with half-acre garden plots are let at from 6½d. to 1s. 6d. a week.

## THE PERIODICALS REVIEWED.

### HARPER'S MAGAZINE.

IN the October *Harper's* Dr. Richard T. Ely has a study of Amana, the religious communistic society on the Iowa River. "Outside of Amana, the only communistic settlements of any note now existing in the United States are those of the Shakers, and their thirty five communities do not altogether have as many members as are embraced in the Amana Society. Amana, then, comprises more than half the communists of the United States, and unless I am mistaken, in studying Amana we are examining the history of altogether the largest and strongest communistic settlement in the entire world." There are 1,800 souls in the community now, and they have added to their domain until it comprises some 26,000 acres.

Mr. Charles Mulford Robinson writes of the "Art Effort in British Cities," there is a nature study contribution from Mr. J. J. Ward, "Plant Battles," a beautifully illustrated light sketch of Monte Carlo by André Castaigne, and an account of the "Newest Definitions of Electricity," by Carl Snyder, which is reviewed among the "Leading Articles of the Month."

### THE CENTURY MAGAZINE.

IN the October *Century* the opening articles deal in text and illustrations with the much-discussed relation of photography to the proper pictorial art of the painter. Mr. Alexander Black conducts a dialogue between the artist and the camera man, and Mr. Alfred Stieglitz writes on "Modern Pictorial Photography." Mr. Stieglitz is the founder of the Society of Photo-Secessionists, who were organized to develop and publish the true art value of photographic reproductions of beautiful things. Mr. Stieglitz tells us that the organization of artists known as the Munich Secession was the first officially to recognize the possibilities of pictorial photography. The art committee of the Glasgow Exhibition in 1901 received pictorial photography as a legitimate member of the family of the fine arts. In the spring of this year the artists of the Vienna Secession admitted photographs to the jury of selection on the same terms as paintings, drawings, and statuary. At the same time, the jury of the Paris Salon accepted for hanging ten photographs which had been submitted by E. J. Steichen, a young artist of Milwaukee. Large prices are being paid by connoisseurs for choice photographic prints, as much as three hundred dollars having been refused for a picture exhibited this year at the National Arts Club of New York.

### NEW YORK'S SUBWAY.

Mr. Arthur Ruhl describes "Building New York's Subway," and Mr. F. W. Skinner tells of the particularly difficult engineering problems in the subway. The longest solid tunnel in the subway system is that which dives into the solid rock at One Hundred and Twenty-eighth Street. "At an average depth of 100 feet below the surface, it burrows through blackness for a distance of two miles, except at One Hundred and Sixty-ninth and One Hundred and Eighty-first streets, where elevators will carry passengers to and

from the tracks. Except for the Hoosac tunnel, there is no single tunnel so long in America."

### OTHER ARTICLES.

Mr. Sylvester Baxter discusses "Art in Public Works," the aqueducts, water-towers, power-houses, reservoirs, and bridges of the modern cities, and Dr. James M. Buckley makes an interesting study of the founder of Zion City, under the title, "Dowie Analyzed and Classified." Dr. Buckley's analysis fits John Alexander Dowie, of course, into the class of fanatics, spiritual megalomaniacs. A much more sympathetic character sketch of Dowie follows from the pen of John Swain, who believes the founder of Zion City to be sincere. "Yet I must admit that he uses all the methods of the charlatan."

### MCCLURE'S MAGAZINE.

WE have quoted in another department from Mr. Ralph M. Easley's article in the October *McClure's*, "What Organized Labor has Learned."

A brief note on Woodrow Wilson, by Mr. Jesse Lynch Williams, emphasizes the fact that it is not as an academic personage that President Woodrow Wilson undertakes his task at Princeton, but as a man among men, realizing always that the students he is to lead are to be citizens and the world's servants, and the college must make men of them.

There is an eloquent appreciation of the actress Rachel by Miss Clara Morris. The actress gives many interesting anecdotes of the great Jewess. Miss Morris has an indignant account of the rapacious and humiliating tactics of Rachel's family. In her minority Felix, her father, allowed the brilliant girl only sixty dollars a month for her own use, to cover theatrical costumes, private wardrobes, and pocket money. When she finally broke away from her slavery to her own family, she gave them all her apartments contained, a pension of twelve thousand francs to her father, paid the debts of her sisters, and exerted herself to get good positions for her brother. The coffin of the great actress had barely settled in the grave when this precious family had a public sale of her belongings.

Mr. John La Farge closes his study of Velasquez with the opinion that of all artists he was the most of a painter, "as having most naturally expressed the special differences of painting from other forms of representation; the appearance of things and not their analysis being the special character of painting. His life is that of a modest, sincere, and honorable man."

### SCRIBNER'S.

MR. RUSSELL STURGIS describes in the October *Scribner's* the work of the sculptor J. Q. A. Ward, who now has in hand his greatest task, "and the most formidable piece of combined sculpture yet undertaken in America—the pediment for the Stock Exchange building, in Broad Street, New York." Mr. Sturgis thinks that "in Ward we have the first of American sculptors in this important matter of con-

structional, expressional, and harmonized design in the placing and grouping of human figures."

#### IMPROVEMENTS IN FIRE-FIGHTING.

In "Fire-Fighting To-day — and To-morrow," Mr. Phillip G. Hubert, Jr., says that our American system of fire-fighting is the most perfect in the world. Our fire force is nearly four times that of Germany or France in proportion to the population, and three times that of England. Fires now cost us \$150,000,000 a year, not counting insurance and expense of fire departments, which amounts to another hundred million. The immediate improvements hoped for are chiefly the substitution of electricity for horses,—that is, automobile fire-engines, more signal boxes, direct communication between the boxes and the fire houses, as well as with the central station, the greater use of chemical extinguishers, devices for fighting smoke, and the better education of the public in using the appliances provided for sending in the alarm.

#### OVERCROWDED LONDON.

Mr. Walter A. Wyckoff continues his articles "Among London Wage-Earners." He says that unsanitary and savage London has largely disappeared, but that overcrowded London remains a most urgent question of the hour. He describes the "Poor Men's Hotels," where sixpence procures a clean bed and room for the night in a comfortably appointed hostelry.

#### THE COSMOPOLITAN MAGAZINE.

A POSTHUMOUS essay by John Fiske on Alexander Hamilton begins the October *Cosmopolitan*. In the series of sketches of "Captains of Industry," Mr. James H. Bridge writes on Henry Clay Frick, and Mr. Edward Bok on Cyrus Curtis, the founder and publisher of *The Ladies' Home Journal* and *The Saturday Evening Post*. It was in 1883 that Mr. Curtis, then thirty-three years old, asked an artist to draw a heading for a paper to be called *The Ladies' Journal*. The artist inserted a domestic scene between the second and third words of the title, and labeled it "Home" in small letters. The first subscription received asked for "The Ladies' Home Journal," and the next, in short, the public renamed the paper, and Mr. Curtis accepted the amendment. The publisher had no money, and he asked the advertising agency of N. W. Ayer & Son for \$400 credit. The credit was allowed, and the entire \$400 was spent in one advertisement in one periodical. In answer to this announcement several thousand people sent 35 cents for a year's subscription. Nowadays, Mr. Bok says, *The Ladies' Home Journal* spends as much as \$800,000 in a single year to make its announcements to the public. Other captains of industry dealt with in this number are David H. Moffat, Woodrow Wilson, the new president of Princeton University, and H. H. Vreeland, president of the Metropolitan Street Railway Company of New York City.

#### "THE MISSING SCIENCE OF HEREDITY."

Mr. H. G. Wells has an interesting discussion of the problem of the birth-supply, a chapter in his series of contributions under the title, "Mankind in the Making." Mr. Wells examines the possibilities of carrying out the principle of Plato, Douglas Galton, and Vicarull Martin in the matter of improving the race by making those units which are best fitted to an improved order of mankind. But Mr.

Wells thinks that even if we had a very wise committee to decide on who should marry whom, we should probably soon vote them out of office and let things go on in the old way. The only thing we can do in this all-important enterprise of improving the birth-supply must come, according to Mr. Wells, through research. But he adds that if there is at present a man specially gifted and disposed for such inquiry, the world offers him no encouragement. "This missing science of heredity, this unworked mine of knowledge, on the borderland of biography and anthropology, which for all practical purposes is as unworked now as it was in the days of Plato, is in simple truth ten times more important to humanity than all of the chemistry and physics, all the technical and industrial science, that ever has been or ever will be discovered."

#### EVERYBODY'S MAGAZINE.

THE October number of *Everybody's* begins with a very dramatic account of "Old Steamboat Days on the Missouri," by J. W. Ogden. The last great commercial steamer to navigate the Missouri River went out of commission twenty years ago. The river traffic bred a tribe of hard men. A pilot was a king in those days. Almost three hundred steamers have been wrecked in the Missouri, and a thousand human beings were lost in the disasters of a half-century of river service. These great steamers were, after 1830, graceful, swift, and commodious. Some of them were over 200 feet long, with the beam of an ocean-going ship. But they were so shallow that their capacity was not more than 1,000 tons. They were capable of making about ten miles against the current. The innumerable treacheries of the Missouri required such an exhaustive knowledge and phenomenal memory on the part of a pilot that ten or even fifteen thousand dollars was not an unusual compensation for eight or nine months' service.

There is an excellent account of the experiences of a literary woman as a working girl by Miss Marie Van Vorst under the title, "The Woman That Toils." Her studies of the factory life of the girls in the Massachusetts towns are eminently practical and accurate. An article on "Light Cures, Old and New," by Dr. A. E. Bostwick, discusses the new remedial work which is best shown in the achievements of Dr. Finsen, of Copenhagen, whose career is described in this number of the REVIEW OF REVIEWS. Besides Dr. Finsen, Dr. Bostwick tells of analogous work done by Dr. Kaiser, of the Vienna Medical Society, and by Drs. Gotthell and Franklin in New York. These endeavors to cure disease by photo-therapy are founded on the old idea that there is life and health in light, and are legitimate successors of the old theories of the once famous Dr. Dio Lewis, who introduced the sun baths that afterward came into general use.

We have quoted among the "Leading Articles of the Month" from Mr. Chalmers Roberts' sketch of Alfred Beit, "The Cressus of South Africa."

#### THE WORLD'S WORK.

IN an able article on the great modern life insurance companies, telling how they use their enormous surplus, it is stated in the October *World's Work* that there was a surplus last year of no less than \$120,000,000 in which policy holders did not participate at all.

What is done with such an enormous superfluous income? This writer shows that the insurance companies have added the functions of banking corporations, trust companies, safe-deposit concerns, and have, too, a powerful influence in the affairs of railroad corporations. The Mutual Life Insurance Company of New York owns a controlling interest in the \$2,000,000 capitalization of the United States Mortgage and Trust Company, as well as several million dollars' worth of the bonds of the same corporation. The New York Mutual owns almost control of the Guaranty Trust Company. A very considerable interest in the great Morton Trust Company is similarly controlled. Each of these companies has offices in the New York Mutual's building in the city of New York. Each is in close touch with the others. The resources of each are ready at any time to coöperate with those of the others. Notice the Equitable Life Assurance Society's report. This society—whose capital stock is \$100,000—owns absolute control of the Western National Bank, with its \$2,100,000 capitalization, and of the Mercantile Trust Company, with \$2,000,000 capitalization. Subsidiary to the Mercantile Trust Company, which is an exceedingly powerful concern, is the Mercantile Safe Deposit Company, itself a most profitable organization.

The Rev. Thomas Dixon, Jr., tells how he escaped the "horrors of city life" and found happiness in a country home on the shores of Chesapeake Bay. Mr. Dixon does not find it difficult to convince the reader that his historic house, with "modern conveniences" added, his five hundred acres of land, his horses, cows, dogs, game, and fish, are better than a city flat. All this, he says, with canvasback ducks, terrapin unlimited, fish, and historical associations, he got "for the price of nineteen feet of scorched mud in New York."

Under the title "The Organized Conscience of the Rich," Mr. Franklin Matthews tells of the many-sided activity of the New York Chamber of Commerce, from its present of \$35,000 for the relief of Savannah in 1865, to the last present of \$42,000 to the West Indians who suffered in the volcanic disaster. The Chamber has raised for public charities altogether \$2,800,000, of which \$1,044,000 was for the victims of the Chicago fire.

Mr. George Maxwell argues that a fixed wage is unjust, "because the producer has no real share or property in the article produced." William McAndrew describes "A Day's Work in a New York Public School," and M. G. Cuniff investigates "Labor Union Restriction of Industry," finding that in the building trades, at least, the union rules are a very real handicap to individual industry and ability and to the employer.

#### THE ATLANTIC MONTHLY.

WE have reviewed among the "Leading Articles of the Month" the article in the October *Atlantic Monthly* on "Limitations of the Production of Sky-Scrapers," by Mr. Burton J. Hendrick.

Mr. Frank Foxcroft begins the magazine with "A Study of Local Option," largely occupied with investigation into the Massachusetts situation. Mr. Foxcroft thinks that in this State the local-option system, although it may not be perfect, is probably the best plan ever devised for dealing with the liquor traffic, and that it works better in harmony with American ideals of self-government. Mr. H. H. D. Pierce, in an article on "Russia," gives much attention to the social life in

St. Petersburg, and especially to the Russian opera. The favorite composers in Russia are Glinka and Tchaikowsky, the former's opera, "A Life for the Czar," being the favorite with all classes. There has been completed in St. Petersburg during the past year the new People's Theater, the gift of the Emperor to the people, where excellent dramatic and operatic works are given at prices within the reach of the poor. For the equivalent of five cents in our money an evening may be spent in this playhouse, and if desired the theater furnishes an excellent dinner before the performance at an equally moderate price. Two good literary essays are by H. D. Sedgwick, Jr., on "Montaigne,"—of whom it is said, "There have been greater men in literature, but none have been more successful,"—and by Harriet Waters Preston on George Meredith, under the title, "A Knightly Pen." Edward Atkinson writes on "Commercialism," there is an essay on "Democracy and the Church," by V. D. Scudder, Prof. I. N. Hollis discusses "Intercollegiate Athletics," and Edith B. Brown "Moral Hesitations of the Novelist."

#### THE NORTH AMERICAN REVIEW.

THE September number of the *North American Review* opens with a discussion of the question "Will the Novel Disappear?" in which James Lane Allen, W. D. Howells, Hamlin Garland, Hamilton W. Mabie, and John Kendrick Bangs participate. The discussion was suggested by an interview with Jules Verne recently appearing in the London *Daily Mail*. In this interview the great French romancer affirmed his belief that in fifty or a hundred years from now there will not be any novels or romances, at all events, in volume form. In his opinion they will all be supplanted by the daily newspaper. These views of Jules Verne are strongly opposed by Messrs. Allen, Howells, Garland, and Mabie.

Mr. John Kendrick Bangs alone, of the five writers who contribute to this symposium, confesses to an agreement with M. Verne in his prophecy. Even Mr. Bangs, however, concedes that the same thirst for the story of of love and life which is inherent in our weak human nature would be as strong as ever, and it would be satisfied, he says, by the genius of the future, just as our present-day geniuses are satisfying all the immediate aspirations of men. "If wireless telegraphy, why not bookless romances, typeless novels, pageless poems? We already have jokeless comic papers. These things are surely coming, and I foresee the day when without novels, poetry, or drama the public will be surfeited with romances of the most stirring character; poems of stately measure and uplifting concept; psychological studies of the deepest dye; and dramas that will take the soul of man and twist it until it fairly shrieks for mercy,—and all of these things men and women will get while they sleep. It is my impression that the literature of that period will be induced by pills." Mr. Bangs then goes on to illustrate his ideas by such concrete examples as the "Alfred Austin Pellet," "Caine's Capsules for Creepy Creatures," the "Belasco Tabloid," and so forth. He concludes with a suggestion that "Some clever druggist will meet the literary necessities of the hour, and put up all the literature that anybody can possibly want in small doses, in every variety, and at a price which will bring it within the reach of all. It will be a great boon, and will enable thousands of men who might otherwise have been novelists, poets, or play-

wrights to turn their backs on letters and take up some really useful occupation."

#### THE NEW PHILIPPINE GOVERNMENT.

The law of July 1, 1902, providing a temporary civil government for the Philippines, is analyzed in an article contributed by Mr. Sidney Webster. His examination of this and other legislation for our colonial possessions leads Mr. Webster to the conclusion that the theory upon which the Spanish treaty was negotiated,—that the new islands could be held indefinitely as colonies outside the Constitution,—has prevailed; that places subject to the jurisdiction of the United States, but not incorporated into it, are not within the United States; that incorporation of territory acquired by a treaty of session in which there are conditions against the incorporation until Congress has provided therefor, will not take place until, in the wisdom of Congress, the acquired territory has come into the American family; that the article of the treaty with Spain by which it is declared that the civil rights and political status of the native inhabitants "shall be determined by the Congress" show a purpose not only to leave the status of the territory to be determined by Congress, but to prevent the treaty from operating to the contrary. Hence the Constitution does not yet control in the new islands.

#### AMERICANS IN EUROPE.

Mr. H. G. Dwight, formerly connected with the American consulate at Venice, writes an entertaining description of "Americans in Europe, as Seen From a Consulate." Mr. Dwight, from his vantage ground of consul's messenger, indulges in certain pointed observations on the globe-trotting propensities of his fellow countrymen. He says: "I often marvel at the tales of travel that are narrated to me, particularly when, as is frequently the case, my visitors affirm themselves to be abroad for recuperation. He of the seven-league boots was nothing to them. They mention the number of towns they have 'done' in as many days, and their reminiscences appear to be solely of accommodation. One wonders what idea they have in traveling. Their interest seems to be principally in motion; and when they find themselves outside of a railway car, they are at a loss for employment. It is then that they come to us for advice. St. Mark's and the ducal palace once hurried through, the satiated traveler comes to ask if there is anything else he should 'do' before going on? Certainly not; he should depart with all speed, and God be with him! What else can you say to a man whose sole interest in this enchanted town is that he finds in a café a trick of cooling beer that he has never seen? With regard to the Doge's Palace, the observation of many is that it lacks steam heat and has an elevator."

#### THE LAW OF PRIVACY.

Mr. Elbridge L. Adams, of Rochester, N. Y., who was counsel for the successful parties in the right of privacy case which recently came before the New York Court of Appeals, contributes an article in which the grounds of this decision are examined, together with certain legislation of other States on the same subject. The Court of Appeals decided, it will be remembered, that in the existing state of the law there is no right of privacy as a legal and actionable right. The case as it came before the court was this: a lithographic company had printed, and a milling company had circulated as an advertisement of its flour, some prints upon which appeared the likeness of a young woman, above

which were the words "Flour of the Family," and below, the name and address of the milling company. A young woman claiming to be the original of the portrait brought suit against both the maker and user of the advertising matter, claiming that she had been greatly humiliated by the scoffs and jeers of persons who had recognized her face and picture on the advertisement, and that she had been made sick, and had been put to the expense of employing a physician, by reason of which she had suffered damage. She prayed to be compensated in damages and for an injunction restraining the further circulation of the picture. The relief sought was granted solely upon the proposition that the circulation of the advertisement without the complainant's consent constituted an invasion of her right of privacy. For this contention, however, the Court of Appeals was not able to find any precedent. Mr. Adams thinks that he has found in recent statutes enacted by the State of California a basis for legislation which should remedy most of the evils complained of, and also holds that the distinction between public and private characters in this country has been virtually nullified. This California law makes it unlawful to publish the portrait of any living person a resident of the State, other than that of a person holding a public office, without the written consent of that person first had and obtained. It is provided, however, that the portrait of a person convicted of a crime may be lawfully published. It is further forbidden to publish a caricature of any person which "will in any manner reflect upon the honor, integrity, manhood, virtue, reputation, or business or political motives of the person so caricatured, or which tends to expose the person so caricatured to public hatred, ridicule, or contempt."

#### SANITARY PROBLEMS OF THE ISTHMIAN CANAL.

Surgeon-General Sternberg, U. S. A., retired, outlines some of the sanitary problems connected with the construction of the Isthmian canal. One of the first things to be looked after, in his opinion, should be the water-supply. A pure water-supply should be insured before the laborers are sent to any particular section of the line to begin work, and other necessary sanitary measures should be promptly executed. Dr. Sternberg accepts as fully demonstrated the mosquito theory of malarial and yellow fever. While the men cannot work under mosquito bars, Dr. Sternberg suggests that they can sleep under them, and that they should be compelled to do so. Mosquitoes seek their food chiefly at night, and a man when not protected by a mosquito bar is especially exposed to their attacks while asleep. It has long been understood that sleeping under a mosquito bar affords a certain amount of protection from malarial fever, although the explanation of this fact is of very recent date. Dr. Sternberg concludes by recommending the establishment of a sanitary service in connection with the Isthmian canal operations similar in character to the sanitary corps enlisted in the army.

#### OTHER ARTICLES.

Prof. E. W. Hilgard writes on "The Causes of the Development of Ancient Civilization in Arid Countries," Mr. A. M. Wergeland on "Grieg as a National Composer," Mr. Arthur Symons on "Casanova at Dux: An Unpublished Chapter of History," Mr. Herbert C. Howe on "Contradictions of Literary Criticism," Mr. G. F. Kunz on "The Management and Uses of Expositions," and Muggiorino Ferraris on "The Public Debt of Italy."

We have quoted in our department of "Leading Articles of the Month" from Señor Morale's account of the situation in Colombia, and from Lieutenant-Commander Smith's exposition of "The Navy's Greatest Need."

#### THE ARENA.

IN the September *Arena*, Mr. Duane Mowry shows that the indiscriminate criticism and abuse of our public men in the newspaper press tends strongly to keep good men out of political service. Mr. Mowry pleads for "the erection of a line between just and unjust criticism, and for the emphasis of a marked difference between the rights of free speech and unbridled license."

#### PROSPECTS OF THE DANISH WEST INDIES.

Although our title to the Danish West Indies is not yet perfected, it is not too early to begin taking an account of stock in the islands. Mr. Hrolf Wisby, in an article on "Our Duty in the Danish West Indies," makes much of the fact that negroes, and negroes only, can stand the climate of the islands in the long run, and he argues that the country must be thrown open to the native black population, while the colored population of our southern sea-coast States should be induced to immigrate to the islands. As to the agricultural possibilities, this writer thinks that hemp-growing would be more congenial and profitable than sugar-cane-growing. Hemp is a product suited to the capacities of the small farmer, and it will grow in soil that is now considered waste.

#### THE REDUCTION OF CRIME.

As the most important steps toward the extermination of the criminal classes, Adelle Williams Wright names the following:

- "First—The establishment of homes for convicts.
- "Second—The education of the young.
- "Third—The providing of proper dwellings for the poor.
- "Fourth—The prohibition of the sale of intoxicating liquors.
- "Fifth—The establishment of the curfew, or its equivalent."

#### A FLING AT ORGANIZED CHARITY.

Mr. Joseph Dana Miller denies to charity, as such, any place in the social relations of men. Society owes relief of distress as a matter of justice. For all attempts at the organization of private relief Mr. Miller has only this to say:

"Intellectually and morally deteriorating is this playing at charity. Better far the hard, calculating bent of mind, urged and animated by a sense of un pitying justice, than this toying with a great problem, this skimming the social surface for novelty, this wetting of dainty feet in idle dalliance in the great deep."

#### OTHER ARTICLES.

Editor Flower voices "The Cry of the Children" in a vigorous protest against the employment of children of tender years at factory labor. Mr. George F. Spinney contributes an interesting sketch of President Vreeland of the Metropolitan Street Railway system in New York City. Mr. Vreeland's career thus far is a good concrete illustration of "Humanity's Part in the Labor Problem"—the title of Mr. Spinney's article. There is a "conversation" with Prof. John Ward Stimson on the subject of "Art for America."

#### THE INTERNATIONAL QUARTERLY.

ONCE more we have an American counterpart of the British quarterly reviews. The *International Monthly*, a periodical very acceptably edited for the past two years by Mr. Frederick A. Richardson, of Burlington, Vt., is now succeeded by the *International Quarterly*, under the same editorship. In contents there is no material change noticeable, beyond the marked tendency to expansion. The average length of the articles, which has always been in excess of the average for other American reviews, remains about the same as formerly, but the number of articles making up an issue has been doubled.

As to the character of the contributions, our readers can form their own judgments from the list of contributors. As was notably the case in the old series of the *International*, these are all experts and authorities of the first rank in their respective fields. In the first issue of the *Quarterly*, for example, Mr. Elwood Mead, chief of the irrigation investigations conducted under the auspices of the United States Department of Agriculture, writes on "Property Rights in Water;" Prof. C. H. Toy on "Religious Fusion;" Mr. Will H. Low on "National Art in a National Metropolis;" Max Nordau on Zionism; Mr. Richard M. Meyer on Hermann Sudermann; Sir W. Lee-Warner on "The Native States of India;" and Prof. J. H. Robinson on "The Elective System, Historically Considered." Prof. George Santayana, of Harvard, recounts "A Dialogue in Limbo," and Mr. Robert Y. Tyrrell reports an "interview" with Cicero. Studies of Napoleon and Héloïse are contributed, respectively, by M. Mare Debrit and Mr. Henry O. Taylor.

The chronicle of events is written, as heretofore, by Mr. Joseph B. Bishop, the topics in the current issue being our work as a civilizer in Cuba and the national value of an Isthmian canal. The important article by Professor Jenks on "The Egypt of To-day" has been quoted at length elsewhere in this number of the REVIEW OF REVIEWS. All of the *International's* articles are of the highest quality known to modern periodical literature, and this American review does not suffer by comparison with its European contemporaries.

#### GUNTON'S MAGAZINE.

IN the September number of *Gunton's*, besides the editorial articles on such timely topics as "Politics and Business Prosperity," "The Misuse of Injunctions," and "Is the Coal Strike a Conspiracy?" there is a character sketch of Governor La Follette of Wisconsin, by Mr. Henry W. Wilbur, which has a special interest in connection with the political campaign now in progress. An address by Mr. Horace White, of the New York *Evening Post*, on "The Economies of Branch Banking" is printed in this number, and there is a paper on "The Rule of Force," by Mr. Albert R. Carman.

#### NEGROES AS COTTON MANUFACTURERS.

Prof. Jerome Dowd tells of a cotton mill in the Piedmont region of North Carolina which is owned and manned by colored people. It used to be thought in the South that negroes could never be employed in factory labor because the hum of the machinery would put them to sleep. Within the past twenty years, however, they have come into very general employment in certain manufacturing industries, notably tobacco factories and cotton-seed oil and fertilizer mills, and

it has been found that negro labor can be successfully and profitably utilized in cotton manufacturing. The mill has been running for more than a year, and only a few of the operatives have succumbed to the charms of Morpheus.

#### THE NINETEENTH CENTURY AND AFTER.

BARON A. VON MALTZAN writes, in the *Nineteenth Century* for September, a very interesting article describing his experiences as a German volunteer with the Boers in Natal. He confirms everything that has been said as to General Buller's monstrous exaggeration of the numbers of the troops opposed to him. He says that the Boer position at Colenso was absolutely impregnable, but General Buller had 20,000 men against 1,500. He lost 1,000, and the Boers lost 3 killed and 8 wounded. He vouches for the fact that at 3 o'clock in the afternoon orders were given to the Boers to cease firing, as it was an unchristian and inhuman thing to continue the slaughter of men who were helpless and defenseless. Buller was quite sure that he had 20,000 Boers against him at Colenso. In reality, in all Natal there were only 13,000 Boers at that time. The whole line from Colenso to Van Reenen's Pass, a distance of 23 miles, was held by 7,000 men. Baron von Maltzan says that the Boers made no trenches whatever at Colenso; they simply lay behind the boulders.

#### MR. TOM MANN ON NEW ZEALAND.

Mr. Tom Mann has been seven months in New Zealand, and he is not enthusiastic about its climate. In some places fog is more general than in London. Wages are higher than at home, but 25 per cent. of this must be deducted as decreased purchasing power. Rent is very high, and the climate is by no means so idyllic as people represent. On the other hand, there are fewer stoppages of work from strikes than in any other country, thanks chiefly to the principle of compulsory arbitration, which, however, he says, is by no means working quite smoothly. It is quite on the cards that the men may take action for its repeal, and that the employers may be found defending it. He is pleased with the New Zealand Factory Act, chiefly because it forbids any boy or girl with a less wage than \$1.25 a week being employed, and also because it fixes the hours of adult males at forty-eight per week, and those of women at forty-five. He is glad to find that the railways are in the hands of the state, and that the people having one person, one vote, and all elections on one day, have government under better control than is the case in England.

#### AUSTRALIAN NATIONAL CHARACTER.

Mr. Percy F. Rowland is rather enthusiastic about the Australian national character, although he admits that there is a tendency to great cruelty on the part of the Australians. This, he says, is due to their climate, to their familiarity with the horrors of drought in the bush, their habit of thinking of the sheep and kine as mere wool and meat,—the counters with which they play the game of life,—long warfare with rabbits and kangaroos for means of sustenance,—these have rendered the normal Australian countryman callous to animal suffering. The Australian woman is less prolific than her European relatives. The number of illegitimate births is double that of Ireland, and the divorce rate is thirteen times higher than that of England. Yet with all these

defects Mr. Rowland maintains that there is a good ground-work for building up such a noble national type that the proudest boast of Englishmen may some day be that they had a share in building up the Australian character. For among the Australians "you will find determination, pluck, sportsmanship, good humor, religion without theology, civility without servility, and an uncommon power of common sense."

#### LORD NELSON ON THE IDEAL HYMN-BOOK.

Lord Nelson writes an interesting article upon "Hymns Ancient and Modern." He thinks that in the future authorized hymn-book the old Latin hymns, with good English translations, should form a prominent part of the book. Then there should be a selection of narrative hymns, bringing out the teachings of the Christian year, and a large selection of modern hymns which have all won their way generally into the hearts of our people. A general book, voicing the religious experiences of men from every clime and in every age, would have no mean share in the formation of national character.

#### THE HUMANIZATION OF THE WORKHOUSE.

Miss Edith Sellers writes a pitiful paper entitled "In the Day-room of a London Workhouse." It was written after visiting a London workhouse in which there were 288 men and 437 women over the age of sixty-five. The account she gives is very sad, and she could not help contrasting the fate of these worn-out toilers with the inmates of the cheery, comfortable homes provided for the same class in Denmark and Austria, where the cost per head per week is considerably less than in these London workhouses, where it averages \$3.37. "There was a time when we were supposed to provide for our poor at once more humanely and more wisely than other nations; but now— It is only in England that poor old folk who have toiled hard for long years and pinched and saved must pass their last days in the workhouse. Even Russia has its old-age homes."

#### THE NEW LIBERAL REVIEW.

IN the *New Liberal Review*, Mr. George Martineau explains and applauds the Russian note on trade combinations. An undergraduate, Mr. D. F. T. Coke, defends Oxford against the accusation of laziness brought by Mr. Fotheringham in the previous number. Mr. Holt Schooling writes on the export of English coal, the large increase of which obscures the significance of the comparative decrease in other exports. Mr. Blumenfeldt gossips pleasantly concerning the new industry of manufacturing antiquities to order, which, it seems, is in a very flourishing condition at the present time. It is, however, somewhat precarious, for fashion is capricious, and antiquities which are at a premium to-day are at a discount to-morrow. One of the brightest articles is Mr. E. F. Benson's paper on the decadence in manners. Mr. Benson argues that the changes which are alleged to prove a decadence in English manners are really due to the improved sense of comradeship which has resulted from men and women playing games together. At the same time he admits that women are often brutally rude to each other. He says that the insolence of women, well-bred in their conduct to the other sex, can be a thing to shudder at when one of her own is concerned. This, in its more flagrant aspects, is easily observable in such public places as steamers and railway cars.

## THE CONTEMPORARY REVIEW.

THE *Contemporary Review* for September, contrary to the usual practice of English reviews, publishes a translation of the article which General de Negrier contributed anonymously to the *Revue des Deux Mondes* on "The Lessons of the South African War." Sir A. E. Miller writes upon "The Proposed Suspension of the Cape Constitution," an article which might have been useful once, but is somewhat out of date to-day. Hannah Lynch writes a sprightly and somewhat spiteful article on "Paul Bourget, Preacher." Mr. A. C. Seward defends the doctrine of natural selection against J. B. Johnston, who attacked it in the July number of the *Contemporary*. Dr. Dillon confines his survey of foreign affairs to a discussion of the future of Italian expansion, a glance at the stagnation of British enterprises in China, and a lamentation over the refusal of the colonial conference to federate the empire.

## WHAT IS THE ESSENCE OF CHRISTIANITY?

Professor Orr, in an article entitled "Dr. Fairbairn on the Philosophy of Christianity," says that the permanent value of his book is that it compels us to face the solemn alternative of what the essence of Christianity is. This alternative, he says, is as follows:

"On the one hand, a universal Father-God, whose presence fills the world and all human spirits; Jesus, the soul of the race, in whom the consciousness of the Father, and the corresponding spirit of filial love, first came to full realization; the spirit of divine sonship learned from Jesus as the essence of religion and salvation—here, in sum, is the Christianity of the 'modern' spirit. All else is dressing, disguise, *Aberglaube*, religious symbolism, inheritance of effete dogmatisms. Will this suffice for Christianity? Or is the Apostolic confession still to be held fast, that Christ is *Lord*: the Incarnate, the Living, the Exalted, the Redeemer and Saviour, the Head of all things for his Church and for the world?"

## IMMORTALITY, BEFORE AND AFTER.

Miss Caillard concludes her three papers upon "Immortality" by declaring herself in favor of the pre-existence of the soul, and inferentially at least of the doctrine of re-incarnation. She says:

"If the supreme worth of that human individuality be allowed, if it bears a unique and consequently eternal ethical significance to God, we must also grant that it neither began with birth nor ends at death."

## THE FUTURE LANGUAGE OF SOUTH AFRICA.

Mr. Alfred A. MacCullagh writes a somewhat inconsequent article on this subject. His conclusion is somewhat startling:

"After all, the people of the British Islands need not concern themselves seriously as to the future of the language question in South Africa. South Africans will settle that for themselves. There may be a republic again in South Africa before many years, but it will be an English-speaking one, or there will be no rest in the land till the blood of the last British South African has stained the soil."

## THE FORTNIGHTLY REVIEW.

IN the September *Fortnightly* "Diplomaticus" writes one of his characteristic, well-informed, and somewhat alarmist articles on the deepening unrest of Europe. He says that the Bismarckian Triple Alliance

made for peace because it was a coalition of the "Haves." The new Triple Alliance of Russia, Italy, and France will be a combination of the "Have-Nots." Italy and France are contemplating partition in North Africa, the *revanche* idea is reviving in France, and we must be prepared in the near future, if not for an actual catastrophe, at any rate for an era of excitability and unrest. The "Have-Nots" are no longer deterred from war by the certainty of defeat. Hence they will be less consistently conciliatory in the future, less prudent, less averse to dangerous intrigues and adventures of the Fashoda type.

## THE TEST OF EFFICIENCY.

"Calchas" reviews in a very hostile spirit the changes which Mr. Balfour has made in his ministry. Apart from the appointment of Mr. Austen Chamberlain, his readjustments are commonplace, pointless, and inept. The present opposition, even without Mr. Morley, Sir William Harcourt, and Sir Henry Campbell-Bannerman, would supply a ministry with a larger number of efficient than are to be found in Mr. Balfour's cabinet. "Calchas" deals faithfully with Lord Rosebery's absurdly inadequate speech on the North Leeds election, which "Calchas" says was a stupefying surprise to the victors hardly less than to the vanquished. After long immobility in national conviction there can be little doubt that the nation is now prepared as it has never been before to change, and to change constantly, until it gets a ministry to its mind. A new political world has come into existence since 1900. The war has destroyed much which was in the national repute, the prestige of British shipping has been almost extinguished, and on the diplomatic side England has discovered that the German empire as the bedrock of her external relations is a rotten foundation. Great Britain has completely lost the reputation of technical preëminence in industry and commerce. For the first time perhaps for two or three centuries there is no longer a department of national life in which anything like the old leadership of English intellect is recognized by the world.

## HERMANN SUDERMANN.

Mr. W. S. Lilly, writing upon Hermann Sudermann's new play "*Es Lebe das Leben*," exhausts his resources of eulogy. The play marks the high-water mark of the author's genius. He says that his inspiration is essentially spiritual, like that of Nature herself. He has far more in common with Euripides than any dramatist of our time. Through his work is that deep underlying thought of the Greek drama that in the moral world law rules, law fenced about as all law is by penalties. This is the deep verity which informs his pages.

## AN APPEAL TO WORKMEN.

Mr. J. Holt Schooling writes a letter to the workmen of the United Kingdom, which he invites London and provincial papers to reprint. His object is to ask them one or two straight questions, the first being, "Is there not a tendency in too many of you to take your work easily?" Secondly, "Do you need so many strikes?" Thirdly, "Why should you drink twice as much as the American workingman?"

## PAARDEBERG.

Mr. Perceval Landon writes a picturesque, brief paper describing the first crushing blow which overtook the Boer forces. Apart from his description of French's ride and Cronje's retreat, the most interesting

part of his paper, although probably not in the least accurate, is the passage in which he says that Paardeberg was hardly less than the scotching of the Christianity of an entire nation. When Cronje lost the race to the river it was to the Boers as if God's arm had broken. He notes that February 11, the day set apart in England for prayer and intercession, was the day upon which French started upon his march, and the effect upon the Boers was overwhelming. They felt without the least affectation that this day of intercession was the most terrible, as well as the least expected, weapon that the English would use, and even among the most irreligious ran a sudden foreboding of ill.

#### THE NATIONAL REVIEW.

CAPTAIN MAHAN contributes to the *National Review* for September a twenty-page article on the Persian Gulf and international relations. He seems to believe in the antagonism between England and Russia in Persia, and therefore advocates the construction of a German railway line through Asia Minor which would have as its outlet on the Persian Gulf a British port. It may be noted that Captain Mahan in the course of his article makes the following remark: "There is certainly in America a belief, which I share, that Great Britain has been tending to lose ground in international economical matters. Should it prove permanent, and Germany at the same time gain upon her continuously, the relative positions of the two as seapowers would be seriously modified."

#### UNIVERSITY REFORM.

Dr. H. E. Armstrong, professor of chemistry at the Central Technical College, writes upon the need for general culture at Oxford and Cambridge. He declares that it is difficult not to believe that British educational authorities have been engaged in a silent conspiracy to undo the nation and deprive the Briton of individuality by a system of examinations and scholarships which encourage cram, and stifle both the spirit of inquiry and the development of character. Whatever elements of good may be discovered in England's educational system, it is impossible to deny that there is a total absence of organization. To secure success there must be reform at the same time both above and below. The establishment of an efficient system of technical instruction is dependent upon the upgrowth of an efficient system of general instruction. At present the control of the educational system rests almost entirely in the hands of politicians and benevolent amateurs. Half a dozen strong, sympathetic men at the Education Department, with power to act and supported by government, could solve the problem in a very few years.

#### ENGLISH "COMPANY DIRECTORS."

Mr. W. R. Lawson maintains that English joint-stock finance is threatened with as bad a breakdown as the British War Office sustained at the outset of the South African War. He says that nine-tenths of the company directors have had no education whatever for duties demanding the highest skill and judgment. He draws up a table showing that of 1,143 companies occupying the broad zone between banks, insurance, home railways, and mining companies, 980 at present have their stock quoted below par. These 1,100 companies have 6,000 directors, most of whom are either incompetent or inefficient. He thinks that something might be done to get practical, trained men for industrial joint-

stock companies, and he insists that these directors should be obliged to give financial guarantees for their responsibility and independence.

#### BLACKWOOD'S MAGAZINE.

"BLACKWOOD'S MAGAZINE" for September contains a good short travel paper by Reginald Wyon, entitled "Montenegrin Sketches." "Linesman" continues his interesting series of papers describing the adventures of his brigade on the heels of De Wet.

An anonymous writer, signing "L," discourses concerning the Boers in an article in which he warns Englishmen that all the living Boers are irreconcilable. They live in the past, and the past holds nothing for them but anger and distrust. "No single one of our transactions with them has been of a joyful or friendly nature, not one but has seemed to them dishonest, oppressive, or cowardly. . . . To the beaten Boer there is no future worth winning." The English tell him he will become great and famous. But all his life long he has prayed for obscurity. What is progress to a man whose earnest wish was to stand still? Or riches to one who dreads and despises them? Or imperial citizenship to an anchorite whose share even in the primitive government of his republic was oppressive to him? The writer says there is no doubt that when for the first time England governed the Boer nation she misgoverned it. She promised, and did not perform; she threatened and did not punish; she went to war and did not win. She invoked the sun and the rivers to attest her immovability, and moved; and to the Boer mind ever since she has been a nation of unjust, impotent braggarts.

There is a little dithyrambic article by Edward Hutton upon Venice after the fall of the Campanile; and a characteristic Blackwoodian article about the new ball with a core in it, which the Americans have invented, which bids fair to supersede the ball with which all golfers at present play. The feather-stuffed ball of the olden days cost \$1.25, till the gutta-percha ball of 25 cents took its place. At present the new core ball costs 62½ cents, and compared with the solid gutta-percha ball the new American ball covers one-third more distance. Judged, however, by the championship results, the core ball is only better than the gutta-percha by one stroke in three hundred and eight.

#### THE CORNHILL MAGAZINE.

IN the *Cornhill Magazine* for September, the editor publishes the first of a most useful series of papers on "Prospects in the Professions," written by carefully selected experts, who not unnaturally prefer to remain anonymous. The purpose of these papers,—the first of which is on the royal navy,—is to give parents some of the many "wrinkles" which they could, perhaps, not pick up otherwise, and which might save them much expense and disappointment. The question of the advantages and disadvantages of the professions, the essential qualities for success, the deficiencies which must cause failure, the amount of outlay actually (not nominally) to be incurred,—enlightenment on all these points should provoke gratitude from many a father with sons to place in the world. On the whole, the navy apparently offers very good average prospects.

Viscount St. Ayres says in an amusing literary paper on Martin Tupper:

"Tupper's claim to immortality rests on his vanity alone. No man ever thought as well of himself with scantier reasons for so doing; no man ever soiled more paper in telling the world why it ought to admire him. And the curious thing is that the world took him at his own valuation; few books commanded a larger sale than Martin's during the

middle years of the nineteenth century. That he should ever have been popular,—that any one, even an American, should have read 'Proverbial Philosophy' sixty times,—might well drive Matthew Arnold to despair."

Lady Grove has a chatty article on "Hotels as Homes," which they never can be in her view.

## THE CONTINENTAL REVIEWS.

### REVUE DES DEUX MONDES.

WE have noticed elsewhere M. Fouillée's curious and interesting article on "The Conduct of Life Among Animals," and Madame Bentzon's "Interview with Tolstoy." As usual, the *Revue* devotes a great deal of space to historical papers, and in each of the August numbers the place of honor is given to M. Sorel's elaborate account of the Peace or Treaty of Amiens, which ended the Wars of the Revolution, and which was hailed, especially in London, as the commencement of a new era of peace and prosperity. Before the Treaty of Amiens, Bonaparte was still unrealized by Europe at large, but the conduct of the negotiations (the treaty was only signed on March 26, 1802) showed the world that the brilliant Corsican soldier was a statesman as well as a general, and caused the more observant of his contemporaries to regard him with fear.

Those taking a practical or merely an intelligent interest in naval matters will find it worth their while to glance over the diary kept by a French naval officer who prefers to remain anonymous. The first chapter is entitled "In Port," and the writer gives a lively account of Cherbourg, the great maritime town whose strength and warlike footing so unpleasantly impressed Queen Victoria and Prince Albert on the occasion of their second visit to France. The French Portsmouth owed its being in the first instance to the ill-fated Louis XIV., who was passionately interested in his navy; but each successive French ruler, including Napoleon, Charles X., and Napoleon III., added something to Cherbourg and its defences, and even now the government is spending twenty-seven million francs in making improvements to the harbor. The writer manages to convey a great sense of activity and power, and gives some choice word-pictures of the various types of seamen with which he was brought in contact.

### WORK IN THE FRENCH COAL MINES.

M. Benoist continues his most interesting account of the organization of work in the French coal mines, and he gives much information of a curious character. Of the five thousand miners employed in one north of France mine, close on four hundred of the workers are children,—that is, from thirteen to fourteen years of age. In most cases a man spends his whole life, from childhood to old age, in this kind of work; for though in the life of every Frenchman there comes one great break, that caused by the conscription, even after having spent some years in the army, the young miner drifts back to his old way of life. It should be added that the miner rarely remains faithful to the same neighborhood; he drifts from mine to mine, and this in spite of the fact that the various companies do all they can to encourage their men to stay with them year after year. M. Benoist has much to say concern-

ing the long hours of hard, constant labor, which, he says, makes the French miner old before his time, and causes him to appear a worn-out old man when he has reached his forty-fifth year. He admits, however, that no French worker enjoys so many holidays as does the miner,—one and all, even the more sober workers, constantly take days off. The usual expression concerning these unlicensed holidays is "doing Sunday." "What were you doing yesterday?" one miner will ask the other. "Oh, I was Sundaying," comes the ready answer.

### OTHER ARTICLES.

Other articles consist of an attempt to analyze the personal character of Frederick the Great, as seen in his political correspondence; of an account of two great musical epochs, that of the cantata and that of the oratorio; of a subtle analysis of the mistakes made by those eighteenth-century philosophers who believed that the world could be rendered virtuous by act of Parliament; and of a political paper dealing with the practical effects of the recent French legislative elections.

### REVUE DE PARIS.

THOSE interested in and concerned with the management of universities will turn at once to M. Liard's curious paper on the foundation of French universities in the *Revue de Paris* for August. A great effort is being made at the present moment to reorganize, and, as it were, resuscitate, the ancient centers of French learning—once so justly famed in medieval Europe. Since the Revolution there has been, from the practical point of view, but one French university—that of Paris. Various Frenchmen who have lived for short or long periods in England have been struck by the great part played in the national life, not only by Oxford and by Cambridge, but by the ancient and honored Scottish universities; and these acute observers have longed ardently to see the same kind of institution flourish on their own soil. M. Waddington took an immense interest in the matter, and as long ago as 1876 made a determined effort to interest the government in the project. Various Republican statesmen followed suit, and at last—in the July of 1896—the dream of Renan, of Berthelot, of Lavisse, of Monod, and of Jules Simon became more or less a substantial reality.

### CHARACTERISTICS OF JOHN CHINAMAN.

In the same number of the *Revue* M. Donnet analyzes the fundamental characteristics of the Chinese "man in the street." According to the French writer, the most remarkable natural trait of John Chinaman is his good sense, and this in spite of the fact that he is full of superstitions. The Chinaman, as is so often the case with those who pride themselves on their good sense, is an utter materialist; the ideal side of life does not appeal to him at all. He is so sure that he knows every-

thing best that he naturally regards all those human beings who have not the good fortune to be born in China as outer barbarians. Even now there are many districts in China where Europeans are believed to be creatures stone blind, with red hair and red faces, and of semi-amphibious nature—that is, living half their time on earth and half their time in the sea. It has often been said that the Chinaman has extraordinary command over his nerves, and can apparently compel himself to feel glad or sorry, according to his mood. At a family funeral the mourners are all very cheerful till the moment comes when they are informed that they must be sorrowful. They then fall to weeping bitterly, and exhibit every sign of intense distress. After this has gone on for some time, the chief mourner observes, "I thank you; that is enough," and, as if by magic, every tear is dried; the men seize their pipes, and begin again laughing and drinking with great good humor.

#### THE FRENCH NAVY IN THE ORIENT.

In the second number of the August *Revue*, undoubtedly the most important article is an anonymous and somewhat technical account of the new arrangements made concerning the disposition of the French fleet in the far East. At the present moment, France's possible adversaries would naturally be England and Japan, and the writer concludes that, in that case, the allies would be face to face, not only with France, but also with Russia, who always keeps a portion of her fleet in Chinese waters. The anonymous writer draws careful parallels between the naval conflicts which took place during the last twenty years of the eighteenth century and those which may occur during the next twenty years. He warns the French Admiralty that in such a far Eastern naval conflict as that foreseen by him, France would be in no sense prepared to hold her own with England.

#### FRANCE A COMMERCIAL NATION.

M. Bérard, who has become a great authority on all commercial questions, contributes an interesting article on the place now held by France in the commercial world. He warns his countrymen, and especially those interested either directly or indirectly in the world's markets, to beware of Anglophobia, for from a commercial point of view the United Kingdom has long been France's best friend and customer. Unlike Germany, the British empire does not seek to acquire her lively neighbor's happy hunting-grounds; she is content to trade with her fair neighbor; indeed, even at the present time the French manage to sell to England goods of twice the value of those which England each year sells to her. Further, wealthy as is the British empire in much that is lacking to France, the French often contrive to make a profit out of what should be purely British products. Thanks in a great measure to Mr. Rhodes, the colonial Briton has now a monopoly of the diamond industry, but the art of diamond-cutting has remained a Continental art, and the De Beers diamonds are all bound to make a short sojourn in Paris before they can be displayed to the retail customer. As for the enormous trade done in French eggs and butter, the fact has been pointed out numberless times in innumerable British publications, and were the United Kingdom to disappear into the sea, there are whole departments of northern France which would find themselves on the verge of bankruptcy. In addition to the egg-and-butter trade, France seems to have a practical

monopoly of certain fruits, and England buys forty million francs' worth of fresh fruit from France each year. The humble but useful sardine means a turnover of fifteen million francs. Fifty millions' worth of French butter is consumed in England, and an instructive chapter could be written concerning the popularity of French wines, notably champagne. M. Bérard speaks with touching sympathy of the energetic promoters of the National Poultry Organization Society; but he points out with considerable shrewdness that in this matter France has nothing to fear from her British rival, for the French farmer's wife devotes herself to the rearing of poultry in a way that no modern Englishwoman would consent to do, and as long as this is so France will go on supplying England with eggs, butter, and poultry to the tune of seventy million francs each year.

#### NOUVELLE REVUE.

THE place of honor in the *Nouvelle Revue* for August is given to M. Fallot's shrewd analysis of the present Maltese crisis. The writer has paid two long visits to Malta, and so considers himself well equipped to deal with the difficult language question. He begins by pointing out that were it not for Great Britain a great portion of the population of Malta would have to leave the island, or else remain to die of hunger. But in spite of this fact, which is fully recognized by the Maltese, the island has never become really British in affection and sentiment, and the French writer accuses the British residents and officials of treating the Maltese native nobility and gentry with scorn. Although until comparatively lately Malta was exceptionally fortunate in her form of government, being in no wise managed from Downing Street, the unfortunate interference of Mr. Chamberlain in the difficult and delicate language question caused the smouldering embers of dislike to burst into flame. The Maltese are now on the worst of terms with their rulers, and this in spite of the fact that the home authorities have given way on the language question.

M. Lacour contributes some curious pages concerning high temperatures and the causation of great heat, especially that artificially produced. Curiously enough, it is extremely difficult to make a thermometer strong enough to register certain high temperatures; as to mercury, it begins to boil comparatively soon.

#### LOCUSTS IN ALGERIA.

M. de Tiallis gives a striking account of the modern plagues of locusts, so dreaded by the Algerian colonist. During the nineteenth century there were four great visitations,—in 1846, in 1866, in 1874, and in 1891. No noxious insect, and for the matter of that no animal, can do more mischief in a short time than can the humble-looking locust; a tract of land which is noted for its fertility and beautiful luxuriance will in the course of a few hours be so completely denuded of every blossoming and green thing as to recall the desert. The eloquent words of the prophet Joel are as true to-day as they were when he first delivered them. All sorts of extraordinary remedies have been proposed, of which perhaps the most absurd and the least practical was that of arming a battalion of soldiers with butterfly nets. More profitable experiments have been made by scientists, and nowadays some locusts are destroyed with the aid of insecticides, but no effective method of combating these African pests has yet been discovered.

## OTHER ARTICLES.

M. Filliol contributes a highly technical and curious paper on what may be called the mysterious beginnings of rivers. Both to the poet and the engineer there is something very striking and mysterious in the thought that the great rivers of the world almost invariably start from tiny springs, and the problem of "where the water comes from" has occupied many minds both in the past and in the present.

In the second August number M. Ghuesi gives a sympathetic sketch of the childhood and youth of Mme. Juliette Adam, the brilliant Frenchwoman who founded the *Nouvelle Revue* some twenty years ago, and who may well claim to have played a very real and constructive part in modern French republican history.

## LA REVUE.

"LA REVUE" for August contains many articles of the highest interest, several of which are noticed separately.

Professor Vambéry calls attention to the growth of German influence in Turkey since 1870. The Turkish official language even contains the word *aleman* (French *allemand*). At Constantinople there are an increasing number of Germans in high favor with the Sultan. None of these functionaries are or have been really worth their high salaries, except Baron von der Goltz, whose instruction of the Turkish officers was certainly worth its cost. How soon Turkey will see that she is pulling the chestnuts out of the fire for Germany, Professor Vambéry leaves to others to discuss. Certainly Germany loses no opportunity of profiting by her friend. But, equally certain, German influence has left the masses of the people quite untouched; the German does not conciliate the Asiatics nearly so much as the English or French; and German advance and the Bagdad Railway (which is to regenerate Turkey) will certainly displease Russia, and sooner or later England.

## LITERARY ARTICLES.

M. Montfort describes the new literary generation in France, which has arisen chiefly since 1895. France's literary vitality is amazing. Every fifteen years it produces a new generation. Most of the names of the rising literary generation of to-day are not well known yet even in England, not to speak of the United States. The best known are those of Jean Viollis, Marc Lafargue, Louis Lamarque, and André Fleury.

Fray Candil's paper on "Intellectual Spain" is devoted to an appreciation of Larra the critic, Espronceda the poet, and Rosales the painter. Madrid has just opened a Pantheon of her own.

MM. Savitch and Kniajnine's paper on the Russian home and foreign press chiefly excites amazement that such a thing as a Russian newspaper can possibly exist.

M. Klingsor has two illustrated papers on French caricaturists.

Mme. Rémusat writes of the new Danish novel. She says pessimism is the keynote of the Danish novel. Of the modern works deserving serious consideration not one celebrates the joy of life.

M. Muret has a lengthy study of "an American naturalist poet"—Thoreau; and Mary Summer's paper on the conquest of the supreme intelligence is a biographical sketch of Buddha.

## OTHER PAPERS.

Dr. Rouby writes of the Nun of Grèzes, Sœur Saint-Fleuret, who has been perplexing France by declaring herself possessed of a devil. Dr. Rouby says the devil is hysteria.

M. Coupin has a charming paper on "Animals which Never Pay their Rent," chiefly birds who usurp other birds' nests.

There is a long, remarkable poem by Ibsen, and the usual reviews of books and magazines.

## GERMAN MAGAZINES.

AN "independent politician" concludes his eulogistic paper in the *Deutsche Revue* upon Prince Hohenlohe as Chancellor. He was not a good speaker, had not the fire of a Babel, the sarcasm of a Richter, or the pathos of Dr. Lieber, and the way in which he said things did not please people. But what he said was always important, profound, and in a classical form.

The *Deutsche Rundschau* contains several interesting articles. M. von Brandt writes upon "The End of the South African War." He points out that everything should be done to allay the animosity between England and Germany, and regrets that the *Times*, the *Spectator*, and the *National Review* seem to have made it their special business to try and make trouble not only between Germany and England, but also between other powers. Mr. Walter Gensel contributes a paper upon art at the Düsseldorf Exhibition. He regrets that the German section was by no means representative. The best art cannot be said to come from Germany, nor indeed from France or England, who have had the lead alternately for so many years. It is to be found in the paintings of Americans and Scandinavians, and the sculptures of Belgians. Von Ernst Elster discusses the question of Heine's nationality.

The *Monatsschrift für Stadt und Land* contains an article by C. von Zepelin upon Russia's position in the far East. He sketches the gradual building up of a Russian colony on the Pacific, and predicts a great future for it. The great trans-continental railway will increase immigration as well as assure the military position. In addition, the unwilling assistance of foreign powers will help its development, and it is sure to play a great rôle in the opening up of the East.

The *Sozialistische Monatshefte* has an article by Eduard Fuchs upon French caricature in 1870-71. It is illustrated with several reproductions, which show that the style of French cartoon has altered very little during the intervening thirty years. All sorts of problems are being worked out in Austria just now, and in consequence Friedrich Hertz's article upon national democracy in the empire is very timely. His conclusion is that Austria can be reconstituted only from the spirit of the masses, can win power and strength only by means of political democracy and national autonomy. Adolph von Elm describes the fourth German Mining Congress.

# THE NEW BOOKS.

## NOTES ON RECENT AMERICAN PUBLICATIONS.

### BIOGRAPHY AND AUTOBIOGRAPHY.

SOME of the brightest bits of autobiography that have recently appeared are to be found in Dr. Theodore L. Cuyler's "Recollections of a Long Life" (New York: Baker & Taylor Company). The publication of this book serves to remind us that of all that famous group of preachers, who, in the latter half of the nineteenth century, gave a world-wide renown to Brooklyn pulpits, Dr. Cuyler alone is left. It is not this fact alone, however, that gives interest to his book; all through his life, even before he became a distinguished clergyman, his travels and associations with noted men of all professions afforded excellent material for a volume of this kind. One feature of the work which gives it a vital interest is the remarkable collection of anecdotes of great men and details of conversations held with them many years since. On Dr. Cuyler's first trip abroad, sixty years ago, when he was a young Princeton graduate, he visited such men as Wordsworth, Carlyle, and Dickens, and the talks with these literary worthies, which Dr. Cuyler's remarkable memory enables him to reproduce, are so characteristic and vivacious that the reader only wishes for more. Of even greater interest to some classes of readers, perhaps, are Dr. Cuyler's recollections of the great American reformers of his generation,—the Beechers, the Finneys, the Moody's, the Goughs, and other distinguished workers and orators, some of whom are almost fading from the recollection of the men of our day. Among the writers and journalists, Dr. Cuyler's acquaintance with Washington Irving, John G. Whittier, and Horace Greeley was intimate and of long duration, and among statesmen Abraham Lincoln was proud to count the Brooklyn pastor as his warm personal friend.

The missionary of whom Robert Louis Stevenson could write "A man that took me fairly by storm as the most attractive, simple, brave, and interesting man in the whole Pacific" is surely worthy of a larger circle of acquaintances than he was able to enjoy in his lifetime. To many readers the new volume entitled: "James Chalmers: His Autobiography and Letters" (Revell) will bring the first revelation of a singularly devoted and heroic life. Chalmers was a Scotch missionary who gave his life to the redemption of the savages of New Guinea, and suffered martyrdom there only a little more than a year ago. Chalmers lived a life that was simple in its devotion to duty, and found little time for the commemoration of his services in literary efforts. The autobiography that he left was a very brief one, and in the present volume it has been supplemented by a mass of correspondence and reports, part of which was supplied by his family and a part by the archives of the missionary society under which he served. Chalmers was sixty years of age when he was killed by the natives, and his career as a missionary had covered somewhat less than forty years. There was much in it of thrilling adventure and repeated instances of personal bravery, so that the reader can hardly fail to join with Stevenson in his commendation of this heroic missionary as indeed an "attractive, simple, brave, and interesting man."

Dr. L. L. Doggett's life of Robert R. McBurney (Cleveland: F. M. Barton) is something more than a biography, since of necessity it involves an account of the rise and development of the Young Men's Christian Associations of America. For over thirty years Mr. McBurney was secretary of the New York Y. M. C. A., and, by common consent, was regarded as the leading spirit of the American Association movement. Dr. Howard Crosby once said that no Christian minister had rendered a greater service.

Unlike any published autobiography of this or any other year is Dr. Charles A. Eastman's "Indian Boyhood" (McClure, Phillips & Co.). Dr. Eastman, who is a full-blooded Sioux Indian, can remember the Minnesota massacre of 1862, when he and his people were obliged to flee for their lives to the plains of the far Northwest before the enraged settlers and soldiers of what was then our frontier. In after years Dr. Eastman embraced our civilization, was educated in our schools, and married a white wife, but never has he lost his love of some of the old tribal customs into which he was born, and which he so well describes in this book. "Indian Boyhood" stands alone in our literature as a record of much that has passed beyond the range of human experience, never to return.

### BOOKS ON POLITICS, SOCIOLOGY, AND ECONOMICS.

Notwithstanding the failure of the National Civic Federation to bring about an arbitration of the coal strike, there will be a very general interest in the published proceedings of the National Conference on Industrial Conciliation held under the auspices of the Federation in New York City in December last. The participants in that conference were leaders in American commerce and industry, and the labor unions were especially well represented. The present volume published by the Putnams contains a complete stenographic report of the discussions of the conference, together with the papers read at the Chicago conference of December, 1900. It will be remembered that the direct outcome of the New York conference was the organization of the industrial department of the National Civic Federation, composed of thirty-six representative citizens, and including such men as ex-President Cleveland, Archbishop Ireland, Bishop Potter, and President Eliot on the part of the public; Senator Hanna, Charles M. Schwab, and H. H. Vreeland on the part of the employers, and Samuel Gompers, John Mitchell, and Frank P. Sargent on the part of the wage earners.

In the publications of the Michigan Political Science Association (Ann Arbor, Mich.), Volume IV., No. 6, appear the papers read at the joint meeting of the Michigan Political Science Association and the Michigan Farmers' Institutes held in February, 1902, the proceedings of which were noted in the REVIEW OF REVIEWS for April last. These papers are grouped under the appropriate head of "Social Problems of the Farmer," and contain timely discussions of such themes as "The Economic Value of Industrial Education," "Higher Education and the People," "Changes Demanded in the Educational System of Rural Communi-

ties," "The Origin and Development of Forest Work in the United States," "Needs and Possibilities of Organization among Farmers," and "Agriculture and the Home Market." Dr. Graham Taylor, of the Chicago Commons social settlement, contributes an interesting paper on "The Church as a Center of Rural Organization;" the Hon. E. A. Prouty, of the Interstate Commerce Commission, treats of "The Dependence of Agriculture upon Transportation;" and Secretary Wilson, of the Department of Agriculture, outlines the relation of his department at Washington to the individual farmer. All of these papers will be found exceedingly helpful to all interested in the movement for the betterment of rural conditions in our country.

Among the recent publications relating to municipal government, the monograph by President Edmund J. James, of the Northwestern University, on "Municipal Administration in Germany, as Seen in the Government of the Typical Prussian City, Halle," is one of the most important (University of Chicago Press). In less than one hundred pages Dr. James gives a full and clear account of the organization of the city government, the functions of the various officials and boards, the municipal operation of public services,—such as water, gas, and electricity,—and a brief note on the management of the city's cemeteries. A careful reading of Dr. James' monograph will put any intelligent American in possession of the essential facts necessary to an intelligent comprehension of the German municipal system.

The Committee of Fifteen's report on "The Social Evil, with Special Reference to Conditions Existing in the City of New York" (Putnam's), is a work of far more than local interest, since it includes a thorough and useful discussion of the systems of regulation of prostitution adopted in Paris, Berlin, and other European cities, with an exhaustive setting forth of the American conditions, especially in their sanitary aspects. Many of the conclusions reached by the committee are as applicable to other American cities as to New York, although the peculiar conditions arising there from the enforcement of the so-called "Raines Law," regulating the liquor traffic, have made appropriate several chapters of special recommendations. All in all, the report contains by far the most satisfactory treatment of this problem from the American point of view that has appeared up to the present time.

"Principles of Sanitary Science and the Public Health," by William T. Sedgwick, Ph.D. (Macmillan), is a volume that has been developed from a course of lectures on these subjects given by the author to students in the Massachusetts Institute of Technology. The material embraced in these lectures, however, is of great value to publicists and physicians who have to do with public questions of sanitation. The work has been written with special reference to the causation and prevention of infectious diseases, and includes the most recent conclusions of specialists on these important subjects. Dr. Sedgwick's chapters on sewage and water-supply, based as they are on actual observation and experience in various American cities, are especially valuable.

Prof. James Henry Hamilton, of Syracuse University, has written a popular account of "Savings and Savings Institutions" (Macmillan). Professor Hamilton has given special attention to the municipal and post-office savings banks of Europe, and a large part of the present volume is devoted to a description of the principles and working systems of these very useful and popular institutions.

In "The Citizen's Library of Economics, Politics, and Sociology," edited by Prof. Richard T. Ely (Macmillan), Prof. Paul S. Reinsch, of the University of Wisconsin, contributes a volume on "Colonial Government." In the first part of his book Professor Reinsch gives a brief survey of the motives and methods of colonial expansion, so as to furnish the historical point of view. In the second part he deals with the general forms of colonial government, and in the third part he presents an outline of administrative organization and legislative methods. His main purpose is to set forth the outline of the colonial policy of European powers. He makes no attempt to apply the information directly to American problems. Such a review of the motives and principles adopted by other nations in their colonial administration should be helpful in building up an American colonial system. In the present volume, however, little attempt is made to discuss specific problems of colonial administration, such as finance, taxation, immigration, and so forth, but the author promises to deal with these topics in a subsequent volume.

"The Eastern Question: A Study in Diplomacy" is the subject of a monograph contributed to the Columbia University series of "Studies in History, Economics, and Public Law" (Macmillan) by Dr. Stephen P. H. Duggan. The author begins his history with the treaty of Kainardji, of 1774, and brings the account down to the Turko-Greek War of 1897.

The Outlook Company, of New York, publishes in a handsomely printed volume a survey by Governor Taft of what has been accomplished in the Philippines in establishing civil government, prefaced by a personal sketch of Governor Taft written by President Roosevelt shortly before the assassination of President McKinley, and first published in the *Outlook* about a year ago. As a record of recent history in the Philippines, Governor Taft's article has special value, and is well worthy of the permanent form that has been given to it.

A new edition of "The Future of War," by the late M. Jean de Bloch, with an introduction by Mr. Edwin D. Mead, has just been issued at Boston (Ginn & Co.). Perhaps it is not generally understood that the work as it appears in English is a translation of only the last one of the six volumes which were published in Russian five or six years ago. It is stated, however, that a complete English edition is now in preparation. The present volume contains the exceedingly interesting conversation with M. de Bloch by Mr. W. T. Stead which appeared in an earlier edition.

A fresh subject has been found by Dr. Yotaro Kinoshita, who writes in the Columbia University "Studies of History, Economics, and Public Law" on "The Past and Present of Japanese Commerce" (Macmillan). The author explains that Japanese students who come to America to study economic science are handicapped by the fact that the appearance of this science in Japan is only of the most recent date. No Japanese economist of note has as yet arisen, and it may be said that there is no classical work of economics in the language of Japan except a few translations from European writers. The admitted importance of Japan in the industrial awakening of the far East is surely sufficient reason in itself why the Western nations should become more familiar with Japan's economic past, and, as the author truly says, in order to understand Japan's present economic condition, it is necessary to know the vicissitudes through which she has gone.

One of the reprints issued by the University

cago Press from the University Decennial Publications, a series intended to set forth and exemplify the material and intellectual growth of the institution during its first decade, is a discussion of "Credit," by Prof. J. Laurence Laughlin. The subject is presented with the clearness of statement and soundness of reasoning which have distinguished all of Professor Laughlin's utterances on this and kindred topics.

An attempt to present some of the fundamental economic truths of the time with a clearness and conciseness fitted to make the presentation attractive to the busy "average man" has resulted in Mr. George L. Bolen's "Plain Facts as to the Trusts and the Tariff" (Macmillan). The author abjures idle speculations and confines himself rigidly to the actualities of the modern business world. His discussions are supplemented with references to the latest and most authoritative writers on various phases of the problems treated. Mr. Bolen has shown himself able to state fairly the opposing arguments on controverted points without lapsing into the condition of utter nervelessness which the mere summarizer often betrays. He forms his own conclusions, and seems glad to have his readers form theirs. The work includes chapters on the railroad problem and municipal monopolies.

In Mr. George Cator's monograph on "Trust Companies in the United States," appearing in the Johns Hopkins University "Studies in Historical and Political Science" (Baltimore: The Johns Hopkins Press), there is an interesting account of the use of the term "trust" in the titles of different corporations, followed by a discussion of the functions exercised by trust companies and of their regulation by the state. The author concludes with suggestions as to some of the causes leading to the growth of these institutions, and explaining the place occupied by them. In appendices are comprised sketches of two of the early trust companies, schedules of legislation, and tables of statistics.

#### BOOKS OF REFERENCE.

President Gilman, Prof. Harry Thurston Peck, and Prof. Frank Moore Colby have set before themselves a task of no small proportions in undertaking the editorship of "The New International Encyclopedia" (Dodd, Mead & Co.). On the basis of the two volumes that have thus far been issued no general estimate of the work is possible, but it may be well to mention the four attributes which, in the opinion of the editors, combine to form the ideal encyclopedia. These are: "First, accuracy of statement; second, comprehensiveness of scope; third, lucidity and attractiveness of presentation; and fourth, convenience of arrangement." However widely the users of encyclopedias may differ as to the relative importance to be assigned to these several desiderata, there would be general agreement, we think, that they include the qualities first to be sought. In mechanical features "The New International" is a model of serviceability. The type is clear, the illustrations appropriate and helpful, the maps authentic, and the volumes of convenient size. As the publication of the work progresses we shall have occasion to comment, from time to time, on the salient features of the letterpress.

The fact that the latest volume of Appleton's "Annual Cyclopaedia" contains a large number of articles of more than transient interest makes a reference to it at this late date not inappropriate. Among these articles there is one on automobiles, one on bookbinding, one on

rural mail delivery, and a remarkable article on medicine and surgery which sets forth the discovery of the causes of malaria and yellow fever, giving special attention to the mosquito theory of germ transmission. The annual article on gifts and bequests has become a regular feature of the annual, and nowhere else is so accurate a record kept of the sums annually set apart in this country for benevolent purposes, aggregating in the year 1901 the enormous sum of \$107,000,000.

"Who's Who?" England's annual biographical dictionary (Macmillan), has reached its fifty-fourth year of issue, and contains, besides its usual complement of sketches of our British contemporaries, convenient lists of official personages, journalists, scientists, newspapers, and members of the British royal family, together with much other information which may at times prove serviceable to American writers.

The eleventh volume of the "National Cyclopaedia of American Biography" (New York: James T. White & Co.) contains sketches of numerous eminent Americans, many of them contemporary. In the present volume the artists and architects seem to receive a larger measure of attention than in earlier volumes of the work. Government officials, governors of States, prominent men in the profession of law and medicine, and writers and journalists are all well represented.

Some indication of the scope of the work undertaken by the editors and publishers of "The Jewish Encyclopedia" (Funk & Wagnalls) is afforded by the fact that two volumes of over seven hundred pages each of closely printed text have been required to cover one and one-third letters of the alphabet. The entire work will consist of twelve volumes, and its completion seems likely to be postponed for several years. Three editorial staffs and nearly two hundred contributors are engaged in preparing the articles on archaeological, historical, theological, philosophical, biographical, and sociological topics which comprise this elaborate work. Since no adequate history of the Jews has ever been published, it was necessary for the contributors to this encyclopedia to write articles giving for the first time a comprehensive history of those countries where the Jewish race has been dominant. The biographical department of this work is especially noteworthy because Jewish biography has been so generally neglected in most of the important biographical encyclopedias of America and Europe, and also because the twelve volumes will include more than five thousand biographical sketches, although the editors disclaim any intention to create a Jewish "Hall of Fame" or to exaggerate the merits of the characters described.

The fourth and concluding volume of Dr. James Hastings' "Dictionary of the Bible" has now been issued (Scribners). Like the earlier volumes of the same work, it contains numerous articles by eminent authorities on Biblical topics. Each of the more important articles is accompanied by a brief bibliographical note. The type used throughout the dictionary is especially clear and serviceable, and the illustrations, while not numerous, are of good quality.

Dr. Edward M. Deems has compiled a thesaurus which he calls "Holy-Days and Holidays" (Funk & Wagnalls). It is especially intended for use by preachers and speakers as a source of material whenever sermons or addresses suitable to recurring anniversaries are to be made. Not only the most important so-called "Church days" have been included, but anniversaries not in the Church calendar, such as Thanksgiving Day

and New Year's Day. The most important secular holidays observed in America, Great Britain, Ireland, and Canada are also included. The volume contains a topical index and an index of authors, and a complete bibliography is also included.

Although only one of the three large volumes of the "Dictionary of Philosophy and Psychology," edited by Prof. J. Mark Baldwin (Macmillan), has as yet appeared, it is possible to gain from this a fairly correct impression of the character of the work. The staff of contributors embraces specialists in all parts of the world, and consulting editors in England, France, Germany, and Italy have supplied recommendations as to foreign equivalents for all the terms defined in the work. Each one of the articles has been submitted to competent authorities especially versed in the topics treated, and Dr. Baldwin's own marked qualifications as editor of such a work have already been demonstrated in earlier undertakings.

"The Municipal Year Book," issued by the *Engineering News* Publishing Company of New York, will be found an indispensable book of reference for all city officials and others in any way interested in American municipal government. The book is edited by Mr. M. N. Baker, associate editor of the *Engineering News* and editor of various works on municipal engineering, and combines a directory of municipal officials and franchise companies, an exhibit of municipal and private ownership, and an outline of leading public works and services in each of the 1,524 largest municipalities in the country, including all incorporated places of 3,000 population or upward as shown by the census of 1900, and, in addition, all New England "towns" of like size are included in Mr. Baker's tabulations. As an exhibit of the relative extent of municipal and private ownership, the book is unique. The information is first given alphabetically by States, together with other facts relating to various cities and towns, and is next presented alone in compact tabular form, with the cities appended in their order of population. Municipal boards and committees having to do with water-supply, sewage, or other similar topics should find this book of great service in enabling them to make comparative studies of places of the same general size. The book is based on special returns made, with a very few exceptions, by the city officials of the several places included.

"The Statistician and Economist," of San Francisco (L. P. McCarty), into which such an astonishing amount of useful information is packed, will hereafter be issued biennially instead of annually. This work is a combination of cyclopedia, chronological summary, technical handbook, almanac, and economic year-book. There is no other publication quite like it in the United States, nor, so far as we are aware, in any foreign country.

It is not often that one can find between the covers of a single volume selections from so wide a range of sources as have been gathered by Mr. J. N. Larned in his book entitled "A Multitude of Counsellors" (Houghton, Mifflin & Co.). In this work Mr. Larned has drawn on the codes, precepts, and rules of life embodied in ancient Egyptian, Greek, Roman, mediæval, and modern writings. All schools of thought are represented, and a more comprehensive compilation of wisdom could hardly be imagined.

The handbook of "Libraries of Greater New York," issued by the New York Library Club, shows that the libraries of the American metropolis number 288, or, in-

cluding branch libraries, 350. The name, location, history, regulations, resources, and number of volumes of each library are given, as well as special collections, where such exist. There is also a manual and historical sketch of the Library Club. Special students can make good use of this manual as a guide to direct them to the best places in which to carry on their researches (New York: Gustav E. Stechert, 9 East Sixteenth Street).

#### ETHICAL AND RELIGIOUS WORKS.

It is entirely appropriate that Mr. Booker T. Washington's volume on "Character Building" (Doubleday, Page & Co.) should head the list of recent publications of this class, for it may well be doubted whether any other book of the year will accomplish so much by way of direct moral influence on individual lives. The book is made up of selections from Mr. Washington's famous Sunday evening talks to the students of Tuskegee Institute. Quite apart from the literary value of these addresses—and this is by no means slight—the moral strength and earnestness of this leader of his race is nowhere else so well exemplified. These talks are all on practical topics, and must have appealed with great force to the young negro men and women to whom they were addressed. These are a few of the topics which best illustrate the nature of the talks: "Helping Others," "On Influencing by Example," "The Virtue of Simplicity," "On Getting a Home," "The Value of System in Home Life," "Education that Educates," "The Importance of being Reliable," "Keeping Your Word," "The Gospel of Service," "Some Great Little Things," "The Cultivation of Stable Habits," "Getting On in the World," "Character as Shown in Dress," "Getting Down to Mother Earth," and "A Penny Saved." In not a few of these addresses there is a suggestion of the real eloquence for which Mr. Washington has long been distinguished; but the feature which gives them their value in their present form, as well as when originally delivered, is their invigorating moral tone.

The latest exposition of the science of ethics to come from the schools is Prof. George Trumbull Ladd's elaborate volume entitled "Philosophy of Conduct" (Scribners). While Professor Ladd has adhered to the philosophical treatment throughout his work, he regards philosophy itself as the "investigation and interpretation of the sum total of human experience," and wholly disregards the *a priori* method adopted by those writers on ethics who are inclined to ignore the actual facts of conduct "or the current opinions of mankind respecting the significance and the value of these facts." Ethics, in Professor Ladd's view, must always remain practical, however metaphysical it may become, "for ethics has its roots in the facts of experience, and its fruitage must be an improvement of experience." While, therefore, Professor Ladd's treatise is fundamentally a philosophical one, the discussion is conducted in accordance with modern methods and with constant reference to the actual facts of human life and conduct.

Dr. Fairbairn's work on "The Philosophy of the Christian Religion" (Macmillan) is described by its author as an attempt to do two things: First, to explain religion through nature and man; and, secondly, to construe Christianity through religion. He defines his book as neither a philosophy nor a history of religion, but as "an endeavor to look at what is at once the central fact and idea of the Christian faith by a man

whose chief labor in life has been to make such a philosophy through such a history." The problems which this book attempts to solve are, in brief, these: "What is religion in general? How and why has it arisen? What causes have made religions to differ? What are the ultimate constituents of religious ideas and beliefs, or customs and institutions?"

The volume entitled "Through Science to Faith," by Newman Smyth (Scribners), contains a course of lectures given before the Lowell Institute of Boston. Dr. Smyth recognizes the value to theologians of a working knowledge of modern methods of scientific inquiry, and even goes so far as to demand some acquaintance with biological studies and results as a required part of instruction in the schools of theology. His present volume, however, is not intended merely for the clergy or for teachers, but for the general reader who wishes to inform himself concerning the scope and tendencies of evolution.

"The Reasonableness of Faith," by Dr. W. S. Rainsford (Doubleday, Page & Co.), is a volume of addresses given on various occasions by the well-known rector of St. George's, New York, on practical themes related to religious life. These addresses are infused with the healthy and vigorous moral earnestness of the speaker.

Count Tolstoy's most recent utterances on religious themes are included in the volume entitled "What Is Religion? and Other New Articles and Letters" (Crowell). The fact that Count Tolstoy was excommunicated by the Russian Church only a few months ago lends interest to his essay on religious tolerance, written as late as January of the present year.

Prof. George H. Gilbert, whose liberal scholarship recently led to his separation from the Chicago Theological Seminary, has written a brief "Primer of the Christian Religion, Based on the Teaching of Jesus, Its Founder and Living Lord" (Macmillan). The writer's well-known sympathy with the principles of modern Biblical investigation makes this attempt of his to formulate a catechism especially noteworthy. Professor Gilbert is concerned, as he states in his preface, with the facts of the Christian religion rather than with inferences from the facts or with theories by which the facts have often been explained. The book consists of a series of questions followed by specific answers, with references to Scripture passages.

Bishop Spalding, of Peoria, the scholarly Roman Catholic prelate upon whom Columbia University recently conferred the degree of Doctor of Laws, has written a little book of "Aphorisms and Reflections" (Chicago: A. C. McClurg & Co.), the point of view being distinctly that of culture and religion. Bishop Spalding's qualities as an essayist have been well illustrated in earlier volumes, notably those relating to education. Men and women of all creeds will find in his "Aphorisms" much that is stimulating and satisfying to the higher moral and intellectual nature.

Dr. Josiah Strong's book on "The Next Great Awakening" (New York: Baker & Taylor Company) is chiefly devoted to an unfolding of the social teachings of Christianity, both those that have been applied by religious leaders and others that have been rejected. As in all of Dr. Strong's books, the facts of modern life rather than the deductions of theologians are considered.

In a two-volume work entitled "Christendom, Anno Domini MDCCCCI," the Rev. William D. Grant, Ph.D. (New York: Chauncey Holt), with the assistance of more than sixty contributors, has attempted a presen-

tation of Christian conditions and activities in every country of the world at the beginning of the twentieth century. In the first volume there is a survey of various countries arranged in alphabetical order. The second volume is devoted to such general topics as "The Gains of Christianity in the Nineteenth Century," "Religious Thought in the Nineteenth Century," "The Social Aspect of Christianity," "Art and Social and Religious Progress," "Critical Movements in the Nineteenth Century," "The Religious Press," and "Religious Leaders." Chapters on "Roman Catholic Christianity" and "Roman Catholic Missions" are contributed by the Rev. Father A. P. Doyle, and there is a paper on "Greek Christianity" by Prof. A. C. Zenos. Dr. Judson Smith writes on "Protestant Foreign Missions," Bishop John F. Hurst on "Church Union Movements," Dr. A. F. Shaufler on "The Sunday School," Dr. L. L. Doggett on the origin and progress of the Y. M. C. A., Dr. Kate W. Barrett on "Rescue Work," Mrs. Katharine L. Stevenson on the W. C. T. U., Mr. John R. Mott on student federation, Commander Booth Tucker on the Salvation Army, Mr. Robert A. Woods on social settlements, and Dr. Francis B. Clark on the Christian Endeavor Society.

In a volume entitled "Spiritual Heroes," the Rev. David S. Muzzey offers studies of the life and work of some of the world's great prophets. In the author's conception the main influences in the world's spiritual development were the Hebrew prophets, the Indian mystics, the Greek thinkers, the Roman organizers, the Christian apostles, the Moslem scientists, the mediæval preachers, and the modern reformers and philosophers. As representatives of these various groups the author has singled out the prophet Jeremiah, Buddha, Socrates, Jesus, St. Paul, Marcus Aurelius, Augustine, Mohammed, and Martin Luther, to each of whom a chapter in this book is devoted (Doubleday, Page & Co.).

Rev. Dr. Andrew W. Archibald, author of "The Bible Verified," has written a new volume which he entitles "The Trend of the Centuries." The book consists of a rapid survey of important epochs in human history, from the downfall of Judea to the culminating achievements of the nineteenth century. The author's main purpose has been to set forth the historical unfolding of the divine purpose. Dr. Archibald's terse and vivid descriptions of historical scenes add much to the "human interest" of his argument (Boston: The Pilgrim Press).

Prof. J. W. Moncrief, of the University of Chicago, has written "A Short History of the Christian Church for Students and General Readers" (Revell). This book meets the widespread demand for a popular history based upon scholarly research. The author makes many references to translation from the original sources, and encourages students to make the fullest use of these translations. For those readers, on the other hand, who have not time to consult larger works, this volume is sufficiently short, simple, and free from technicalities to answer every reasonable want.

A book which appeals more especially to the student is the volume by Prof. Arthur C. McGiffert on "The Apostles' Creed," being a lecture on the subject, with numerous critical notes designed to elucidate the origin, purpose, and historical interpretation of the creed (Scribners).

Under the auspices of the Central Committee on the United Study of Missions there has been published an outline study of India, entitled "Lux Christi."

by Caroline Atwater Mason (Macmillan). This little volume is full of interesting facts regarding mission work in India, especially the work for the women of the country. There are also convenient lists of books and periodicals, and statistical papers of great value to all interested in the advancement of Christian missions.

In a series of "Handbooks on the History of Religions" (Ginn & Co.), a volume on "The Religion of the Teutons" is contributed by Prof. P. D. Chantepie de la Saussaye, the translation from the Dutch having been made by Dr. Bert J. Vos, of the Johns Hopkins University. The author of the book is an authority in the field of comparative religion, and in the present work is presented for the first time in English a reliable popular account of the Teutonic deities, myths, conceptions, and observances. The method of treatment is purely historical. The survey begins with the earliest times, and is brought down to the conversion of the Teutonic tribes to Christianity.

#### BOOKS RELATING TO EDUCATION.

In the "Educational Series" issued by the J. B. Lippincott Company, Prof. E. L. Kemp contributes a compact "History of Education," including accounts of the educational systems not only of the Western nations, but of China, India, Persia, and Egypt. It is no part of the author's purpose to give an exhaustive statement of historical facts, but his aim is rather to single out those events in the history of education which illustrate most clearly the genesis and evolution of existing systems and methods.

A contribution to educational history of a more special character is Mr. J. E. G. de Montmorency's volume on "State Intervention in English Education" (Macmillan). In this book the history of state-aided education in England is traced from the beginning down to the date of the first government grant in 1833. Heretofore there has been no satisfactory book of reference on this important subject, and the record now presented will be found useful by American as well as British specialists in education. The volume includes an interesting summary of the relations between education and the state in the New England colonies.

Another volume of much interest to teachers has been made up of papers selected from the writings of Prof. S. S. Laurie, of the University of Edinburgh, and is entitled "The Training of Teachers and Methods of Instruction" (Macmillan). Among the topics treated in these papers are "The Teaching Profession and Chairs of Education;" "The Philosophy of Mind and Training of Teachers;" "The Respective Functions in Education of Primary, Secondary, and University Schools;" "The University and the People:—and the University of the Future;" "Geography in the School;" "The Religious Education of the Young;" "Examinations, Emulation, and Competition," and "History and Citizenship in the School."

A book of unique value to all American teachers and school superintendents has been written by Mr. Preston W. Search, whose varied experience as a superintendent of city and village school systems in many States of the Union qualifies him to speak as one having authority. The work is entitled "An Ideal School; or, Looking Forward," and it appears in the "International Educational Series," under the editorship of Dr. William T. Harris (Appleton). In addition to the editor's preface, there is an introduction by President G. Stanley Hall, of Clark University, who speaks with the greatest en-

thusiasm of the author's ability and single-minded devotion to the highest educational ideals. The topics treated in the book are of the most practical nature, such as "The Health of School Children," "Fundamentals in Planning a School," "The School Plant," "The Scope of the School," "Courses of Study," "The Function of the Teacher," "Municipal Difficulties and Organization," and "The Ethical Basis of the School." President Hall says of the book: "I can think of no single educational volume in the whole wide range of literature in this field that I believe so well calculated to do so much good at the present time, and which I could so heartily advise every teacher in the land, of whatever grade, to read and ponder."

To turn from the ideals to the realities of educational systems, an illuminating volume entitled "Life at West Point" has been written by Mr. H. Irving Hancock (Putnams), a war correspondent who has had a good opportunity to form an opinion as to the practical value of the West Point training, and who has made a careful study of the methods and aims of the Military Academy. Those among our younger readers who may have in view West Point appointments can do no better than to consult Mr. Hancock's book, and learn from it not only what studies will be pursued at the academy, but more, perhaps, about the actual daily life of the cadets than can be learned from any other single source. The author does not let pass the opportunity to make a serious estimate of the value of the discipline in the making of the American army officer, and to discuss the future of the West Point graduate in relation to our army system. The book is admirably illustrated.

What the public schools are doing for the States of the old South is well brought out in a little volume entitled "The Rebuilding of Old Commonwealths," by Walter H. Page (Doubleday, Page & Co.). These three papers,—"The Forgotten Man," "The School that Built a Town," and the *Atlantic Monthly* article which gives its title to the volume,—make very clear the failure of the old-time systems of Southern education to reach the masses of the present day, as well as the duty which all lovers of progress, North and South, owe to the leaders and builders of the new public-school system which, in some of the Southern States, is just beginning to do effective work.

A book which will prove of great assistance to teachers of history and civics is Prof. Henry E. Bourne's "The Teaching of History and Civics in the Elementary and Secondary School" (Longmans). The first part of this volume is devoted to an exposition of the subject prepared with a view to give to all teachers who have not had special historical training a better comprehension of the problems of historical instruction, while a second part offers a review of the general field of historical study, with many bibliographical and critical helps.

"Freshman English and Theme-Correcting in Harvard College," by C. T. Copeland and H. M. Rideout (Silver, Burdett & Co.), gives in small compass the clearest possible exposition of the Harvard system of instruction and training in composition, by means of exhibits of the actual work there of the students in the English courses. Specimen themes are given, with the marks of corrections and comments of the instructors, and the reader is enabled to see just how the famous Harvard methods in English composition are applied in the class-room.

# INDEX TO PERIODICALS.

Unless otherwise specified, all references are to the September numbers of periodicals.

VOL. XXVI.

NEW YORK, NOVEMBER, 1902.

No. 5.

### THE PROGRESS OF THE WORLD.

*The President's Great Achievement.* On a desk calendar entitled "The Shakespearean Year," the quotation for October 15 was: "All great achievements are the natural fruits of a great character." On that date President Roosevelt terminated the most formidable industrial deadlock in the history of the United States by securing from representatives of the opposing forces their assent to his plan for bringing about an immediate resumption of anthracite coal mining, and a deliberate and permanent adjustment of the questions in controversy. President Roosevelt had been told that he had no warrant for intervention; that he must almost certainly fail if he tried; and that he would injure his prestige and perhaps sacrifice his political future if he essayed to step outside the rôle of his constitutional duties to act as industrial peacemaker in a time of national emergency. But Mr. Roosevelt's whole career has been built upon a succession of sacrifices of his political future. In his case, "courage mounts to the occasion." (Some men calculate with such nicety that they lose all power of bold and effective action.) We have endeavored, more than once, to make it clear that Mr. Roosevelt is not an imprudent or unsafe man, but that he is one of those rare Executives able to think with great concentration; to assimilate varied and complex facts; to listen to many counselors with a mind that does not flag, or wander, or cease to dominate the topic of discussion, and to get the best results out of consultations with a vigor of intellectual digestion that very few men possess.

*A Threatened Public Calamity.* This anthracite coal strike—which had begun early in May,—had not caused the public any very serious inconvenience during its first ten or twelve weeks. The price of coal had, of course, advanced; but poor people were needing only a very little through the summer for kitchen use, and the cool and agreeable summer had been

followed by a mild September. But with the approach of October the situation grew serious in the extreme. Many industries dependent upon the use of anthracite coal became greatly embarrassed. The supply was so meager that factory managers were put to their wits' end to get fuel enough at \$15 or \$20 a ton to keep their machinery running; whereas, in normal times, their supplies had cost perhaps \$3 a ton. The great majority of the retail coal dealers were entirely sold out, and for the poor who were obliged to buy in small quantities the price had reached a cent a pound, or even more, with prospect of a total cessation of the anthracite supply. Soft coal was being largely substituted for hard coal; but it also, in the East, had advanced 300 or 400 per cent. in price, and it was not well adapted for chimneys, furnaces, stoves and grates that had been constructed for anthracite. Furthermore, the cessation of anthracite mining during that half of the year in which the bulk of the winter's supply is produced had created a situation of scarcity that could not have been wholly overtaken by the utmost effort to substitute the bituminous article. With our cold American winters, the fuel supply is a necessity ranking only second to the supply of bread; and, indeed, the supply of bread was already affected, for the bakers in the large Eastern cities had, as a general rule, been compelled to advance the price of the standard loaf.

*The Parties in Interest.* Thus, the interest of the general public in the coal strike had rapidly outgrown that of the two parties in dispute. The striking miners were being supported by contributions from their fellow-unionists employed in the bituminous mines of the country, and by funds from other organized labor bodies, and were not in any dire want. Their confidence was firm, and they showed not the slightest sign of surrender. The operators, on the other hand,—leagued in a firm and closely-organized mo-

nopoly, with absolute control of the anthracite coal trade,—were indifferent equally to the demands of the miners and to the clamorings of the public. They issued solemn pronouncements, of a metaphysical nature, evidently intended to create discussion and divert attention from the practical situation. It had all along been believed by the public that the readjustment of the finances of several of the coal-carrying railroads, and the creation of the so-called anthracite coal trust, had left the real authority centered in the banking house of J. P. Morgan & Co.; and that Mr. Morgan himself, by speaking the word at any time, could have brought about a conference which would have ended the deadlock and given the public its coal supply. But Mr. Morgan had been in Europe most of the summer, and he was occupied with several other business situations of vast magnitude. The coal trust was in the hands of a board of directors consisting of the presidents of a group of coal-carrying railroads. The headship of this group of presidents fell to Mr. George F. Baer, by virtue of the fact that he had been made president of the Reading Company,—which, with its railroad lines and its coal mines, is much the largest single factor in the federated group of interests that constitutes the monopoly of anthracite coal mining, carrying, distribution, and sale.

Mr. Morgan had, it was understood, practically agreed early last spring, in view of his expected absence from the country for some months and of his absorption in other affairs, to leave to this group of railway presidents the full authority to represent the coal monopoly in its controversy with the miners. He had returned from Europe on August 20. It had been the hope of everybody that he would see the impossibility of a solution of the trouble on the lines that the board of railway presidents had adopted, and that he would take the matter up on its own merits. So sensitive, indeed, was Mr. John Mitchell, the head of the striking Miners' Union, to the demands of the suffering public for a resumption of the coal supply, that he went so far—though this fact was not made public at the time,—as to offer to undertake to persuade the miners to resume work at once on Mr. Morgan's promise to take up the miners' claims in his own way, and to render a decision upon the questions in controversy. This remarkable offer was made in perfect good faith, quixotic though it might seem to some people. The leader of one compact party in a great industrial conflict proposed to lay down arms on condition that the one really controlling head of the equally compact party on the other side

should, himself, name the terms upon which future peace could be maintained. This was characteristic of Mr. John Mitchell's breadth of mind, and of his instinctive belief in the American love of justice and fair play. He believed the miners' cause would be safe even in the hands of its most inveterate opponents, if the points at issue could but be taken up responsibly upon their real merits.

*Too Busy in  
Wall Street  
for Labor  
Problems.*

The principal trouble in this protracted anthracite dispute had grown out of the fact that the labor situation in the coal mines has never had (since the change of conditions that has been brought about by the creation of the anthracite monopoly) any real consideration whatever from the people in actual authority. This larger mastery of the production and mining of anthracite coal has been, from the point of view of private finance, a great triumph. The gentlemen who have come forward as official heads of the coal-carrying railroads, and who in that capacity jointly manage the anthracite coal fields, are not in their present positions by virtue of any especial knowledge of the way to solve labor disputes. They are part of a great financial and administrative organization that has been endeavoring so to regulate the coal output; so to adjust freight charges; so to apportion shipments; and—with competition eliminated,—so to fix at profitable levels the market price of coal, as to put new value into depressed or non-dividend-paying stocks. It has been their task to make money for their stockholders,—partly from those legitimate savings by which combinations can capitalize competitive waste; but partly, also, by exactions from the general public. In short, they have been reaping the reward of successful monopoly control of the production, transportation, and marketing of an article of common use and prime necessity. These things, rather than labor problems, had been claiming their best attention.

*Capital Blind  
and Deaf.*

This modern reorganization of the anthracite business, moreover, was only an incident in that stupendous movement,—centered principally in Wall Street,—for combining industrial and transportation companies, floating new issues of bonds and stocks, and rolling up with dazzling and unprecedented rapidity vast private wealth. Still further, let it be said with unshrinking frankness, that most, if not all, of the men most largely concerned on the capitalistic side have been, to no small extent, absorbed in the brilliant personal opportunities that these Wall

Street reorganizations and combinations have afforded for the making or multiplication of their own personal fortunes. Thus, instead of being the men who had best understood the coal miners' situation in eastern Pennsylvania, they have been the men who have seemed to careful observers to understand it least of all,—so intently have their minds been fixed upon other objects and other considerations. It is only upon this theory that their mistaken utterances during the five months of the coal strike could possibly be accounted for, as well as their total failure to see themselves, and the situation they had created, as they were seen by almost everybody else. Before the strike began efforts had been made by patriotic and public-spirited men, who compose the National Civic Federation, to avert a struggle by conciliation or arbitration. The Civic Federation is made

up, in considerable part, of large employers of labor. It is entitled to public confidence; and it could have averted the anthracite trouble with perfect ease if it had not found the operators wholly intractable.

Indeed, a careful study of all the facts made it rather difficult not to believe that, for some reason or another, the operators desired at the outset to have the strike come on; and that, during most of its continuance, they did not wish to have it terminated. Why they should have desired a strike, is a question that has been variously answered. Under cover of the confusion there were said to be large transfers of the securities of some of the companies concerned; and it was the opinion, in certain business circles, that the strike had been employed to depress values

(Chairman of the Executive Department, Erie Railroad.)

in order to make easier the further purchase of stocks so as to insure permanent control. Another opinion seems to have been that—inasmuch as the strike would make an immense increase in the cost of coal to the public—the anthracite trust would find it easier to fix a higher permanent level of prices than had existed before. Such a result would naturally reward the monopoly for a vast deal of temporary inconvenience. A third theory was that the coal operators were simply acting on behalf of a coalition of interests that now dominate a number of so-called trusts and combinations; and that this coalition is deeply opposed to organized labor, and desirous of crushing out trade-unionism.

*Trade-Union-  
ism's Death  
Sentence.*

According to this view, it was believed by the capitalists when the strike came on last spring, that the time was favorable for meeting the Miners' Union; and that the operators would certainly win a victory, destroy the prestige of Mr. Mitchell's organization, and, henceforth, have the labor situation wholly in their own hands. In any case, the strike seems to have been welcomed by the operators, who entered upon it without the slightest misgivings, not dreaming that they were destined to be humiliated and defeated in the end. The very ill-advised strike of the Amalgamated Iron and Steel Workers against the steel trust last year had ended in failure for the strikers; but it had also made combined capital a little too confident in its sheer strength, and had made it forgetful of the fact that "circumstances alter cases," and that every labor situation must be judged upon its own intrinsic merits. It should be understood that the main question all along has been, not whether the miners were justified in making certain specific demands having to do with wages and conditions of employment, but whether they were right in asking for the establishment of some regular way of dealing between capital and labor. Thus, the miners were fighting for a way to bring about orderly and decent conditions in the anthracite district; and the operators were fighting for the retention of anomalous and disorderly conditions.

*Monopoly on  
One Side—*

When as in the old times the anthracite districts were divided up among a large number of really independent mine owners and operators, local strikes might, indeed, be frequent; but general strikes were practically impossible, and uniformity of conditions throughout the mining regions were not to be expected. But, when the coal-carrying railroads began to fix dominating freight rates had frozen out the independent operators,

and leased or bought most of the coal lands, a new era was beginning. And when these railways ceased to compete with one another in the anthracite trade, and found a way to unite their coal interests, the new era was fairly launched. It is true that their spokesmen stated, last month, that there were still seventy-five different operators in the anthracite region; but, so far as the public is concerned, there is only one operator. On the side of the producing, carrying, and selling of coal, the situation is completely controlled by an organization in which the coal-carrying roads are leagued; this organization spoke for the entire anthracite business, last month, just as if there had been only one anthracite mine in the world, of which it was absolute owner. And when, finally, the situation became unbearable, the murmurs of public opinion began to grow louder until a tornado was imminent, and Mr. Morgan himself appeared on behalf of the joint coal and railway interests,—no coal-mine operator or railroad director ventured for a moment to deny that Mr. Morgan was authorized to speak for the combined capitalists, as completely as, on the other side, Mr. John Mitchell was authorized to speak for the combined laborers.

*—Means Union  
on the Other  
Side.*

Thus, combined capital presented a solid front. Local mine owners had abdicated the responsibility of direct relations with their employees, and had allowed all negotiations on their behalf to be carried on, first, by a board of railway officials meeting in New York, and, finally, by one New York banker. Effrontery, let it be said, could not have gone farther than for capital under these circumstances to deny to plain workmen the right, for their own protection and advantage, to form associations and to deal with capital through their chosen agents or representatives. Not only was it reasonable that the coal miners should have been united in a great trade union; but it was plainly to the advantage of legitimate owners and employers—in view of the existing situation—that this union should be recognized and dealt with. There is, indeed, far more reason for the existence of the one general organization of miners in the anthracite regions than in the bituminous States, for the simple reason that the whole anthracite business has been brought under control of a single monopoly, while nothing of the kind is true of coal-mining in the bituminous regions.

*The Union's  
Worthy  
Record.*

Yet experience in the principal bituminous States has shown that Mr. Mitchell's organization—the United Mine Workers,—is a beneficent factor. In those

States, the bituminous operators appoint a committee of representative employers which, every year, meets a representative committee of miners. After due discussion, the wage-scales are fixed for a year to come on the plan of "collective bargaining," and the United Mine Workers hold their members to faithful keeping of these contracts. Thus, the turbulence and strife that were once almost chronic in the mining districts of such States as Ohio and Illinois are at an end, and employers and employed alike are warm in their approval of the new arrangement. All that Mr. John Mitchell has tried to bring about in the anthracite regions has been the adoption of a wage-scale upon the sensible, businesslike plan of mutual discussion and agreement. Mr. Mitchell's reasonableness and forbearance, during the past three years, in his endeavor to secure this desirable solution, have been worthy of the highest degree of praise.

But why, if Mr. Mitchell has wanted *"Inevitable, nothing but what was perfectly ignorance."* reasonable, and as advantageous to one side as to the other, has he met with such rebuffs? The answer is a perfectly simple one. The "powers that be" in Wall Street had never really known what it was that Mr. Mitchell wanted. They were in such a roaring, whirling maelstrom of speculation, company-promoting, railroad reorganization, rivalry among themselves, and the like, that it was practically impossible for anybody outside to shout against such a deafening noise. Mr. Mitchell, and the friends of sane and decent adjustment of the labor situation in Pennsylvania, never got a full hearing in those quarters. This inability to awake dormant intelligence in the seats of the mighty, had led to the strike of the fall of 1900.

*The Strike of 1900.* Senator Hanna, who was managing the Republican presidential campaign, knew and understood Mr. Mitchell thoroughly. As the result of his own experience as a large bituminous coal operator, he approved of Mr. Mitchell's union and its methods; and he was able to secure a settlement of that strike by obtaining for the Pennsylvania miners a 10 per cent. increase in their wages. But even Mr. Hanna was not able to teach the leaders of Wall Street anything about the labor question. He could only arouse the capitalists to action by frightening them with the bugaboo of Bryanism. They conceded the 10 per cent. advance to stop the strike, without the slightest reference to the justice of the claims of the miners, merely because they were told that labor troubles in the campaign season might put William J. Bryan in

the White House. Mr. Mitchell and his men had won their strike; not on its merits at all, but through the by-play of politics. No attempt was made to deal frankly and directly with them. To avoid the necessity of communicating with them, the 10 per cent. advance was made known by notices posted up at the mines.

*The Situation of the Spring of 1901.* Through the politicians, however, as intermediaries, Mr. Mitchell had been assured that the 10 per cent. advance would hold good for six months, or until April, 1901. Then came the time for a permanent adjustment. But, again, it was impossible to secure any intelligent consideration of what was desired. A great strike was imminent; and Mr. Mitchell—patient, modest, anxious to avert the crisis,—came to New York to secure through a recognition of his union a means for taking up gradually, one by one, the difficulties and grievances involved in the labor situation. The period was the most prosperous in the history of the country, and there could have been no possible excuse for cutting wages down to the former hard-times level. The miners, on the other hand, would have been content to leave wages where they were if owners had been willing to meet workers to consider frankly such a matter as the best plan of weighing coal, and other questions affecting the conditions of employment. Again Mr. Mitchell failed, yet not wholly; for he had received what he believed to be a tacit—though not an explicit—promise that if he could avert a general strike and keep the men at work another year, then he might fairly hope that, in the spring of 1902, his union would be recognized. Meanwhile, he was given reason to believe that a frank and fair investigation of actual conditions would be made in which he and his union would be allowed to participate. On the strength of these vague and indefinite understandings, Mr. Mitchell and the leading local officers of the miners' union went back to Pennsylvania, where, by sheer force of moral leadership, they restrained their justly irritated and impatient followers, and postponed *sine die* what had threatened to be the greatest strike in the history of the United States.

*And that of the Spring of 1902.* It seems impossible that the coal operators could have been so fatuous and so blind to their own interests as to forget Mr. Mitchell's admirable conduct in the spring of 1901, or to fail to be prepared with some sort of amicable proposals in the spring of 1902. It turned out unfortunately, however, that instead of making ready—as men of good-will had supposed they were doing,—for some system of dealing collectively with the

miners and keeping the peace, the operators were using this year of truce to prepare themselves for war; and so, when the attempt was made in March and April of the present year by disinterested people to secure harmony and prevent a strike, it gradually became obvious that the union of capital had deliberately made up its mind to have nothing to do with the union of labor. Even then, Mr. Mitchell kept his wonderful self-control; counseled further patience; and did all that he could to prevent a strike, in the hope that the friends of arbitration would ultimately succeed. His advice did not prevail, however. The more radical leaders of the anthracite men carried the day, in a large and representative miners' convention; and so the strike was ordered.

*Mitchell as  
Strike Leader.* Mr. Mitchell accepted the mandate of the convention, and as president of the organization did not shirk from the official duty to lead a strike which he had hoped to avert. No better strike leader than John Mitchell has ever emerged in any time of industrial strife in this country. As one means to bring public opinion to their support, the mine owners—through individuals and newspapers employed by them,—adopted a policy of calumny and slander against Mitchell personally. This policy completely failed through Mr. Mitchell's remarkable poise and self-control.

Never once was he provoked to bitterness or retort. All his utterances were statesmanlike in their tone of moderation and calmness; and, although the monopoly of capital was far more vulnerable than the organization of labor, Mr. Mitchell avoided recrimination, and said not one disagreeable word about the men who were publicly saying so many false things about him. The excellent discipline and order maintained under Mr. Mitchell's leadership of the strikers will only be comprehended by an inquiry made in the historical and comparative spirit. Great industrial strikes are never as polite as ladies' missionary meetings, nor quite so free from turbulence as Sunday-school picnics. In the course of this Pennsylvania strike there was some crime, some disorder, and some unjust and wholly objectionable interference with the few non-union men who had not the disposition to coöperate with the great mass of their fellow-workers; but, as compared with former strikes in the Pennsylvania coal regions, or with former strikes in the bituminous regions of Ohio, Illinois, and various other States,—or as compared with a dozen street railroad strikes in different American cities in recent months or years,—this Pennsylvania strike was a peaceable affair. As an excuse to the public for not supplying coal, the operators continually stated that they could obtain an abundance of labor if the State of Pennsylvania would only protect their men against the vio-

ANTHRACITE MINERS, WITH BREAKER BOYS, AT THE LUNCH HOUR.

lence of the strikers. This statement was false, as were also a series of statements, issued from time to time, respecting violence by strikers, and the extent to which mining operations had been resumed with non-union labor.

*President  
Roosevelt's  
Intervention.*

The climax of the situation was reached when the President of the United States decided to invite Mr. Mitchell representing the miners, and the group of presidents of coal-carrying roads who were, jointly, leading the fight on the other side, to come to the White House on October 3, and allow him to express the urgency of the situation on behalf of the suffering public. The invitation having been accepted by both sides, there was a widespread hope that the end was near; this hope was dashed, however, by the results of the conference. President Roosevelt, in an admirable statement, impartial and conciliatory, called upon both sides regardless of what they might deem their rights, to make concessions in the interest of the country, as a whole. Mr. Mitchell, on behalf of the strikers, promptly rose, and offered to abide by the decision of any arbitrators appointed by President Roosevelt, and, meanwhile, to resume work. This proposal was what the President desired, and what the country regarded as reasonable. To the surprise, however, of the President, and to the dismay of the country, the group of gentlemen representing the employers arose one after another and read to the President a series of typewritten lectures, denouncing the strikers, refusing arbitration at President Roosevelt's hands, and calling upon the President to send federal troops to support the operators.

*A Final Test in  
Pennsylvania.*

After this performance, the tide of American indignation ran higher than it has gone over any recent event except the assassination of President McKinley.

THE SO-CALLED "TEMPORARY WHITE HOUSE."

(Where President Roosevelt is living while the White House is undergoing extensive alterations, and where the coal strike was ended by the President's interposition.)

To test, however, the question whether or not the operators could mine coal if there were troops enough to keep the peace and protect the workers, Governor Stone, of Pennsylvania, called out the entire force of the State National Guard, some ten thousand men in all; and these troops were distributed at points where it was thought that trouble might arise. The upshot was that every local lodge of the miners' organization met to pass a vote of confidence in Mr. Mitchell, and to declare their determination to stand together and to maintain the strike. The ten thousand Pennsylvania troops found practically no disorder anywhere; and the promise of the operators that men would flock back to the mines was wholly unfulfilled. They then had the audacity to say that ten thousand troops were not enough, and that President Roosevelt ought to

PENNSYLVANIA MILITIAMEN ON DUTY IN THE COAL REGION.

send a large contingent of the United States regular army. This, however, was obviously absurd. The available mine labor belonged to the union, and the union did not show the slightest sign of disintegration. Then the public began to turn its flashlights upon the anthracite monopoly itself, and to ask whether it should not be prosecuted under the Sherman anti-trust law. Complaints were lodged against it; and Attorney-General Knox, with the sanction of President Roosevelt, instructed the United States District Attorney at New York to listen to the evidence that might be offered in support of the petition, and to give the subject prompt investigation.

*The Politicians Aroused.* The coal question, meanwhile, had absorbed the entire attention of the community; and the politicians, of both parties, regarded it as having a vital bearing upon the pending Congressional and State campaigns. The Democrats of the State of New York were holding their convention, at this juncture; and they inserted in their platform a plank calling for the ownership and operation of the anthracite mines by the Government. Senator Quay, of Pennsylvania, and his colleague, Mr. Penrose, exerted themselves to the utmost to secure some concessions from the operators; and Governor Odell, and other leading Republican politicians of New York, joined in a

series of conferences which only secured for them the same kind of emphatic rebuff that President Roosevelt had met with at the hands of the operators. Governor Odell's answer took the practical form of proceedings instituted by the attorney-general of the State to ascertain whether the anthracite monopoly was in violation of the New York anti-trust law. Newspapers, mass meetings, boards of trade, and various organizations throughout the United States were at this time denouncing the Coal Trust and demanding its prosecution. Conspicuous lawyers like ex-Attorney-General Olney were scathing in their denunciations of the trust, and frank in their statements that it could be criminally prosecuted under the laws.

*Mr. Morgan's Reversal of the Operators.* Meanwhile, the coal famine was becoming daily worse, and President Roosevelt was striving day and night to find a way to bring it to an end. Mr. Morgan at length perceived that the country was determined to hold him responsible; and that the position so arrogantly maintained by the gentlemen who were regarded as his lieutenants, was untenable, and must be given up. Accordingly,—after personal conferences at New York with Mr. Root, the Secretary of War,—Mr. Morgan on October 13 went to Washington, conferred with President Roosevelt, and finally agreed to leave all issues concerned to a board

of arbitration to be appointed by the President. This proposition of October 13 differed, in no essential respects, from the proposal that Mr. Mitchell had made ten days earlier; excepting that, whereas Mr. Mitchell had offered to leave everything unconditionally to a tribunal to be selected by the President, the operators' proposal brought by Mr. Morgan limited the President in the choice of arbitrators to certain classes of men. So obviously one-sided a proposal could not have been entertained under any conditions less desperate than those existing; but President Roosevelt showed his good sense and his practical mind by not summarily rejecting the proposition, but by receiving it as a starting-point for a solution.

*The Final  
Terms of  
Settlement.*

Mr. Mitchell was sent for; and he went to Washington firmly opposed to the acceptance of a tribunal which one side to a controversy was seemingly endeavoring to make up in a pettifogging spirit in its own interest. President Roosevelt convinced him, however, that it would be possible to choose perfectly fair-minded men from the categories prescribed by the operators, and names were freely discussed. Mr. George W. Perkins, of Mr. Morgan's firm, then went to Washington; and, through him, the employing interests were persuaded to consent that the President should

Copyright, 1901, by Pach Bros., New York.

MR. J. P. MORGAN.

(Who responded to the President's appeal and arranged to arbitrate the strike.)

add a sixth member to the five they had proposed. Thus, a seemingly irreconcilable situation was harmonized by President Roosevelt, when he found himself dealing with a reasonable man on one side and a reasonable man on the other. It is hard to get committees to act as sensibly as their members would have acted individually. When Mr. Morgan took up the matter, the solution was near.

FRANK P. SARGENT.

(Now Commissioner of Immigration, formerly head of Brotherhood of Locomotive Firemen, who aided President Roosevelt in securing arbitration.)

The operators had stipulated that the tribunal should be made up of an army or navy engineer; an expert mining engineer; a man who had had experience with the coal business as an operator or merchant; a United States judge for the Eastern District of Pennsylvania; and an eminent man, recognized as a sociologist. To those the President chose to add a sixth, who should be an eminent Roman Catholic prelate, nearly all of the miners being adherents of the Catholic Church. General Wilson, Judge Gray, and Bishop Spalding, are men of ripe years and national fame; eminently qualified, by character, intelligence, and experience, to serve on any tribunal of arbitration. Mr. Parker—selected as a mining expert—is our foremost authority upon coal statistics. He is editorially connected with a

## THREE OF THE SIX COAL-STRIKE ARBITRATORS.

technical and trade journal that has been aggressively opposed to the miners and their organization at every stage. Mr. Parker would have made an invaluable expert witness before the tribunal, and it is not to be assumed that he will be unduly biased as a judge. Mr. Watkins, who was formerly an independent anthracite mine owner, is in a position to understand intimately the views of the so-called coal trust. Mr. Clark—who was selected by President Roosevelt as the eminent man acquainted with sociology—is head of the order of railroad conductors, and a man of great intelligence, respected alike by capitalists and trade-unionists, and thor-

oughly acquainted with labor problems, as such. Carroll D. Wright, who was named as recorder of the commission, will presumably take the initiative in conducting its investigations; he is, in many ways, the most highly-qualified man in the country to ascertain the facts involved in this controversy, and to weigh the merits of the opposing contentions. Taken as a whole, it is an admirable commission; and its appointment represents a humane and Christian solution, advantageous to labor, and reassuring to capital. Why should the business interests of this country be endangered by labor disputes and strikes when a resort to such a tribunal as this one is

almost always readily available? There has never been a moment since their present organization was formed when the coal miners of Pennsylvania would not have been eager to submit their claims to such a tribunal. It is a great thing that the employers have now been forced by public opinion to realize that they too must be somewhere nearly as reasonable as the trade-unions. Common sense has indeed won a victory.

*A New Crop of Radicals.* The coal strike overshadowed all other topics last month; yet the acute phases of the subject did not prevent a widespread discussion of the principles involved. For once, many of the extreme social and economic radicals were content to be silent in order to hear astonishing avowals from the mouths of men heretofore regarded as the very high priests of conservatism. What was there for the extremists to say when men like Richard Olney, formerly Attorney-General and Secretary of State, should declare that the anthracite operators who had called on the President to suppress the law-breaking strikers, were themselves "the most unblushing and persistent law-breakers." Continuing in this vein Mr. Olney, said:

For years they have discriminated between customers in the freight charges on their railroads in violation of the interstate commerce law. For years they have unlawfully monopolized interstate commerce in violation of the Sherman anti-trust law. Indeed, the very best excuse and explanation of their astonishing attitude at the Washington conference is that, having violated so many laws for so long and so many times, they might rightfully think they were wholly immune from either punishment or reproach.

A BREAKER IN THE HARD-COAL REGION, WITH SOFT-COAL TRAINS PASSING EN ROUTE TO NEW YORK.

There were no doubts whatever as to the views and sympathies of ex-President Cleveland, who heartily approved of the steps taken by President Roosevelt. As against the assertion by the operators of the unqualified right to manage their own affairs without interference, either from the workmen or from the public, the answer of aroused American conservatism was that in the last analysis the rights of the private owners of the coal mines were least important of all. The most fundamental right was that of

ANTHRACITE MINERS AT HOME.

the public to obtain its necessary fuel supplies. Next in importance was the well-being of the large population employed in the hard and dangerous work of mining coal for public use. American conservatism will not confiscate anybody's property, and it will doubtless deal most tenderly with the issues of watered stocks and bonds that the monopoly exploitation of the anthracite coal fields has converted into the semblance of sacred vested interests.

*An Advance  
in Thinking.*

But American economic thinking has made a great advance. Public ownership of coal mines has now been talked of, not merely by the class of men called rabid socialists, but by hard-headed business men and shrewd practical politicians. We are not, indeed, going to have public ownership and operation of coal mines in the United States at any time in the near future;—at least, there is no probability of such a development. But we may fairly hope to have a state of public intelligence and political honesty which will bring about the rigid enforcement of means to regulate and control such combinations as the one which has brought on this great anthracite trouble of the present year. One of the disadvantages of the country is, that so many lawyers of the ability and force of Mr. Richard Olney, instead of being engaged on the side of the public, are the advisers of the great trusts and combinations which rely upon expert legal counsel to point out the way to violate the laws. Meanwhile, there has also been a renewed study of labor questions, and a hopeful revival of interest in the question how best to keep the peace between capital and labor.

*Some  
American  
Principles.*

Those misunderstandings and conflicts which have so disturbed European industry, and curtailed its development, are not wanted in the United States. This country has prospered on two general principles, (1) that of encouraging the largest possible output, and (2) that of paying liberal wages; while English and European trade-unionism has stood for small output, fixity of condition, and stagnant rather than buoyant industry. The kind of trade-unionism that refuses to give the industrious and ambitious man a chance, as against the lazy, inferior, and incompetent workman, is mischievous; and it must be reformed, or destroyed. Strikes are a perilous resort, and are always evidence of stupidity on one side or on both sides; and, generally, of turpitude on the one side or the other. The public does not hold to severe enough account the men who are ultimately discovered to

have been responsible for a needless labor conflict. Some labor leaders are reckless and fanatical, and some capitalists are pompous and arbitrary; but the leaders on both sides are usually well-meaning, and responsive to an appeal to the sense of fair play. The real fault will generally be found to lie simply in a lack of intelligence. This is the trouble that chiefly afflicts Wall Street at present in its new rôle as center of American industrial activity.

*Ignorance in  
Wall Street.*

The ignorance of Wall Street touching the history of labor movements, the personality of labor leaders, the aims of trade-unionism, and the ordinary working in the labor market of the law of supply and demand, is greater than is commonly believed. Wall Street very much dreads and dislikes what it calls a harsh and indiscriminate attempt at the enforcement of the anti-trust laws; yet it has been indulging in the fantastic dream that, with its new and experimental weapons of industrial combination, it could at once go forth and destroy so firmly established a force as trade-unionism. It would seem clear to the most ordinary intelligence that the one indispensable policy for Wall Street to adopt was that of liberality toward labor and large encouragement to trade-unionism. Trust methods make it easily possible for industries to pay good wages and keep the peace with their men; and thereby they strengthen themselves at a thousand points. "Collective bargaining," made possible by the existence on the one side of large capitalistic combinations, and of trade-unions on the other side, affords the easiest and best attainable method by which the trust magnates can keep clear of labor troubles, and carry on their affairs profitably and safely. To many thoughtful observers of this strike in its successive phases, the most painful and the most disquieting thing of all, therefore, was the revelation it gave of the short-sightedness of a group of employers who were risking everything they had to fight desperately against the very methods of dealing with their labor-problems that would have been most beneficial to themselves. The worst of it was they thought their ignorance wisdom, and distrusted the wisdom of their own friends who really knew. There were individual men in Wall Street who would have arrived at wise conclusions; but they were not given the full opportunity.

*An Exceptional  
Man.*

Thus, the final concessions were coaxed out of the operators at the last moment by Mr. George W. Perkins, of Mr. Morgan's firm; and there had never

MR. GEORGE W. PERKINS, WHO AIDED THE PRESIDENT AND MR. MORGAN IN SECURING ARBITRATION.

been a time for eighteen months or two years when, if Mr. Perkins had been authorized to act for the capitalists as Mr. Mitchell was acting for the laborers, the situation could not have been promptly harmonized to the permanent, as well as the temporary, advantage of everybody concerned. He understands that capital and labor should be joint industrial forces; that one needs the other; that it is good for the country that both should be prosperous; and that it is just as fair for one as for the other to be organized, and to deal through accredited representatives. He can grasp the essential principles, and he is practical. It was not men of Mr. Perkins' type who ever supposed that the circulation of petty slanders about John Mitchell would help to settle the anthracite deadlock. Organized labor certainly needs honest and upright leadership; and fortunately, in men like John Mitchell, and like Mr. Clark, of the Railway Conductors,—whom President Roosevelt has selected as a member of the arbitration board,—American trade-unionism to-day has a number of men who lead wisely and intelligently. But, on the other hand, the vast aggregations of organized capital also need wise leadership, and they cannot well endure many such shocks of confidence as this anthracite trouble has produced.

*Centralized Power and Human Welfare.* The combinations of capital are not all of them predatory or improper; many of them are excellently conducted, and they are becoming great balance-

wheels, so to speak, that help—like the succession of regular crops—to keep the flow of national prosperity smooth and steady. Thus, Mr. Morgan's great steamship combination is a most legitimate and admirable triumph of industrial organization and financiering genius. The Steel Corporation bids fair to prove itself not a trust, in any monopoly sense, but a wonderful experiment in the field of industrial economics, a creditable evolution and a valuable factor in this country's prosperity. A number of the great railroad combinations, in like manner, are in the line of genuine progress. Apart from technical questions of a legal nature, it is not to be assumed, off-hand, that even the anthracite operators' agreement is not also a move in the right direction. But the responsibility that goes with the conduct of these vast enterprises cannot be best exercised by men whose mood is arrogant. Power, when it makes men ruthless, is not in fit hands. Let us hope Wall Street will have learned something from this last experience; and that it will, at least, have a better instinct as to the men competent to give it advice in problems involving human welfare.

*The Political Pendulum.*

The politicians had been much puzzled over the question how this strike would affect the approaching elections. Early in October—when the President's efforts seemed doomed to failure through the obduracy of the capitalists,—it was widely believed that the new Congress would be overwhelmingly Democratic. President Roosevelt, himself, probably shared in that opinion. No very logical reason could be given; but, as a rule, in this country the party in power is always punished for anything in the nature of a widespread calamity. It has seemed to fall peculiarly to the lot of the Democratic party to claim that it ought to be rewarded when the people are in trouble; but that is merely because the Republicans happen to have been dominant in our generation much more than half the time. If the political pendulum should prove to have swung the other way this fall, it will not be due to any lack of popular affection for the President and confidence in him. Republican candidates for Congress, indeed, would many of them have been in better position before the people this fall if there had not been something of a prevalent impression that the majority party in Congress had not been supporting the President with due loyalty.

*The President's Policies.*

At least, however,—as we have remarked more than once,—the President is on excellent personal relations with all public men in his party; and he never expected any man to sacrifice honest convictions, on any point, to please the administration. He was naturally disappointed, and deeply so, that Congress failed to uphold the national honor and good faith in dealing with Cuba. No citizen who shares the President's deep convictions on this question will, this year, feel like voting for any Congressional candidate who has not given his word explicitly that he will support President Roosevelt in any non-partisan and patriotic plan for recognizing, by commercial treaty or otherwise, the moral fact of Cuba's dependence upon us as a sequel to our occupation of the island and our forcing upon the Cubans the concessions to us enumerated in the Platt amendment to their constitution. This is the most important business that can come before the present Congress in its short concluding session, which will open on Monday, December 1, and close on Wednesday, March 4. President Roosevelt's fortunate settlement of the coal strike will certainly have saved his party many thousands of votes, as it will also have enhanced his prestige and strengthened his hands for the great tasks that pertain more directly to his office. The circumstances of the strike manifestly brought new support to the President's position on the trust question, as set forth in his recent speeches. It is a growing opinion that, under existing powers, Congress can accomplish a good deal toward the better regulation of the great corporations; and it is possible that both the interstate commerce law and the Sherman anti-trust law may be amended in the near future.

*The President's Indisposition.*

Our October number went to press last month as the President was entering upon his Western speaking tour, with an extensive itinerary, that was to have kept him away from Washington until October 7; and we stopped the presses to make a brief note of the fact that the after-effects of a wound received in the collision of his coach with a trolley car in the Berkshires, on September 3, had compelled a sudden change of plans, the speaking trip being abandoned in Indiana on September 23. The President was suffering excruciating pain from bruises on the left leg below the knee, which had failed to heal properly and had resulted in the formation of an abscess, with some affection of the bone. The leg was operated upon in Indianapolis, and the President was at once removed to Washington, where he was

kept in an invalid's chair, through the anxious conferences over the coal strike, and not allowed to begin to walk until about the middle of October. What the country might have lost in his speeches was more than compensated for in what it gained by his presence at Washington, under circumstances which enabled him to give concentrated and protracted attention to a situation far more important than the pending electoral campaign.

HON. BIRD S. COLER.

*Some Notes of the Campaign.*

In the normally Republican State of Pennsylvania, it was supposed that Mr. Pattison, the Democratic candidate for governor,—who has twice previously been elected to that office through exceptional local conditions,—may gain votes by reason of the coal strike; but it does not seem likely that he will be able to defeat Judge Pennypacker. In New York the Democrats—as foreshadowed in these pages last month,—nominated Mr. Bird S. Coler for governor; ex-Senator David B. Hill providing the platform, and absolutely dominating the Democratic situation. Mr. Coler was elected comptroller of the city of New York, on the Tammany ticket with Mayor Van Wyck, in 1897. The platform pays particular attention to the tariff question. Yielding to pressure under momentary excitement over the fuel famine, Mr. Hill allowed a plank to be inserted in his platform advocating the national ownership and operation of coal mines. The proposal was not

taken seriously by the newspapers or the public; Governor Odell's reelection, by a normal majority, was regarded as assured after the settlement of the coal strike on October 15. The Republican State Convention endorsed President Roosevelt for renomination in 1904; favored reciprocity with Cuba; spoke for protection, though touching lightly on the tariff issue; and condemned monopolies and trusts, but not in the violent and unqualified terms of the Democratic platform. There were only two notable incidents connected with the State Republican Convention; one being its hearty endorsement of Roosevelt, as against the earlier plans of some of the party leaders; and the other and more dramatic incident being the repudiation of a candidate who had been selected by the leaders for lieutenant-governor, on the ground of his connection, as an active Wall Street man, with a large number of great corporations and so-called trusts. Certain corporate interests had opposed the endorsement of Roosevelt; they were again displeased by the rejection of the candidate who had been selected to run with Mr. Odell. Some, at least, of them were further offended by Mr. Odell's outspoken disapproval of the attitude of the operators in the coal strike. These incidents were said to have resulted in the shutting-off of campaign funds from sources usually relied upon for liberal contributions; but the offishness of Wall Street may be worth more to Governor Odell and the Republican ticket this year than its friendly aid could have been.

*The Trusts  
and the Par-  
ties.*

The pending campaign has afforded a hundred illustrations of the absurdity of trying to give the so-called trust question a party character. The Democrats of New York—breathing out threatenings and slaughter against all trusts in their platform,—placed at the head of their ticket a young Wall Street banker regarded as having trust affiliations; the Republicans, on the other hand, with their much milder platform, refused to allow a very excellent candidate for lieutenant-governor, although originally agreed upon, to have a place on the ticket on account of his connection with numerous corporations. In Massachusetts the Democratic candidate for governor, Mr. Gaston, had attained prominence as the leading spirit in the most powerful corporation of Boston or the State,—a wealthy man, thoroughly identified with the modern corporation methods; the Republicans, on the other hand, departing from their long-established traditions, did not nominate a man of wealth, a Harvard man, or a member of

Copyright, 1902, by H. Chickering & Co.

HON. JOHN L. BATES, OF MASSACHUSETTS.  
(Republican candidate for governor.)

the typical Massachusetts aristocracy of family and culture, but have as their candidate a man of the people who is said to belong to what the older generation will remember as the Henry Wilson type. It is not that Mr. Bates lacks education, experience, and fit qualities; it is only that he represents a larger and plainer element of the people. He is a Methodist rather than a Unitarian or Episcopalian, and a graduate of Boston University rather than of Harvard. He is a lawyer, but not a wealthy one, and he is a downright opponent of trusts; and in the Boston Common Council and in the State Legislature he has kept a watchful eye on the sort of corporate interests that have been represented by Mr. Gaston, the Democratic candidate. Thus, in our model commonwealth of Massachusetts, it is the Republican rather than the Democratic ticket, this year, that best represents the attitude of those who would put greater restrictions upon combinations of capital. There is no need to multiply instances; the trust question evidently does not fit itself to the present-day party alignments. President Roosevelt and Attorney-General Knox fairly represent the average thoughtful view: that the sovereignty of the Government must be maintained, and the laws of the land must not be disregarded; but that, on the other hand, the normal play of business energy should not be

unduly interfered with. Mr. Knox made a masterly speech on the subject at Pittsburg last month. Experience is proving a good teacher.

As for the tariff question, it became more evident as the campaign advanced that it was beginning to assume something of its old primacy of rank, as between parties. The Democrats almost everywhere were declaring that, in the language of the New York platform, "the immediate revision of the tariff is the extreme duty of the hour;" the Republicans, on the other hand, were all of them avowing (1) that the Democratic treatment of the tariff would be dangerous; (2) that the protective principle must be maintained; and, (3) that the present schedules are not sacred and must, in time, be revised. Beyond that point the Republicans differ among themselves,—half of them attaching relative importance to the need of reducing the schedules; and the other half attaching relative importance to the desirability of "letting well enough alone," and avoiding the business disturbance that might arise from attempts to revise a tariff which, after all, is at present working very well. President Roosevelt, in his message to Congress in December, will probably advocate the appointment of a permanent tariff commission,—made up of members of repute and of expert qualification,—who will, from time to time, report upon particular schedules with a view to their scientific readjustment. He will doubtless recommend the immediate abolition of the tariff on anthracite coal, although no one regards this as having any very important bearing upon the recent situation. Further than that, he will press upon Congress the need of reciprocity with Cuba, and will doubtless advise the adoption of Mr. McKinley's policy of reciprocity treaties in various directions. From this time on there will be heard, with increasing frequency, the arguments in favor of reciprocity with Canada.

On the Continent there has been a very bitter outburst of feeling against the United States in consequence of Secretary Hay's protest against the treatment of Jews by Roumania. Many newspapers in Germany and throughout the Continent have treated this as unwarranted interference, and as evidence of seeking on the part of the United States for an excuse to interfere in the internal affairs of Europe. The European opposition to the United States is in reality commercial rather than political, inasmuch as all well-informed European statesmen are well aware that President Roose-

velt and Secretary Hay have not the slightest desire to take any undue part in foreign affairs. President Roosevelt's popularity abroad has, indeed, been shown in hundreds of flattering comments upon his share in the settlement of the coal strike. The prompt action of the tribunal at The Hague, as described in these pages last month, in settling the questions submitted by the United States and Mexico, is everywhere regarded as a happy augury for the future of international arbitration. The dispute did not involve a very large sum of money, and it did not strictly concern either government. The people of the United States as a whole only cared to have a just decision made; they would not therefore have been disappointed or displeased if the verdict had been rendered in favor of Mexico. What has been decided simply is that certain trust funds for Roman Catholic purposes, of which the Government of Mexico acts as custodian, belong in due share to Catholic missions in that part of the United States which was formerly Mexican territory.

It is said that the French Panama Company and the French Government jointly have fully convinced the Government at Washington that a valid title can be given by the company in its proposal to sell to us its franchises and properties. This probably means the final adoption at an early day of the Panama route, inasmuch as it is further reported that our State department is completing the necessary negotiations with the Republic of Colombia. Our navy has been especially active of late in protecting the Panama railroad, and for this we have been much misrepresented in South America. There seems, indeed, to be an organized effort to mislead public opinion in Brazil, the Argentine Confederation, and other South American States, respecting the Monroe Doctrine and the purposes of the United States. It is to be strongly suspected that a good deal of this work is fomented by European political or commercial agents. Thus, the Brazilian people are constantly fed upon the most absurd statements as to the nefarious designs of the United States, especially in the matter of the dispute between Brazil and Bolivia over the Acre territory.

The British Parliament reassembled last month for what will doubtless prove to be a history-making session. The foremost place will be taken by Mr. Bal-four's education bill, which proposes such changes in the national system of elementary schools as would result in building up at the expense of

*The Tariff as a Party Issue.*

*Uncle Sam in South America.*

*America in Europe.*

*Domestic Politics in England.*

the taxpayers a parochial or private-school system throughout the United Kingdom, to the weakening of the secular, or strictly public, school system that had been inaugurated some thirty years ago. The principal force in support of Mr. Balfour's bill is the Church of England; whose strongest ally in defense of this policy is the Roman Catholic Church, which would under the proposed law dominate the common-school system of Ireland, with all bills paid out of the public treasury. The opponents of the system are, chiefly, the great dissenting religious denominations, and those elements of the population that believe in general in the divorce of church from state and in the modernizing of British institutions. The most powerful personal leader who has come forward in opposition to Mr. Balfour's measure is the Rev. Dr. Clifford, foremost of English Baptists. Many thousands of prominent men following Dr. Clifford, and other Nonconformist leaders, have pledged themselves to the policy known as "passive resistance,"—that is to say, if the bill should become a law they will refuse to pay the taxes known as school rates, the proceeds of which would be turned over to the Church of England or other ecclesiastical denominations for the support of schools that are not under direct public control. With the South African War at an end, the English people are giving their attention to these questions of domestic policy that had been in abeyance for two or three years; and upon such issues the Liberals,—who were hopelessly divided, and therefore without influence in the questions pertaining to South Africa,—are finding a way to reunion, and accordingly to strength and influence. Mr. Chamberlain, who really shares with Mr. Balfour the leadership of the party in power, had formerly been much opposed to the granting of public support to private and denominational schools. But a few days before Parliament reassembled on October 16, he convinced his devoted followers in Birmingham that it was necessary to support Mr. Balfour's measure in order to prevent the defeat of the party in power at a time when, for other reasons,—such, for example, as Mr. Chamberlain's own reconstruction policy in South Africa,—it is deemed imperative that the Balfour government should not be replaced by a Liberal ministry.

*The Irish Question.* The opening days of Parliament were marked by extraordinary demonstrations upon the part of the Irish members. During the Parliamentary recess several prominent Irishmen, including members of Parliament, had been arrested under the

coercion law for their active part in the new United Irish League, which is the successor of the old Land League. On general principles, there had been reason to suppose that the Irish party in Parliament would support Mr. Balfour's education bill. But their fierce opposition to Mr. Balfour's administration may lead them to oppose an education bill which they would otherwise favor, for the sake of helping to overthrow a ministry which they regard as peculiarly hostile to Ireland. The Irish leader, John E. Redmond, accompanied by John Dillon and Michael Davitt, attended an Irish convention in Boston last month, and have been speaking elsewhere. Of the new Irish movement Mr. Redmond says:

"The league is the ruling power in Ireland to-day, as truly as ever the Land League was. The government played into our hands by the coercion policy, and now the country is aroused. We are on the eve of a settlement of the land question, and after that national self-government will speedily come to Ireland.

"The Irish party now in the House of Commons is the only real opposition in the English Parliament, and I believe the day is near at hand when it will have the controlling influence in Great Britain.

"Hundreds of Irish are imprisoned under the Coercion act without receiving any trial by jury. But nobody cares for imprisonment under these circumstances. The more the people are attacked the higher their spirits rise."

*English Industrial Questions.* English industrial questions have occupied an unusual share of attention during the past few weeks. The completion of Mr. Morgan's great steamship combination has been a foremost British topic. To meet this situation, the British Government has committed itself to a plan for the granting of large subsidies to the Cunard line, which was thus dissuaded from going into the combination. The London *Times* has been leading in an aggressive campaign against what is termed municipal socialism,—that is to say, against the very rapid development in the English municipalities of the system of municipal ownership and operation of gas works, street railways, and kindred enterprises. It has now been charged that this aggressive movement against the municipal tendencies of the time in England has been solely at the instigation and expense of certain immense combinations of capital (on the American plan, and to some extent under American leadership) that are proposing to get control of the English trolley systems in pursuance of similar methods in the United States. There are also signs of active interest on the part of American capitalists, not merely in street railroads and London underground lines, but also in the standard steam railway systems of the United Kingdom.

HON. F. W. REITZ, FORMERLY TRANSVAAL STATE SECRETARY.

(Now speaking in this country.)

*Uneasiness in South Africa.* It is feared by many people in England that South African troubles are only beginning rather than ending. Certainly, the period of reconstruction bids fair to be a long and painful one. State Secretary Reitz of the Transvaal,—who, though he signed the treaty of peace, refused to accept amnesty and British citizenship for himself, and is now traveling in this country,—declares that there is scarcely a house left, outside the towns, in the entire region that formed the theater of the late war, and, further, that the money that England proposes to pay to help the farmers reestablish themselves is only as a drop in the bucket compared with the sums that will be needed. The Boer generals now in Europe regard Mr. Chamberlain's attitude toward the provisions of the peace treaty as narrow and ungenerous, and Lord Milner's extreme unpopularity in South Africa adds to the difficulties of a bad situation. The mine-owners at Johannesburg are strongly opposing the British plans for making them assume a great part of the financial burdens of the war. Thus, the last state of the Uitlanders seems to be worse than the first.

*The  
Afrikaner  
Bond.*

In Cape Colony, the Dutch element holds its political predominance firmly, and it is undoubtedly disposed to protect those more extreme pro-Boers in the colony who gave aid to the enemy in the recent war, and were therefore technically guilty of treason. Mr. Jan Hofmeyr, the famous old-time leader of the Afrikaner Bond, as the organization of the Dutch element in Cape Colony is called, has now gone back to South Africa after an absence of more than two years. It was his support that originally lifted Cecil Rhodes into the premiership of Cape Colony, and it was he more than anyone else who aided Mr. Rhodes in making his territorial expansions of the British Empire. The Afrikaner Bond is now going to extend its organization to the conquered territories of the South African Republic and the Transvaal. The position that the Bond will take is understood to be (1), a firm demand that in all internal affairs the Dutch in South Africa shall have the same rights and privileges, as regards language, religion, and other institutions, as are enjoyed by the French in Canada, and (2) a demand that in outside relations they be given the same freedom of action for South Africa that is enjoyed by the Dominion of Canada. The Boer generals have been traversing the Continent of Europe amidst many demonstrations of friendliness, but they have been disappointed in their hope of large gifts of money in aid of the impoverished South African farmers. It is said that they are now sorry they did not visit the United States before touring in Germany and France.

*Affairs  
in Germany.*

On October 16, the German Reichstag resumed again the discussion of the long-pending tariff bill. The speech of Chancellor von Bülow was regarded by the extreme advocates of the new protective programme as destroying all chances of its success. All appearances were that the measure would be defeated by a large majority, the Socialists and Radicals being against it because it is too favorable to the landed interests, while the Centrists and Conservatives are against it because they do not think it favorable enough to German agriculture. Dr. Andrew D. White is to complete his term of service as ambassador to Germany upon reaching his seventieth birthday early this month, and the appointment of Mr. Charlemagne Tower, who goes from St. Petersburg to Berlin, is said to be regarded with favor by the Germans. The failure of the German Emperor to receive the Boer generals was a much-advertised incident last month that had no real importance. Industrial questions in Germany, as in all other great countries, are upper-

most just now, and capitalistic combinations similar to those in the United States are in that country, as in England, quite the order of the day.

*Affairs in France.* It is interesting to turn from the strenuous attempts of Premier Balfour and the British party in power to hand over the common schools of their country to ecclesiastical control, to the equally strenuous attempts of Premier Combes and the French party in power to rescue elementary education in France from the undue control of religious associations. The French premier stands firm as a rock, and up to date he has the backing of a strong majority in the Chamber of Deputies. In the past three or four months some 2,500 schools taught by members of the religious orders have been closed. This school question had to divide attention in France last month with industrial difficulties, particularly with an extensive strike, which seems to have been due in some part to those disturbances of the whole world's fuel market that resulted from the great American coal famine and the demand in the United States for foreign coal. The French strike was by no means complete, and it did not promise to be of long duration as these pages were closed for the press. The death of Emile Zola was another topic that absorbed French attention for a few days. There is nothing striking or new in the foreign relations of France, but the past month has brought renewed evidences of the pacific intentions of the present French ministry, and of

its determination to abandon completely the idea that France is to attack Germany upon the first favorable occasion

*The Situation in Turkey.* There is always smoke rising from the smouldering fires of political discontent in Macedonia and other parts of the Turkish Empire, but in the past few weeks the smoke has been denser than usual, and the apprehension that the flames might burst forth has been serious and widespread. The news from the Macedonian hills has not been very definite, but it is known that there was last month something like an organized uprising on foot, and that the movement of Turkish troops to suppress it was heavy. The diplomatic world was agog last month, furthermore, over reports that Russia was taking advantage of Turkey's difficulties to secure a renewal of those old-time arrangements which insured the freedom of the Dardanelles to Russia's ships and made the Black Sea a Russian lake. Next month is likely to have brought forth some more definite news from these troubled regions. Austria-Hungary is watching this situation very intently. The Hungarians, by the way, have been celebrating the centenary of the birth of Kossuth.

*A Convention on Labor and Capital.* One of the engagements that President Roosevelt was unable to keep, by reason of the accident already described, was at Minneapolis, where he was scheduled to make an address at a national convention of employers and employees held from September 23 to 25. This turned out to be a very instructive three-days' conference on the relations of labor and capital to one another and to the public, and it was participated in by a number of prominent employers, several labor leaders well qualified to speak, and statistical and economic authorities like Mr. Carroll D. Wright, Prof. John B. Clark, of Columbia University, and numerous others. It was a timely congress; and, to judge from the newspaper reports, its discussions must have been unusually valuable. At this time of aroused interest in all phases of the labor question, it would be a good thing if a full report containing the princi-

CELEBRATING THE KOSSUTH CENTENARY IN BUDAPEST, HUNGARY.

pal papers and speeches could be printed in popular form and widely distributed. The discussions contained many references to the pending coal strike in Pennsylvania, and the experience of various states and countries was drawn upon. Colonel Wright's opening paper was a noteworthy address by a man who seems to have had many titles to prominence in these past few weeks, and of whom we are glad to publish an appreciative character-sketch elsewhere in this number of *THE REVIEW*. Colonel Wright's preliminary investigation of the anthracite situation appeared last month as an important brochure in the publications of the Bureau of Labor at Washington. In the conferences which led finally to arbitration, Colonel Wright's counsels were regarded as invaluable by the President. He was made recorder of the arbitrating tribunal, and will doubtless have a large part in directing its work and shaping its conclusions; he was also, last month, installed as president of the new collegiate department of Clark University at Worcester. A paper of profound worth at this Minneapolis conference was presented by Prof. John B. Clark, who discussed the question, "Is Compulsory Arbitration Inevitable?"

*Some  
University  
Occasions.*

The place that our universities and higher institutions of learning hold in American life and society was freshly illustrated last month by the great attention paid to the inauguration of new presidents in several important institutions. The notable gatherings of educational leaders and public men that marked, early in the year, the inauguration of President Remsen at the Johns Hopkins, and President Butler at Columbia, were recalled by the assemblage at Princeton on October 25 to witness the formal induction of President Woodrow Wilson into his new office. Of President Wilson's career hitherto as historian, man of letters, publicist, orator, and educationist, Mr. Robert Bridges wrote in this magazine several months ago. Princeton's great part in the nation's past is only an earnest of its future influence and usefulness. It is pleasant to note that President Patton,—who remains at Princeton, holding a university professorship in his favorite field of study,—has also accepted the presidency of the famous Princeton Theological Seminary. President Edmund J. James, of Northwestern University,—which has a beautiful location on the shores of Lake Michigan, at Evanston, just north of Chicago,—had been installed on October 21, after two or three gala days, whose brilliant programmes were participated in by a number of distinguished educators. These university occasions have, of late, become veritable love-

Photo by Pirie Mac Donald, New York.

PRESIDENT WOODROW WILSON OF PRINCETON.

feasts in their showing forth of the spirit of mutual good-will and cooperation that now marks our American university and college life. The old superciliousness of Eastern institutions toward "fresh-water colleges," so called, has totally disappeared,—at least, in so far as the real leaders are concerned. Never before have our colleges and universities so faithfully represented the best ideals of American life; and never before have they been so zealous and so intelligent in their efforts to adapt themselves to the best service of the whole people. Dr. James is a thorough master of educational science and of the art of administration; and he has in his new work the hearty sympathy and support of President Harper, and the authorities of the neighboring University of Chicago. The Northwestern is now more than fifty years old, and it has collegiate and professional students to the number of about 2,500,—about one-quarter of these being students in the collegiate department at Evanston. Its professional schools occupy a large building in the heart of Chicago, and they have important rank among institutions of their respective kinds. The Northwestern has been under the especial auspices of

the Methodists, just as the University of Chicago has had the special support and protection of the Baptists. In neither case do these denominational distinctions limit, in any appreciable way, either professors or students in the university life and work. On October 16 Kansas celebrated the installation of the new president of its university with due ceremony, and the occasion was one of great popular interest in the West. President Hadley, of Yale, delivered an important address. The new president is Dr. Frank Strong, who has for some time been president of the University of Oregon, and who is regarded as one of the best trained and most successful of the younger college administrators. Like all members of the group of Western State universities, this institution at Lawrence, Kan., is making excellent progress.

*The Shorter College Course.* At Worcester, Mass., there has been opened a new collegiate department of Clark University. President G. Stanley Hall continues as president of this uni-

versity, which in its short career has made such noteworthy original contributions to philosophy and science; but a separate president was desired as head of the new affiliated undergraduate school. Of this collegiate department Col. Carroll D. Wright was installed as president last

PRESIDENT STRONG, OF KANSAS STATE UNIVERSITY.

PRESIDENT JAMES, OF NORTHWESTERN UNIVERSITY.

month. Although so long at Washington as Commissioner of Labor, Colonel Wright is a Massachusetts man, and his new duties will be congenial. Senator Hoar is chairman of the board of trustees of Clark University, and he and Senator Lodge, both of whom are especially felicitous on academic occasions, participated in the exercises. The Clark College, which opens with a large freshman class, has adopted the three-year course, with the group system which has proved so satisfactory in the undergraduate department of the Johns Hopkins University. President Butler, in his first annual report to the trustees of Columbia University last month, presented weighty reasons for providing a two years' college course. This question is one of such vital interest to all colleges and to the country at large that we have asked President Butler a series of questions which he has been good enough to answer explicitly and frankly, and his discussion will be found printed elsewhere in this number of the REVIEW. It would seem likely to arouse a thorough discussion, and to stimulate some needful reforms.

# RECORD OF CURRENT EVENTS.

(From September 21 to October 20, 1902.)

## POLITICS AND GOVERNMENT—AMERICAN.

September 24.—The Montana Democratic convention is controlled by United States Senator Clark....New York Republicans renominate Governor Odell.

September 25.—Connecticut Democrats nominate Melbert B. Cary for governor....Republicans of the Third Iowa District nominate Judge B. P. Birdsall for Congress, to succeed Speaker Henderson, who declined a re-nomination.

September 27.—Montana Republicans declare for Roosevelt for President in 1904....Gen. Russell A. Alger is appointed United States Senator by Governor Bliss, of Michigan.

September 30.—The Michigan Democratic State Central Committee names L. T. Durand as the party's candidate for governor, in place of Judge George H. Durand, his brother, who finds it necessary to withdraw on account of ill-health.

October 1.—Joseph M. Terrell (Dem.) is elected governor of Georgia by a light vote....The Vermont Legislature elects Gen. J. G. McCullough governor by a majority of 60 votes....New York Democrats nominate Bird S. Coler for governor on a platform declaring for government ownership of the anthracite coal mines....Rhode Island Democrats nominate Dr. L. F. C. Garvin for governor.

October 3.—Massachusetts Republicans nominate John L. Bates for governor.

October 9.—Rhode Island Republicans renominate Gov. Charles D. Kimball, and declare for President Roosevelt's nomination in 1904.

October 14.—The Vermont Legislature reflects United States Senator W. P. Dillingham.

October 18.—President Roosevelt issues an order warning Federal officeholders that the law forbidding political assessments must be obeyed.

## POLITICS AND GOVERNMENT—FOREIGN.

September 25.—The Earl of Dudley, Lord Lieutenant of Ireland, makes his formal entry into Dublin....The French Ministry of Finance reports on French investments abroad, which amount to \$6,000,000,000.

September 29.—The Cuban budget is announced as aggregating \$14,000,000.

October 8.—A general insurrection is reported in Macedonia.

October 9.—Joseph Chamberlain, British Colonial Secretary, addressing the Liberal Unionists of Birmingham, declares that if the present ministry is defeated on the Education bill it will resign office....The new Japanese loan is heavily over-subscribed.

October 14.—John O'Donnell, Nationalist member of

GOV. JEFFERSON DAVIS, OF ARKANSAS.  
(Re-elected on September 1, 1902.)

GOV. JOHN F. HILL, OF MAINE.  
(Re-elected on September 8, 1902.)

Parliament for County Mayo, Ireland, convicted of intimidation and inciting to boycotting, is sentenced by the Crimes Act Court to three months' imprisonment at hard labor, and to an additional three months in default of bail for good behavior.

October 16.—The British Parliament reassembles; John O'Donnell is suspended from membership in the House of Commons for an insult to the prime minister.

October 17.—The French ministry is sustained in the Chamber of Deputies, on the question of the enforcement of the Associations law, by a vote of 529 to 233.

October 18.—After a week of fierce fighting, the Venezuelan revolutionist, General Mendoza, is reported to have retreated, leaving 3,000 killed and wounded.

#### INTERNATIONAL RELATIONS.

September 22.—President Palma, of the Cuban Republic, requests the United States to withdraw the artillery companies now stationed on the island.

September 24.—By the display of the American flag, a Venezuelan gunboat is enabled to approach and bombard Ciudad Bolivar; United States Minister Bowen exacts an apology from the Venezuelan Government.

HON. D. C. HEYWARD, OF SOUTH CAROLINA.  
(Democratic nominee for governor.)

September 26.—It is announced that ambassador Charlemagne Tower, now at St. Petersburg, has been chosen to succeed Dr. Andrew D. White as American Ambassador to Germany; Ambassador McCormick, now at Vienna, is appointed ambassador to Russia; Minister Stover, now at Madrid, is appointed ambassador to Austria-Hungary; Arthur S. Hardy, now minister to Switzerland, is transferred to Spain; and Charles Page Bryan, minister to Brazil, becomes minister to Switzerland, while David E. Thomson, of Nebraska, succeeds him at Rio de Janeiro.

Copyright, 1902, by E. Chickering, Boston.

COL. WILLIAM A. GASTON, OF MASSACHUSETTS.  
(Democratic candidate for governor.)

September 27.—The ambassadors at Constantinople nominate Mugaffer Pasha as governor of Lebanon.

September 28.—A battle between Turkish troops and Bulgarians near Salonica, in European Turkey, is reported.

September 29.—Russia restores the Peking-Shan-hai-kwan Railway to the Chinese Government.

October 1.—The "Pious Fund" argument before The Hague Tribunal is closed....Greece protests to Turkey against the murders of Greek notables by Bulgarians in Macedonia.

October 4.—The Central American Court of Compulsory Arbitration is instituted at San Jose, Costa Rica; Guatemala declines to participate.

October 7.—It is announced that a convention between France and Siam, on the disputed boundary question, has been signed.

October 8.—In accordance with the agreement between Russia and China, the Manchurian territory lying south of the Liau River is restored to China.

October 10.—The Colombian Government makes a formal protest against Admiral Casey's refusal to permit the transit of soldiers across the Isthmus of Panama.

October 13.—Sir Michael Herbert, the new British ambassador to the United States, presents his credentials at Washington.

October 14.—The Hague Tribunal decides in favor of the United States as against Mexico in the "Pious Fund" case....Henry L. Wilson, United States minister to Chile, is appointed minister to Greece to succeed Charles S. Francis, resigned; John B. Jackson is made minister to Chile.

October 15.—Massacres of Christians in Macedonia by Turkish troops are reported.

(Independent coal operator, prominent in connection with the anthracite strike.)

GEN. THOMAS J. STEWART.

(The new commander-in-chief of the G. A. R., elected at the Washington Encampment in October.)

GEN. J. P. S. GOBIN.

(In command of the Pennsylvania troops ordered out during the coal strike.)

#### LABOR DISTURBANCES.

September 22.—The sheriff of Lackawanna County, Penn., calls on Governor Stone for troops to subdue rioting among the coal strikers.

September 23.—Troops are ordered to Lebanon, Penn., to put down rioting among iron and steel workers on strike there.

September 24.—More troops are ordered out in the Pennsylvania anthracite district.

September 28.—New Orleans street-car men, 1,800 in number, strike for shorter hours and higher wages—an eight-hour day at twenty-five cents an hour.... President Mitchell, of the United Mine Workers of America, issues a statement discussing the anthracite miners' condition and pay, and repeating their demands.

October 3.—A conference is held at Washington between President Roosevelt, the anthracite mine operators, and representatives of the miners; no agreement is reached (see page 532).

October 6.—The entire division of the National Guard of Pennsylvania is ordered to the anthracite region.... At Geneva, Switzerland, troops are called out to restore order among the striking street-car employees.... Twenty-five thousand men quit work in the coal fields of France.

October 7.—President Roosevelt appeals to the striking coal miners to resume work, promising to name a commission to investigate their condition.... The British Miners' Federation votes to send money to the coal strikers in the United States.

October 8.—The United Mine Workers decline President Roosevelt's proposition to resume work pending action by Congress.... The French miners declare a general strike.

October 9.—The Swiss Workmen's National Committee proclaims a general strike.

October 10.—Conferences between political leaders and the coal operators end in failure.

October 11.—The American Federation of Labor issues an appeal in behalf of the striking coal miners: Secre-

tary Root, representing President Roosevelt, confers with J. Pierpont Morgan on the coal strike.

October 12.—The New Orleans street-car strike is ended by mutual concessions.... The street-car employees at Geneva, Switzerland, return to work.... Miners in the Belgian coal fields demand an increase in wages.

October 13.—As a result of conferences on the coal-strike situation between President Roosevelt and J. P. Morgan, it is announced that the coal operators have asked the President to appoint a commission to decide the matters at issue in the anthracite region.

October 15.—After conferences with President Mitchell of the United Mine Workers and with representa-

PROFESSOR MATZEN.

(President of the Hague Tribunal, which decided in favor of the United States in the "Pious Fund" case.)

tives of the coal operators, President Roosevelt appoints as a commission to investigate and settle the questions involved in the strike, Gen. John M. Wilson, U.S.A.; the Hon. George Gray, of Delaware; Edward Parker, of the Geological Survey; Thomas H. Watkins, of Scranton, Penn.; Bishop Spalding, of Peoria, Ill.; and Edgar E. Clark, of the Order of Railway Conductors. Col. Carroll D. Wright, head of the Department of Labor, is designated as recorder of the commission.

October 16.—President Mitchell issues a call for a delegate convention of the United Mine Workers, to vote on the proposition to return to work at once and accept the arbitration of President Roosevelt's commission.

#### OTHER OCCURRENCES OF THE MONTH.

September 23.—Owing to an abscess on his leg, resulting from the recent trolley accident at Pittsfield, Mass., President Roosevelt is compelled to abandon his trip to the Northwest and to submit to a slight surgical operation; he returns to Washington.

September 25.—As a means of relieving the money market, Secretary Shaw offers to anticipate payment of interest on government bonds up to June 30, 1903.

THE CROWN PRINCE OF SIAM.  
(Now visiting the United States.)

September 26.—A severe cyclone in Sicily destroys more than 500 lives and does much damage to property. . . . It is announced that 60 per cent. of the spinning and weaving mills in the South have been consolidated; the cash capital involved is \$25,000,000. . . . As a further measure of relief for the money market, Secretary Shaw announces that he will purchase 5 per cent. bonds of 1904 at 105.

September 27.—In a train wreck at Arleux, France, 22 persons are killed and 60 injured. . . . A Russian military celebration takes place at Shipka Pass in memory of the independence of Bulgaria. . . . American and British tobacco interests are amalgamated in a joint company under the name of the British-American Tobacco Company, Ltd.

GEN. WILLIAM BOOTH.  
(Father of the Salvation Army. Now in the United States investigating Salvation Army work.)

September 29.—Porto Rican public schools are opened with an attendance of 55,000 pupils.

October 1.—An international ship combination is completed, the International Navigation Company, changing its name to the International Mercantile Marine Company, with Clement A. Griscom as its president, and increasing its capital to \$120,000,000.

MEMORIAL CHURCH ON THE BATTLEFIELD OF SHIPKA PASS,  
BULGARIA.

(This church was dedicated during the fêtes held in the first week of October to commemorate the winning of the independence of Bulgaria by Skobelev in 1877.)

October 5.—The body of Emile Zola is buried at Paris, with impressive ceremonies....Capt. John J. Pershing's column completes a successful campaign against the Moros, in the island of Mindanao, P. I., having killed or wounded a hundred of them and captured or destroyed 140 forts; the Sultan of Cabugatan is among the dead.

October 6.—The Canadian-Australian cable is reported laid from Vancouver to Fanning Island, a distance of 3,455 nautical miles.

October 9.—At the national encampment of the G. A. R., at Washington, D. C., Gen. Thomas J. Stewart is elected commander-in-chief....The Nebraska Supreme Court decides that the reading of the Bible, supplication to the Deity, and singing of sacred songs in the public schools are prohibited by the State constitution....Col. Carroll D. Wright is inaugurated as president of Clark College, the undergraduate department of Clark University, at Worcester, Mass. (See page 548).

October 12.—The Sultan of Bacolod, of Mindanao, P. I., rejects the friendly offers of Commander Sumner, of the American forces.

October 16.—The corner stone of a memorial to the missionary victims of the Boxer uprising in China is laid at Oberlin, Ohio, under the auspices of the American Board of Commissioners for Foreign Missions.

October 17.—Secretary Shaw authorizes the purchase by the Treasury Department of 4 per cent. bonds of 1925 at 137½ and interest.... Dr. Frank Strong is inaugurated as chancellor of the University of Kansas.

#### OBITUARY.

September 22.—Prof. Christopher Ernest Luthardt, a noted orthodox theologian, of Germany, 80.

September 23.—Major J. W. Powell, the eminent naturalist, 68.

September 24.—Senhor Silvano Drandao, Vice-President of Brazil.

September 25.—Capt. Lamont G. Burnham, a well-known Boston merchant, 58....Isaac A. Singer, of the Singer Manufacturing Company, 65....Justice A. H. Ellis, of the Kansas Supreme Court....Rev. Dr. George A. Archibald, of Covington, Ky.

September 26.—John Latey, the London editor, 60.... Count Giuseppe Dassi, one of the most prominent Italians in the United States, 80....Mrs. C. A. Pillsbury, of Minneapolis, 67.

September 27.—Gen. Francis J. Lippitt, a lawyer and

a veteran of the Mexican and Civil wars, 90....Sidney L. Willson, United States pension agent at Washington.

September 29.—General von Gossler, formerly Prussian Minister of War, 62....Emile Zola, the French novelist, 62.

October 1.—Rear-Admiral James E. Jouett, U.S.N. retired, 74....Dr. John Byrne, the eminent gynecologist, 77.

October 2.—Frank Jones, ex-Congressman from New Hampshire, 70.

October 3.—General Bela M. Hughes, a noted character in the early history of the West, 86....Ex-Judge Mason B. Loomis, a well-known jurist of Chicago, 67.

October 4.—Zebulon Stiles Ely, a New York philanthropist, 83.

October 6.—Canon George Rawlinson, of Canterbury, England, 90....Dr. Abel M. Phelps, of New York, a orthopedic specialist, 51.

October 7.—Ex-Congressman William Wallace Grout, of Vermont, 66.

October 8.—John Hall Gladstone, the English scientist, 75.... Brig-Gen. Hugh H. Abernethy, of Jersey City, N. J., 60.

October 12.—Frederick A. Keener, a prominent citizen of Denver, 76.

October 13.—Major John F. O'Brien, a well-known business man of Louisville and a Confederate veteran 62....Dr. Elvira Ranier, of Oswego, N. Y., a prominent New York woman physician, 55....Dr. William Richard Whitehead, of Denver, Col., a distinguished physician and medical author, 70.

October 14.—Sir John George Bourinot, clerk of the Canadian House of Commons, 75.

October 15.—The Very Rev. Monsignor Connolly, of St. John, N. B., 80....John A. Dillon, leading editorial writer of the *New York Evening World*, 59.... Rear-Admiral Thomas O. Selfridge, Sr., U.S.N., retired, 90....Lieut.-Col. Charles Porter, U.S.A., retired, 64.

October 16.—The Rev. Frederick Munson, a retired Congregational clergyman of Brooklyn, N. Y., 85.... Col. Charles Anthony, of Springfield, Ohio, a veteran of the Civil War....Charles Henry Ham, of Montclair, N. J., formerly editorial writer and appraiser in Chicago, 71.

October 17.—Joseph A. Dean, of New York, one of the pioneers in the linseed oil business, 82.

October 18.—Prof. James A. Mitchell, of the faculty of St. Mary's College, Maryland, 48.

THE LATE QUEEN HENRIETTA OF BELGIUM.

## CARTOON COMMENTS ON THE COAL STRIKE AND ITS SETTLEMENT.

ONLY COMMON SENSE IS NECESSARY.—From the *World* (New York).

THE cartoonists of the country were at their best last month when the coal strike, in its various phases, was the one topic that absorbed public attention. No possible selection of a dozen or a score of these drawings can convey much idea of the variety and the cleverness displayed in the work of twenty-five or thirty caricaturists, each one of whom drew enough coal-strike cartoons to fill up our entire department. While the cartoonists almost invariably favored arbitration of the dispute, and represented in the main the rights of the

public rather than those of either of the contesting parties, their sympathies were overwhelmingly with the strikers as against the operators. Yet, on the other hand, the greater part of their work showed good temper. Their admonitions to the coal-road presidents were not meant to be offensive or to leave any permanent sting. Mr. Bush, in the cartoon on this page, expresses the general sentiment respecting the desirability of arbitration from all points of view. This picture, we hope, symbolizes future harmony in the coal regions.

ROOSEVELT'S BIGGEST GAME.—From the *Herald* (New York).

President Roosevelt was fortunate enough to receive the approval, so far as we are aware, of every one of the newspaper cartoonists of the country regardless of party affiliations. His intervention in the coal strike came in the midst of a season of political campaigning; and it would have been easy for an ungenerous opposition to

ascribe political motives to the President. But Republican, Democratic, and independent newspapers alike have praised his course as manly, sincere, and wholly to the public interest, while miners and operators throughout were expressing themselves to that same effect, when agreed upon nothing else.

# CARROLL D. WRIGHT: A CHARACTER SKETCH.

BY H. T. NEWCOMB.

**E**IGHTEEN years ago a President—whose administration, according to the already registered decree of the electorate, was soon to be succeeded by one dominated by political principles radically different from those to which he adhered,—was confronted by the perplexing necessity of choosing an officer who should organize and direct a newly-created bureau that was manifestly sure to impress profoundly and permanently, the social ideals of the American people and the political policies of the United States. There was one man whose temperament and training especially equipped him for the position, and his previous public services conspicuously pointed to his preëminent fitness; but he was an earnest Republican; he had advocated the policies of his party on the stump, and had even been a prominent member of the national convention which had nominated the lately defeated candidate, James G. Blaine.

Thus although Colonel Wright—who had then served for twelve brilliantly successful years as chief of the Massachusetts Bureau of Statistics of Labor, the first bureau of the kind created in the world and the model for all that have followed,—was unmistakably the man best qualified to serve as the first federal Commissioner of Labor, it seemed scarcely proper to deprive his State of his services in order that he might hold for but two or three months a position which, by all the precedents of the "spoils" system, was marked as one that no president could refuse to confer upon some member of his victorious party. But those who took this view neither properly estimated the strength of Colonel Wright's achievements, nor fully realized the clear-sighted probity of the Democratic President-elect. No sooner was Mr. Cleveland aware of the nature of General Arthur's perplexities than he caused it to be made known to the latter that if the place were left open until after his inauguration he would at once appoint the Massachusetts Republican—Colonel Wright. This, however, was not the first time that confidence in the integrity and unprejudiced breadth of view of Colonel Wright had overcome the scruples of partisanship; for two Democratic governors of Massachusetts, William Gaston in 1875 and Benjamin F. Butler in 1883, had denied the ambitions of their own political followers, men prominent as

leaders of the labor movement, in order to retain his services as the head of the State bureau.

Carroll Davidson Wright occupies positions which are unmistakably unique in the fields of public education; in the official circles of the capital; in the labor movement; in the modern trend of religious progress; and in the intellectual life of the nation. Although he was denied opportunity to enter college by ill-health, which followed his preparatory work and is, therefore, without university training, he has been for twenty years in great demand as a university lecturer. He is now president of Clark College, the collegiate department of Clark University, of the Manassas Industrial School for Colored Youth, and of the Hackley School at Tarrytown, N. Y. He is a trustee of the richly-endowed Carnegie Institution, and a member of its executive committee of seven; professor of statistics and social economics in Columbia University; and honorary professor in the Catholic University of America; while he has, at different times, delivered courses of lectures at Harvard, Johns Hopkins, Michigan, Northwestern, and Brown universities, and at Dartmouth College. At Washington, Colonel Wright has long been recognized as dean of the large corps of able and industrious workers in the fields of sociology, economics, and statistics.

One phase of Colonel Wright's relation to the labor movement has been expressed very clearly during the course of the President's efforts to save the public from the disaster of a failure of the anthracite supply. The daily press has not failed to make plain the fact that his advice and aid have been sought at every stage. A report was wanted concerning the causes of the controversy and its accompanying conditions; Colonel Wright was requested to make it, and, twelve days later, it was in the President's possession. A proposal of great importance and extreme delicacy was to be made to President Mitchell: Colonel Wright was obviously the most suitable intermediary. A conference between the leaders of both sides and the President was arranged; Colonel Wright sat at the right hand of his chief while it was in progress, and remained last, of all those present, to consider the outcome with him. A commission to settle the controversy is called into being under conditions which preclude Colonel Wright's

COL. CARROLL D. WRIGHT.

designation as a member; but the Presidential will, and the wishes of both parties, unite in demanding that he shall bear to it a relation that involves service, influence, and honor.

In spite of its rapid preparation, the report on the strike is no merely perfunctory and superficial summary, but a logically-arranged, grave, and philosophical statement of the results of well-directed and cautious inquiry. Probably no other man could have completed the inquiry with equal promptness or success. Colonel Wright approached it with the entire confidence both of the leaders of the strike and of the officers of the corporations concerned,—a confidence which recognized not only the integrity of his purposes, but his possession of the

still rarer qualities of freedom from prejudice; of profound discretion; of readiness to seek ideals step-by-step through paths of practicability; of sympathetic perception; and of broad humanity. Such confidence he has long enjoyed, and it has brought him the personal friendship alike of the principal labor leaders and of many capitalists and real captains of industry. As the head of the Labor Department, Colonel Wright is bound by an obligation to hold the scales evenly between both parties to wage contracts. He is the partisan of neither side; although his sympathies, in the continuous struggle of labor for a higher standard of living, are—with those of every right-minded man,—on the side of the recipients of wages. Yet the warm heart is held in check by a cool head, and, like every sensible man, he realizes that the call that progress makes upon industry must not be greater than it can bear.

In concluding his "Outline of Practical Sociology," Colonel Wright declares his conviction that there is on the way a true religious revival that must profoundly modify the problems

which it has been his life work to study and elucidate. He believes that there can be no real solution of the great and varied questions that confront society, which does not embody and enforce the everlasting principles of mutual obligation that make up real religion. This conclusion is that of a deeply spiritual mind, yet one to which the crudely-supernatural has little meaning or attraction. The son of a Universalist clergyman, Colonel Wright freely admits his admiration for the magnificent organization of the Roman Church, and his appreciation of its strong and elevating influence upon artisans and wage-earners. He has, for many years, been an active teacher in the economic department of the great Catholic University at Washington. His church

relations are, however, with the Unitarian denomination, which he served for three years as president of the American Unitarian Association. He is now president of the National Conference of Unitarian and Other Churches. In Washington he has, not infrequently, occupied the pulpit of the church of his denomination.

What has been enumerated expresses but a part of Colonel Wright's relation to the intellectual life of America; to relate all, would be to tell the complete story of public activities that began at an unusually early age and have been prosecuted with especial vigor. He is, unquestionably, the foremost living statistician; and, although he disclaims any title to rank as an economist, there is no American whose work in that field entitles him to a higher place. As a student of practical sociology, the magnitude and scope of his contributions to human knowledge are unequalled. He succeeded the late Gen. Francis A. Walker as president of the American Statistical Association, of which he had long been a most influential member; he is a leading member of the American Social Science Association; a vice-president of the American Association for the Advancement of Science; a councilor of the American Economic Association; and a member of the American Academy of Political and Social Science, and of the American Historical Association. He is one of the governors of the Washington Academy of Sciences; and European recognition of his social services has been evidenced by his election as a corresponding member of the Institute of France; an honorary member of the Imperial Academy of Science of Russia; a member of the International Statistical Institute, and of the International Institute of Sociology; and an honorary member of the Royal Statistical Society of Great Britain.

To sociological literature, he has contributed almost fifty volumes of statistical reports of great permanent value; besides supervising the completion of the twenty-five volumes that contain the results of the Eleventh Census. He is the author of a Chautauqua text-book of unusual merit and interest, "The Industrial Evolution of the United States;" and his "Outlines of Practical Sociology,"—a volume of modest dimensions, but containing a graphic and accurate description of American society, and the outlines of a broad system of social philosophy,—is used in most of the great universities. He also directs and acts as the chief editor of the "Bulletin of the Department of Labor," a publication that appears every two months; while the list of his magazine articles includes a large number of titles, a wide range

of social topics, and, substantially, every considerable magazine in the United States. Colonel Wright appears frequently on the lecture platform, and has thus presented the results of his studies to audiences in, practically, every important city in the land.

Colonel Wright is of mixed English-and-Scotch descent, but was born in New Hampshire, on July 25, 1840, of American ancestry that dates back to the year 1640 and includes several soldiers of the Revolution. At the age of eighteen he was a school-teacher; at twenty-two, a private soldier in the New Hampshire Volunteers; and, at twenty-four, the colonel of a regiment in active service in the Civil War. Leaving the military service in 1865, he resumed legal studies which had been begun in 1860; was soon admitted to practice; and, making a specialty of patent law, had by 1875 acquired a practice worth, approximately, \$10,000 a year. He served as a member of the Massachusetts Senate for two terms, during which he secured the passage of the "Massachusetts Standard Policy" law regulating insurance; a measure requiring railways to run cheap morning-and-evening suburban trains for workingmen; and another, completely reorganizing the State militia. In 1873 he was made chief of the State Bureau of Statistics of Labor. In 1880 he had direct charge of the Federal census in Massachusetts, and, later, was sent to Europe to study the factory system for the Tenth Census. Although he became the federal Commissioner of Labor in 1885, he continued in charge of the Massachusetts bureau for three years, and directed the State census of 1885. While holding his present position he had charge of the Eleventh Census, from the resignation of Mr. Porter in 1893, to 1897, when it was practically completed and he was relieved of the responsibility at his own request. During the same time, he served as chairman of the special commission of three which investigated the Pullman strike of 1894 in accordance with the subsequently-repealed law of October 1, 1888. This record of achievement is that of one who has not slackened the pace of his endeavor, and is now probably in the most fruitful period of his life.

The official bureau organized and directed by Colonel Wright has been most successful. For special investigations he has been able to enlist, from time to time, the most eminent American students of the particular social relations involved. It numbers among its regular employees men of the highest attainments in its field, not a few of whom have acquired their training through their service there. Its present chief clerk—whose mastery of the technique of statistics is unexcelled,—entered its service

as a youth, and in the lowest rank. The present treasurer of the island of Porto Rico; the chief statistician who directed the population inquiries of the Twelfth Census; the assistant statistician of the United States Department of Agriculture; one of the assistant directors now planning the Philippine census; the president of the City and Suburban Homes Company of New York City; and many other men of distinction who are now performing practical social services of great utility, are "graduates" of the Department of Labor. The best expression of Colonel Wright's qualities as an executive is the high quality of the work accomplished under his supervision, its large volume, and the relatively small expense incurred. He has that chief requisite of a successful modern administrator, ability to delegate work and to avoid wasting his own energy on details. Thus he always has time for whatever really demands his attention.

Colonel Wright's official career under four Republican Presidents, and during eight years of Democratic rule, has not failed to have its occasional difficulties and perplexing situations; it is, however, a characteristic fact that his calm philosophy and unostentatious but persistent self-reliance have enabled him to meet them so unflinchingly and overcome them with so much apparent ease that they have seemed not to exist. The strike of 1894 supplied one of these situations; but he refused to temper his report in any degree, and spoke the truth, as he saw it, with such unfaltering clearness and manifest conviction that criticism was speedily baffled, and even those who appeared aggrieved at the outset soon either admitted the validity of his conclusions or wisely withdrew all show of opposition.

Colonel Wright speaks so clearly and so freely that there need be little difficulty in comprehending the direct and simple tenets of his social philosophy. It is one of balanced optimism springing from a reasoned and deeply-rooted trust in the essential beneficence of the all-pervading and unceasing Divine purpose which he perceives, written largely in the history of all ages and all society. He places religion ahead of all other social influences, while asserting that it must progress as men progress, and be refined and spiritualized as the ideals of humanity become more elevated and spiritual. He proclaims, as next in importance, the gospel of individual effort; the doctrine that personal improvement sought and obtained by means consistent with ethical principles must lead to general advancement. His broad eclecticism finds philosophical socialism fraught with an important message to mankind; but he regards it as most valuable, as a criticism which points out

the blemishes in the present system. The latter is to be developed and improved, but it is a result of divinely-appointed evolution and cannot be superseded by any man-made formula. There is no universal remedy; no panacea for social ills; but there is, and must always be, a trend toward improved conditions. These are some of the broader generalizations. Some of his more specific conclusions may be hastily sketched. Labor and capital both have the right to organize, and the former can demand with perfect propriety the privilege of "collective bargaining." For capital to deny this is as absurd as it would be for a labor union to insist on meeting the individual security-holders of a corporation, or the several members of a firm. Labor controversies should be avoided by intelligent bargaining, which implies a better understanding of mutual relations; but if, on account of the weakness of humanity, they occur, their settlement should be sought by conciliation or mediation. This implies that employees and employers shall meet face-to-face, on a common basis: each desiring to deal with perfect equity, mutually recognizing the integrity and manliness of both. Arbitration is, relatively, cumbersome, because it submits the decision of a trade question of possibly fundamental importance to a third party; but when other means fail it is, in its voluntary form, an eminently civilized recourse. Compulsory arbitration would lead to results more disastrous than follow strikes or lockouts. It would mean the enforcement of wage-rates that might be destructive to capital, or the evasion of the law, on the one hand; or driving men to their labor by force, on the other. The problem of labor is a continuing one, which can never be finally settled; which must ever develop new phases and difficulties; its friction can be moderated, but not eliminated. The parties to labor controversies, like those to all contests between intelligent beings, invariably claim that they stand for vital principles. In this contention they are sincere, but mistaken. Thus, in the report on the anthracite strike, Colonel Wright was able to say that although the difference in point of view had led to apparently-conflicting statements, these were the consequences of position, and not of a desire to mislead. The fact that labor unions exist, and that workingmen can and do strike, is proof of the growth of intelligence; when intelligence is yet greater, differences will be settled without resort to industrial warfare. In the meantime, labor unions should be incorporated; they should develop a higher average of leadership; and employers should be much more considerate of the rights and welfare of employees.

# THE SETTLEMENT OF THE COAL STRIKE.

BY WALTER WELLMAN.

**N**OW that the great coal strike has been settled, it is interesting to inquire how the end was reached, and what it means. It means much more than the mere resumption of coal production and relief of the fuel famine. Important as that is, the true significance of the settlement, and of the method employed in bringing it about, is much broader and more far-reaching. The greatest event affecting the relations of capital and labor in the history of America was the agreement to submit the coal strike to an arbitration tribunal appointed by the President of the United States. It marked a distinct step forward; and it is not too optimistic to say that the precedent now established is likely to go very far toward making great and prolonged strikes well-nigh impossible in the future. Both capital and labor have learned a most wholesome lesson; capital, more especially, for reasons which I shall hereinafter suggest.

Every great example and every great action involves the breaking of precedents. One of the finest phases of American life—whether in literature, art, invention, industrialism, finance, or civics,—is the spirit which refuses to admit that a thing cannot be done because it has never been done before. Fortunate, indeed, was it that there sat in the Presidential chair at Washington a man whose intrepidity gives him almost a fondness for breaking precedents and striking down traditions, provided they are precedents and traditions which stand in the way of wholesome achievement. Many of Mr. Roosevelt's advisers thought he made a great mistake by setting out as a strike-settler; the President, in their opinion, had enough on his hands in discharging his constitutional duties as head of the state and his traditional duties as chief of a great political party, without hunting trouble elsewhere. It is a not very-well-kept secret at Washington that, for a time, the President's mentors were divided into two camps on this question,—one urging him to pull out and stand upon his record of an honest, though futile effort, after the apparent failure of the White House conference; and the other urging him to go ahead despite constitutional rocks and political torpedoes.

Now that it is all over, it is pleasant to reflect that, among the latter party, was none other than the President himself. He never had the slightest notion of giving up the job. He lis-

tened patiently enough to those who pointed out the difficulties and dangers of the business; the hazards of playing with the fires of capital's sensitiveness and labor's suspiciousness; but he went ahead, just the same. It is almost a pity—from the standpoint of those of us who love to study the game,—that the strike was settled: for it would doubtless have been most delightful to watch and see how far Theodore Roosevelt would go, and by what route. It might, also, have been rather thrilling. One thing is very certain; if the strike had gone on, and serious disorder had occurred in the coal fields, and federal troops were needed to restore order,—the bluecoats would have been on hand; under their orders, no trifling would have been permitted. One of Mr. Roosevelt's maxims, "Don't hit till you have to; but, when you do hit, hit hard," would have found practical application here.

But the strike has been settled, and President Roosevelt is entitled to, and is getting, a large share of the credit. Most people say, "The President settled it!" It would be more accurate to say that he helped. At this juncture, it is worth while to let the eye glance rapidly backward for a moment. It is too long a tale to be told here—the origin, progress, and pathology of the mental disease which had seized upon the managers of the coal railways. They had this disease, and, apparently, there was no one that could cure them. Pride of opinion, obstinacy, arrogance, childishness, inability to sympathize with the interests of other people, or even to comprehend how their own were to be best served; a tendency to misunderstand everything and every one, and to browbeat all who would not agree with them, were the outward manifestations of the disorder which the public saw most of. Senator Hanna and the Civic Federation tried to ward off the malady; but, in the end, only aggravated it. Mr. Hanna had settled the strike of 1900 for political reasons, and he was not to be permitted to meddle this time. Various well-meaning outsiders offered their good offices, but were rebuffed. Philanthropists, governors, and more Senators tried their hands, but failed.

Late in August, Mr. J. Pierpont Morgan returned from Europe, and there was general expectation that he would soon settle the strike. He had organized what is known as the coal

trust, and Morganized corporations controlled nearly 75 per cent. of the output. Hence, no one doubted that the great financier had power to call the strike off whenever he chose by the simple process of calling up a few railway presidents on the telephone and giving them their orders in sufficiently large doses. But when Mr. Morgan caused the announcement to be indirectly made that he was not responsible for the strike and did not intend to interfere, there was widespread and keen disappointment. People at once rushed to the conclusion that Mr. Morgan did not settle the strike because he did not want to, and abusive letters by the hundred poured in upon him.

Now, the facts are that Mr. Morgan has been trying to settle the strike all the time. Since returning from Europe he has done little else. Even he was at once surprised to find how difficult a task it was. By this time the hallucinations of the railway presidents were chronic and painful. It is only fair to them to say that they sincerely believed they were right in their contention that the miners' union was a wretched, irresponsible, and lawless organization; that it maintained the strike through intimidation; and that they,—the railway presidents,—had become, through circumstances, the champions of the sacred right of men to work when they wish to work and somebody is ready to hire them. "Let us alone, and we will win out," was the plea which Mr. Morgan heard from the lips of Mr. Baer and his associates at every effort to bring about a settlement. "All we need is sufficient protection, and we'll break the strike. An important principle is at stake; so, let us alone."

Time and time again Mr. Morgan endeavored to secure some slight recession from this attitude which would make a settlement possible. The railway presidents were as a stone wall. They had become almost fanatical. They knew that if Mr. Morgan were to throw aside every other consideration and rush on to a settlement, at any cost, he had the power to do so; but they felt that he would not go to this extreme. They knew that he is, essentially, a peacemaker; that he abhors, above all things, quarrels between large interests in the financial world. In the coal fields many interests were involved, and some of these stood by Mr. Baer,—a great number of capitalists and high officials of banks and railways whom Mr. Baer and his associates had been able to convince that their view was the right one, and that in the battle was involved a principle which it would be cowardly to sacrifice. Then Mr. Morgan, for a long time, found settlement impossible within the limits of action which he thought it necessary for him to respect. He

could not afford a clash of interests, and he could not attempt to use his power as that of a dictator as long as these other interests stood out. Besides, at every turn, Messrs. Baer, *et al.*, begged for "a little more time, and we'll break the strike."

Things drifted thus till President Roosevelt decided to take a hand in the game and called the now-famous conference at the temporary White House. Apparently, this conference was a failure; it resulted in nothing, unless it was a widening of the breach. But, actually, this conference was the beginning of the end. It set in motion the molecules in men's brains which produce the mightiest effects in this world. It brought on "the psychological moment,"—a moment which Mr. Morgan and his alert allies, partners Bacon, Steele, and Perkins, were quick to perceive and take advantage of. Some of the events which followed in rapid succession may be thus listed:

1. Governor Stone ordered out the Pennsylvania militia.

2. Mr. Morgan told the operators that with this ample protection they must "make good" by mining coal or admit that they had lost the battle.

3. Reports from the coal fields indicated that the presence of troops added none to the numbers of men at work.

4. Mr. Mitchell, of the miners' union, called meetings of the locals, which unanimously decided against acceptance of President Roosevelt's suggestion of a return to work, relying upon the efforts of the President to secure justice for them, and voted to continue the strike to the end.

The intolerant tone of the railway presidents in their conference with President Roosevelt displeased the country, and greatly strengthened Mr. Mitchell, whose bearing was dignified and respectful. Men who had taken the operators' side of the controversy said such manners "spoiled their case." Among the men of great influence within the coal corporations who were provoked at the manner in which the railway presidents had borne themselves in the presence of the Chief Magistrate, was Mr. Cassatt, president of the Pennsylvania Railway. Up to this time, Mr. Cassatt had been an indifferent spectator; only recently returned from his long summer vacation, he was not in full touch with the situation. His sympathies leaned naturally to the operators' side, but he did not regard himself as occupying a position of responsibility with regard to the question. But Mr. Morgan thought otherwise. Control of the Reading Railway having virtually passed from the hands of Mr. Morgan as voting trustee to the Penn-

sylvania Railway, and the Reading being a large miner and shipper of coal, efforts were made to induce Mr. Cassatt to join in settling the strike.

Impressed by the chain of events which immediately followed the White House conference, as well as by the state of public opinion, Mr. Cassatt at last bestirred himself. He visited New York, and had a long conference with Mr. Morgan. This was on October 7. That moment marked the beginning of the end. As soon as Morgan and Cassatt came to an understanding, the deadlock in the coal region was doomed; from this on it was only a question of time and method. There immediately followed the effort of Senators Platt and Quay and Governor Odell to secure a settlement,—an effort which might have succeeded but for injudicious use of threats by the Senators.

The next step was the visit of Secretary of War Root to Mr. Morgan on the 11th. Mr. Root went at the request of President Roosevelt,—to present to Mr. Morgan, and, through Mr. Morgan, to all the interests involved, some of the aspects of the situation as it was viewed at Washington, and the programme of the President concerning it, as already outlined in the first part of this article. The President could not have had a better emissary. Masterful, intellectual, practical; always driving straight to the heart of a problem; fertile of plans for getting over difficulties and to results is Elihu Root. The great financier and the great War Secretary made progress. The former proclaimed himself ready and able to cut the Gordian knot which had bound up the labor and the production of the anthracite fields; he felt his responsibility to the public, to society, and he was not the man to shirk it. The latter pointed out the way, it was arbitration under the auspices of his chief.

That was Saturday. The next day Mr. Cassatt met Mr. Baer of the Reading flying to Mr. Morgan by special train. All that Sunday telephones were throbbing through the East as financiers talked to railway chiefs. Monday all met in New York for consultation. As theretofore, counsels were divided. Some were for fighting it out; some for settlement by posting notices offering a small increase of wages; others, for other methods. But now there was a master-mind and a master-will among them; it was Mr. Morgan. He dictated terms; he decided upon the plan. The brain of Elihu Root had supplied the idea; the power of Pierpont Morgan clothed it with life.

Probably Mr. Morgan never before appeared so large. It was one of the crowning moments

of his life. For weeks he had labored along the road to it. The money in the coal business he cared not a rap for,—a few millions, more or less, were as nothing in the balance. But he did care for his prestige and fame as a conservator of industrial peace; he did care for his responsibility as a trustee of great interests; millions of men, and millions of money, demanded of him action and wisdom. He had his way, and it was the right way. Steel trust, nor shipping trust, nor any other great triumph in the field of finance, will ever reflect so much honor upon Mr. Morgan as this unselfish and patriotic achievement.

He had not only done a great thing, but he now proceeded to make it known in a big way. Instead of having the proposal to arbitrate announced at his bank, with himself inevitably looming in the background as the creator of it, he thought of Mr. Roosevelt down in Washington. Some of Mr. Roosevelt's acts he had not relished; the attack upon Northern Securities was, in his opinion, an onslaught upon him. But there was to be no littleness in this great hour. So he telephoned for a special train, and was soon speeding to the national capital. As I saw him walk into the White House, with Mr. Root, to place the fruit of his power and labor before the young President,—as if it were a peace-offering and a pledge of good citizenship, and of desire to be of service to society,—I thought the scene worthy of a place in a drama of American life.

This was not the last chance Mr. Morgan had to do good work in ending the strike. The limitations placed upon the selection of arbiters were regarded by President Roosevelt as somewhat too narrow. He wished to broaden them by minor changes and by adding two names to the list. When the presidents of the coal roads received this suggestion from the President they flouted it. They were unwilling to have an "i" dotted or a "t" crossed in the proposition, as they had agreed to it. If there were to be any changes they would repudiate the whole business. Here, again, Mr. Morgan stepped in; he took charge; he sent his partners, Messrs. Perkins and Bacon, to Washington, instructed to adjust the differences. The result is known to the country. An arbitration commission was agreed upon, and announced, and the strike came to an end with the acquiescence of a delegate convention of miners held at Wilkesbarre on October 21. Had not Mr. Morgan compelled the operators to accept this compromise, the fat would have been in the fire; for President Mitchell was determined, should the compromise fail, to demand for the miners an arbi-

tration board selected by President Roosevelt without any restrictions whatever.

Press and public have praised President Roosevelt alike for his efforts in behalf of peace, and for the care which he exercised in making up his commission. Nothing succeeds like success. Had the President failed, he would not have had as many of critics as he now has of eulogists; but they would have made more noise. The idea of the coal-company people in proposing that men of certain described vocations or professions be named was not an attempt to "pack the jury," but to avert, if possible, the selection of too many philanthropists, prelates, theorists, sociologists, and such. Those people have too much heart, and not enough head, for the cold realities of business; and, after all,—from the operators' view-point,—this is a business question.

Of the capacity and impartiality of the tribunal there can be no doubt. Gen. John M. Wilson, of the United States army, knows what discipline is and has a proper respect for it; but, as an engineer-officer who has had much to do with such public works as river-and-harbor improvements, and other government construction, he has acquired personal knowledge of the labor question from an unprejudiced standpoint. Hon. George Gray, of Delaware, is well known as lawyer, Senator, and federal judge; he has the judicial temperament, and, in character and attainments, is an ideal arbitrator in any cause requiring breadth of view and painstaking investigation. Edward Parker, statistician of the Geological Survey, is an expert student of the coal industry. An effort has been made to ascribe bias to him on account of the fact that he is part owner of a coal-trade journal which, in the past, has espoused the operators' side of the controversy; but every one who knows him believes him capable of a perfectly fair judgment. Thomas H. Watkins, of Scranton, was for several years member of a coal-mining firm, and he is supposed to be the representative of the operators upon the commission. As a matter of fact, Mr. Watkins is as unprejudiced as any one could wish; he knows both sides of the question practically, for in his youth he worked in a coal mine, and was afterward an employer of miners. Bishop Spalding, of Peoria, is a distinguished Catholic prelate who has made a study of industrial questions, and whose sympathies are known to be warm for the miners of his own section of the country. Edgar E. Clark, chief of the Order of Railway Conductors, is the representative of organized labor; he was a brakeman on Western railroads, and has practical knowledge of labor conditions.

It is a well-balanced tribunal. If tendencies or bias could be justly ascribed to any of the members, Clark and Spalding would be set down as leaning toward the miners; Parker and Watkins to the owners; with Gray and Wilson as wholly neutral.

One highly important result may come from this arbitration; and that is judgment upon the question whether or not the union is to be recognized and dealt with. By proposing to abide by the tribunal's verdict as to "all issues" the operators bind themselves to recognize the union, should the commission so decide. As this article is written the commission was not organized; but it would be absurd for it to dispose of the question of wages without attempting a solution of the vital and controlling problem in the anthracite field,—which is, the relations which the organizations of the miners are to have with the companies. It is only by deciding this question, and compelling obedience, that a permanent peace can be secured. The operators have refused to have any dealings with the union, or with its president, John Mitchell. To them their reasons may seem valid; but men like the writer,—who know Mr. Mitchell personally, and who have studied the methods of his organization,—are unable to discover any good argument against recognition and close working relations. The union is conservative and fair; it is led by men of great ability and moderation; its aim is not to fight owners, but to aid them in maintaining discipline and stability. With a pretty full knowledge of these facts, I unhesitatingly declare that, if six or eight months ago the railway managers had set out to make use of the union as a coöperative agent in the task of handling labor with the least possible friction, there not only need not have been a strike, but by this time the amicable relations between the companies and the organizations of the men would be giving such satisfaction that the employers would not consent to a return to the old conditions. Such is the verdict of the soft-coal operators of the West who have found industrial peace through close relations with the same organizations.

It is not at all improbable that the result of this great arbitration will be a permanent and scientific solution of the problem along these lines. Should the President's tribunal fail so to decide, I believe the corporations themselves will soon need coöperation; for it is true that Mr. J. P. Morgan believes in organized labor, and does not believe that the right of combination should be enjoyed by capital while it is denied to labor.

# JOHN MITCHELL: THE LABOR LEADER AND THE MAN.

BY FRANK JULIAN WARNE.

**S**EATED in a large willow-rocker near the window in strike headquarters in Wilkes-barre was a full-faced, clean-shaven man, with deep-set, luminous eyes, a firm mouth and a high forehead, with the brown,—almost black,—hair brushed carelessly back on the right side, as if by the fingers. A frock coat, high collar, and a black tie large enough to almost hide the white of the shirt gave to the figure the appearance of a priest. At the moment,—it was on a Sunday morning,—each feature of the face expressed serious thought, if not worry, with now and then a flash very near to melancholy. In his hands was a colored cardboard, characteristic of the illustrated Sunday newspaper supplement. As he turned the cardboard around slowly, he traced with a pair of scissors its black-dotted lines, only stopping long enough now and then to bite off the end of a half-smoked, half-chewed cigar. Scattered over the floor, as if discarded in impatience, piled under the small table and stacked in one corner of the room, covering the bureau and protruding from its drawers, were newspapers by the score. Clippings lay on the table among government reports, volumes treating of various phases of the coal industry, hurriedly-assorted mail, and here and there a novel whose title recalled treatments of certain labor problems. The scissors were laid aside, the pieces cut from the cardboard were fastened together by bending their corners, and the whole was set upon the mantelpiece. It represented Abraham Lincoln standing on a platform, with one hand holding outstretched a scroll and with the other raised in command. Beneath, looking up to the figure, with great joy depicted on their faces, were two negroes half-rising from the ground, and with the shackles falling from their hands and feet. Under a pictorial representation of marching troops were the words "A Race Set Free and the Country at Peace."

The man who had engaged in a task usually associated with the pastimes of a child was John Mitchell, president of the United Mine Workers of America.

"Capital and labor will both be sorely wounded before they work out their proper relations," he said, as he resumed his seat near the window. "I am not a Socialist, and do not believe in Socialism. I do not believe it would be best for the State to own and operate her coal mines. I

am a strict trade-unionist. I believe in progress slowly,—by evolution rather than by revolution. I believe a better day is in store for the American workingman, but it has to come through no radical change in the organization of human society. It must come one step at a time, and through a slow upward movement, by his own efforts. One thing at a time, and not all things at once, is the way a better state will be ushered in. I know there are those in the United Mine Workers of America who believe in an early realization of a new social state, where all men are to be economically equal. But such members are in the minority. The principle that governs our organization is that of trade-unionism, pure and simple,—of labor's joint bargaining with capital for a fair share of that which labor helps to produce. We believe in securing this by peaceable means,—through arbitration, if possible,—and, if not in this way, then by the only remaining way left to us."

It was suggested that many of labor's most intricate and harassing problems might be solved if there were an intelligent supervision and direction of the great stream of immigration yearly coming to the United States. "Instead of waiting until this stream chokes up the mining industry with an over-supply of labor, why do not the United Mine Workers aim to control it when it first reaches this country, directing it into the sources of demand intelligently and rationally?" he was asked.

"This stream of immigration," he replied, "must flow somewhere. If it is not into the mining industry, then into some other industry, where its temporary evil results will be just as evident. I doubt if there could be any such control. The labor problem is a national one,—not local,—and we must have consideration for the American workingman in other industries as well as in mining. No matter in what direction this immigration is turned in this country, the same problem is presented—a tendency to the lowering of wages. I believe the only way to solve this is to organize labor so that this tendency will be checked,—to have the American workingman enforce a living standard of wages, for less than which no laborer should work."

As to the personal side of his life,—the influences that have made marked impressions in forming his character and ideas.—President

MR. JOHN MITCHELL.

Mitchell is reticent. He does not recall that any books in particular have given a direction to his thoughts, although he remembers having been much impressed by Spencer's "Social Statics" and Bellamy's "Looking Backward." He has been a voracious reader from youth up.

No one acquainted with the labor leader—

labor "agitator," as he was commonly called.— of a decade or more ago who has had a close insight into the methods of the man at the head of the United Mine Workers, can doubt that John Mitchell is a new type of labor leader. He is not a demagogue; a haranguer; a typical agitator. His public speeches and statements

show this. They do not overflow with flowery metaphors appealing to the passions and prejudices of his followers; but, for the most part, they are business-like presentations of conditions as he sees them, appealing to the reason. At no time in the history of the labor movement in this country have such remarkable manifestos been issued by any leader as have been his replies to the operators and his presentations to the public of the miners' side of the controversy during the progress of the strike just closed. His point of view—his regarding labor as a commodity—and his lucid power of explanation, as evidenced in his statements and public addresses, show that a labor leader of a new school of thought and action has come to the front. He is, first of all, a business man in the labor movement; he leads organized labor as our "captain of industry" manages a great commercial or industrial combination. He treats labor as a commodity. That particular amount which the United Mine Workers controls is for sale; his organization wants the highest price it can get for it; he realizes, at the same time, that the purchasers—the railroad-mining companies—like all consumers, want to get this labor at as low a price as possible. These two opposite points of view, he believes, can be reconciled by the two parties most interested "bargaining" as to the price of labor. This is done between capital and labor in ten of the soft-coal producing States in joint annual conferences.

In Kansas, Iowa, Missouri, Kentucky, Tennessee, Alabama, Illinois, Indiana, Ohio, and in parts of the western and central Pennsylvania soft coal fields the representatives of the mine employees and of the operators meet annually to determine, for a period of twelve months, upon the wages and conditions of employment which shall prevail in the industry. In these States there are a total of 185,000 mine workers, producing annually 125,000,000 tons of coal. Prior to the introduction of the principle of "joint bargaining" between the employees and the employers through the efforts of the United Mine Workers of America strikes and lockouts were of frequent occurrence in these States, but the adoption of the joint conference plan has had the effect of reducing labor disturbances in those particular fields to a minimum. In the States mentioned practically all the mine employees work under agreements entered into by representatives of both the operators and the union. These contracts cannot be enforced by law: the only power back of them to compel the mine workers to live up to them is the word of the United Mine Workers officials.

When the national convention of mine work-

ers met in Indianapolis, on July 16, "for the purpose of considering a proposition for a general suspension of work by the coal miners of the United States in support of the anthracite mine workers," then on strike, President Mitchell, in advising the men in the bituminous coal fields not to violate their contracts by a sympathetic strike, said: "It has been the proud boast of the United Mine Workers of America that during the past several years, or since the organization became a power in the labor world, contracts based solely upon the honor and good faith of our union have, under the most trying circumstances, been kept inviolate." He expressed his belief that "contracts mutually made should, during their life, be kept inviolate," and that "a disregard of contracts strikes at the very vitals of organized labor." Senator Hanna, as a representative of the soft coal operators of Ohio, where such agreements exist, testifies to their efficiency in preserving amicable relations between the employees and the employers.

Such a plan President Mitchell is striving to secure for the hard coal industry. To it the operators objected. Then he suggested arbitration: "Let a disinterested third party determine what shall be the price of mine labor," he said. To this also the operators objected. Then the only course remaining, he believed, was for labor to refuse the price the intending purchasers offered until they came nearer the price asked by the representatives of this labor. The waiting period is called "a strike."

This is why 147,000 men and boys in the three hard coal fields, more than five months ago, laid down their tools for an indefinite period. They knew from experience that such action meant suffering and want to them and those dependent upon them. Business throughout the three hard coal fields was brought to a standstill. Marriages were postponed; family relations severed; nearly every tie binding together in a social bond hundreds of thousands of people was affected. Great railroad systems, which for years have been burning anthracite in some of their locomotives, were compelled to adopt substitutes, and there being no hard coal to transport to market, much of their revenues were stopped. The supply of fuel for millions of people and thousands of industries, not directly parties to the controversy, was suddenly cut off. There was hardly a person in all the great industrial centers of the East who was not affected, directly or indirectly, by the strike.

What great power! What incalculable consequences might have flowed out of its use! The source of this power was in the Mine Workers' convention, which declared for the strike. But

Sketched for the New York American.

MR. JOHN MITCHELL.

while the struggle was in progress it was all delegated into the hands of one man. It was recalled when the convention met again to declare the strike at an end; but, in the meantime, it was exercised by one man,—the son of a farmer and coal miner,—a man who, twenty years ago, when but thirteen years of age, was working in the coal mines of Illinois.

Deprived of his mother within two, and of his father within four, years after his birth,—on February 4, 1869,—John Mitchell was early in life left in the care of his stepmother. His schooling was meager, and was secured only at intervals when there was no demand for his labor on the farm. Thrown upon his own resources when but thirteen years of age, he entered the mines at his birthplace in Braidwood, Ill. Three years later, while employed in the mines at Braceville, Ill., he was brought under the influence of the labor movement at that time directed by the Knights of Labor. It

made him restless, and, with the indomitable will of his Irish parentage, he set out determined to see something of the world. He visited Colorado, New Mexico, and other Western and Southwestern States, working in the mines to support himself. Drifting back to the Illinois coal fields in 1886, he became a mine worker at Spring Valley, and took an active part in the trade-union movement there as President of the Knights of Labor "Local." When twenty-two years of age he married Miss Katherine O'Rourke, of Spring Valley; five children have been born to them, of whom four are living. At one time he served as president of the Spring Valley Board of Education.

Thirsting for knowledge, he read everything that came within his reach; joined debating societies, athletic associations, independent political reform clubs and various social organizations, in which many opportunities came to him to exercise his mental faculties and to cultivate the art of speech-making.

A ready talker, with great personal magnetism, he quickly formed friends, and was rapidly promoted to positions of honor and trust.

When the United Mine Workers of America was organized in January, 1890, he was among the first to be enrolled as a member in his district. He was a delegate to the sub-district and district conventions; secretary-treasurer of the northern Illinois sub-district, at that time embracing all of the State then organized; and, in 1896, chairman of the Illinois Mine Workers' legislative committee, with headquarters at the state capital to work for labor legislation. He served later as a member of the Illinois state executive board and as a national organizer.

In January, 1898, at the Columbus convention, Mr. Mitchell was elected national vice-president, and in September of the same year the executive board made him acting president to succeed Mr. M. D. Ratchford, who resigned to become a member of the United States In-

dustrial Commission. The national convention at Pittsburg, in January, 1899, confirmed this choice and elected him for the following year. He has been reelected each year since then. He is second vice-president of the American Federation of Labor, and a member of various committees of the National Civic Federation.

Trained in simplicity of living, he remains democratic in all his habits. Except when pressed with business matters, he is approachable by any one wishing to see or meet him. Usually, he makes his headquarters in hotels where the men he leads will not feel out of place when they call to consult him. He leads, and yet the men who follow him believe that he is but their servant carrying out their expressed wishes. This is the explanation of much of his power over the mine workers, particularly in strike times. Its exercise has had the effect of making him conservative in action. With his frugal habits and comparatively small salary, there is no place for "high living" or excesses that undermine mental vigor. In any industrial or commercial pursuit his marked ability for organizing and leading men would command many times his present yearly salary of \$1,800.

The head of the United Mine Workers has an active brain, trained by hard and continuous work, capable of brushing aside subterfuges and at once grasping the essential points of a difficulty. He impresses one as having an almost inexhaustible supply of stored-up energy, bodily and mental. He is indefatigable; so hard does he work that his friends have more than once felt solicitous for his health. This working of his restless energy is probably best shown in what has been accomplished by the organization since he was first placed at its head, just four years ago. In September, 1898, the union had but 43,000 members; in January of this year it numbered nearly 300,000 in the 2,000 locals scattered throughout 21 of the 28 coal-producing States. He has extended the eight-hour workday into the mines of Missouri, Iowa, Kansas, Michigan, Kentucky, and parts of Tennessee, and has secured for the mine employees of those States an increase in wages ranging from 13 to 25 per cent. An increase of 21 per cent. in the wages of other mine workers in different States has been secured through joint conventions with the operators; and an increase of 10 per cent. in wages, with the abolition of certain grievances, was, in 1900, forced from

the anthracite railroad mining companies in the three hard coal districts of Pennsylvania.

Great as all these are in accomplishment, they are overshadowed by President Mitchell's recent victory, now fresh in the public mind. After five months of bitter warfare, he has fought to a successful termination the greatest conflict between capital and labor ever waged in the history of the world. He has advanced the cause of labor by leaps and bounds: he has ushered in the period when peace through arbitration promises to reign supreme over our industrial world in place of war through strikes and lock-outs. It is too early yet to realize the tremendous importance of this one accomplishment. This much seems clear, however,—by it a new era has been entered upon. Not the least of its effects will be the widening of the scope of the office of the President of the United States.

When John Mitchell, as the representative of this principle of arbitration—of this new era—stood face to face with the presidents of the coal-carrying railroads and mining companies in the presence of the Chief Magistrate of the nation, the American people had presented to them, for the first time, a full view of the new type of man who is marshaling labor's hosts and directing its battles. It was there he won his greatest fight; with the representatives of eight great corporations as his antagonists, and with millions of people as anxious, eager spectators. Under circumstances that might have tried bitterly the strength of any champion, this mild, unassuming son of the plain people, demonstrated anew the teaching that it is to him only who has conquered himself is it given to conquer and lead men. When, unmoved by the attacks of his adversaries, he calmly offered to submit to a commission appointed by the President all the questions in dispute, and to abide by the decision of that tribunal, even if the mine workers were not granted a single concession, he won over the public. It took sides. It forced arbitration as the means of settlement. And in doing so it has proclaimed, in no uncertain tones, its confidence in such a man.

John Mitchell's present aim is to organize thoroughly all the 455,000 mine employees in the United States into the United Mine Workers of America. That he will accomplish this purpose, unless sooner called to higher honors and wider fields of usefulness, no one who knows the man and his work entertains the least doubt.

# A SUCCESSFUL FARM COLONY IN THE IRRIGATION COUNTRY.

BY ALBERT SHAW.

“BACK to the land” is a favorite motto of some of the most thoughtful students of our American society. They believe that country life, under improved agricultural and social conditions, offers a remedy of increasing importance for the evils of the congested life of our great cities and industrial towns. Attractive, however, as this remedy could easily be made to appear, its practical difficulties heretofore have been almost insurmountable. How shall the victim of ill-health or other misfortune—finding himself penniless and in need of charitable aid, in the tenements of New York or Chicago with a family on his hands,—make the initial move to a happy life in the sunshine and fresh air of the country? Even if he were possessed of a practical knowledge of farming, his lack of enough money even to buy a railroad ticket to the West would make it as difficult for him to set himself up in business as an independent American farmer, as to become the president of a bank or a railroad. And even with some knowledge of farming and a few hundred dollars, the difficulty of finding the right place and getting a successful start would be prohibitive, in nineteen cases out of twenty.

Yet it is an obvious fact that there are, in the aggregate, millions of people in our cities and towns who would be better off if established in the country; and, on the other hand, there are tens of millions of acres of land,—still cheap or wholly uncultivated,—upon which a vast, self-

A COLONIST'S COTTAGE IN PROCESS OF CONSTRUCTION.

sustaining population might well be located. The difficult questions have been how to bring the people to the land, and how to tide them over the first few years.

Evidently, the ideal plan must be some form of systematic colonization. There are many thriving instances in our Western States of highly-civilized agricultural communities formed by colonies of well-selected, well-to-do, experienced, and capable people. And these instances are pleasant to encounter and easy to praise. But what one wants most to find are instances of the successful colonization of impoverished people from the cities who have sought an escape from conditions that were crushing them down, and whose resort to agriculture is bringing happiness, independence, and true success in life.

We believe that the Salvation Army has found a way to bring this desirable thing to pass; and that it can now show at least one quite remarkable demonstration of its methods, and at least two other very promising experiments. A favorite part of General Booth's great social project a dozen years ago, for the relief of London's abject pauperism, was temporary colonization on farms in England, to be followed by transplantation to permanent farm colonies beyond the seas. “In Darkest England and the Way Out” was a marvelous contribution—both theoretical and practical,—to the diagnosis of modern poverty and to its remedial treatment.

THE FORT AMITY SCHOOLHOUSE.

Much can already be shown, by way of results, from a number of efforts then set on foot in England by General Booth, his associates, and the supporters of his social work. The land project undertaken by the Salvation Army in this country, while doubtless attributable, in the spiritual sense, to that movement in England, is, on its practical side, an entirely independent affair—worked out by the energy and great organizing ability of the present head of the Salvation Army in America, Commander Booth-Tucker.

In casting about for a way to begin the movement of surplus and unfortunate population from the cities to the country, it was hardly less than

A COLONIST AND HIS BEES.

an inspiration that Commander Booth-Tucker should have grasped the idea that the best place to begin was upon valuable irrigated land, advantageously situated, in the so-called arid belt. The business of raising wheat and corn and of carrying on general farming in the Mississippi Valley, and the great prairie States of assured rainfall, belongs to the typical American farmer and his class. It cannot be entered upon with advantage by colonists from the cities. But irrigation promises to open a new agricultural empire, where very small farms and well-organized neighborhood life must be the rule; and, to this region, colonies from the cities may be taken, if under wise and capable guidance, with great hope of success.

The Salvation Army officers were able to enlist the good-will of the Santa Fé Railroad and of gentlemen in control of one of the largest and most reliable land and irrigation companies in the entire country. Attractive land was secured adjacent to the railroad, and it was laid out in twenty-acre farms. An announcement of the land-colony plan brought hundreds of applications from unsuccessful people in the cities who wished to be permitted to try the new ex-

THE COLONY POST OFFICE.

periment. The pioneer group was carefully selected with a view to intelligence, character, and physical capacity. There was capable leadership, and the immediate hardships involved in camping out upon the open plain, in what happened to be a period of excessively bad weather, were cheerfully borne. Temporary shelter was soon provided: and, for the first season, farming operations were in common, in order to supply immediate necessities for food. Meanwhile, each of the pioneer families became purchasers, on credit, of a twenty-acre farm. The land had cost the Salvation Army something less than \$25 an acre, and the purchasing colonist was charged somewhat more. The colony included several mechanics, and small houses of a neat type were built by coöperative effort. A certain amount of tools, a team of horses, a cow, and other necessities, were provided on credit for each family. A period of ten years was allowed in which the colonists should pay for their land and supplies.

SHIPPING CANTALOUPE.

A BIRD'S-EYE VIEW OF FORT AMITY COLONY, COL.

(The colony owns nearly 2,000 acres of land situated in Prowers County, Col. The main line of the Santa Fé Railroad runs through the colony.)

A COLONIST AND HIS FAMILY IN FRONT OF STONE HOUSE BUILT BY HIMSELF.

It is more than four years since this Fort Amity colony,—which lies near the line between Colorado and Texas,—was started, with about sixteen families and nearly one hundred men, women, and children. It now contains forty or fifty families and, perhaps, three hundred people altogether. Under the successful irrigation system in use, the crops are abundant and sure; and, in that mild climate, several crops each year may be taken from the rich soil. With intensive cultivation, a twenty-acre farm is fully large enough to keep one family well employed and to support it in great comfort. It required the investment of a large amount of cash for the

A COLONIST HAULING MILK TO THE COLONY CREAMERY.

Salvation Army to launch an experiment of this kind; but, so far as the colonists themselves are concerned, it is in no sense a charity affair. The colonist pays interest on the farm that he buys, and upon the other materials provided; and he pays back the principal in annual installments. We have been permitted to examine the balance sheets for successive periods, and it is evident that the Amity colony is going to be a complete financial success; that is to say, the colonists are doing so well that they are not only making a current living for their families, but they are paying off their indebtedness satisfactorily. A number of them are making payments far in excess of what is due, and thus cutting off interest charges.

The smallness of the farms enables the people to meet one another frequently and to enjoy a pleasant social life. The schoolhouse—located

SINGING BRIGADE OF THE COLONY.

in the very center of the colony,—is, in several senses, the neighborhood focus. The community is in high favor throughout its region. It is becoming an intellectual, as well as a moral and religious, center for the countryside at large; and it is already taking the lead in advanced and scientific methods of agriculture. There is no rule that requires the colonists to be members of the Salvation Army, although that organization is naturally the foremost in the religious life of the colony. While coöperative methods prevail, to the great advantage of all, this neighborhood must not be confounded with communistic enterprises; for it rests upon the very opposite principle. Each member of the community

A FAMILY IN THE SUGAR-BEET PATCH.

BUYING A HERD OF HORSES FOR THE COLONY IN KANSAS CITY.

is an independent landowner, who has purchased his farm from an organization that has advanced the capital; that has supplied him with good neighbors; and that has given him the assurance of good schools and pleasant neighborhood advantages. In a very few years his farm will have been paid for; and with its fruit trees and flowers and its varied and luxuriant crops, it will have become a veritable little paradise.

Fort Amity is proving so advantageous a place that the Salvation Army has located there an orphanage called the Cherry Tree Home built at a cost of about \$20,000, and accommodating, perhaps, a hundred children from crowded city streets, to be reared in this wholesome farming neighborhood and, in due

time to become themselves irrigation farmers. Commander Booth-Tucker has carried the experiment to such a point that he is certain that for

COLONISTS' CHILDREN IN THE SCHOOL-ROOM.

an average advance cost of \$500 he can take a family from the city to such a farm colony as Fort Amity, provide it with land, house, tools and team, and fairly launch it upon a successful career as the owner of an independent estate. He believes that, if a large part of the money now spent in charitable relief in cities were put into a fund for the systematic transformation of unsuccessful townfolk into successful members of farm colonies, there would be a great saving of waste human life and waste capital, as well as a great development of agricultural resources now lying waste. And we think Commander Booth-Tucker's judgment upon this matter is well matured and reliable.

Besides this colony in Prowers County, Col., the Salvation Army has established a promising settlement in California, known as Fort Romey; and, in northern Ohio, it has formed a colony known as Fort Herriek, on an admirable tract of land contributed by a generous and distinguished citizen of Cleveland, Ohio, Mr. Myron T. Herriek.

Farming is a business that requires no small degree of knowledge, judgment, and skill. One of the chief advantages of the colony plan is that there can be supplied to each uninstructed comer the necessary oversight and guidance. Where there is industry, fair intelligence, energy, and a determination to get on, the chance of failure is reduced to the very lowest minimum. It may be regarded as fortunate—in view of the new and comprehensive irrigation policy adopted by the United States Government,—that the demonstrated success of the Fort Amity colony and the other farm colonies of the Salvation Army, point the way to one of the very best methods by which to utilize the extensive tracts of productive soil that are in the near future to be made available by the completion of irrigation reservoirs and conduits. May these happy and wholesome farm colonies be multiplied by the thousand; and may they take hundreds of thousands of unfortunate town dwellers to the busy but serene and wholesome life of the irrigated farm!

# THE RISE OF THE NATURE WRITERS.

BY FRANCIS W. HALSEY.

**O**BSERVERS, in noting the extraordinary sales that have been secured for individual works of fiction in recent years, have sought in various ways to account for them. A common explanation has been found in advertising; as if mere advertising ever did, or ever could, force upon the public a book whose intrinsic qualities did not of themselves appeal to readers. More careful minds have cited as a cause the advances we have made in education, and these have come much closer to an acceptable explanation. Other causes have been found in the increase in the purchasing power of the reading public,—the money men and women have had to spend for books,—and in the extraordinary growth of circulating libraries. Taken together, these causes have brought, to writers like Mr. Churchill, Miss Johnston, Mr. Major, Hall Caine, Sir Gilbert Parker, the late Paul L. Ford, and the heirs of Mr. Westcott, incomes such as no writers of fiction since Scott ever before enjoyed.

Meanwhile, far less note has been taken of the increase in the production of Nature-books, both in numbers and in sales. When one recalls the Nature-books that were produced twenty-five years ago, the growth in this class of literature has been almost as noteworthy as the growth in fiction. It has amounted to a complete transformation, not only in the volume of sales, but in the character of the books themselves. Most readers can recall a time when the early writings of John Burroughs stood almost alone among Nature-books which, at the same time, could have been called scientific as well as popular. Popular would scarcely now be the right word for books which sold no better than Mr. Burroughs' early ones, and yet in their day Mr. Burroughs could easily have been called a popular writer in the sense that he most nearly reached what there was in existence then of popular taste for Nature-books. It was a brave stand Mr. Burroughs made. Long and consistently has he adhered to the original lines on which he wrote,—lines on which let us all be thankful that he still writes,—firm in a determination to write on no others.

Mr. Burroughs has come rightfully into his rich inheritance of fame. Seldom has real distinction been earned in literature through ways more honorable to its possessor or through sincerity more deep. Wordsworth's line that "The

mind that builds for aye" trusts to "the solid ground of Nature" has not been better justified in any other man who has written of Nature. Justified he not only is in his own present distinction, but in his intellectual children, for in truth what a throng of children has he not raised up—men and women who have not written

By courtesy of McClure, Phillips & Co.

JOHN BURROUGHS.

of Nature from the outside, as mere observers and passers-by, but who have studied long and deeply to discover her secrets, and, seeking diligently, have found them, because they loved her while engaged in the pursuit.

Long before the day of Burroughs, at least two other men wrote of Nature in "sad sincerity" quite as notable as his—Audubon and Gilbert White. The books of Audubon never passed into popular circulation, because the editions were small and expensive, but it was Audubon who taught observers the supreme importance of intimate knowledge as gained from study. 1

close to the subjects they wrote about. His influence in this direction (and some others) is potent still, and will long remain so. That friend of all creatures, whether on four feet or two, left behind him certain journals of his life which, when published within the last decade, disclosed how fine was his devotion and how rare his spirit. Strange, indeed, was it that they should have lain so long unknown,—some of them in the back of an old secretary, others in a barn on Staten Island. When his granddaughter, Maria R. Audubon, edited them for publication, readers saw, as they had never discovered in his previously published works, what splendor lay in Audubon's nature, and how worthy is that fame which holds him secure as one of the most inspiring and noble figures in the annals of American science.

Gilbert White antedated by long years Audubon and Burroughs.—White the obscure curate, unknown to most of his fellow-townsmen, spending his days in a private garden or in fields about Selborne, that he might write one of the famous books of his generation, and of which the fame grows with the passing of time, as witness the many editions late years have absorbed. White also was a close observer; he wrote down nothing which he had not learned from personal observation; hence the book he produced is one of the truest records ever made in print. That quality, more than all others, is the one that has given to it everlasting life.

JOHN JAMES AUDUBON.

Back to these examples runs the spirit which has animated all the best writers on Nature whose books have crowded library shelves in recent years. Among contemporary writers, none perhaps has more completely shown that spirit than Ernest Ingersoll, during the quarter of a century in which he has been producing books that have charmed and instructed all who have

MR. FRANK M. CHAPMAN.

read them and of which the latest volume is "Wild Life of Orchard and Field." In this volume Mr. Ingersoll supports the pleasing theme that, while the advance of civilization has driven back into the forest and the jungle the wilder and more savage animals, it has led smaller creatures, such as birds, to accept man's presence as a blessing and thus to make friends with him.

The subject of birds has indeed been about the most fruitful in all this growth of literature pertaining to outdoor life. Neltje Blanchan's volumes, "Bird Neighbors" and "Birds That Hunt and Are Hunted," are notable in this line beyond most bird-books, not alone for their wide circulation, but for the illustrative distinction with which they were presented. How much they have done to spread knowledge of a delightful subject we need not attempt to estimate. It is enough to say that a large debt has been contracted by the public for the intelligent and effective work Mrs. Doubleday has done.

An obligation of similar nature has been contracted with Mr. Frank M. Chapman whose "Bird Life" has gone into many editions, the latest of these having the honor of illustrations reproduced in color from drawings by Ernest

MABEL OSGOOD WRIGHT.

Seton. Upward of one hundred families of Eastern North American birds are illustrated in this volume. The chief benefit that has resulted from books like Mr. Chapman's and Mrs. Doubleday's is that they enable men and women who are ignorant of the names and habits of the birds about them, to learn to recognize them and understand their ways of life.

Another volume whose influence is becoming potent in the same direction is Francis H. Herriek's "Home Life of Wild Birds," in which a life record of feathered songsters is given, or a sort of diary of their behavior from day to day. He has made this record assisted by his camera, so that his information is nearly all original. He has, therefore, followed methods of the best historians by going to primary sources.

In the domain of flowers work of much note has been performed by Mrs. William Starr Dana, or, as she is known since her second marriage, Mrs. Frances Theodora Parsons, by Mabel Osgood Wright, and by F. Schuyler Mathews. Mrs. Parsons' first volume was almost an event among books of its class, and has had many followers, her own book still holding its place, however, as a standard contribution in constant demand. Her later book, "According to Season," revised and extended from time to time,—the latest editions being fully illustrated with colors,—was constructed on lines so unconventional and with such regard for the needs of those who love flowers, that its vogue has been general. The authoress, as her title indicates, described flow-

ers in the order of their appearance in woods and fields, and she wrote of these as one who was their lover.

Mrs. Wright, who had already achieved success with "Birdcraft," "Citizen Bird," "The Friendship of Nature," and other books, wrote of "Flowers and Ferns in their Haunts," her purpose being to treat those objects in their relations to the landscape. Her book, therefore, is a handbook of flowers and ferns in their natural surroundings. Indeed, her thesis was that half

the beauty of these objects lies in the environment where they came into life, and of which they form such brilliant parts.

MR. JOHN MUIR.

Mr. Mathews, on a plan distinctly different from either of these writers, has produced books quite as interesting as theirs, and to which a cordial welcome has been accorded by the public. "Familiar Flowers of Field and Garden" was first issued without distinction as to illustrations, but its

ERNEST SETON.

popularity has called for later editions in which orthochromatic photographs have been employed with over two hundred other pictures from drawings by the author. Two other notable works from the same hands are "Field Book of American Wild Flowers," in which pictures and text are given on opposite pages, and "Familiar Trees and Their Leaves," in which, with much popular information, is combined such interesting statements of facts as that a large sugar maple

MR. CHARLES G. D. ROBERTS.

will put forth in a single season as many as 430,000 leaves from which to draw into itself the warmth, light, and air, without which it could not live.

Meanwhile, more than one writer has given the public charming volumes on cultivated flowers. Some of them have come from English hands, and here again women have made important contributions. One of the latest books of this class is "How the Garden Grew," by Maud Meryon, who has the courage to confess her failures as well as her successes. Eternal vigilance in gardening, as in many other pursuits, is the price of success, and this we constantly learn from the authoress's pages. In our own country Alice Morse Earle, whose writings of Colonial and Revolutionary times have become widely appreciated, has produced one of the most delightful of books in "Old Time Gardens," of which the repute will widen with the

passing of time. It is now not more than half a year old.

In the domain of animal life apart from birds our present best known name is Mr. Ernest Seton, whose books have almost rivaled in sales some of the popular novels of the day. Merely to mention them is to recall to many minds the most familiar of titles, "Wild Animals I Have Known," "The Trail of the Sand Hill Stag," and "Lives of the Hunted." Mr. Seton's success was achieved on legitimate lines. It was not through clever advertising that "Wild Animals I Have Known" soon became as familiar an object in shop windows as "Quo Vadis" or "Trilby." It made its way distinctly on its merits, as an authentic record of things known and seen,—things no one else had known so intimately, seen so accurately, and described so delightfully.

Reference should here be made to the invasion of the novelist's field made by Nature-study, as exemplified in the writings of James Lane Allen. Mr. Seton's books remind one that another writer should also be named,—Charles G. D. Roberts, whose "Kindred of the Wild" is really a book of animal life. And yet his book is to be classed as fiction; from which may be inferred the originality displayed in its conception. Eagles, panthers, moose, and other creatures of the forest throng his pages.

No attempt can be made in this article to catalogue the throng of books on outdoor life which have become popular in late years, and which illustrate the awakened interest in Nature of which at the beginning I spoke. But mention should certainly be made of John Henry Comstock's "Insect Life," with many illustrations from the hands of his wife, Anna Botsford Comstock; of Mary Rogers Miller, who wrote "The Brook Book;" and of Martha McCulloch Williams, and A. R. Dugmore.

Nor shall I overlook the valiant work done by John Muir in his pleas for the forests, his description of the great trees of California, and, above all, in his "Our National Parks," in which he not only discloses his knowledge of trees, but of geology, and writes with distinction, charm, and affection. A work which also may be named here, and named for praise only, is "A Journey to Nature," by J. P. Mowbray, who, when wearied with toil in town and city, and possessed no less by a scientific spirit than by real gratitude for all that God has done to make the earth habitable and beautiful for man, literally made a journey back to Nature, and in this book records all that he saw and felt.

The present demand for books of Nature,

MR. JAMES LANE ALLEN.

such as I have here named, shows how striking a change has occurred in the character of books people now read in summer. Formerly, the sole books properly to be called summer reading were works of fiction—those badly printed, paper-covered novels that were everywhere seen. Novels themselves, as I have said, pay tribute to Nature-books. Some of the most successful of them have owed no small part of their vogue to the fine feeling for Nature which their writers displayed. Perhaps the most notable example of this (and certainly the most exquisite) are found in the writings of Mr. Allen, and notably in "The Choir Invisible," where the story is not more charming than the rare picture given of wild nature in forest lands. None but a profound lover of the forest and of the creatures that people it ever could have written that book.

Were we to seek for the causes of this change in taste among readers we should find the most potent one to be the strong tide of population that has turned toward cities. We have be-

fore us a condition that is little more than a reaction or a return to a first love. This reading of Nature-books is part of the consequences of the impulse which each year drives more and more city people to spend longer seasons in the country. With the delights of this migration from brick walls to velvet lawns and shaded woods has come this interest in the flowers, shrubs, and trees of the forest; in wild game that live there; in the fish of streams; and in the birds of the air. We have, therefore, in literature only a part of the consequence of that potent influence which made the bicycle so recently popular, and which now has made myriads of devotees of golf.

An interesting outcome of this whole subject has just appeared in England. Nature study has become in that country a popular educational fad, and the recent "Nature Study Exhibition," held in the Royal Botanical Gardens in London, has awakened so much interest from its novelty and its suggestiveness, that there are enthusiasts who predict that it will lead to an entirely new educational movement. It is even predicted that text-books, as a main means to an education, are doomed, the open book of Nature being the volume which in future will be most industriously and profitably thumbed.

With how much care the publishers have responded to this demand the present article has pointed out in a suggestive way only. The authors who have been mentioned are not more numerous than those who have been omitted. My aim has been neither to indicate the most successful nor the most familiar, but rather those who could perhaps best illustrate the various lines on which activity in the production of nature books has proceeded.

Nor has anything been said of the manufacturing side of these books. That in itself might be the subject of an extended article, for here again one meets with revolutionary conditions. They are part only of that complete change which one sees to have taken place in the making of all books intended for popular reading. Larger type, better paper, more numerous illustrations, specially designed covers, and a general improvement in the art side of all parts of books have made many of them beautiful when considered merely as the products of a factory.

## EMILE ZOLA.

THE LATE EMILE ZOLA.

**O**NE of the hardest workers and most popular authors of our time passed suddenly from our midst at the end of last month. There are many opinions concerning the political and ethical value of much of Zola's work, but there can be no difference of opinion as to the immense industry, marvelous fertility, and lofty aim of the French novelist, who was asphyxiated in his own chamber by the fumes of his own stove.

There are novelists of many kinds, but M. Zola was one of the rarest—namely, a journalist-

novelist, a man who is by nature a supreme special correspondent or newspaper-investigator, who, after completing an exhaustive first-hand investigation into some phase of human life, instead of embodying it in a series of special articles, presents his report in the shape of a novel. There are social investigators as painstaking as Zola; there are men of letters who write more brilliant novels; but no one hitherto has combined to the same extent the capacity for rapid but patient study of social, moral, and political questions with the capacity to express the results

of his investigations in the form of a popular romance. The serious side of him, and the earnest purpose which inspired his life-work, were obscured in the minds of many English readers by the license which he allowed himself in dealing with the seamy side of human nature. Yet, let it never be forgotten that the greatest of all living novelists,—and one who is not merely a novelist, but a great preacher of the loftiest and almost transcendental morality,—has paid emphatic tribute to the worth of Zola's works. Count Tolstoy declared that, in his opinion, Zola was almost the only man who was doing serious work in France among the innumerable swarm of her novelists.

"The pictures which he paints are not agreeable," said his great Russian contemporary. "His portrait of the miner and the peasant are not pleasant to hang on your chamber walls; but it is good that they should have been painted once for all—having been painted, you can hang them behind your door or put their faces to the wall; but it is well that we should be reminded of the conditions in which multitudes of our brothers live."

The novelist's father, François Zola, was a Venetian, the mother a Greek. Emile was born April 2, 1840, at Paris, and spent his childhood at Aix. The father died when Emile was seven years old, and the Zola family was finally, in 1858, driven by extreme poverty to Paris. The young man lived here in absolute squalor, until, at the age of twenty-two, he obtained a clerkship with M. Hachette, the publisher. His first volume was a collection of fanciful stories, "*Contes a Ninon*." In 1865, he began to write for the press. After several novels appeared with moderate success, "*Thérèse Raquin*," published in 1867, obtained an immense circulation, and gave the author a good start on the path to fame and fortune. M. Zola's later work gave him a very large income.

Zola, at the beginning of life, seems to have been seized by a loftier ambition than that which inspires the pens of most of our writing folk. In the Rougon-Macquart series he attempted to portray in a series of vividly-colored stereoscopic views the whole complex life of modern society. A lofty idealist he was not; a painstaking realist he was; and he equipped himself for his herculean task by most painstaking and conscientious labor. At the beginning of his career he aimed at nothing more than the reproduction, as in a colored photograph, of life as he found it palpitating around him in the boulevards, streets and alleys, and fields, of France. But in his later years there was witnessed the gradual evolution of the artist into the prophet or moralist. In

one of his latest works, "*Fécondité*," he attacked the limitation of families and the resulting organized infanticide which prevails in France, with all the fervor of a Hebrew seer. His book, which he devoted to a study of labor in Paris, and his extraordinarily accurate delineation of contemporary life in the Eternal City, showed the same tendency to subordinate the mere storyteller to the ethical teacher and social reformer. This, probably, reached its ultimate development in his last book on "*Work*"—a novel surcharged with gloom and serious to the point of dullness. Perhaps for that reason none of his later books attained anything approaching the vogue of the earlier volumes of the Rougon-Macquart series.

Only in "*La Réve*" did he attempt a purely idyllic work. In "*La Débâcle*" he ventured upon the field of the historical novelist, and produced a picture of the gory welter of confusion in which the Second Empire went down that can never be forgotten by any one who read it. Lourdes attracted him also, and in his novel of that name he dealt with that mystical side of life which can be studied round the shrine of Notre Dame de Lourdes, with more sympathy and insight than might have been expected in the author of "*Nana*" and "*La Terre*." But even "*Nana*"—a novel in which he sets himself to delineate the life of the Parisian prostitute—was miles removed from the ordinary pornographic putridity which is served up by some revelers in the roses and raptures of vice. It is a great sermon on the text in the Old Book, in which, speaking of the "*Strange Woman*," it is said of the visitor to her house: "He knoweth not that the dead are there, and that her guests are in the depths of hell."

The fame of Zola as a novelist, however, has in the last few years been somewhat eclipsed by the fame of the author of "*J'Accuse*." His sudden intervention in the Dreyfus controversy is still fresh in the memory. His famous indictment of the organized machinery of perjury, and the military conspiracy by which justice was denied to the prisoner in Devil's Island, was a great service rendered to the cause of humanity. It was a thankless, and even a dangerous, task to plunge into the midst of the turbulent arena in which every one who spoke for justice was denounced as a traitor to his country. Like Professor Virchow, he was one of the earliest adherents of the International Union; like him, he appended his signature to the international protest against the South African War. His death removes one of the half-dozen men of letters whose names are familiar as household words throughout the whole civilized world.

# THE GROWTH OF TRUST COMPANIES.

BY CHARLES A. CONANT.

**T**HE trust company is essentially an American institution. It was correctly declared by Mr. Charles F. Phillips at the last meeting of the American Bankers' Association that, "In the strict sense of the term, there are no trust companies in Europe or the Orient, and none in the Latin-American countries, barring the Mexican Trust Company, a purely American foundation, and one or two others, all in a nascent state; nor, so far as I am aware, have corporations, anywhere outside the United States and some portions of Canada, yet undertaken to do, in a conjoint and aggregate form, any substantial portion of the work which is customarily and regularly performed by the trust companies in our midst."

The growth of the business of trust companies during the last few years has partaken of the prosperity which has come to many other American enterprises. This is plain from the statistics of their numbers, deposits, and resources, as reported to the Comptroller of the Currency, and set forth below for representative years:

TRUST COMPANIES OF THE UNITED STATES.

Year.	Number.	Capital.	Individual deposits.
1891.....	171	\$79,292,889	\$355,330,080
1897.....	251	106,968,253	566,922,205
1901.....	334	137,361,704	1,271,061,174
1902.....	417	179,732,581	1,525,867,493

Here is a multiplication within ten years of the individual deposits of trust companies by more than four times, or an increase of more than 300 per cent. Even within the brief period of five years the increase has been more than 150 per cent. The total resources of the New York trust companies were \$300,765,575 on January 1, 1892. They rose slowly during the next five years to \$396,742,947 at the beginning of 1897, and then went up by bounds to \$579,205,442 on January 1, 1899, and to \$797,983,512 on January 1, 1901. The figures for the beginning of 1902 showed another advance of nearly \$200,000,000, making the total resources \$969,403,911, and those for the first half of 1902 indicate a like progress. The total deposits of the trust companies of the State of New York on June 30, 1902, were \$887,001,687, and the total resources were \$1,078,212,685. How this progress compares in New York City with that

of the Clearing House banks may be seen from the following figures of individual deposits:

DEPOSITS IN NEW YORK CITY BANKS.

	June 26, 1897.	June 30, 1902.
Clearing House banks.....	\$597,100,000	\$980,246,000
Trust companies.....	305,354,638	780,776,124

These figures show that while the deposits of the Clearing House banks of New York City have increased about 40 per cent. in five years, those of the trust companies have increased about 150 per cent. Percentages in such cases are sometimes deceptive. The trust companies first began to obtain importance about a decade ago, and it is not surprising that they have gained ground rapidly during the recent period of industrial activity. The real measure of their progress is afforded by the fact that while the Clearing House banks of New York, with their long-established reputations and great resources, have in five years increased their deposits about \$363,000,000, the trust companies of the city have increased theirs by the still larger sum of \$455,000,000. Throughout the United States the business of the trust companies, although their form of organization is limited to a small number of States, has shown a striking growth. The deposits of all national banks and trust companies appear in the following table:

INDIVIDUAL DEPOSITS IN BANKS OF THE UNITED STATES.

	June 30, 1897.	June 30, 1901.
National banks.....	\$1,770,480,563	\$2,941,897,486
State banks.....	723,640,795	1,610,508,346
Loan and trust companies...	566,922,205	1,271,061,174

TRUST COMPANIES AS TRUSTEES.

In view of this remarkable exhibit of the growth in the business and resources of trust companies, it becomes interesting to inquire what are these institutions, and what is the nature of the work which they are doing. Such an inquiry naturally centers around the answers to such questions as these:

What are the special functions of trust companies?

Wherein do these functions differ from those of commercial banks?

Are trust companies competing unduly with other banks?

Should any new restrictions be imposed upon the organization and management of trust companies?

In answer to the first question, it may be said generally that the functions of trust companies are to execute trusts for individuals, living and dead, and for estates and corporations.

When a rich man dies in the United States he is enabled to commit to a trust company the often complex duties of administering his estate, instead of appealing to the favor of relatives or friends. The company holds a copy of the will, sells and buys property under orders of the courts, collects regularly rents for real estate and dividends on securities, and pays such dividends over, according to the terms of the will, to the legal heirs. In most of the States of the American Union much freedom prevails in devising property by will. A husband who distrusts the capacity of his wife or children to administer their property with prudence after his death may put the property in the hands of a trust company, and direct that the income only shall be paid to his heirs. Widows are thus guarded against the anxiety and loss which they might suffer if they undertook to administer the property for themselves; improvident sons are prevented from squandering the principal of their estates; and charitable bequests and other public benefactions are carried out in a regular and lawful manner. These functions are the same as those which were formerly performed in this country, and are still performed abroad, by attorneys, personal friends of the deceased, and other executors and administrators; but their performance by a trust company according to prescribed methods insures greater regularity of procedure, and in many cases greater safety, economy in management, and more strict compliance with law.

One of the primary advantages of committing the charge of estates in this manner to a trust company is that its life is continuous, and its responsibility is that of a corporate body of large resources, instead of the personal liability of an individual. It is a peculiar advantage of employing a trust company in the management of estates that such companies are organized especially for carrying on this class of business. It is their primary concern, and is not subordinate to other interests, as is sometimes the case with individuals having other occupations, however high their standing and strict their probity. The trust company necessarily has offices devoted exclusively to its business, with proper vaults for keeping securities and prescribed methods

for carrying on each branch of its duties. It has separate accounts for each trust, it has books showing when the interest should be collected on the securities held, and it takes prompt and constant notice, through its observations of the stock market, of influences affecting trust funds adversely, which may suggest a change in the character of investments.

#### CAREFUL MANAGEMENT ASSURED.

The uniformity of methods imposed by law and by financial custom upon the trust companies leads them to exercise their functions with extreme care. A trust company is not likely to assume responsibilities of a doubtful character without the order of a court, careful deliberation by its own officers, or the opinion of counsel. Some of the ablest financiers and attorneys of the United States act as advisers for the trust companies of New York and other large cities. Two Secretaries of the Treasury have become heads of New York trust companies on leaving office,—Mr. Charles S. Fairchild of the New York Security and Trust Company, and Mr. Lyman J. Gage of the United States Trust Company, whose offices face each other on opposite sides of Wall Street. Secretary Root was the counsel for the Morton Trust Company of New York before he became head of the War Department, and former Vice-President Morton is its president. No step is taken involving an important question of law without the advice of men of this character as executive officers and counsel. Their ability and researches are brought to bear upon a doubtful question affecting a small estate in the same manner as in the case of a large estate, because of the importance to the company of deciding correctly the principle involved.

The solvency and sound management of the trust company, especially in such important commercial States as New York and Massachusetts, are insured by the rigid system of inspection provided by the laws of the States. All the books, papers, memoranda, and cash reserves of a trust company in the State of New York are open to the examination of State officials, appointed for the purpose, at any moment and without notice.

#### BANKING FUNCTIONS.

The explanation already made regarding the functions of trust companies in relation to individuals and estate answers to a considerable extent the second question, Wherein do trust companies differ from commercial banks? The advantages derived by an individual or an estate from employing a trust company to execute

important trusts naturally commend themselves to a corporation having similar trusts to be executed. The work of reorganizing old corporations and organizing new ones, taking up old securities and issuing new, which has been made necessary by the new enterprises, the consolidations, and the "mergers" of the last few years, has fallen in a large measure to the trust companies of New York and one or two other large cities. While individuals connected with these companies have, in some cases, been active in initiating these projects, the companies in their corporate capacity have performed merely ministerial and strictly legal duties in executing the trusts committed to them. The stronger trust companies of New York have been very chary of committing themselves officially to new flotations. Some of the more conservative make it a point not to float shares, however good, but limit themselves to bonds, which have priority of lien upon the property upon which they are secured.

The national banks act to some extent as the agents of corporations in the mere transfer of the ownership of securities and the payment of dividends. In the case of the formation of a new corporation, however, or an important change in the character of the securities issued by an old one, a trust company is usually chosen as the agent of the transaction. This is because the trust companies are organized for this work, have officers and attorneys familiar with the legal points involved, and are therefore enabled to render the service with economy, precision, and the certainty of conforming strictly to law. The New York law regarding the incorporation of trust companies confers these specific powers, among others, upon such companies :

1. To act as the fiscal or transfer agent of any State, municipality, body politic, or corporation, and in such capacity to receive and disburse money, and transfer, register, and countersign certificates of stock, bonds, or other evidences of indebtedness.
2. To receive deposits of trust moneys, securities, and other personal property from any person or corporation, and to loan money on real or personal securities.
4. To act as trustee under any mortgage or bond issued by any municipality, body politic, or corporation, and accept and execute any other municipal or corporate trust not inconsistent with the laws of this State.
7. To take, accept, and execute any and all such legal trusts, duties, and powers in regard to the holding, management, and disposition of any estate, real or personal, and the rents and profits thereof, or the sale thereof, as may be granted or confided to it by any court of record, or by any person, corporation, municipality, or other authority ; and it shall be accountable to all

parties in interest for the faithful discharge of every such trust, duty, or power which it may so accept.

If the Northern Securities Company, for instance, should desire to issue new securities in exchange for those of the Northern Pacific Railway, a trust company would be the agent naturally chosen as the intermediary in the transaction. It would receive the old bonds from their holders, issue receipts for the bonds, and later issue the new bonds to those who brought back their receipts. If money were to be paid on either side, it would be distributed by the trust company. The company, acting under the best legal advice, without prejudice toward either party, complying strictly with the terms of the agreement as interpreted by the most competent legal talent, thus acts as a guardian for the interests of the public on the one hand and the corporation on the other. The peculiar province of the national banks is the lending of their deposits upon commercial paper and the issue of circulating notes. It was chiefly for the latter purpose that they were originally sanctioned by law, much as this function has been atrophied by a clumsy system of security for note issues. How different are the functions of the national banks from those of the trust companies may be inferred from comparing the provisions of the New York law, already given, with the provisions of the national banking law, that a national bank may exercise—

All such incidental powers as shall be necessary to carry on the business of banking ; by discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt ; by receiving deposits ; by buying and selling exchange, coin, and bullion ; by loaning money on personal security ; and by obtaining, issuing, and circulating notes, etc.

#### ACCEPTANCE OF DEPOSITS.

The powers and activities of the two classes of corporations,—trust companies and national banks,—trench upon each other in some directions, but it is obvious that each has separate fields, which are not likely to be entered by the other. The field in which the competition of the trust companies with national banks has attracted the most attention is probably the acceptance of deposits and the use of these deposits in the loan market. The acceptance of deposits by trust companies was at first limited largely to deposits which were not likely to be the subject of frequent transactions. In many cases it was specified that the deposit should be left in the hands of the company for a fixed time, and deposit receipts were given instead of ordinary pass books.

When money was left in the custody of the company under these conditions, such large provision was not required for reserves, as in the case of money subject constantly to be withdrawn by checks. The opportunity for its continued use by the trust company permitted, moreover, the payment of a fair rate of interest. Hence, trust companies generally paid interest to individual depositors ranging from 1 to 3 per cent., according to the nature of the deposit. This policy attracted large deposits, especially from trustees holding funds in anticipation of some fixed event and corporations desiring to keep certain cash reserves in addition to their current working accounts. Gradually large corporations, discovering the advantages of keeping interest-bearing deposits with trust companies, increased the amount of such deposits and secured the acceptance of active accounts at a less rate of interest than that paid on the more permanent deposits. The trust companies have been thus placed in possession of great resources, which increase their ability to handle conversion projects for railway and industrial corporations, and afford them a considerable fund which they are able to utilize in short-term loans.

#### NATURE OF LOANS.

Most of these loans are made on call,—that is, subject to repayment whenever notice is given to the borrower. According to the etiquette of New York trust companies, a mere telephone message to a borrower is sufficient to secure the repayment of a loan; but it is a matter of banking courtesy that such messages shall go out about noon in order to give the borrower an interval before the close of banking hours to transfer his loan to another bank or company or find the money to pay it off. The greatest conservatism is shown by the best New York companies in making these stock loans. They allow a margin of about 20 per cent. between the market value of the securities and the amount loaned. They are far from accepting as collateral for loans all the classes of securities which are on the market. In most cases, moreover, a variety of securities is required to protect each loan, so that a shrinkage on one would be covered by the solidity of the remaining securities. It has been declared by officers of leading New York trust companies that not a dollar has been lost by them upon these secured stock loans.

The trust companies differ from the national banks in the character of the loans made. They trench little upon the field of the national banks in discounting the paper of merchants based upon mercantile transactions. This is a very

important field of banking, has a close relation to the volume of currency required by trade, and is the field which the national banks, when they were first authorized, were expected to occupy. The larger portion of national banking business is still of this sort, and it has grown greatly within the past five years. There has undoubtedly been a feeling here and there, however, that the national banks, since the rise of the trust companies, were relatively losing deposits and losing their share in the large operations which some of the trust companies have found so profitable. It may be said on this head that as much depends upon the personality of the banker as upon the form of banking organization. If a few captains of finance in New York have shown peculiar capacity for drawing to certain trust companies a large volume of business, it is highly probable that the same men would have accomplished similar results through a State bank, a national bank, or a private corporation if the trust-company organization had not been directly open to them by law. It is no secret among intelligent bankers that the trust companies which have made the largest profits have not derived those profits from the mere routine of banking. Trust-company profits have been derived chiefly from the skill of their officers in financing important combinations and aiding in the creation of new enterprises.

A trust company is better fitted by law and by the nature of its organization for work of this character than a national bank. A national bank has imposed upon it the function of safeguarding the currency. It is forbidden to intrust more than one-tenth of its capital to any single person, firm, or corporation. Its resources must be kept in such condition that they can be turned into money on the shortest possible notice. The same is true of such trust companies as pay their deposits on demand, but the trust companies hold many large deposits nominally subject to payment on demand, but which they know are not likely to be called for. If a few drafts are made upon such deposits, they have ample resources for meeting them in their cash deposits with the national banks.

#### THE QUESTION OF CASH RESERVES.

The subject of bending the trust companies to the same rules as those which govern the New York Clearing House banks has been more or less discussed since the growth of the trust companies has made them an important factor in the banking resources of New York. One of the propositions which has been most seriously discussed has been that the trust companies should be required to keep something like the same cash

reserves as the national banks. The national banks of New York are required by law to keep in currency an amount equal to 25 per cent. of their deposits, and the State banks which are members of the Clearing House are compelled to conform to the same rule. The state of this cash reserve,—whether there is a large surplus reserve, or whether it is near the legal minimum,—is one of the barometers of New York money-market conditions which always receives the most attentive study at home and abroad. The trust companies have heretofore kept such reserves as, in the opinion of their officers, were required to meet demands upon them; but they have in most instances kept the bulk of these reserves on deposit in national banks. A check upon a national bank deposit is usually more acceptable to one of their clients in a large transaction than would be a roll of bills or a keg of gold. For smaller demands from their clients for pocket money the trust companies keep such cash on hand as they find necessary, but they have fewer active accounts of this sort than the national banks, and few large demands are made upon them for actual currency.

The national banks of the cities enjoy an important privilege which is not granted to the trust companies. Outside of New York, the national banks are permitted to deposit one-half or more of their reserve in the national banks of New York, and to count such deposits as cash on hand. An enormous volume of such deposits is carried by the national banks, and they have greatly increased within ten years, as may be seen by the following table:

OBLIGATIONS OF NATIONAL BANKS TO OTHER BANKS.

Date.	To national banks.	To State and private banks and trust companies.
July 12, 1892.....	\$367,143,324	\$188,693,254
July 23, 1897.....	388,117,906	208,876,900
July 15, 1901.....	645,038,393	528,151,801
July 16, 1902.....	628,954,567	582,102,814

It is obvious from these figures that the national banks have profited greatly within the past five years in their command over the resources of their fellows in the national banking system, and that they have had voluntarily intrusted to them a large share of the cash of the State banks and trust companies. It is naturally contended on behalf of the trust companies that they should not be burdened with any such reserve requirements as are imposed upon the national banks, unless they are granted the privilege of receiving the deposits of the national banks of the country, and the latter are

permitted to count such deposits as a part of their lawful reserves. The officers of the strongest trust companies would probably be glad to comply with the requirement that they should keep a reasonable reserve in proportion to their deposits. Such a requirement would be rigidly complied with, and if it imposed burdens upon the weaker companies which wiped out their slender profits, it would not be a source of regret to the stronger companies to see establishments driven from the field which may not be hardy enough to weather the financial storms which the future undoubtedly has in store.

A reserve of 15 per cent. of deposits would be more than sufficient to meet all possible demands upon the trust companies, and at least half of this reserve, if not two-thirds, might properly be kept on deposit in national banks. Fifteen per cent. of \$1,271,081,174,—the deposits of the trust companies of the United States in 1901,—would be about \$190,000,000. The trust companies actually had due to them from other banks \$191,527,201,—an amount almost exactly sufficient to meet a 15 per cent. reserve requirement. They had also cash to the amount of \$24,810,203,—only about 2 per cent. of their deposit obligations. The requirement that they should keep 15 per cent. in currency locked up in their own vaults would mean that they should withdraw nearly \$167,000,000 from other banks, and practically withdraw that much money from the use of the market. Several of the strongest trust companies in New York already meet the requirement that they shall keep a reserve equal to 15 per cent. of their deposits, but keep most of it in other banks. Thus, on June 30, 1902, the Morton Trust Company, with deposits of \$51,517,694, had a reserve of \$11,659,890; the Mercantile Trust Company, with deposits of \$55,236,450, had a reserve of \$12,586,132; and the New York Security and Trust Company, with deposits of \$49,407,985, had a reserve of \$5,548,632.

The second of the requirements referred to,—that a trust company should keep one-third or one-half of its reserve in its own vaults,—could not be enforced, except after long previous notice, without serious effects upon the money market. With total deposits in New York City of about \$750,000,000, a reserve of 15 per cent. would be about \$112,500,000, half of which would be about \$56,250,000. The total reserves of the trust companies in the city of New York on June 30, 1902, were \$114,383,820, but of this amount only \$8,328,110 was in currency in their hands. In order to comply with such a requirement as has been suggested above, it would be necessary to withdraw nearly \$50,000,000 in

currency from actual use and lock it up in gold, silver, and greenbacks in the vaults of the trust companies.

Fears have sometimes been expressed that the keeping of trust-company reserves on deposit in national banks, instead of in actual currency in their own vaults, tended, along with other recent developments, to rear a structure of credit too lofty for the slender foundation of currency at its base. Comparison with the British system, however, is distinctly favorable to the solidity of conditions in New York. The reserves of the New York Clearing House banks for the week ending October 11, 1902, were \$219,612,500. This reserve is distributed among fifty-nine different institutions, and the proportion of reserve is, on the whole, much larger than that held under the monetary system of Great Britain. In London the reserve in actual cash is held entirely by the Bank of England. Other banks content themselves with keeping in their own custody only such little cash as may be required for daily retail needs, known as "till money." The joint-stock banks keep deposits with the Bank of England, and the private and country banks keep deposits with the joint-stock banks. The system thus depends absolutely upon the solidity of a single institution,—the Bank of England. The British system has the advantage of economy in the use of money, but the American system is more exacting in its safeguards. As the London *Statist* remarked last spring, "Were the New York banks permitted to work with as small a margin of actual cash against liabilities as we do in this country, they would be able to greatly increase their loans and their deposits."

How far the demand for arbitrarily fixed reserves is a matter of sentiment has been shown by the effect of the recent action of Secretary Shaw in seeking to relieve the pressure on the money market. By a stroke of his pen he decided that he would permit national banks to hold deposits of government funds, without keeping against such deposits the reserves of 15 per cent. or 25 per cent. required against other classes of deposits. By this measure, it was announced, the loaning power of the banks would be increased by about \$130,000,000. It is obvious that, from the standpoint of sound banking, the banks were no stronger after this announcement than before. If they needed a 25 per cent. reserve against gross deposits, the Secretary was wrong in suspending the requirement; if they did not need it, the public was wrong in feeling alarm when reserves against gross deposits, before the Secretary's action, fell below 25 per cent. The true banking rule is

that a banking institution shall pay legal-tender money upon its deposit and note obligations whenever such money is demanded, whether its reserve be 1 per cent. or 100 per cent. The bank answers with its life for its ability to do this, and the necessity that it shall live exerts a more constant and potent pressure upon its officers than the requirement that unused money shall be piled up in reserve funds. In the national banking system, with its hundreds of banks with small capital scattered over forty-five States, legal regulation of reserves is a matter of prudence and public convenience. In some of the States such regulation may be justified upon the same grounds, but it is necessary in inverse ratio to the degree of financial progress of the community and the importance of the stake of its financial leaders in the soundness and solvency of their enterprises.

If a specific reserve requirement is necessary for the prudent conduct of trust companies or the safety of the market, it should be imposed. It is obvious, however, that it could not be complied with suddenly without causing a convulsion in the money market. It could not be done under any circumstances except at considerable cost, which would not fall upon the trust companies, but upon the public. The community would be deprived of the use of \$50,000,000 of its working capital or be compelled to import that amount to make good the amount withdrawn from active use. It would amount practically to setting aside and locking up that much gold, to lie idle or to be used only in great emergencies, like those for which the war treasure of \$30,000,000 is so sacredly guarded by the German Emperor in the fortress of Spandau.

If the privileges enjoyed by either the national banks or the trust companies involve danger or disadvantage to the community, or if they threaten to drive one class of institutions out of existence, they should be restricted. The national banks and the trust companies, however, while they trench to some extent on each other's fields, each have functions to perform which differ from those of the other. It would be extremely harmful to chain either class of institutions upon a Procrustean bed of regulations or burdens, suited perhaps to one and not suited to the other. The national banking law could probably be amended to advantage in a direction which would give greater scope to the national banks in doing business; but it would be a step in the wrong direction to extend the restrictions imposed upon them, if they have been found burdensome, to a class of institutions which has contributed so much as the trust companies to the industrial triumphs of America in recent years.

# SELF-GOVERNMENT IN ORIENTAL DEPENDENCIES.

BY JEREMIAH W. JENKS.

SO much, both good and bad, has been said during the last year regarding our treatment of the Filipinos in political affairs, that it is interesting to see how our work compares with that of other nations who have for many years been dealing with Oriental peoples. It may be worth while, also, to state clearly how much we have already actually done in the way of giving self-government to the Filipinos. Naturally, the countries to be considered are primarily the English and Dutch dependencies in the Orient.

## BRITISH INDIA.

It should be recognized at the outset that in their home government the English are a liberal, free, self-governing people; considerably more so than any other people in Europe, with the exception of the Swiss. While England is called a monarchy, every one with even an elementary knowledge of politics knows that the will of the people rules England much more completely than it can be said to rule France, and that not a few writers and thinkers are convinced that public opinion controls in governmental affairs more directly and more thoroughly in England than even in the United States. That is not my opinion. The idea of self-government is, in my judgment, carried out more completely in Switzerland than in any other country in the world; next comes the United States; then, England and her self-governing colonies. But the idea of self-government is more generally recognized and more completely carried out in practice by the English than by any other people, excepting the Swiss and the American.

In some matters of public policy, however, the English are to be placed even first as regards liberality and the encouragement of the idea of freedom. One need but mention commercial freedom and the readiness which the English have shown to leave the people to fight out their own salvation, both at home and in the colonies. So fearful, indeed, is England of putting restrictions of any kind upon trade that certainly most Americans, and probably most Europeans, think her colonies in the Far East should often be criticised severely for their

laxity in enforcing even quarantine and other health regulations. No greater contrast can well be imagined than the prompt and rigid way in which the Americans at Manila and the Japanese at the southern ports of Japan have lately dealt with ships likely to bring cholera into the country, and the free way in which the ships entering Hongkong and Shanghai were treated, as well as the apparently culpable way in which, in those same places, persons having cholera were permitted their freedom. One man reports that in one forenoon's ride in Shanghai he saw eleven Chinese lying in the streets dead from cholera. Of course, one should not criticize without full knowledge, but appearances are certainly unfavorable. When speaking, therefore, of the English in their government of the colonies, we are speaking of a people whose inclinations are very strongly toward individual liberty; and wherever England has restricted sharply the liberty of a people there probably is, we may assume, some reason for such action.

In dealing with the question of the English in India we may at first overlook the native states; both because, without exception, the individual subject has less freedom under his native ruler, merely guided by an English adviser, than he has in British India, where the rule is directly through English officials; and, second, because we shall devote a section to them later.

## PURPOSES OF THE GOVERNMENT.

Whatever may have been her plan earlier, England has clearly announced in later years the principle of her Indian policy to be, "India is to be governed for the good of the Indians." Doubtless, here and there, individual officials let this principle drop out of mind; doubtless, also, in times of emergency,—as under stress of war,—the English Government at home may feel that India should do her part in aiding the mother country; but, taken all-in-all, no careful observer who goes somewhat thoughtfully through India, meeting the officials of various grades, both English and native, and noting the details of their work and its results, can doubt that a conscientious effort is made to keep in the foreground the good of the natives rather than the profit of the mother country.

If this purpose does not result in granting self-government to the Indians, it is because those who have spent their lives in administering the affairs of India are conscientiously of the opinion that self-government would not prove beneficial to them. They may be mistaken; but they are earnestly striving to give to the Indians what is best for them. As seems to be the case with Lord Cromer in Egypt, they probably think that the natives do not always know what is best for them; but even the best informed natives do not advocate self-government.

#### THE FORMS OF GOVERNMENT.

So far as the central government goes, the people of India, as such, have nothing whatever to say regarding its policy. As is well known, the governing power under the laws made by the English legislative houses is the Secretary of State for India, assisted by the Council of India in London. This council consists of not less than ten members; at least nine of these must have served or resided ten years in India, and no one of them can have been away from India longer than ten years before the date of his appointment. This is surely a body of experts, made up of those whose sympathies are likely to be with the natives. Moreover, in the India Office the highest positions,—political, financial, administrative,—are held by men who have shown themselves able, conscientious, and successful in India itself; but they are not natives.

In India the governing body is the governor-general in council. The governor-general is appointed by the home government for a period of five years. He may or may not himself have had training in India; but his council, of five members and the commander-in-chief, is made up of experienced men, familiar with Indian conditions. For legislative purposes sixteen additional members are nominated by the governor-general. A representation of natives is always found in this legislative council, and no important act of government of a legislative nature can be taken without the knowledge and, generally speaking, the concurrence of this body. These members, however, are not representative of the people of India in the sense that they are chosen by the people, for all are appointed by the government.

As regards what we might in the United States consider State and local government, the condition is much the same. In Madras and Bombay the governors, and the lieutenant governors of other provinces, and their councils,—made up again of experienced men,—are all appointive, no place being filled by election. In the provinces whose heads are chief commissioners, the

situation is the same. Only in purely local and municipal affairs do the ordinary people have a voice in choosing their representatives.

#### LOCAL GOVERNMENT.

It has been the policy of England, speaking generally, to govern—as far as is consistent with good government—in accordance with the traditions and habits of the people. They have recognized that customs in government, as well as social customs, are likely in the long run to be a natural growth, and thus to have had a reason, at some time at any rate, for their existence. Where these customs are too strongly contrary to English good morals, as, for example, in the case of *suttee*,—the burning of widows on the funeral pyre of their husbands,—or of infanticide, the government has interfered and stopped the practices; otherwise, they are generally retained.

#### THE VILLAGE.

Although the customs differ considerably in different parts of India, ordinarily the village has for centuries been the unit of local government, with its headman either an hereditary official recognized by the over-chief, or, in individual cases, an official chosen by an election more or less formal. The headman has had under him in various cases assistants who took charge of the policing, or of the records, or of other work in connection with the village. The village blacksmith, barber, carpenter and other village servants have also held their positions by hereditary claim. In some instances,—for example, in Upper Burma,—when certain taxes are levied upon the village as a whole, the distribution of this tax among the different households has been made by the headman with the assistance of councilors elected by the village. In practically all cases these customs have been retained by the English, with the requirement that all hereditary and elective officers should be confirmed by the representative of the English government. In case of the choice of a really incompetent or corrupt official, the English have not hesitated to set aside the election, or to exercise a choice among different persons who might naturally inherit the position. This element of self-government, it must be kept in mind, however, has had only to do with the smallest units of government in dealing with their own local affairs, and its influence has not extended beyond the limits of the village concerned.

#### LOCAL REPRESENTATIVE ASSEMBLIES.

Under Lord Ripon's administration, 1880-84, a further step was taken toward self-gov-

ernment. It was provided that the different villages, or groups of villages, should elect representatives to a council, to be presided over by the representative of the central government in charge of the district, making a body that might fairly be considered to correspond with our county boards of supervisors in such states as New York and Michigan where the boards are representative of the different towns, although the powers of these boards were much less extensive than those ordinarily granted to the boards of supervisors.

This is by far the longest step that England has taken in the direction of self-government in India.

#### RESULTS OF MEASURES INTRODUCING SELF-GOVERNMENT.

A very general opinion among English officials in India and, there is reason to believe, also in the India Office of England, is that even this measure of self-government granted at that time was premature, to say the least, and that it has on the whole been a failure. In most parts of India people were not accustomed to any political activity of that kind. They had been in the habit of doing as they were told in matters of taxation, road-making, and other local affairs, and in many cases they felt that this self-government was an imposition upon them of an added burden of work rather than a privilege bestowed. The consequence has been that in very many cases they have come somewhat sulkily, if at all, to the meeting, usually feeling somewhat the pressure of the English official in charge of the district; and they have come with no plans formulated and with no definite ideas as to what should be done. When, to prevent the meeting from being a failure, the English presiding officer brings forward his own plans for the government of the district, the greater number of the members are likely to say, politely, "As the sahib wishes," while those who take an active part in the discussion often show a lack of practical knowledge and efficiency.

Some of the more thoughtful of the English officials,—particularly, it would seem, those in the higher positions,—believe that the measure has been educative to a certain degree, and that it should be continued. The large majority of those with whom I discussed the matter said, practically, that they believed the system had been a failure, and that, though it could not easily be done away with, it would have been better had it not been introduced. The chief commissioner of one of the more important provinces,—an able and most efficient Indian official, lately retired,—has recently published an opinion

to the same effect. The system for the present is defended chiefly on the ground that it is educative and that this little experience will gradually lead to greater capacity for self-government.

Several of the most thoughtful and best-trained native Indians, even some who have been prominent in criticising most sharply the British government of India, seem to agree on this matter. While believing strongly in the natural ability of the high-caste native; while considering him fully the intellectual equal of the Englishman; and, while even asserting that in many individual cases this lack of initiative on the part of the local representative is due to fear of his English superior officer, they practically without exception said that up to the present time the natives of all races beyond doubt were lacking in administrative ability and were deficient in the power of directing the work of others. They thought that this had come about through century-long oppression by various rulers, Hindu, Mohammedan, Christian, and believed that in the course of time, if given the opportunity and means of training, they would overcome it; but even they recognized that, at the present time, the natives in no part of India are ready for self-government, and that even the very elementary, inchoate form of self-government in local affairs which they do possess is not a success.

#### MUNICIPAL GOVERNMENT.

In many of the larger municipalities, such as Bombay, Calcutta, and others, there has been a more determined effort made to establish self-government. City councils have been established which should perform the work that is usually performed by city councils in civilized countries. In most cases a goodly proportion of the members of these councils are appointed, but usually a considerable proportion and, in some cases, even a majority are elected. Naturally in the larger cities it is possible to find natives of India experienced in business and public affairs to serve in these positions, but the system even here does not seem to have been very successful. Sometimes the natives of the best type, belonging to the higher castes, refuse to put themselves before the electors as candidates, saying that it is beneath them to ask favors of members of the lower castes, although they would be willing to accept an appointment by His Excellency, the Governor. More often, as some may think has been the case at home and in England, men who are looking for an opportunity to advance themselves either politically or financially put themselves forward and get themselves chosen by the ignorant electorate.

It is, practically, universally believed that the

average native Oriental is less trustworthy in both business and politics than the average European or American. He has, in far too many cases, a natural liking for intrigue, a hazy uncertainty regarding the truth in speaking of things where the truth might be unpleasant either for himself or others, and a readiness in selling his opinion or his vote which would astonish the most corrupt of our city councilors. The result has been, according to the almost universal testimony, that the natives who are councilors, with rare exceptions, cannot be trusted in public affairs. They are readily bribed, and their judgment can be considered of practically no value at all.

#### NATIVE STATES OF INDIA.

Before the English had compelled the rulers of the native States to receive a British resident their form of government in nearly all cases was despotic. The ruler practically owned the land and also the people, who had no rights whatever as against their ruler. In many instances the ruler-in-chief granted certain sections of the country to his favorites, who in turn received from him despotic rights over the poorer inhabitants.

Even since the British Government has placed residents with the native States whose advice must be listened to, and, in most important matters,—particularly when they affect British India proper,—must be heeded, the situation is not materially different as regards the common people, excepting that certain cruelties, criminal in their nature, are not allowed. All the laws are promulgated in the name of the native ruler, and the theory of the government remains as it was before. The main improvement has been in the direction of greater liberties of action in business matters, social life, etc., rather than in the direction of government. In some of the most advanced States, whose rulers have been educated under English influence, or even perhaps in England itself,—as, for example, in Baroda and Mysore,—there are the mere beginnings of self-government. In Baroda there is a municipal government where the right of election of councilors obtains to a certain degree. The "Gaekwar"—native ruler—also proposes to institute self-government in rural districts in purely local matters, somewhat after the form already explained in British India. In Mysore there is a consultative assembly; but as yet it is not inaccurate to say that self-government, meaning by that a government coming from the people through the election of representatives, is unknown in the native States.

#### THE STRAITS SETTLEMENTS AND FEDERATED MALAY STATES.

The Straits Settlements is, of course, one of the Crown colonies of England of the usual form. Both the governor and his council are appointed by the English Government, and, although the different interests and the different native peoples are represented on this council, there is no pretense made of having the people themselves select their own representatives. In the two or three largest cities, such as Singapore and Penang, there are municipal councils which are in part elected. A report can be made regarding native members of the municipal councils here like that on India,—only, owing to the larger number of immigrants, the native representation is, relatively speaking, small, and apparently the corruption has not been so great.

In local affairs in the rural districts no effort whatever is made toward local representation. The appointees, English and native, of the government levy the taxes, lay out the roads, organize the schools, and do whatever needs to be done; generally working, it is believed, conscientiously for the good of the locality, but consulting the native inhabitants only informally, if at all.

#### THE FEDERATED MALAY STATES.

The Federated Malay States, since the English undertook their protection in 1874, have been, on the whole, so successful, both from the point of view of peace and order and of financial prosperity, and they, moreover, have been so frequently held up to the United States as models of what the Philippines should become, that one needs to deal with them somewhat more carefully.

It will be recalled that each of the four States of the federation has its own native sultan as its formal ruler. This sultanhip is an hereditary office, and the English technically have nothing to do with it, although, as the protecting power, they, of course, must approve and recognize the sultan. All laws are promulgated in the name of the sultan, and are in reality passed by him in council. In order to secure the safety of his small State he has given over to the English Government the absolute control of its foreign affairs, and has consented to receive at his court an English adviser whom he shall consult, and who shall be given full information regarding all legislative and administrative affairs. This is the form of government.

#### POWER OF THE RESIDENTS.

In practice this English resident has a seat in the sultan's council. In order to have the work

efficiently carried on an Englishman has been placed at the head of practically every department of government of each state, and not a few of the more important subordinate positions are filled by Englishmen. All laws of a financial or business nature, all laws in fact excepting those that might raise a question of religion, or might affect vitally the old time customs of the people, are prepared by the resident or by his superior officer, the resident-general of all the states, and are submitted to the sultan and his council in complete form ready to be passed. Naturally, in order to avoid friction or possible misunderstanding, it is customary for the resident to consult the sultan before presenting bills of importance, or before raising any question of prime significance. Naturally also, if, when such matters are presented, the sultan or the council suggest amendments that appear wise, the resident may consent to the change; but it is practically no exaggeration to say that all legislation proceeds from the resident and is given to the state by the resident. How complete this power of the resident is can readily be seen when one knows that since these four states were federated in 1895, it has been the purpose to give them on all important matters—such, for example, as Chinese immigration, police administration, taxation, etc.—identical legislation. In order to bring this about the residents of the four states in question meet in council under the chairmanship of the resident-general and prepare identical bills which are then submitted to the four sultans in council for approval. It is not expected that any council will make an amendment that is not approved by all four of the residents.

It will be observed that, so far as the average native Malay is concerned, he has absolutely no voice whatever in his government. It may probably be said that formerly under the native chiefs he had nothing whatever to say, and this also is true. The English have deprived him of none of his liberties as regards governing himself, for he never had any; but through their influence he has been granted liberties of action, of holding property, of self-education and self-development such as he never dreamed of before; while his personal safety and that of his wife and children have been absolutely secured.

#### SUCCESS OF THE GOVERNMENT.

From other points of view the policy has been extremely successful. Owing to the fortunate circumstances of these states possessing the richest tin mines in the world, as well as to their being extremely fertile, their financial condition is most enviable. The native rulers

receive an income with absolute certainty much greater than they received before they submitted and consented to receive an English resident; the country has to a great extent been provided with macadamized roads as perfect as those in France; railroads have been built through several of the states and are now being extended into a complete system, and that out of the current revenues without bonding; over one of the fine roads between two of the native states a regular line of automobiles is running instead of an electric tram; a telegraph and telephone system has been established; and in the municipalities one finds almost everywhere incinerators for disposing of garbage, systems of water-works, and many other provisions such as only the most highly civilized states enjoy.

Even in the municipalities there is no attempt at local self-government. There is a municipal board, made up often in part of natives, but the board is an *ex-officio* one, all the members of which are appointed in their representative official capacities by the central government. It would perhaps be no exaggeration to say that, so far as all external evidences of good, honest, successful government is concerned, no better example can be found in the world than the Federated Malay States present; but in these states there is, so far as one can see, not even a vestige of popular self-government.

#### NATIVE OPINION.

Some efforts have been made toward educating the native Malays; but the opinion seems to be universal that they are not yet capable of self-government, and that they are contented under the form of government that they have. On the other hand, among the best educated, more intelligent Malays, one finds a longing for something more, and a belief in the possibility of an ultimate self-government. I spent an evening discussing this question with one of the most intelligent of the native chiefs,—a man who, under the old order of things, would have stood very near the sultan, and who, under the present order, is one of the most trusted councilors and an expert official of both the sultan of his state and of the English government. He knew the English form of government at home; he believed in thorough education of the people; and he thought that ultimately something should be done toward giving the native people an elective franchise with all that that implies. He was, however, equally positive in the opinion that at present a choice even of local rulers by the people would be a misfortune if carried beyond the villages, and that a representative body for mak-

ing the laws for the state would be, for a good while to come, the greatest misfortune that could befall the average man.

### THE DUTCH COLONIES.

Owing to the forced labor which, in earlier years,—beginning in 1832,—the Dutch government exacted from the natives of Java, and to the complete reports which travelers made upon that system at the time, the impression has gone abroad that the Dutch Government has been severe, even cruel, toward the Javanese, and that their methods, therefore, ought not to be used by a free people, like those of the United States, in treating similar questions. The Holland of the present day, however, in its dealings with its eastern colonies, is hardly to be judged by the Holland of fifty years ago. The popular party in Holland has found it worth its while to challenge the old policy in Java, and the system of forced labor has been abolished upon all but coffee plantations, while even there it is not carried on in the same rigid way as in former days. Moreover, even the state coffee plantations are growing smaller year by year.

In later days the Dutch Government has beyond question kept clearly in mind, in its legislation, the welfare of the native Javanese. Care is taken to keep the taxes low enough so that the natives can live with a reasonable degree of comfort. Whenever there is a partial failure of crop, the tax is remitted, and it is also remitted at times as a reward for especially careful work on the plantations. In the interests of the unsophisticated villagers the shrewd Chinese trader is kept out of the villages, and his sphere of activity is restricted to certain parts, especially to the larger cities.

In his dealings with Europeans the native Javanese is also protected. The law prescribes that in the case of a European renting land the terms of rental shall be such as to prevent the exhaustion of the soil, and the contract must meet the approval of the resident. Knowing the superior ability of the European and the Chinese and the certainty that the simple-minded Javanese would soon find himself landless and practically absolutely in the hands of the foreigner if unlimited freedom were left to all parties, the government watches over him in a paternal way; and, on the whole, the Javanese seem contented and prosperous under this *régime*.

There is, however, in Java, with the exception of purely village government, nothing in the nature of self-government. In some of the villages, it is true, there still remains, as a custom of ancient days, the right of election of the

village headman, subject only to the approval of the Dutch Government, which approval is regularly granted unless the choice is absolutely unfit. In the courts in the larger districts native officials, usually members of the earlier ruling families, still hold positions of authority and govern the lower classes as of old. By the side of these native rulers, however, stand the Dutch officials, holding, on the whole, the more authoritative positions, and above them both stands the central government of Java, all Dutch appointees of the home government, practically directing their every action. The taxes are levied through the Dutch officials; schools are placed where, to the Dutch officials, it seems wise; and other methods of administration are carried out in the same general way. Even in the larger cities, such as Batavia and Soerabaya, the local inhabitants and others, whether Javanese or Chinese, English or Dutch, have nothing whatever to say. Their rulers are appointed for them by the central government, and by these officers taxes are levied, streets opened, the cities cleaned and lighted.

The Dutch officials, moreover, are of the opinion that they are giving the Javanese all the liberty that they are really capable of using well at the present time. They have been with them for many decades; they know their characteristics; they work together in the government with the more intelligent members of the earlier ruling families; and, on the whole, they do not believe that at the present, at any rate, the average native is in any way capable of self-government. It may perhaps be said that the Dutch have not had the same range of experience in this regard that the English have had, and that their conclusion may have been reached with less experiment; but it is beyond question that their government is, on the whole, efficient; that they believe what they say; and that, after excellent opportunities for observing the characteristics of the natives, lower and higher alike, even those who have their share in the government, this conclusion has been reached and is a conscientious one.

### FRENCH INDO-CHINA.

In French colonies we find an inclination to adopt French methods from home in part, with, however, the consequent need of holding ultimate the power in French hands. Speaking generally, the colonial business proper is almost absolutely in the hands of the governor-general, since he organizes all work, names all civic functionaries except minor ones, who are appointed by his subordinates, is responsible for

order within and for defense against aggression from without, and even approves the budgets, though in Cochin-China the budget is also voted by the colonial council.

#### THE GOVERNMENT OF COCHIN-CHINA.

In Cochin-China, which is really a colony with direct administration, the other divisions of Indo-China being only under a French protectorate, the executive is aided by a privy council of nine members, of whom a majority are French officials and hold their positions *ex officio*, while the four who may be natives chosen from the higher classes, are appointed by the government. A colonial council of sixteen members with quite extensive powers, contains six Asiatics, who enjoy also civic rights. These are elected by delegates from the municipalities selected by the notables. The French members are chosen by direct suffrage. In local affairs the *arrondissements*, corresponding roughly to our counties, have councils made up in part of natives chosen by the notables of the villages, but presided over by Frenchmen. The governor may add European members, and must approve proceedings. This administration is centered at the capital, and is carefully controlled by French officials.

In the villages there are two classes of inhabitants, the registered, who have a right to vote for village officers, and the non-registered, who have no such right. Under the native *régime* the administrative independence of the villages was noteworthy, and the French have aimed to preserve native institutions as far as possible. Nevertheless, it has been found necessary to maintain careful supervision over the local councils in order to prevent local abuses. For this purpose largely the *arrondissement* councils mentioned above were created.

The larger cities have municipal councils, to assist the mayor and his assistants. In Saigon, the capital, this council is composed of eleven French citizens and four natives, all chosen by universal suffrage. In Cholon, the native city, on the other hand, the presiding officer and three Frenchmen nominated by the chamber of commerce sit with four Annamites and four Chinese, who are elected to membership by a vote of their own nationalities, the suffrage being restricted by a high property qualification.

It will be observed that in local affairs there is a goodly measure of self-government, and that even in larger divisions the native Annamites are given representation, though French supervision is everywhere, and in the more important places French members are kept in the majority.

#### THE PHILIPPINES.

The chief mistake, perhaps, in most discussions on the Philippines is an assumption often made that the Filipinos are one in nature and type, and that general statements can be made regarding them. Nothing can be further from the truth. Mindanao, of course, is largely Mohammedan, and the Moros, in language, in training, in disposition, are entirely different from the other Filipinos. The Negritos, again, lowest of all doubtless in the scale of civilization, are more unlike the average Tagalog of Luzon than are the Comanches unlike the residents of Boston. But excluding entirely from our consideration all the non-Christian tribes, Negritos, Igorotes, Moros, and others, we still have even in the one island of Luzon several different peoples, neither of which can understand the other, unless by chance certain individuals in both may understand some common language such as Spanish. As they differ in language, so also, to a considerable extent do they differ in customs, in occupation, habits of living, and even in earlier habits of government. If we take into consideration, however, only the more advanced provinces, and those which were brought most completely under the domination of Spain, and confine our attention to these alone, we may perhaps treat fairly the question of self-government.

Of these peoples possibly 10 per cent.,—probably less than 5 per cent.,—can speak Spanish and have some of the elements of education. Part of those who do not speak Spanish may possibly read and write a little in their own language; but if so, their literature is valueless, and they have no means of acquiring the elements of a higher culture. Many of them, however, have excellent characteristics. A person traveling among them is often reminded of the excellent qualities of the Japanese, the most progressive people of the East. Generally speaking, the Filipinos are neat in dress, cleanly in person; they seem bright and intelligent as one talks with them; a few have been educated in Europe, and these seem often men of excellent ability, while the best of them may be called orators and scholars. The average young man or young woman trained in any handicraft shows manual dexterity. They sometimes make excellent draughtsmen, and have shown in certain localities not a little skill in wood carving, in weaving, even in painting, while a very large proportion of them have excellent taste in dress and music.

With these good qualities, however, and with the worthy ambition which many of them have,

are to be considered also other qualities which suit them ill for governing. With comparatively few exceptions they are not diligent; they are not thrifty,—the needs of the day being satisfied, they care little for the morrow; many even of the best trained are not truthful, having the characteristic of most Orientals of caring rather to please their hearer than to stick closely to facts; and, doubtless in far too many cases, they have less regard for the rights of private property than seems to people of the Anglo-Saxon race essential for successful government. Worse still, perhaps, from the point of view of self-government, is the fact that the more ignorant people are extremely superstitious, and that they have been trained for generations, even for centuries, to yield absolute obedience to the wealthier classes and to those who had been placed over them in government. In our war against them the *anting-anting* or charm which was to make them invulnerable as against American bullets was found in certain instances on every one of hundreds of an attacking force, and there can be little doubt that the vigor of their charge was due to the real belief that their talisman would keep them safe.

The fact of their absolute subservience to the "upper" classes has also appeared in many ways. When even to welcome American officers a reception or feast was given by the friendly Filipinos, it was often learned afterward that the "presidente" of the town, or the "cabeza" of the barrio, had sent out word to the citizens to bring him, free of charge, a certain number of chickens, or eggs, or whatever other provisions he might need which they could furnish, or to come in certain numbers to serve in preparing or carrying out the entertainment. Even when American troops or officials wished men to work on the roads or to aid in transportation, and found it impossible to hire directly for any reasonable sum a sufficient number, if appeal were made to the "presidente," and he sent word to the common men, a sufficient number would be secured at once, who would work more or less faithfully for the time being at reasonable pay. The fact is that the average Filipino of the lower class has been subject to absolute domination of the feudal type, having been compelled to render service free of charge. In very many individual cases, as has been brought out continually in the courts established by the Americans, personal service in the houses of the wealthier families has been of such a nature, when combined possibly with a small debt which has been kept hanging over the head of the servant for years, that the servant has been in reality a slave. This relationship between the aristocracy of the towns

and the common people, throughout even the best parts of the most advanced provinces, cannot be overlooked in considering the question of self-government.

#### FORM OF GOVERNMENT.

We have already given to the Filipinos practically everywhere, excepting in Mindanao, a greater measure of self-government than is possessed by any other Oriental people, whether independent or colonial. The Filipinos elect all their local officials, and these really direct the government. Every male Filipino of the age of twenty-three who pays a tax of about \$15 gold, or who owns real property worth about \$250, or who can speak, read, and write either English or Spanish, has the right to vote. So far he elects men to direct his local affairs, and through these men he has a larger share in determining what shall be done in local matters and what taxes shall be levied, than do the inhabitants of any part of India, the Dutch East Indies, China, or Japan. In the provincial governments the governors are elected by the municipal councilors, who, as we have seen, are elected by the people, though the other members of the provincial board,—i.e., the treasurer and supervisor,—are appointed. It is also proposed, likewise, to give to the Filipinos within a short time the election of a general legislative assembly, which must be consulted on all matters of importance and which will have a veto on practically everything proposed by the appointive officials, while Congress has already granted to this people the right to send two representatives to Congress to represent them in Washington; they, also, as soon as their legislative assembly is chosen, to be elected as real representatives of the Filipinos themselves. Neither the 35,000,000 of the Dutch East Indies, nor the 300,000,000 of British India, including the native States, have any representative of their own choosing in their own home parliaments, and yet the rulers of both these countries feel that their people have all the rights of self-government that it is wise to grant them. It is true that we have in the Philippines several men of ability, of education, of training, but the educated high-caste Brahmin, or Maratha, trained in Cambridge or Oxford, is surely as high a type as the best of the Filipinos,—most people would say far higher.

#### FILIPINO OPINION.

Even the educated Filipinos themselves think that we have gone far enough in the way of granting the common people self-government. I

have spoken with many intelligent Filipinos, both in the government and out of it, and I have not found one who was in favor of extending the suffrage without property qualification to the uneducated. One said that he favored general manhood suffrage, but explained that the votes must be cast by the upper classes for the lower. Many of them even question the wisdom of the election of governors of provinces and the members of a legislative assembly at the present time. No thoughtful, intelligent man who has lately studied the problem on the ground,—whether Filipino, or American, or foreigner,—so far as my knowledge goes, thinks it would be in the interests of the Filipinos to grant them at the present time a greater measure of self-government than they now possess. At present the restricted franchise leaves, to a considerable degree, the power in the hands of the well-to-do and better educated classes; but, far different from the conditions under the Spanish *régime*, these leaders of the people are not at liberty to dictate to the poor what they shall do nor to exact from them any unpaid service. In all of the districts there are courts under the supervision, if not in the immediate charge, of American officials; and every act of oppression on the part of either American or Filipino rulers as against the common man may be brought before the courts. Experience has shown that the courts are ready to teach the common people their rights by punishing the guilty oppressor, and there is reason to believe that the common man is fast learning what his privileges are.

The experience of the courts, joined to the extremely practical training of a useful nature that is being given in the schools of the Philippines to an extent unthought of in any other eastern country is rapidly leading the Filipinos to a larger measure of self-government in all their local affairs. There is reason to believe that, after some generations, a much more active part may be taken by them in all local affairs than could wisely be granted to the present generation. It seems hardly possible when one considers the slowness with which social changes are brought about, that even the comprehensive scheme of education planned for the Filipinos can make any serious impression much short of three or four generations. The present generation is hardly affected, while the next is likely to make little wise use, it may be feared, of so newly gained powers.

#### INTERNATIONAL RELATIONS.

It is perhaps not necessary to dwell at length upon the question of self-government in inter-

national affairs. So far as appears this is not asked for at the present time by any Filipino who has any standing among his fellows; and, as I understand the matter, no party or group of men in the United States is advocating independence for the Filipinos in international affairs without a guarantee on the part of the United States against the aggressions of foreign nations, a guarantee which would amount to a rigid protectorate. Certain it is that without such a protectorate a Filipino nation could not exist. Englishmen thoroughly versed in Oriental politics have said that, while England did not wish the Philippines if the United States would keep them, she could not but look with apprehension upon the seizure of the Philippines by any other foreign power. Intelligent Japanese connected with their government, realizing to their full the burdens which Japan has at present to carry and the somewhat critical situation in which she is placed in international matters, feel also that, were the United States to withdraw and other nations be given a chance of seizing, under whatever pretext, the control of the Philippines, she could not stand idly by, for her interests, too, might be endangered. And yet no one doubts that, with this conflict of interests, a withdrawal of the United States might well mean an attempted seizure under some excuse by some foreign nation.

#### CONCLUSION.

The United States has already given to the Filipinos a larger portion of self-government than has ever been granted under any circumstances to any other Oriental people. The United States has already granted more self-government than any other nation has considered wise, or safe, or beneficial to the people themselves. As with this present measure of self-government there have been also joined measures for training the Filipinos themselves further in the methods of self-government, with the exception of individual instances, we have probably not gone too far; although we have certainly gone as far as is consistent with safety or with the interests of the Filipinos, and in individual cases we have overstepped the mark. If we continue present plans there is reason to believe that gradually—after a considerable lapse of time—there can be given greater measures of self-government, both by first extending the suffrage and, later, by increasing the powers of elected officials. At present, at least, we should follow the advice of the wiser Filipinos, carry out present plans, and wait for results to show the next step to take.

# SHALL THERE BE A TWO YEARS' COLLEGE COURSE?

AN INTERVIEW WITH PRESIDENT BUTLER, OF COLUMBIA UNIVERSITY.

President Butler's first annual report to the trustees of Columbia University is a document of wide public interest by reason of its bold and innovating suggestions, touching the length of the college course and, as an incident thereto, the granting of the so-called baccalaureate degree. Newspaper extracts led, last month, to much comment both in the daily press and in educational circles. In addressing the trustees of Columbia, Dr. Butler naturally presented the subject with reference, principally, to its bearing upon the problems of the great university of which he has lately become the official head.

The point that has attracted popular attention, and that has furnished the basis for most of the newspaper arguments, is Dr. Butler's proposal to reduce the regular college course from four years to two years; or rather, to provide concurrently a longer and a shorter course, with the suggestion that the degree of A.B. be conferred at the end of the second year, and that of A.M. at the end of the fourth year. The discussion in educational circles is, of course, only in its beginning. In order that there may be no misapprehension concerning what it is that Dr. Butler really proposes, and in order further to ascertain his views respecting the bearing of his proposals upon American collegiate work in general, we have ventured to ask Dr. Butler several questions, which he has answered for the benefit of the readers of this magazine.

**QUESTION.** *As respects Columbia itself, do we understand that you are advising an immediate and radical change?—or that you are outlining a policy which really is in the line of a natural evolution from present conditions?*

**Answer.** I deemed it my duty, in my first annual report, to present to the trustees of Columbia University the results of my reflection upon the largest problems which lie before us for solution. In a certain sense, therefore, my recommendations may be said to be academic; although, of course, they bear directly upon the policies of the immediate future. I have outlined in the report what I believe to be the logical result of forces and tendencies now at work in American education, and have not proposed, and do not propose, any violent or radical policy on the part of Columbia University, or of universities and colleges in general.

**Question.** *About what proportion of Columbia's collegiate students have probably been, in point of fact, actually giving only three years to ordinary collegiate work, the fourth year being mainly regarded as the first in the period of professional study, upon which it is permitted to count?*

**Answer.** Not very many students in Columbia College have taken advantage of the provision by which their fourth year may be spent wholly in professional study. At no time, I think, has the proportion of any given senior class making such use of the last year exceeded 10 per cent. It is stated, in explanation of this fact, that the restrictions surrounding the privilege, and the severe conditions under which the professional work is carried on, have combined to discourage

students from attempting this combination of courses.

**Question.** *Please define in a few words just what the proposed change is, and explain in what regards it would seem more practical and satisfactory than the existing system for the purposes of Columbia.*

**Answer.** I may answer this question by premising the fact that I am profoundly concerned for the future of the American college, which I believe to be the strongest characteristic of our educational system, and the one which gives our system manifest advantages over those of Continental Europe. The spirit and the purpose of the college are our strongest defense against the purely materialistic and commercial ideals in education and in life. It is my belief that forces are now actively at work which will result in the destruction of the American college during the next generation, or, at least, in the destruction of its essential characteristics; first, perhaps, as it exists in the larger universities, and then elsewhere. These forces are: On the one hand, the rapid development of secondary schools,—particularly public high schools,—and the extension of their work upward into the field hitherto occupied by the freshman and sophomore years of the college; and, on the other hand, the invasion of the junior and senior years of college work by professional and technical studies which are quite foreign in spirit, method, and purpose, to the studies which they are displacing.

As to these changes, there is one fundamental question to be asked: Are they in the interests of better and more effective educational standards in a democracy?

The growth of the public high schools, and the upward extension of their work into the field formerly occupied by the early years of the college, seems to me to be an unmingled public blessing. These schools have brought educational opportunities, of an improved kind, to tens of thousands of students who could never have left home, or have entered upon college residence, in order to obtain them. I accept this change, therefore, as not only inevitable but beneficial. I recognize the ability of the best secondary schools to do not only as well as, but even better than, the colleges have been in the habit of doing the work of many of the studies of the freshman and sophomore years. I believe it to be indisputable that many secondary schools provide better equipment and better instruction in English, history, physics, and chemistry, than do any but very few colleges. College teaching has, at this point, failed to keep pace with the tremendous educational advances of the last generation; while the secondary schools have availed themselves of the new tendencies and opportunities to the utmost.

On the other hand, I do not believe that the displacement of the remainder of the college course by professional and technical studies is either necessary, wise, or desirable. One object which I have in view is to check the further progress of this invasion, and to keep some period of college residence solely for that study of the liberal arts and sciences which mean so much.

So far as Columbia is concerned, my proposals would,—if ever put into operation,—result in marking off definitely the work of the college from that of the secondary schools on the one hand, and from that of the technical and professional schools on the other, and would give the degrees in arts for college work, and for college work alone. These degrees are now given, both at Columbia and elsewhere, for work which has no relation to the group of studies on which the arts degrees have traditionally been based. Many see no objection in this, believing that one object of study is as good as another. I dissent from that view.

Another point is, that both college officers and professional school officers object to the division of the time and interest of the student which results from classifying him as an undergraduate in college at the same period that he is wholly devoting his time to the pursuit of technical studies under another faculty.

*Question.* Columbia has great numbers of young men studying for the practice of law and of medicine, and many hundreds, also, preparing for the life of engineers and architects, and for other practical callings of a professional grade, besides many

who will pursue postgraduate courses in preparation for professorships or for expert service in other ways. Besides these, Columbia has many students who will pass from college to business life, and some who will become men of leisure.

*In view of existing American conditions, about what years, on the average, and how many years, would you have young men of these different categories spend in the preparatory school; in collegiate work proper; and in professional, or postgraduate, study? At what age ought they to leave college or university?*

*Answer.* This question goes to the root of the matter. All classes of students named in the question should complete a normal secondary school course of four years. All should have some college life and training as well. Those who are to prepare themselves for professorships, and for expert service in other ways, will need all of four busy college years before entering upon what are called postgraduate or research studies. On the other hand, those who are to spend from three to four years in a professional or technical school do not need,—in the strict sense of the word,—four years of college instruction; although many of them, no doubt, would profit by having it. It is for this class of students that I believe a two years' course of college instruction to be very desirable. They would then spend from five to six years in combined college and university residence; and, in view of the rigorous intellectual discipline given by the modern instruction in law, medicine, architecture, engineering, and the rest, and in view also of the undoubted educational value of those subjects, as now taught, they would get from such a course a training of much general value, as well as one which bears especially upon their chosen profession. It must not be forgotten that, to require a two years' college course for students in the professional and technical schools, would be to raise the requirements for those schools by two years, and to lengthen the total period of college and university residence by at least two years for such students everywhere, except at the law schools of Harvard and Columbia, and the medical schools of Johns Hopkins and Harvard. The student who entered college at seventeen would leave the university with his Ph.D. at, say, twenty-four, or with his professional and technical degree at twenty-two or twenty-three, according as the professional or technical course occupied three or four years. The courses in medicine and applied science at Columbia occupy four years each; the course in law occupies three years; but the faculty of law is now advising certain classes of students to spread the work over four years in that school also.

*Question. What would be the effect of the adoption of your suggestions upon the tendency to early specialization, which many educators think a serious danger?*

*Answer.* It is a serious danger, and my proposals are aimed at postponing the period of beginning to specialize. It must not be forgotten that, so long as students are admitted to the professional and technical schools directly from the secondary schools, they are specializing severely at sixteen or seventeen years of age. By putting them through a two years' college course, the beginnings of highly specialized study would be deferred two years. I regard this as a great gain. On the other hand, to insist upon a four years' college course, the age of admission being seventeen and a half or eighteen years, is to postpone unduly the period of specialization as well as to put the best professional and technical instructors out of the reach of all but relatively few.

*Question. Are the rearrangements that you propose feasible in the other leading universities of the Eastern States, and what,—if you choose to say,—seems to you to be the tendency in the policy of such institutions? Would some such plan appear to be feasible in the organization of the great State universities of the Mississippi Valley and farther West?*

*Answer.* I do not see why,—after these proposals have run the gantlet of debate and critical examination, and, if they sustain themselves,—they cannot be adopted anywhere, East or West, and whether the college is large or small. They are especially easy of adoption by the great State universities, if approved by those institutions. It would be an unmitigated advantage if one-third of the nearly five hundred colleges in the United States would give a two years' course and that only. They could do so much very well.

*Question. The questions you have raised in your report are of intense interest to the authorities of scores of colleges of the distinctively American type. Would you think it advisable for them to introduce a two years' course for the degree of A. B., and give the degree of A. M. upon the completion of a four years' course? Would not such a system tend to crowd the short course with students, and to send those who care for further study to the universities for professional, or postgraduate, work?*

*Answer.* This question can only be answered by bearing in mind what I have already stated—that, in my judgment, the distinctively American college is seriously threatened, unless it takes steps to readjust itself to new conditions, and to mark its work off clearly and somewhat sharply from that which normally and properly precedes it in the secondary school, and from that which is

now filtering down into it from the university and the professional school. I think that the traditional A.B. standard was a good one, in respect both to the age at which the student took the degree and to the character of the studies which he pursued for it. As I have pointed out, the student of to-day spends two years more than did his grandfather, and one year more than did his father, in obtaining the A.B. degree; and yet it is the degree of his father and his grandfather, and not his, that we talk about as the traditional A.B. degree conferred by the distinctively American college. The so-called distinctively American college is, because of its uncertain, or ill-enforced, standards of admission, not infrequently doing work now regarded as belonging to the secondary school. It seems to me that it would be difficult for any serious-minded observer to hold that a student who could pass with a rating of, say, 60 per cent.—such examinations as were set in June last by the College Entrance Examination Board, and on which examinations were held in every part of the country,—was not at least two years ahead, in ground covered as well as in age, of his grandfather when the latter entered college. To compare the education of the college graduate of 1860 with that of to-day is not easy; but the latter has demonstrably had two years more of formal instruction than the former. It is universally held that the resulting conditions are unsatisfactory; but there is great reluctance to propose, or to approve of, any specific remedy. The grandfather and his contemporaries hold themselves to be better trained than their grandsons. If so, what is to be done about it? My proposals, whether good or bad, are no more than an attempt to point out a specific remedy for an admitted evil.

Providing the colleges, generally, would raise their standards of admission to a point where they rest squarely upon a four years' secondary school course, it seems to me that the plan which I have outlined might be adopted by them all. So long as the entrance requirements are below this standard, the colleges are practically conferring the degree of A. B. for a college course of three years, or for one of two and one-half years, at the present time. The remaining year, or year and a half of this work, is work which has, during the past generation or two, been transferred to the secondary school.

It was my duty, for more than ten years,—as dean of the Faculty of Philosophy of Columbia University,—to pass upon the college degrees offered by intending university students as credentials for admission to postgraduate courses. In that way the degrees of more than two hun-

dred American colleges and scientific schools came under my observation; and some of them could not be accepted for admission to anything higher than the sophomore year of Columbia College. It is idle to suppose that there is any present uniform significance in the A. B. degree, or any present uniform standard on which it is conferred; or even that the degree represents four years of truly collegiate study when four years have been spent in college residence. Such an assumption is contrary to fact. Not only do the degrees of no two colleges mean the same thing,—either in form, content, or adequacy of training; but it often happens that two degrees given in one and the same year by a single college are as far apart, in significance, as are two degrees given by different colleges. One reason why I prefer the plan which I have outlined to that now in existence is, that I believe it would bring definiteness and increasing uniformity into the A. B. degree, wherever conferred, and so give it new dignity and importance. My suggestion proceeds from an admission, and approval, of the fact that two years of the traditional four years' college course have passed over to the secondary schools.

*Question.* But would it not debase the value of the A. B. degree to confer it upon the completion of a college course of two years?

*Answer.* That depends entirely upon the meaning of the term "debase." Suppose the conditions of admission to college were still further increased to a point where they were equivalent to the standard of admission to the present junior year at Harvard or at Columbia; would it be necessary to the maintenance of the standard of the A. B. degree that the college course should continue to be four years in length from that point? Well, it is just such a change as this which has occurred during the past thirty or forty years. It seems to me quite unreasonable to suppose that, after a considerable portion of the work heretofore done in college has passed over to the domain of the secondary school, that the college must go on keeping up a four years' course, simply for appearance's sake, or to hold fast to the tradition that the college course must occupy four years. My fundamental proposition is that the American degree of Bachelor of Arts gained its significance, and has its significance, because of what is known as the old-fashioned four years' course of college study, and that the appropriate time to confer the degree was, and is, upon the completion of such a course.

It is a question of fact easily to be decided, whether or not some portion of this four years' ~~course~~ <sup>work</sup> now covered in the secondary by the college admission ex-

amination. If so, the proper time to confer the B. A. degree is upon the completion of the rest of the old, standard course. As I view the facts, this time is arrived at after two years of college residence, admission to college having been gained on the terms stated, and not on lower terms. Either the college admission standard of to-day is lower than it used to be, or is higher than it used to be, or is just what it used to be. I fancy that no one will contend that it is either lower than formerly, or the same as formerly. Therefore, the facts must be that the A. B. degree conferred after a four years' course has been pushed up beyond the point which it occupied when it gained so much reputation and distinction. That very pushing up it is which has caused the trouble under which our higher education is now suffering primarily through being top-heavy and too long-drawn-out. It is not true that the highest standard (in point of time consumed) is necessarily the best in education. Too low a standard brings education into contempt; too high a standard deprives it of the opportunity for social service which should belong to it.

Personally, I am not able to take the lively interest in the question of degrees which many do. They seem to me to require too much explanation to be worth very much; yet we have them, and they can be so administered as to have real value. That value will depend, primarily, upon their definiteness and upon the standard of excellence required for attainment. I should like to improve the present conditions, in both of these respects; but I care much more about the establishment of a two years' college course than about the degree it earns, or whether it earns any degree.

*Question.* Cannot the time which it seems desirable to save be saved elsewhere than by contracting the college course?

*Answer.* It cannot. The secondary school course, where best given, is now substantial and satisfactory; it uses the four years allotted to it thoroughly and well. Certainly, the professional courses cannot be shortened; for it is only recently—under the strongest sort of pressure from the professions themselves,—that they have been lengthened to three and four years of substantial work. There remain but two places where time can be saved. The first is in the elementary school, where two years are wasted, chiefly in the upper grammar grades, and eight years are occupied with work which could be accomplished in six. I called attention to this situation in an address before the National Educational Association at Minneapolis in July last. The other place is in the college course;

and that I have discussed in the report about which you are questioning me. To the best of my knowledge, no other suggestion for saving the time which almost every one admits is now wasted or unprofitably used, except that of the three years' college course, has been made.

*Question. Would it be of advantage if the typical American college should lower its entrance requirements by at least one year?*

*Answer.* No; it would be disadvantageous. With the possible exception of two institutions, no college admission requirements are now too high for the best social service. Most of them are too low by from a year to a year and a half. To raise them by that amount of work would, as experience has shown, not result in permanently raising the age of college admission; but it would compel more concentrated and better work in those secondary schools which are still behind-hand. This, of itself, is a legitimate end toward which the influence of colleges should be exercised.

*Question. Would your suggestions have a tendency to make student life more concentrated and strenuous, discouraging the four or five months of vacation idleness that is now customary, and making the ordinary college student take himself seriously as a worker?*

*Answer.* They certainly would. There is an ethical aspect of this matter which has escaped attention, and which ought to be emphasized. Charming as are the privileges and delights of college life, it is not a good thing for the American boy to spend four formative and precious years as idly as he may do in college. I say advisedly, "as he may do." Not a few college students overwork themselves, and very many spend four profitable years; but my own observation and the comments of numberless parents force me to the conclusion that many boys drift through college more or less aimlessly; and, in consequence, are injured rather than benefited by the experience. Personally, I should rather have a boy work through two years of college life than loll through four years; it would be better for his character and better for his intellectual development. West Point and Annapolis can teach the colleges some lessons in this regard.

*Question. Does not the present system have a tendency to undue prolongation of childhood; that is to say, to an unfortunate postponement of responsible participation in the affairs of real life?*

*Answer.* It does; and, therefore, it operates to discredit the college and college education. Many of the complaints made by practical men of affairs against the college would be done away with if we could bring about an improvement in this respect.

*Question. With a shorter college period and an earlier entrance upon business, or professional, life, might we not hope to have a greatly-increased proportion of college-bred men in the community?*

*Answer.* Certainly; and this is one of the ends that I lay most stress upon. In a democracy, we cannot afford to have the college a class institution; the conditions which surround it cannot be made such as will confine it to the children of the well-to-do and leisure classes, without very unfortunate results. Double college courses, as I have proposed,—one of two years, and one of four years,—would result in greatly increasing the number of men who have had some serious college training, while depriving no one of any of the rich opportunities that he now has.

*Question. What would be some of the principal essentials of the concentrated two years' college course? Would it tend to a somewhat rigid curriculum?*

*Answer.* Doubtless the two-year college course would differ at different colleges, as the existing courses differ. In my judgment, it would be wise to make the work of such a course both heavier and more concentrated than the courses which existing tendencies have brought about and are bringing about. Such a course should contain the work in English, mathematics, Latin, one modern language, one experimental science, economics, and philosophy, that forms the backbone of the best A.B. courses.

*Question. What are some of the subjects now usually comprised in the four years' course that could be dropped from a two years' course?*

*Answer.* As matters are at Columbia, nothing need be dropped from the two years' course except subjects wholly elective; and at Columbia, as elsewhere, this elective privilege during the last two years may be exercised wholly or in part by choosing subjects which are counted toward professional and technical degrees. There would be no enforced loss of liberal studies.

*Question. How would such a change affect social phases of college student life?*

*Answer.* I do not see that any necessary change in the social conditions of college life would result. The colleges generally would have more students to care for, and it would doubtless be the case that more complex and diverse social relationships would be built up in consequence.

*Question. While the element of time spent in college may fairly be held to be subordinate to the amount and quality of the work done, yet may not the value of the time element be underestimated?*

*Answer.* Yes, it may; and I realize that there is some danger in a shorter college course, on that account,—but the best consideration which I have been able to give to the subject convinces

me that this danger is quite outweighed by the manifest intellectual and moral disadvantages of a longer period of college residence not well occupied. A certain amount of cultivation—and even of culture,—may be absorbed from college life and work by the student who puts very little energy into his own studies. But I think that this does not happen often; and that, in any event, it is not a consideration which can be permitted to outweigh those on the other side.

*Question. How would such a change be likely to bear upon college finances in general?*

*Answer.* The effect upon college finances would be uncertain for a short period, but afterward probably favorable. My judgment is, that the number of new students who would go to college for the shorter course would outweigh the number of those who, now taking the longer course, would be satisfied with the shorter, if it were provided.

*Question. How would the American degree of A.B., under this proposed arrangement, compare in educational value with degrees in England, Scotland, Canada, and elsewhere?*

*Answer.* Premising what I have said above about the admission requirements,—an essential which must never be lost sight of in this discussion,—such a baccalaureate degree would take rank with the French baccalaureate; with the pass degree at Oxford; with the ordinary degree in

course at the Scottish universities; and with the graduation certificate from the Prussian Gymnasium. The content of all of these degrees would differ; but, from an administrative point of view, they would represent about the same amount of time spent in study. Personally, I am much more concerned about the quality of the work done by the student than I am about the time spent in doing it; although, under certain conditions, the latter element becomes important. We have steadily underestimated the intellectual capacity of the American boy, have allowed him to waste two years early in his school life, and have framed a college course through which he may dawdle, if he wishes to. The result is that an educational superstructure has been piled up which must be remodeled or it will fall down.

The main thing to bear in mind is the *purpose* of the college training. President Hadley put it admirably in his address at the University of Kansas the other day, when he said that "The great thing that the English colleges have always done, and the great thing that the best American institutions are doing in their collegiate courses, is to lead the student to value some other ideals besides the commercial one. Young men are far too apt to overvalue these ideals as compared with the ideals of civic duty, of religious earnestness, and unselfish devotion to causes which promise them no personal advancement."

## GOVERNMENT IN THE PHILIPPINES, 1898-1902.

### A REVIEW OF THE SUCCESSIVE STEPS IN THE EVOLUTION FROM MILITARY TO CIVIL ADMINISTRATION.

BY ARTHUR WALLACE DUNN.

**I**T is a little more than two years since the first attempt was made to introduce civil government into the Philippine Islands. Previous to that time the military government was supreme. It was not only the executive, but the legislative and judicial as well, though some effort had been made to have some of the old Spanish laws enforced by civil magistrates; but the military courts-martial, acting under the orders of the military governor-general, were the courts of last resort. Legislation was enacted by military orders promulgated by the adjutant-general, and these orders were enforced by the same power that made them, the commanding general. Since the Philippine c

added

in the islands and began the organization of the civil government the progress from military absolutism to civil control has been rapid and successful. Each advance has been made with care and consideration. It is a gratifying fact that no backward steps have been necessary, but that the growth of civil authority, with the corresponding decrease of military power, has taken place with but very little friction.

It is no more than a deserved tribute to Secretary Root to say that his far-seeing mind and master hand have brought about these results. He has had to contend with much, because many of the military men who were in the islands were firmly convinced that nothing but absolute

military control would avail in governing a people who had never known any other authority. There were others, however, who thought differently, and the Secretary was greatly aided by General MacArthur, who was military governor when the first attempt to introduce civil government was made, and who, in consequence, was shorn of his power. It is not too much to say that Secretary Root had a clearer vision, a broader and more comprehensive view, than any other man, even of those who had been in the islands, and who were supposed to understand the situation by reason of personal observation. It was Secretary Root who evolved the plans, who drew the instructions to the Taft commission, who gradually enlarged its powers, and who finally drafted the legislation of the last Congress, under which the islands are now governed.

#### THE OTIS ADMINISTRATION.

Six different officers have commanded the army of the United States in the Philippines. Brig.-Gen. Thomas M. Anderson was in command of the first expedition against the Spanish, which arrived on June 30, 1898, and remained in command until Maj.-Gen. Wesley Merritt arrived on July 25 of the same year. General Merritt remained in command but a short time, during which the battle of Manila was fought with the Spaniards and the Spanish rule brought to an end. General Merritt sailed for Paris on August 30, 1898, to give such information as he possessed to the Peace Commission, and Maj.-Gen. Elwell S. Otis took command. He was virtually the first American governor-general of the Philippines, acting under the direction of the President through the Secretary of War.

It was while General Otis was in command that the Philippine insurrection broke out, and Aguinaldo's army was chased all over the island of Luzon by soldiers of our regular army and State volunteers. He was also still in command when the new levies known as the United States Volunteers were raised and sent to the islands, to fight under Lawton, MacArthur, Young, Wheaton, Bates, Hall, the two Bells, Funston, Sumner, and others. General Otis was a most methodical man, and knew everything connected with the Philippine government. He brought to bear upon the problems presented to him not only a military training, but a legal and business education which made him invaluable to the Government. Under the direction of General Otis tariffs were made and modified, revenues were collected, and expenditures made. The Chinese were excluded by his order, and immigration and commercial laws made and en-

forced. He dealt with all questions, whether military or civil. He had the power of life and death; and his orders were supreme, whether in a case of murder or police offense, for all trials were regulated by the military, of which General Otis was the supreme head. His orders established a department of posts, provided an educational system, directed the construction of public works and improvements of various kinds, and, in fact, were the law for eight million people. I heard Secretary Root pay him a high compliment during a private conversation, when he said that the people of this country could never know how much they owed to General Otis. The careful regard he had for details, and the attention he gave to every part of the great affairs he controlled during his administration, prevented the extravagance that usually follows a war where so many troops are engaged. Not a breath of scandal or hint of corruption was ever heard in connection with the vast expenditures for military and governmental purposes during the time when General Otis was in command.

#### GENERAL MACARTHUR AND THE TAFT COMMISSION.

Maj.-Gen. Arthur MacArthur was made military governor on May 5, 1900, when General Otis, weary after two years' exhaustive work in a tropical country, was relieved, and returned to the United States. General Otis had appointed a board which had made a report upon a system of municipal government. He had also approved by military order, on July 22, 1899, a system of municipal local government in the island of Negros, which afterward became the basis of similar governments in other portions of the archipelago. When General MacArthur took command no change was made in the government of the islands, although it was in contemplation. The Taft Commission, consisting of the Hon. Wm. H. Taft of Ohio, the Hon. Luke E. Wright of Tennessee, Prof. Dean C. Worcester of Michigan, the Hon. Henry C. Ide of Vermont, and Prof. Bernard Moses of California, had been named. The comprehensive instructions under which the commission was to act had been prepared by Secretary Root and approved by President McKinley, and delivered to the commissioners on April 7. The commission did not depart at once, and it was not until September 1, 1900, that it began to carry out those instructions in the establishment of civil government in the Philippines.

General MacArthur still remained governor-general. He was the executive power, and to him the commission reported upon all matters pertaining to the government. The commission was the legislature, but acted by authority of the

President through the Secretary of War, and it was still under the war power that it performed such functions as were delegated to it. This included the establishment of civil governments in provinces and municipalities, making rules and orders for raising revenue, the expenditure of funds, the establishment of an educational system, organization of courts, and the further organization of a postal system. Various departments and bureaus for the administration of the government were established with the approval of the Secretary of War, and great progress was made in establishing civil governments in the pacified portions of the islands.

#### JUDGE TAFT BECOMES CIVIL GOVERNOR.

On July 4, 1901, another decisive step was taken. Maj.-Gen. Adna R. Chaffee, who had made such a brilliant record in China, succeeded General MacArthur as commander of the army in the Philippines, but he did not become governor-general. That office ceased to exist when General MacArthur relinquished his command. This was done by an order of Secretary Root issued on June 27, by which it was directed that the President of the Philippine Commission should, after July 4, exercise the executive authority in all civil matters that had previously been lodged in the military governor. Wm. H. Taft was appointed civil governor, and the instructions to the commission were continued in force. The military governor was relieved of civil duties save in those provinces where order had not been sufficiently restored to enable provincial governments to exist.

#### NATIVES PARTICIPATE IN THE GOVERNMENT.

It was under the new conditions that the most rapid progress toward civil government was made. Some friction occurred between the civil and military authorities, but as both were acting under the War Department, Secretary Root was able to adjust all the contentions, and, for the most part, in a satisfactory manner. In some provinces army officers continued to act as civil governors, but they reported to the civil governor of the islands. Occasionally they performed dual duties, being governors of provinces and commanders of detachments of troops, but generally it was the aim of the commission to have native officers, and, where necessary, they were supported by the military authorities. Sometimes it was found that these native officers, while holding their positions under the commission, were in league with the insurrectionists: but notwithstanding all such drawbacks, progress was made toward well-established civil government. Some army officers claimed it was a

failure, and that the islands must again revert to military control, but the success of the civil government refuted the assertions of the pessimists.

By an act of the Philippine Commission on September 1, 1901, with the approval of the Secretary of War, three native Filipinos were added to the commission,—Dr. T. H. Pardo de Tavera, Señor Bernito Legarda, and Señor José Luzuriaga. Filipino lawyers were given judicial positions, and wherever possible natives were utilized in the scheme of civil government.

#### TARIFF LEGISLATION—ACTION BY CONGRESS.

It was found necessary to revise the tariff, and this was done by the commission with a view to raising revenue and for the protection of Filipino interests. Then the draft of the proposed law was sent to the United States and published, and changes were made in the Insular Bureau of the War Department to meet suggestions made by those who were shipping goods to the islands from this country. When finally completed, it was enacted into law by the Philippine Commission. Other acts and laws necessary for the government of the islands were passed by the commission, both before Judge Taft was made civil governor and also afterward.

Such progress was made by the commission toward civil government that Congress was ready to legislate at its last session. The decisions of the Supreme Court in the insular cases made it necessary to pass a tariff bill both for the islands and for the commerce between the United States and the islands. For the Philippines the tariff of the commission was adopted as a whole, while the rates charged upon goods from the islands to the United States were made 75 per cent. of the present tariff rates on foreign products. But more important still was the general legislation for the islands known as the Philippine government bill. That act ratified and confirmed the action of the President in creating the Philippine Commission, the instructions to the commission, the creation of a civil governor, and establishment by the commission of the executive departments of the interior, commerce and public works, finance and justice, and public instruction. The law carried with it a ratification of the acts of the commission. But it went much further, and provided for many other things which were deemed for the benefit of the islands. The bill had been carefully prepared in the War Department. It received such amendments as Congress thought necessary, but continued the administration of the civil power through the Secretary of War.

THE ISLANDS NOW GOVERNED THROUGH THE  
AMERICAN CONGRESS.

Congressional action marked an important epoch in Philippine affairs. Before that time the President had exercised authority as commander-in-chief of the army. Although civil government had been established, it was under the war power. Secretary Root's directions were laws for the islands. He could instruct the civil commission to do what he deemed necessary and it would be done. The commission was created by the President, and instructed by him through the Secretary of War. While there was civil government in the Philippines it was wholly in the hands of the President. The distinction was between military and civil in the Philippines, but there was little distinction in this country, as the President was the virtual head of the Philippine government, as the head of the army. So he is still, but the Congressional action limits his power. He can act only in accordance with the Philippine law. The Philippine Commission is the legislature for the islands under that law. It is still controlled by the President to the extent of appointment, but his appointments must be confirmed by the Senate. The commission is also restricted to the law, and cannot go outside of it. So the Philippines are actually governed by the people of the United States through Congress.

## THE PHILIPPINE LEGISLATURE.

In accordance with the Philippine law preparations are being made for taking a census of the islands. This will be followed in two years by an election of delegates to an assembly, which, with the Philippine Commission, shall constitute the legislature of the Philippine Islands. This will be the last step for complete civil government, and while it will not give the people of the islands absolute home rule, it will give them such a voice in the control of their affairs as they never had before and could not expect under any proposed government by those who have been in insurrection against the authority of the United States. Before the legislature assembles Congress will no doubt pass additional

legislation, if it is found necessary in the scheme of Philippine government.

## REDUCTION OF THE MILITARY FORCE.

Maj.-Gen. Geo. W. Davis relieved General Chaffee of the command of the army in the Philippines on September 30 of this year, but it is a small army compared with that which has been in the islands. General Otis commanded over 60,000 troops and General MacArthur 69,420. That was in December, 1900, when the army was the largest in the islands. With the growth of civil government there has been a rapid decrease in the army. General Davis succeeded to a command of less than 20,000 men, and this small army is for the most part inactive. Formerly the army was scattered over the country in small camps, doing police duty and keeping down roving bands of insurrectionists. The constabulary system of the civil government has relieved it of much of this duty, and the small camps are being abandoned and the present army concentrated at important points, where it can be called into action quickly if needed. Some military force is still necessary, and, in the judgment of the best military men, will be needed for some time to come, but the duty of the army as a governing power has ceased.

The absolute military government which General Otis exercised, and which for a time was in the hands of General MacArthur, is now changed to a government by the people of this country. This has been accomplished in two years, and is certainly one of the marvels of progress, considering all the conditions that have existed in the islands. It is the government of an alien people, speaking a different language from ours, with habits, tastes, and desires entirely different; a people unfamiliar with us and with our form of government, and with Anglo-Saxon ideas. In fact, they are yet far from our ideals, and many years will elapse before they reach our standard; but the progress made since the civil power supplanted the military gives promise of future development, and we may look forward with confidence to the success of the experiment the United States is making in the far East.

## LEADING ARTICLES OF THE MONTH.

### THE END OF THE COAL STRIKE—PROFESSOR GUNTON'S VIEWS.

**A**LTHOUGH known more especially among economists as a sturdy advocate of the protective tariff, Professor George Gunton, of New York, has given much attention to labor questions,—particularly to the eight-hour day and the standard of living. For many years he has

PROFESSOR GEORGE GUNTON.

been a keen observer of the rise and development of labor unions in this country, and the subject has been discussed by him with great incisiveness and force in numerous articles contributed, from time to time, to *Gunton's Magazine*. Professor Gunton has not failed to discern the mistakes of the unions, nor has he hesitated to point them out. He has repeatedly insisted that the unions must be raised to a higher plane; that their responsibility must be increased; and, as a step in that direction, that trade unions, like business corporations, should become legal, chartered institutions.

Writing in the November number of his magazine on the issue of the recent coal strike, Professor Gunton says:

"A union is not only used to protect the rights and interests of the laborers, but under foolish, unwise management it is more frequently used to defend the inexcusable conduct of loose, irresponsible, and sometimes worthless laborers. It is this which has led, and very naturally, to the tendency to employ a larger number of miners than is really necessary. With such careless, irresponsible conduct, the mine-owners could only operate their mines half or two-thirds of the time. If the miners would work promptly,—as promptly as do mechanics and factory operators and laborers in other fields,—the employers would have no interest in encouraging a surplus of laborers merely to 'hang around.' Their earnings would be much greater, and the tendency to respectful mutual recognition would be altogether more general. It is the experience with this kind of conduct,—the reckless leaving of work, ordering strikes for mere whims, breaking of contracts and similar irresponsible acts,—that is the chief basis of the determination of the mine-owners not to recognize the unions."

In the bituminous coal mines of the Middle West the mutual contracts between the operators and the United Mine Workers are strictly kept, and "careless, irresponsible conduct" is not tolerated on either side. It is this form of arrangement which Mr. Mitchell desires to introduce in the anthracite region.

#### DIFFICULTIES BEFORE THE COMMISSION.

While Professor Gunton believes that the arbitration commission may succeed in establishing peaceful relations between the miners and the operators, he does not look for an immediate solution of the problem involved in the strike.

"As the operators have frequently stated, the conditions of work are so varied that it is practically impossible to have a uniform piece-work rule throughout the whole anthracite region. This is made the basis of the objection to recognize the general labor organization. Before the problem is satisfactorily solved a new basis of employment will be necessary in order that a substantially uniform system may prevail. If this is accomplished,—so that the same contract will furnish substantially the same results for all, and the unions become incorporated institutions, responsible for their agreements and the conduct of their members,—the foundation will have been laid for a workable relation between the miners and mine-owners, with union recog-

nitition, without demoralization of management. It is in this line, and not in brute-force resistance to unions, that the peaceful solution of this vexed problem must be ultimately found."

#### MISTAKES OF THE OPERATORS.

Professor Gunton declares that the mining corporations, "in the manner of their propositions, the unreasonableness of their attitude, the errors of their statements," "have done more to justify socialism and stimulate the demand for public ownership of industries than a quarter of a century of socialistic agitation could have done."

"The public, who have suffered from the inconvenience and high price of coal, the anti-monopoly agitators and the sentimentalists who believe in government ownership, all have been strengthened in the idea that the Government should take charge of such industries as coal mining and other large enterprises. The effect upon public opinion in this direction has been so marked that the Democratic party in New York State has definitely declared in favor of government ownership of the coal mines. All this is extremely unfortunate for invested capital, for the public welfare, and for labor. That the corporations have been wrong in their attitude is demonstrated by the manner and method of the final adjustment which has taken place, and which could have taken place the first week of the strike, or before the strike began at all. But all the mistakes of the corporations are as nothing compared to the mistake of launching into a propaganda for public ownership of industry."

#### HOW NEW ZEALAND WOULD HAVE SETTLED THE COAL STRIKE.

A TIMELY article in the *Atlantic Monthly* for November, by Mr. Henry D. Lloyd, deals with "Australasian Cures for Coal Wars." Mr. Lloyd is chiefly occupied in contrasting the methods of dealing with labor troubles in New Zealand and other Australasian lands with the methods used in the United States, and very much to the disadvantage of the latter. He begins by telling how New Zealand has gone into the coal business on its own account:

#### HOW THE GOVERNMENT RUNS THE COAL MINES IN NEW ZEALAND.

"Appropriations have been passed, and powers delegated, to enable the general government to establish state coal mines. These will supply first the needs of the state,—as for its railroads, navy, and government buildings,—and then the needs of the public. And this political economy

of all by all for all puts it into the law that, as rapidly as the net receipts increase above 5 per cent., the price of coal to the public shall be lowered. Here, as in its railroad service, in the loans of public money to farmers and artisans, and in the subdivision among the landless of great estates resumed for the people, this democracy eschews profit-mongering, and does business on the plane of a social exchange of service for service at cost."

Mr. Lloyd thinks that the nervousness of our coal-mine owners in the United States as to the bringing in of "politics" only reveals their vulnerable heel. "'Politics,' the use by the people of their irresistible weapon, public coöperation, has made lambs of the coal monopolists on the other side of the globe."

#### EIGHT HOURS A DAY'S WORK.

One of the chief causes of the war in the Pennsylvania coal fields is the demand for a nine-hour day and the recognition of a union. Mr. Lloyd says that such disputes about hours do not take place in New Zealand.

That state first enacted that its coal miners should work no more than an average of eight hours a day, as Utah has done; and then, at the session of the Colonial Parliament last year, passed a general eight-hours-a-day law for all workingmen and a shorter day for working women and working children,—New Zealand, like the rest of Christendom, being still unchristian enough to rob many of its children to enrich a few of its men. New Zealand is the first state of modern times to bring its legislative regulation of men's hours of labor out from its cowardly refuge behind the petticoats and bibs and tuckers of their women and children. Other states have furtively limited the hours of men by the device of limiting the hours of the women and children who are working by their side."

#### THE RECOGNITION OF TRADES UNIONS.

The writer can see no force in the contention that the recognition of the United Mine Workers of America would make their leader "so powerful that he could name the next President of the United States, and become dictator to this President and all the rest of us." "The New Zealand democracy sees no danger of dictatorships from the recognition of trades unions. It has made the encouragement and recognition of trades unions part of the public policy of the state. Indeed, the workingmen are bribed to organize themselves into unions. They have been given powers to hold property and to sue members not possessed by unions in other countries. Greatest of all these inducements is that,

if so organized, the workingman gets as a right that arbitration of disputes with employers for which, elsewhere, he has to beg or fight, and usually in vain. New Zealand prevents labor wars by a multitude of democratic interventions to forbid economic violence by the strong upon the weak, like those just mentioned, which make it necessary to surrender for the chance to work, or to strike for hours and recognition of unions. Crowning all these interventions is this guarantee of arbitration."

#### HOW COMPULSORY ARBITRATION WORKS.

Mr. Lloyd thinks that the real cause of the labor war between the coal miners and the operators this past summer was the refusal of the employers to arbitrate. Such a cause would be impossible in New Zealand. Mr. Lloyd proceeds to explain what compulsory arbitration means there. It does not mean that the parties to a labor dispute must arbitrate the dispute. If they would rather fight, the laborers can go on and strike, and they can fight it out to their heart's content; but, if either party to the dispute asks for arbitration, then arbitrated the quarrel must be.

#### HOW OUR COAL STRIKE WOULD BE MANAGED IN NEW ZEALAND.

Mr. Lloyd proceeds to explain the various stages of the negotiations which, in New Zealand, would lead up to the final arbitrating of the trouble. One or both parties to a controversy are pretty sure to ask for arbitration, as the results of New Zealand's experience with labor problems have made the present provisions very popular.

"A private conference might be all; that failing, reference to the district board of conciliation; if either party were still dissatisfied, an appeal to the one national Court of Arbitration. A few weeks' work of committees; a few days in court for the witnesses and the representatives of the unions of the workmen and the capitalists; a few hours' deliberation for the five members of some Conciliation Board and the three members of the Arbitration Court. No riots, no troops, no agitation of capitalists, press, or philanthropists. Above all, no famine among the people, and no famine of industry, for,—most beneficent of all,—pending this appeal to arbitration, work must go on. Laborers are forbidden to strike, employers to lockout for the purpose of evading arbitration, though they may cease for any other reason. The peaceful New Zealand court-room of arbitration, with its table, about which the judges, the contestants, the witnesses, and interested ~~persons~~ are grouped, is a

lens through which we Americans can look, with what satisfaction we may, at the spectacle we make of ourselves as 'practical' men."

#### COMPULSORY ARBITRATION AND GOVERNMENT BY INJUNCTION.

Mr. Lloyd argues that compulsory arbitration is not in any sense foreign to Anglo-Saxon liberty any more than such compulsion as taxation, eminent domain, conscription, education, and sanitation. He thinks the workingmen of America have rejected the Australian method only to submit to something far worse. This is the defeat of strikers by injunctions, often entailing imprisonment. The Australian workingman thinks a judge in an arbitration court much better than a judge "who sits in his star-chamber, dispensing government by injunction, with reserves of Gatling guns and generals on horseback just outside the door."

#### THE REQUIREMENTS OF COMPULSORY ARBITRATION.

Workingmen must form a union and register under the law before they can be summoned to arbitrate. If they wish to withdraw afterward, they can do so. Employers and employees may, if they wish, establish private arbitration tribunals of their own. In New Zealand the state does not compel arbitration. It only provides the place where and the way how. New South Wales has gone further, and has given the state the right to call the combatants in labor wars into court.

#### THE RESULTS OF AUSTRALASIAN ARBITRATION.

The decisions of the courts under the compulsory arbitration procedure have not been always in favor of the workingmen, though most of them have been. Some have gone heavily against labor, but the workingmen have always submitted. The trade unions have been much stimulated by arbitration, and the employers favor it; for, by it, they are safe from cut-throat competition by unscrupulous rivals who cut wages in order to cut prices, and they can make contracts ahead without fear of strikes, as awards are usually made to run for two years, and bind all in the trade. The Australian colonies are the only countries where the workingmen can have their representatives received, and their case fairly heard, and their living wage enforced, as a right. There, only, the supremacy of public opinion,—which, elsewhere, is a boast,—has been made a reality; for there only has public opinion clothed itself with the powers by which it can learn all the facts and enforce itself. Employers, clerks, and even books, can be brought into court to furnish the information necessary for a just and practical decision.

### LABOR UNIONS : AS VIEWED BY COL. CARROLL D. WRIGHT.

**E**VENTS of the past few weeks have tended to enliven the interest of the American public in the subject of labor unions. It happens also that the public has a special reason, just at this time, for being interested in the views of Col. Carroll D. Wright, the head of the Department of Labor at Washington, who has been President Roosevelt's official adviser throughout the coal strike, and was named by the President as recorder of the arbitration commission.

An article on labor organizations by Colonel Wright would have been a capital "feature" for any of the American magazines to publish in their October or November numbers: but it was an English review, the *Contemporary*, that actually bagged the game.

In beginning his account of labor organizations in the United States for English readers, Colonel Wright naturally gives a summary of their history. He shows that labor organizations "constitute an integral part of our industrial development, and are really an influential feature of industrial achievement. Since 1825 the history of trade-unionism is a progressive one. Out of the earlier combinations there have grown some great associations or organizations, developing power and bringing to the attention of the country conditions which need reform and relations which call for the highest ethical influence to secure their proper adjustment; and it is sufficient in this place to say that, no matter what the opposition of any particular period was, or the character it assumed; no matter what antagonisms within disturbed the order of development; no matter how defections reduced the ranks of unionism at times, and jealousies prevented success; labor organizations have continued through success and failure, and their propaganda have extended first to all great interests, and ultimately to all parts of the land."

Colonel Wright notes the gradual change in the attitude of the courts toward the labor unions. Early in the last century the courts declared all such organizations to be conspiracies; but in later years they took the ground that these organizations were legitimate, and that efforts to secure increased remuneration were not efforts to restrain trade.

#### TYPES OF ORGANIZATION.

In describing the three types of unions recognized among trade-unionists,—the local, the national, and the international,—Colonel Wright says:

"The typical local union is made up entirely of members who live and work in one town or one restricted locality, and its business is conducted in the democratic way, by a vote of all the members meeting in one place. The national and international unions really constitute but a single type, though the formal distinction between them is carefully preserved in all trade-union literature. The typical national union aims at bringing under one control the workers in its trade in the United States; while the international union, so called, draws into its constituency the local unions of the United States, Canada, and sometimes Mexico. Local unions are the constituent elements of national and international unions, and the voting is done by delegates. Most of the national trade unions are affiliated to one great federal organization, known as the American Federation of Labor. The railway brotherhoods, so called, keep their separate organizations, without affiliating to any other body. There are some independent unions; while the Knights of Labor are a body entirely distinct from all other organizations, and have a different organic law.

#### STATISTICS OF MEMBERSHIP.

"It is difficult to ascertain the membership of unions. In Great Britain the law requiring registration enables the Government to state with fair accuracy the strength of unions in that country. According to the latest reports available, the English trade unions had a membership of 1,802,518, while in the United States,—with double England's population,—the estimated membership of labor organizations on July 1 last was 1,400,000. It is estimated at the present time that there are nearly 18,000,000 persons (men, women, and children) in the United States working as wage-earners. The percentage embraced in the labor unions is not large, therefore, being not more than 8 per cent. of the whole body. It must be remembered, however, that in many trades the members are organized up to a large proportion,—sometimes 90 per cent.—of the total number engaged."

The American Federation of Labor probably represents 850,000 members, and the Knights of Labor perhaps 200,000. The Order of Railway Conductors of America,—whose head, Mr. E. E. Clark, has been appointed on the Coal Commission,—has nearly 25,000 members; the Brotherhood of Locomotive Engineers, over 34,000; the Brotherhood of Locomotive Firemen, nearly 38,000; the Brotherhood of Railway Trainmen, about 44,000; and there are at least four other influential railroad organizations.

## THE AIMS OF TRADE-UNIONISM.

"The objects of most trade unions are well represented in the declaration of the Federation of Labor, which demands eight hours as a day's work; favors the national and State incorporation of unions; urges the obligatory education of children, and the prohibition of employment under the age of fourteen; calls for the enactment of uniform franchise laws; and opposes contract convict labor and the 'truck' system of payment of wages. It favors the adoption of employers' liability acts, and generally indorses the claims of trade-unionism everywhere."

Some of the unions expend large sums in the form of benefits to members. The International Cigarmakers' Union has paid out, in this way, in the past twenty-one years the sum of \$4,737,550. The union has a membership of nearly 34,000.

## LABOR UNIONS AND STRIKES.

Having made an exhaustive investigation of strikes in this country, Colonel Wright is prepared to say:

"As a rule, trade unions are opposed to strikes, and they declare themselves not in sympathy with the strike method of enforcing demands. They, of course, insist upon the right to strike, and the courts sustain this right. It is the almost universal attitude of courts in the United States that, if one man can leave his employment, two or more may do so, and that there can be no restriction upon this privilege. The courts hold, however,—as they do in England,—that intimidation and violence must not accompany strikes; and that the strikers themselves, in indulging in these things, are amenable to criminal law. Strikes are no longer considered as conspiracies, however."

Of the 22,793 strikes that occurred in the United States during the twenty years, 1881-1900, inclusive, labor organizations ordered 14,457, or 63 per cent. Of those so ordered, 52.86 per cent. succeeded; 13.60 per cent. partially succeeded; and 33.54 per cent. failed.

Colonel Wright recognizes the fact that the great organizations are growing more and more conservative, especially those represented in the American Federation of Labor. When the American Railway Union, in the Chicago strike of 1894, demanded a sympathetic strike of mechanics and artisans, this purpose was defeated by the executive committee of the American Federation. Again, in the great steel strike of 1901, the executive committee declined to advise a general strike, and in these two instances, as Colonel Wright well says, the Federation placed the whole country in its debt.

"To-day the most prominent leaders of all

labor organizations are joining hands with broad-minded employers, everywhere, in efforts to adopt the joint-committee method of settling disputes. They are learning from the experience of the mother-country that it is better to have such joint conciliation committees, before whom all grievances can be laid as soon as they arise, and by whom they can be talked over in a friendly, but interested way. Our most intelligent 'captains of industry' are thoroughly alive to this view, and in connection with organized labor they have a grand opportunity to accomplish results that shall be beneficial to themselves and to the community."

## THE PRINCIPLE OF COLLECTIVE BARGAINING.

In the latter part of his article, Colonel Wright reaches the *crux* of the issues between employers and employed, which has had a fresh illustration in the coal strike:

"Trade-unionists have undertaken to secure recognition through a system known as collective bargaining, the adoption of sliding scales being a feature of this work. Collective bargaining has also been indorsed in many cases by employers, but occasionally,—as in the great Homestead strike in 1892, and some other labor conflicts,—the scale has been a prominent cause of difficulty. Employers sometimes resent the idea of collective bargaining, because, in carrying it out, there must be a recognition of the union. Men like Mr. John Pierpont Morgan, however, prefer to deal with well organized and administered trade unions as the medium through which to arrange questions of wages and other conditions of employment, rather than to subject themselves to the chaotic and unreliable results which are found when workmen act as individuals."

Colonel Wright says of the unions that, as a rule, they are friendly to machinery; "are studying practical, economic questions; and are not dragging upon industry. The exceptions to this rule are now so few that they need not be considered."

In concluding his article, Colonel Wright expresses the belief that the era of bitter antagonisms in the industrial world has passed:

"When the greatest capitalists of the country are ready to recognize and deal with unions, and to advocate the advantages, through conciliatory methods, which can come only through organizations, and to meet the leaders of labor unions in great conferences,—as they have done recently,—for the discussion of vital economic and moral questions, there need not be much fear of antagonism. The old suspicious attitude toward trade unions in the United States is practically a thing of the past."

### THE RIGHTS OF NON-UNION WORKMEN AND OF UNION MEN.

"A QUARTER-CENTURY of Strikes" is the title of a series of articles dealing with the history and character of American labor organizations, written for the *Atlantic Monthly* by Ambrose P. Winston. The first article appears in the November number, and deals chiefly with the effect of wages on prices in competition; the success of the trade unions in establishing their influence throughout all industries; and, especially, with the policy of compelling membership in a union.

This compulsion exercised by the labor unions on non-union workers to become members or to accept a union scale, when these non-union workmen may desire neither membership nor the scale, has been generally denounced as a grave infraction of liberty, and is one of the most puzzling points in the whole labor question. Mr. Winston thinks the question is too complicated to decide, either in favor of the union or against it. He admits that it is a lamentable thing if a miner, or a man in any other employment, is denied the right to decide for himself what offer of wages it is his pleasure to accept.

"It is difficult to imagine an experience more vexatious or humiliating to a man of positive judgments and keen sensibilities than dictation on such a subject as this by a body of strangers. Certainly, so far as there is any such thing as an inalienable right, the privilege of freedom in this matter is inalienable. The case is not closed, however, until we have noticed the reasons on account of which the members of the union interfere. The union exists for the purpose of increasing or, at least, maintaining wages. Few would deny their right to do this if they can. The welfare of themselves and their families depends upon it most vitally, and it too is 'inalienable' if, indeed, there are rights sacred beyond question. But the men who voluntarily join trade unions,—if they are but a fraction of their craft,—cannot, alone, protect themselves against falling wages. If at any point in the whole line of competing producers a few workmen, by their submission, impair the equality of wages, it is hopeless for others to attempt to maintain their standard. The effect is a depression in prices where there has come a depression in wages; then, necessarily, a general decline in prices and a fall in all wages. This is the injury which the worker for low wages inflicts on those who seek by organization to increase wages. The pressure of competition, which has in recent times grown so intense, brings the fall of prices and of general

wages close after the first yielding by a body of laborers. One may conceivably condemn the method employed by workmen thus injured to defend themselves, but it cannot be denied that the injury is real; it cannot be denied that one is interested in what greatly injures him,—that one group of defenders in a beleaguered city are interested when negligence permits a breach at another part of the same wall,—that dwellers in far-away Mediterranean cities may, without impertinence, interest themselves in the pestilence-breeding but holy wells of Bombay, which the zeal of the faithful holds sacred against cleansing."

### THE COLLECTIVE RESPONSIBILITY OF WORKMEN.

"The rise of labor unions means, then, first of all, that the determination of wages for each laborer and his conditions of work cease to be primarily his own affair; this, in order that wages may be uniform, and that thus the merciless downward pressure of present-day competition may be checked. There are recorded nearly five thousand strikes in the United States during twenty years, avowedly directed to this purpose of forcing the employer to deal collectively with the union. The responsibility for the fixing of wages shifts farther and farther from the individual workman, not only as the unions extend more widely over the nation, but also as the authority in one union and another becomes more centralized."

Mr. Winston goes on to show how the trade union is engaged in its second revolutionary task to deprive the employer of the power which he exercises at discretion of controlling the workmen in various matters not defined by the labor contract. In past years there has been much provision of savings deposits for employees, construction of model towns, with libraries, schools, lectures, good lunches at small prices, dressing-rooms and restaurants for the women, working-aprons and sleeves for women to wear over the street dress, elevators, Saturday half holidays with a full day's pay, etc. "Yet each of these philanthropies failed to insure the friendliness of the workmen and to restrain the hostility of the trade unions which, in their thorough-going work of taking from the employer all his discretionary power to complicate the exchange of labor for cash, have seemed to resent his use of that power even for benevolent purposes. It seems evident that the trade unions, so far as they gain strength, must terminate not only the evil, but the pleasant incidents of this discretion." Mr. Winston calls attention to the fact that the trade unions reduce the relations of employers and workmen to pure business, where paternal-

ism and benevolence have no place. He thinks it curious that business men of shrewdness unsurpassed should have imagined that their employees would permit others, in effect, to regulate their expenditure.

#### ANARCHISM AT CLOSE QUARTERS.

OF the various useful activities centering at Chicago Commons, the well-known social settlement, none is more interesting than the so-called "Free Floor"—a free-for-all gathering in the large assembly hall on Thursday evenings. It is because the Commons is situated in a "Red," or supposedly anarchistic, neighborhood that some ill-informed people have criticised these weekly conferences as inimical to the public peace and order. How wide of the mark such criticisms are is clearly shown in an article contributed to the October *Arena* by Dr. R. Warren Conant.

At each of these weekly meetings there is a speaker, invited beforehand by Dr. Graham Taylor, director of the Commons, who delivers an address on some economic or political topic of general interest. After he has finished, the chairman of the meeting invites those present to ask questions, which the speaker may answer or not as he chooses. Dr. Conant's account of "the subsequent proceedings" follows:

"As the address is usually quite conservative, while the audience is composed largely of anarchists, socialists, and various other stripes and breeds of 'ists,' it may readily be conceived that the invitation for questions is often the signal for pandemonium to break loose. The questions come thick and fast, many of them keen and searching, finding the vulnerable places in the speaker's logic, and he must have quick wits and a ready tongue to meet them all promptly and squarely. The chairman has a gavel, which he is obliged to wield vigorously in deciding questions of precedence and in maintaining order and decorum. Often it is necessary for him to hold questioners to the question. They start in to make wild speeches, but are promptly required to confine themselves to one question and nothing else—an excellent discipline. The fellow who has been accustomed to hear his vaporings received by saloon audiences with howls of delight and encouragement learns at the Free Floor what it is to be called to order, and to be compelled to speak to the question or sit down.

#### ANARCHIST ORATORY.

"When the chairman thinks that enough questions have been asked and answered, he may throw the meeting open to short speeches,

not to exceed three minutes each, and not to wander widely from the subject of the evening. This is a much-prized opportunity. In such a crowd there are always would-be orators eager to air their theories and notions, and they spring to their feet gesticulating wildly to catch the chairman's eye. It is a comical sight."

The three-minute rule, strictly enforced by the chairman, remorselessly cuts short the flow of eloquence, but it is good discipline for the man who gets the floor.

Usually good humor prevails, "but sometimes there is wild commotion; faces scowl, fists clench, voices clash, and a riot seems imminent." At such times the chairman pounds with his gavel for order and tries to say something that will close the incident in a general laugh. As he is successful in this effort, according to Dr. Conant's account, he must be a shrewd and tactful chairman.

At these meetings the visitor gets a glimpse of modern social conditions from the workman's point of view, and, if he is of an open mind, he may be surprised to perceive how partial and one-sided some of his own views have been. "Even from the poor speakers a valuable lesson is to be learned,—from the poor, stammering, stumbling fellows, who pour forth a wild jumble of broken logic and broken facts in broken English. Often they become quite incoherent in their ravings against capital and in the recital of their 'wrongs.' The audience partly applauds, partly laughs at them, but really it is too pitiful to be amusing.

"What a mental chaos, scarcely distinguishable from insanity! While abhorring their sentiments, the hearer is filled with pity at the sight of human souls groping in such mental and moral darkness. Yet these men are fellow-citizens and voters. Such a one was Czolgosz; perhaps, if he could have had the benefit of the instruction, discipline, and good-fellowship of the Free Floor, President McKinley might be alive to-day."

#### A GOOD SCHOOLING FOR SOCIAL INSURGENTS.

The restrictions placed on the anarchist speakers are wholesome in every way, and can hardly fail to have an educative value:

"All Red talk is strictly forbidden; no one is allowed to abuse the freedom of the meeting by advocating either murder or robbery in any form. Think what all this signifies for the anarchists! They come to the Free Floor to receive, as they suppose, entertainment only; really they are being taught the first principles of good citizenship,—principles that they would not accept in any other form. In the first place, they hear the truth of economic and political ques-

tions, presented without the distortions of the anarchistic press and platform. They learn to listen to distasteful doctrines in silence; to take their turn in speaking, both giving and receiving respectful attention; to speak to the point; to clothe their vague ideas in concrete form; to restrict their speech,—selecting, condensing, and differentiating; to give and receive hard knocks without getting angry; to keep order and submit to authority. What an unconscious schooling in the lessons that are most fatal to the spirit of anarchy!"

The Free Floor serves as a safety-valve. As Dr. Conant says, it is far better that men and women who are bitter with a sense of wrongs should vent their bitterness under reasonable restrictions, and then be answered by a well-informed and logical speaker, than that they should "gather in a filthy saloon to be inflamed by the unrestrained, beer-inspired mouthings of ignorance or demagoguery."

#### WANTED: COMPETENT SPEAKERS.

The difficulty at Chicago Commons, as it appears, is not in getting an audience, but rather in finding effective speakers to give instruction:

"It is a rare man or woman who can face and answer effectively such a crowd, fanatic and shrewd, having no respect for God, man, or devil. I have seen speakers, who could make very impressive addresses from pulpit or platform to a well-dressed, well-fed audience that was already convinced, go all to pieces before a Commons audience. Reverend gentlemen, who have been accustomed to deliver themselves with unction to hearers who would never think of being so rude as to dispute them, are unpleasantly jarred by an audience that does not hesitate to tell the speaker that he does not know what he is talking about, disputes his facts, and denies his most sacred premises. Under this baiting speakers act variously, according to their temperaments; they may wax indignant and sarcastic, or, after a feeble defense, throw up their hands and admit that they may be wrong after all, and the anarchists may be right!

"On the other hand, a strong man or woman, of self-control and quick wits, who understands that audience beforehand, can give them shot for shot good-humoredly, knock over their delusions and sophistries with the truth, command their respect and liking, and do them great good. No man can do this who stands up before an anarchistic crowd saying in his heart, 'These are violent fools whom I am here to instruct;' he will end by being taught some things that he did not know before. The speaker who is to do such people any good

must come to them in a sympathetic spirit, prepared to admit that the present social order contains much wrong that should be righted; prepared to declass himself sufficiently to look at the economic situation through their eyes and to sympathize frankly with their real grievances; prepared to waive any preconception whenever it comes in conflict with elemental truth; and helpful in pointing out the practical and immediate remedies. In short, he must be a straightforward, fearless man, if he is to lead perverted minds and hearts to see that peace is better than violence, saving better than wasting, ballots better than bullets."

#### THE STORY OF A RUSSIAN REFORMER.

"THE Reminiscences of the Russian Reformer, Prince Khilkoff," is the title of a book that is to appear at the end of this year. In *La Revue* for September 1 and 15, M. Jean Finot publishes some very interesting extracts from this book. Prince Khilkoff's views do not exactly accord with those of Tolstoy, whom, nevertheless, he greatly admires. But he is extremely sympathetic with Tolstoy, and his life shows the Tolstoyan doctrines in actual working. In views he is, however, more Marxian than Tolstoyan.

At the age of seventeen,—in 1875,—he entered on a military career; but very soon he noticed, with horror, that most of his superiors thought only of their own advancement, and considered the soldiers as so much "cannon flesh." The first time he killed a Turk it seemed to him he was a murderer, and he was haunted by the face of the dead man. When the war was over he asked to be, and was, transferred to a regiment of Cossacks. He was to winter among the Doukhobors, and was at once struck with their happy homes, their physical beauty, and the absence of servility and brutalization.

#### A CHRISTIAN SOCIALIST.

At last he contrived to leave the army. Already, absurd tales were being circulated about him; he was accused of socialism, and his relations with some political exiles had won him official hostility. On leaving the Caucasus he went to his mother's estates at Pavlovki (Khar-koff). Mother and son could not agree. The final rupture occurred over an orchard. The mother insisted that men must be engaged to drive off the thievish peasants. The son was made miserable by seeing a swarm of children looking enviously at the apple trees laden with fruit.

"This time I called them and told them that

they might come into the orchard and eat as many apples as they wanted, and even take some home. At first they did not believe me, but afterward they decided to come. Formerly, all night long, stones rained on the apple trees; but, now that the orchard was open in the day, no one thought of going there at night. The caretakers could sleep in peace. When gathering-time came I distributed half the fruit among the families of the old men, who, in my grandfather's time, had planted the fruit trees. The remainder was sold for 200 rubles."

The prince had come to consider the land not as personal property, but as a loan which ought one day to be returned to those who plowed it. He accepted his mother's offer of part of the land on condition that he should not interfere with the other part. He reserved a small piece for himself, meaning to let the rest. He built himself a small dwelling, procured some bees, and studied bee-culture. As literature he had Tolstoy's "My Confession" and the Bible. Perhaps, but for two circumstances, his reforms would have stopped there. One day, when riding, he saw a peasant plowing, whose horses were eating some young oaks. He was angry, and spoke sharply to him about it.

"Then he turned his plow, and I found myself face to face with him. Never in my life had I seen such a face, and I have never seen one since,—the face of a skeleton, with greenish skin stretched over prominent bones, and, sunk in their orbits, sinister eyes looking at me. I was as if nailed to the ground, without being able to take my eyes off this melancholy sight.

"He answered me quietly: 'As for me, I have eaten nothing for three days.'"

The prince fled in horror, only to come on a poor woman picking up dead wood, who ran away from him as fast as she could for the boggy ground and her feeble state.

Then he decided to hand over the land to the peasants at the price of the mortgage, on condition that they would go bail for the value. He took a peasant to live with him, at first, in the midst of the village, and finally married a young girl who shared his views. He worked on the land, and busied himself with his bees, and hoped to continue doing so in peace. But then the police began to watch him.

For a long time he had not gone to church. "Why not?" asked the peasants. "Because I dislike the cynical way the clergy treat what they profess to believe," he had replied. The peasants applied to him to deliver them from the rapacity of the priests (rapacity for which there seems some excuse, since they are miserably paid). Some of the peasants ceased to

go to church; others asked questions about the Bible. Result, an accusation of having left the Orthodox Church, an accusation to which Prince Khilkoff frankly pleaded guilty. He was, however, soon set at liberty.

#### HIS CHILDREN ABDUCTED.

Then his mother, hoping he would soon abandon his follies and live the life of other men (this part is all singularly like Tolstoy's "Resurrection"), sought out his wife, hoping to find an ally in her; but the wife faithfully seconded her husband. Now, the marriage not having been blessed by the Orthodox Church, the children had no right to the title or fortune of their family. The old princess, unable to understand such a state of things, by dint of long scheming carried off the children. Before this, however, the prince was condemned to exile in Transcaucasia for five years, where, after six months, his wife and two children joined him. Not many months later the commissioner of police arrived from Tiflis with an order from the emperor for the children to be taken away. The story of how the old princess schemed to get them away; how they were abducted by force; how the father and mother pursued them, but in vain; is very graphically and pitifully told. They are still separated from their parents, though two more have since been born.

When the time of exile was over, Prince Khilkoff stayed for some time in England and France, and finally settled at Geneva, where he is now living in the midst of a small band of Russian exiles, Tolstoyans, and revolutionaries.

#### THE BOHEMIAN QUESTION IN AUSTRIA.

WILL Bohemia prove to be a bulwark against German expansion? There is a long and elaborate article in the *National Review* for October, in which Dr. Karel Kramarz pleads the cause of the Bohemian Czechs, which is, he maintains, at the same time the cause of Austrian survival. The essence of the Bohemian problem, he says, is whether the Czechs will or will not succeed in maintaining their position, and in gaining so much influence throughout Austria that they can work effectively in the direction of maintaining the whole kingdom of the Hapsburgs against the aspirations of German Chauvinism. The Czechs fight against the false idea that Austria is a German state; and they are thus, in reality, the support of the monarchy—a fact which, unfortunately, is not yet recognized by the Viennese bureaucracy. It is, in reality, the good fortune of Austria and her dynasty that the overwhelming majority of the people

are not German. Only by the recognition of this fact can Austria be saved from German ambition, which is to reduce her to dependence by means of annexation, or by her inclusion in the German customs union.

#### BOHEMIA AS THE FOE OF GERMANISM.

The Bohemian national question is therefore an all-European question. Without a completely independent Austria the road would lie open for the establishment of Germany as a world-power of such magnitude as the world has not yet seen. It would be a compact empire with natural boundaries; from the military point of view it would be invincible, economically strong, endowed and enriched with innumerable natural treasures, and enhanced by the methodical energy of German economic life. It would have splendid markets in the Balkan states, and, through the Bagdad railway, in Asia Minor and Persia. Germany, in such conditions, would form a world-empire worthy of the dreams of the national party; but it could only be established on the ruins of the historical balance of power in Europe.

#### THE DEMANDS OF THE CZECHS.

Dr. Kramarz does not think that this peril will ever occur, as the Czechs are too numerous to submit permanently to the centralizing and Germanizing policy of the Viennese government. The Czechs only demand that all races should have equal rights; and the electoral manipulations which give the Germans a majority in some Slav districts cannot be maintained. The majority of the Austrian population will never allow itself to be compelled to submit to humiliation at the hands of the German minority. The Austrian government has borrowed many laws from Berlin, but they have never borrowed the law which would be their greatest strength,—that is, the federal constitution, as the German party sees its last defence in the maintenance of the system of German centralized bureaucracy.

#### THE CZECHS AS AUSTRIA'S FRIENDS.

The Germans in Germany support their brethren in Austria because they see that the strengthening of Germanism in Austria involves the making of Austria an appendage of Germany. To prevent this, fate has planted the Bohemian race in the heart of Europe,—in the midst of the ocean of German influence,—to form a barrier which prevents the German flood from swamping all from the North Sea to the Adriatic. The Czechs are an arrow in the side of Germany, and such they wish to and must remain. They are struggling, not merely for the national right

of the Slav races to their own individuality, but also on behalf of Austria and her complete foreign independence.

#### CARDINAL GOTTI AND THE PROPAGANDA.

IN choosing a successor to the late Cardinal Ledochowski as head of the Sacred Congregation of the Propaganda, the Pope went outside the congregation itself and appointed a member of the Carmelite order, Cardinal Gotti. From the fact that this high office is regarded by Catholics as second in importance to that of the supreme pontificate itself, an unusual degree of interest attaches to this appointment. An

CARDINAL GOTTI.

article in the *Catholic World* for October, by James Murphy, answers several questions that have been asked by those less fully informed concerning the personal predilections of Cardinal Gotti, and supplies at the same time much interesting information about the nature and functions of the Propaganda itself.

In the phraseology of the Roman public, according to this writer, there are three popes,—“the White Pope,” who is the supreme pontiff himself; “the Black Pope,” or the superior-general of the Jesuit order; and “the Red Pope,” or the prefect of the Propaganda.

#### THE NEW “RED POPE” A MATHEMATICIAN.

Cardinal Gotti, who has now become “the Red Pope” of Roman parlance, is in his sixty-

ninth year. His father was a Genoese dock laborer. Soon after joining the Carmelite monks, in his boyhood days, the future cardinal showed an unusual bent toward physical science, and he became professor of mathematics and natural philosophy in the College of St. Ann.

"Even to this hour Cardinal Gotti shows the keenest interest in the progress of the world's thought on physics, and in all new mechanical inventions and devices, and his apartments at the Trajan Forum were almost congested with books and periodicals on these subjects, which kept pouring in from various quarters of the globe. It is believed that under Cardinal Gotti's influence the study of mechanical science will assume a much more important position than heretofore in the curriculum of the Propaganda College.

#### AN ECCLESIASTICAL DIPLOMAT.

"Young Gotti rapidly rose in the ranks of his order until he obtained the position of provincial, which gave him the opportunity of traveling. He became known at the Vatican for the keenness of his judgment, revealed as consulter of the Sacred Roman Congregations. His appointment as delegate apostolic for various special missions to South American republics followed, and his success while administering this function in Brazil gave him prominent rank among the diplomats of the Church.

"Pope Leo XIII. had long shown a special predilection for him, and in the Consistory of November 29, 1895, he created him cardinal, with Santa Maria della Scala as his titular church. Later he was appointed prefect of the Congregation of Bishops and Regulars, and member of the Congregations of the Holy Office, the Index, Rites, Indulgences, and Extraordinary Ecclesiastical Affairs. He is also protector of the Archconfraternity of St. Anthony of Padua, of the Venerable Company of the Stigmata of St. Francis in Florence and in Filottrano.

"Personally, Cardinal Gotti is of medium stature, has a small, oval face, a fresh complexion, and a bright, cheerful aspect that makes him look younger by three or four decades than he really is."

At Rome the new prefect of the Propaganda is regarded as essentially a bureaucrat, exacting in all matters of method, discipline, and order.

"It is said of him that no other cardinal in Rome can give such immense concentration to the handling of matters of detail, that he has the infinite capacity for taking pains which is one of the marks of genius. This fact probably explains in a great measure his remarkable success as a diplomat. His diplomacy has nothing of the crafty or pettifogging about it. It was the

simplicity and lucidity of his work while at the Apostolic Legation in Brazil that won for him his first public triumphs."

#### THE PROPAGANDA AND ITS OFFICES.

The special duties of the Propaganda relate to the spiritual and temporal administration of the missions, the settlement of their controversies, the sending of missionaries into countries that are to be evangelized, and the nomination of bishops and of vicars-apostolic.

"The *personnel* of the congregation consists at this hour of twenty-five cardinals, one of whom is prefect, Cardinal Gotti, and another of whom is *Prefetto dell' Economia*, or supervisor of the finance department, Cardinal Antonio Agliardi. Cardinal Gibbons is one of the members of the congregation. The secretary is usually a titular bishop, at present Monsignor Luigi Vecchia. He is aided sometimes by a substitute—the post is at present vacant—and by an apostolic protonotary, Monsignor Luigi Pericoli. It further comprises thirty-eight consulters, of whom fifteen are monks, four *minutanti*, or high bureaucratic officials, and an archivist. The only American at present in the list of consulters is the Most Rev. John Joseph Keane, archbishop of Dubuque.

"For the temporal administration of the Propaganda there exists the following positions: a chief of administration, a comptroller, a *minutante*, a cashier, an architect, a director of the Polyglot Press, a jurisconsult, and an attorney, all of whom are laymen. The general congregation is held once a month, on Mondays. It is held under the presidency of the Pope only on the occasion of the transaction of unusually important business. Every week a 'congress' convenes, composed of the cardinal prefect, the secretary, and the *attachés*.

"The work of the congregation is now supplemented by that of the Sacred Congregation of the Propaganda for Affairs of Oriental Rite. This subsidiary congregation owes its origin to Urban III., who in the early part of the seventeenth century, formed it for the correction of books of Oriental rite. It was formally organized by Benedict XIV. one hundred and fifty years ago. In 1862, Pius IX. reconstructed it and extended its operations to all Oriental business. It is now composed of fourteen cardinals, with Cardinals Gotti and Agliardi at the head. Its secretary is Monsignor Antonio Savelli-Spinola. It has nineteen consulters, four *minutanti*, and four interpreters, all ecclesiastics. Several minor commissions for matters of detail exist within the Congregation of the Propaganda."

## OVERSIGHT OF "MISSION COUNTRIES."

All the "mission countries," so-called, are put in charge of the Propaganda. These countries are: In Europe, Great Britain, and Ireland, Norway and Sweden, Holland, Denmark, Russia, Northern Germany, Saxony, Anhalt, Schleswig-Holstein, part of the Grisons, the Balkan Peninsula, and Greece; in Asia, all except the Portuguese colonies; in Africa, all except Algeria, the Canary Islands, Ceuta, and Reunion; in America, the United States, Guiana, Patagonia, the West Indies and the Antilles, with the exception of Cuba, Hayti, Guadeloupe, and Martinique; in Oceania, all except the Philippines. (In the view of the Roman hierarchy, the Philippines are in a higher administrative class than the United States.)

"The official representatives of the Holy See in the mission countries are the apostolic delegates, the apostolic vicars, and the apostolic prefects.

"The apostolic delegation constitutes a more or less extended jurisdiction accorded by the Pope to a secular or regular prelate over a certain number of dioceses, of apostolic vicariates, or of prefectures, without distinction of rites.

"The apostolic vicariates are territories, or parts of territory, the spiritual administration of which is turned over by the Holy See to individual prelates. Ordinarily the vicars-apostolic are bishops and have a titular see. They are chosen by the propaganda, which lays down specifically the limitations of their jurisdiction. It sometimes happens that vicariates are raised to the rank of bishoprics, without, however, ceasing to be part of the mission countries. This was the case in England when, on September 29, 1850, Pope Pius IX. reestablished the nation's hierarchy.

"Apostolic prefects are chiefs of missions who are not bishops. They are simple missionaries, seculars, or monks, invested by the propaganda with certain special powers. Apart from the faculty of conferring the major orders, priesthood, diaconate, and sub-diaconate, they often exercise all the powers of a bishop. They may give the tonsure and confer minor orders, move as they will their subordinate clergy, broaden or restrict the rights and privileges intrusted to the missionaries, inspect churches, address pastorals to the faithful, and administer the sacrament of confirmation.

"The United States and Canada are among the apostolic delegations; North Carolina, Arizona, and Indian Territory, in the United States, are apostolic vicariates. Alaska is a prefecture apostolic, the prefect apostolic being a Jesuit father."

## THE BRITISH AND AMERICAN EDUCATIONAL SITUATION.

THE points of contrast in the present educational situation in England and the United States were clearly brought out in an address recently delivered at Columbia University by Dr. Michael E. Sadler and published in the October number of the *Educational Review*.

As the result of more than twenty years of education on modern lines in the United States, Dr. Sadler recognizes here a "strong type of keen-witted, hard-working, self-controlled young men, and a very influential and public-spirited multitude of college women." He thinks that here, more than in England, "the young man is having his innings."

## THE AMERICAN SENSE OF OPPORTUNITY.

Dr. Sadler is not disposed to give the schools exclusive credit for this fine type of young men. "Something else was needed to produce that. I mean, the sense of wide opportunity. More and more do I come to feel that this is one of the central reasons for certain differences between your secondary schools and ours. An American boy feels that, if he works hard, shows sense, and keeps bright, he is bound to find opportunity of success. An English boy grows up with a puzzled wonder where in his crowded island he will find a promising opportunity for professional success, or even for industrial or commercial effort congenial to his taste and appropriate to his level of general education. This baffling sense of a strangely limited horizon of personal opportunity is one of the subtle causes of our present educational hesitancy. Can you wonder that so many of our most active-minded educators and statesmen feel it essential to the free development of our national vigor and intelligence that our boys should be taught to think of their after-life in terms—not of England alone—but of empire?"

As a kind of corollary of this confident outlook on life, Dr. Sadler finds that our boys and girls have much more choice in their studies than the English youth have. Furthermore,—the English student is struck by the fact that your American schoolboys and schoolgirls are much more openly critical of their teachers than English boys and girls are commonly encouraged to be. I fancy that the career and happiness of a teacher in America depend much more largely, than with us in England, on the suffrages of those who are taught. This must certainly stimulate adaptiveness on the part of the teachers—though I am inclined to suspect that there is a rather darker side to the situation

than at first sight appears. Anyway, if the jargon of political philosophy permitted it, I should be tempted to define American educational government as a paidocracy—tempered by expert superintendence on short tenure."

#### THE EDUCATIONAL MOVEMENT OF TO-DAY.

In his remarks on the efforts being put forth in this country to adjust school curricula to new social conditions, Dr. Sadler shows a keen appreciation of the actual situation, with its serious difficulties :

"It is an old commonplace that schools and colleges exist to prepare us for life. The difficulty is for them to know how to do it when the conditions of social economic life are changing with a rapidity almost, if not quite, unparalleled in the history of human culture. You in America seem to me to be engaged in an immense effort to get your schools and colleges into true gear with the practical needs of life. Hence you are tearing out in all directions those portions of subjects or parts of curricula which seem to you unessential. But the difficulty is to say with certainty what are the essentials. And, as life is becoming more and more differentiated, there arises a need for much greater differentiation in types of school. Moreover, this differentiation is not a matter of the last few years of high-school or college life. Its demands affect much earlier years of education than those. And the differentiation is required not only by the difference in life-aims of the pupils, but by far more subtle differences in temperament, in mental aptitude, and in ethical need. This is the true cause of the educational unrest which we can see all over the world at the present time. This is a period of educational ferment, comparable, as it seems to me, to that earlier period of educational ferment which preceded the French Revolution. Much that looks like progress and constructive advance in education at the present time is really the working of a critical and destructive movement washing away the more obstinate fragments of an obsolete system of education, which, in its time, had a very real relation to the actual needs of certain kinds of life.

"To me, the educational movement now going forward in America seems the most striking and forceful of all the educational movements in the world. It is on the largest scale ; it is supported by the most superb liberality ; it is the boldest in its ventures ; it is becoming—largely through the influence of the president of Columbia—truth-seeking and truth-inspiring ; scientific in its dispassionate self-criticism ; and it is supported by the most whole-hearted national

enthusiasm. We educational students in other lands hail its great achievements and its still more brilliant future. Silent admiration best befits us when we think of the future of your great universities—and of what their influence already is and will be on their sisters in the Old World. The science and art of education are being profoundly influenced by your work here in the training of teachers ; by your experimental schools ; and not least by the currents of suggestion and of encouragement which go out from Teachers College and from the department of education in this university, at Clark University, and at Chicago. You in America, and not least the educators of the West, are working out fertile experiments in the field of secondary education on modern lines. You from the North are carrying the torch of educational propaganda over the length and breadth of the awakening South. And in the great work at Hampton and Tuskegee there is shaping itself in successful practice that ideal of training which seeks at once to deepen character, to engender loyalty to a great institution, to educate for the practical labors of life, and to avoid, in its cultivation of the powers of mind, of character, and of expression, any disproportionate use of books, or of ill-digested ideas, and of the verbal memory."

#### THE STRENGTH AND THE WEAKNESS OF BRITISH EDUCATION.

In two brief paragraphs Dr. Sadler gives a most interesting summary of what he regards as the essential points of strength and weakness in the British educational system :

"The strong points of the best types of English education seem to me to be an unhurried, steadfast pleasure in the great masterpieces of literature ; its dislike of false sentiment ; its reserve and wholesomeness of tone ; its shrinking from pretentious philosophizing ; the good spirit of its games ; the beauty of some of its old buildings and playgrounds ; the unselfish and lifelong devotion of its best teachers ; the training which it gives in the government of others and in the leading of men ; and in its undercurrent of reverence for those deeper, unseen things which lie almost beyond the reach of words.

"Its weakness lies in its lack of widely diffused intellectual interest ; in its failure to stimulate the brain-power of the average boy ; in its deficiencies in regard to the professional training of the teacher ; in the aloofness of so great a part of the studies in many of our chief secondary schools from the scientific, political, and ethical problems of the present day ; in its ignorance of what scientific research and scientific coöperation really mean ; in its good-natured

reluctance to press to a logical and practical conclusion some things which must be settled one way or the other, and cannot (without peril) be left in the dim region of indefinite compromise ; in the indistinctiveness of its intellectual and social aims ; in its unwillingness to attempt a bold questioning of the lessons of our history, and to impress definite teaching derived therefrom on the whole of the rising generation of our people ; in the resultant confusion of our school system ; in the labyrinthine intricacy of its organization ; and in its consequent failure to impress itself on the imagination and clear understanding of the masses of the people."

#### ENGLAND'S CONSERVATISM.

In concluding his address Dr. Sadler harks back to the essentially conservative temper of British institutions :

"We are unwilling to sever ourselves from our old ties, or to dispense with old guides and teachers whom we love for their own sakes, and not only because they have served us so devotedly and well. You must expect us to be slow in our educational changes. England is not lethargic, but profoundly moved by the swirling currents of change in our modern life. It would be wrong for us to break with our past. We can best do our duty for the world in the future if we refrain from impetuous, revolutionary change. But because this is our lot in this time of deep unrest—because there is laid on us the duty of sacrificing much that is good and profitable in the present, in order that we may be faithful to what is true and sacred in the past ; because it is now, as ever, our supreme national task to preserve what is good in two ideals which, though they appear to conflict, are really two sides of one higher truth,—for these very reasons we admire the more the superb sweep of your educational advance, your clear administrative aims, and the rich variety of your buoyant life."

#### EUROPE VERSUS AMERICA.

MR. ANDREW CARNEGIE'S rectorial address delivered at St. Andrew's University, Edinburgh, is printed in the November *World's Work*. Mr. Carnegie makes a rapid review of the world's recent industrial changes and present tendencies, and inquires into the reasons that have brought the United States so rapidly into its present position of industrial ascendancy.

#### NEW IMPORTANCE OF RAW MATERIALS.

The position of capital and skilled labor, as regards raw materials, is now reversed. For-

merly, the first two controlled the last ; now, the seat of manufacture is simply a question where the requisite raw materials are found under suitable conditions. The cotton industry—for instance,—was attracted from Old to New England, and is now attracted from it to the Southern States alongside the raw material. The jute industry—once centered in Dundee,—is now established in India near the supply of jute.

#### THE CHANGE IN BUSINESS METHODS.

A second reason for the reversal of the positions of Britain and America, as industrial powers, is given by Mr. Carnegie in the change in business methods which has come in the past twenty years. Manufacturing has been revolutionized by new inventions, improved machinery, and new and enlarged demands. So rapidly does one improvement follow another that some parts of the huge concerns are constantly undergoing reconstruction. Old-established works are at a serious disadvantage,—especially if under joint stock ownership,—because it is difficult to get from numerous small owners the capital needed for modern improvements ; hence, the old countries—and particularly Britain, the pioneer,—have been at a disadvantage, as compared with the new American land with its clean slate to begin upon.

#### THE UNITED STATES, BRITAIN, AND GERMANY, WITH RUSSIA COMING.

Mr. Carnegie shows how Germany has forged ahead in the race toward industrial supremacy, her product of steel being now second among the world's nations. "She promises to run Britain close, perhaps by the end of the decade, for second place as a manufacturing nation." These three countries are the important industrial nations : The United States, Britain, and Germany. Mr. Carnegie excepts "that giant of the future,—Russia,—whose latent resources are enormous, and whose growth is so steady, not only through increase of population, but through accretions of contiguous territory ; she must occupy a great position, but not in our day, nor, perhaps, in the next generation."

#### THE HOME MARKET ALL IMPORTANT.

Throughout his lengthy discussion, Mr. Carnegie continually insists on the vital importance of a profitable home market as the most powerful weapon for conquering foreign markets. "The nations with the best home-demand for any article will finally conquer the world's trade in that article in neutral markets. "In economic circles 'the law of the surplus,' as I have ventured to call it, attracts increasing attention.

Manufacturing establishments are increased year by year until they become gigantic, simply because the more made the cheaper the product, there being a score of cost accounts divisible by product. By giving men constant employment, and having a reputation for never stopping, the best men are attracted and held—an important point. The manufacturer upon a large scale can afford to make many contracts in distant parts of the world, and even some at home, at a direct loss in times of depression, knowing that, upon the whole, the result will be less unprofitable by running full, than running short, time or stopping. Hence, those possessing the most profitable home market can afford to supply foreign markets without direct profits, or even at a loss, whenever necessary."

#### THE QUESTION OF POPULATION.

The second most important factor in the industrial development of nations is population, since increased numbers expand the home market. Mr. Carnegie shows that the United States is increasing three times as rapidly in population as the United Kingdom, and more rapidly than Germany, which is also before the United Kingdom in rate of increase.

#### A THIRD FACTOR, UNTILLED FERTILE SOIL.

Finally, the American Union has a vast advantage in its resources of untilled fertile soil. Wherever food products can be grown profitably, people will increase until the limit of food supply is reached. America is consuming more and more of its own supplies; it already manufactures as much of its enormous cotton crop as Britain imports, and not more than 10 per cent. of all its field crops, except cotton, are ever exported.

#### THE RELATIVE IMPORTANCE OF HOME AND FOREIGN MARKETS.

Mr. Carnegie calls attention to the vastly greater importance of the home market, as compared with the foreign market. Exchange of products benefits both buyer and seller; hence, home commerce is doubly profitable. Further, products bought and manufactured at home do not enable a foreign country to compete with the home country; the home market of America takes 96 per cent. of the manufactured articles; only 4 per cent. goes to foreign markets. Even Britain takes four-fifths of her own manufactures. "Politicians give far too much attention to distant foreign markets, which can never amount to much; and far too little to measures for improving conditions at home, which would increase the infinitely more important home

market." Mr. Carnegie continually recurs to and emphasizes this theory that the home market is the first consideration.

#### OTHER DISADVANTAGES OF BRITAIN.

Mr. Carnegie says that people in the United Kingdom, both employers and employed, fail to give the requisite attention and energy to business, regarding it only as a means to obtain entrance into another rank of society; both classes take life too easy. He advises employers to give their ablest employees shares in the business, and says that "the great secret of success in business, and of millionaire-making, is to make partners of valuable managers of departments. The contest between the old and the new lands to-day resembles that between professionals and amateurs." In efficiency of labor the Continent has a great advantage over Britain, and America over the Continent. It is not the lowest, but the highest paid labor, with scientific management and machinery, which gives cheapest products.

#### THE FUTURE OF BRITAIN.

Even with her disadvantages, Mr. Carnegie thinks that Britain's present population, wealth, and trade, are not likely to decline, and that they may even increase in the immediate future. Her wealth, climate, geographical position, and resources, are superior to those of any country in Europe, and Britain alone, among European nations, holds in reserve an important home-market capable of yielding profit equal to at least, one-third, or more, of all her present export trade. She has in her unrivaled supply of coal, as far as Europe is concerned, another mine of vast wealth.

#### ONE DARK CLOUD ON BRITAIN'S INDUSTRIAL HORIZON.

Mr. Carnegie says that Britain's supply of Cleveland ironstone will be practically exhausted in twenty or twenty-five years, at the present rate of production, except that two concerns will then have sufficient for some years longer; the Cumberland supply is already nearly exhausted. Without cheap iron and steel, the construction of ships and machinery of all kinds—and of the thousand-and-one articles of which steel is the base,—would tend to decrease. Britain is not alone in this danger: even the United States has a proved supply of first-class ore for only sixty or seventy years,—with inferior grades to supply her thirty years longer,—unless the rate of consumption be greatly increased; the enormous territory of the Republic, however, may give new discoveries of deposits. Germany has,

to-day, the most enduring supply of iron ore, though it is not so rich as the American.

#### THE UNITED STATES COMPARED WITH DISUNITED EUROPE.

Mr. Carnegie says that the recent industrial combinations of the United States are not nearly so powerful—in the effect of enabling the Republic to compete successfully,—as the fact of the political union in America. One must compare Europe and America as units, continent against continent. Mr. Carnegie finds portentous contrasts: First, Europe is an armed camp, with 9,000,000 men engaged in unproductive military duty; the American Union has an army of only 66,000 men, with no conscription. Europe has 410 fighting vessels; America, 35. Second, America has, in its political union, the peaceful security necessary for industrial development. Third, in the great continent of America an industrial captain can establish his several works at the centers of the various markets; he may proceed to ply ships, or build railroads, or construct works, anywhere on the continent, dreading neither interference with supplies, hostile legislation, or national antipathies; the result is that every process of manufacture in the Union flows, naturally, to the localities best adapted for it, there being no barriers to free selection.

In short, Mr. Carnegie pictures the American Continent as one harmonious, peaceful, coöperative whole, its power and energy directed to industrial progress; the European Continent as divided into hostile camps, the power and energy of each directed to military protection and commercial isolation.

#### WHAT MUST EUROPE DO?

"There is only one answer. She labors in vain until she secures some form of political and industrial union and becomes one united whole,—as the American Union is,—in these respects, for this is the only foundation upon which she can ever contend successfully against America for the trade of the world or each of her separate nations holds its own home trade in manufactures, except under a system of protection, which must handicap her in the race for the trade of the world."

#### MR. CARNEGIE'S PROPHECY.

"The coming century is to look back upon the present petty political divisions of Europe with the feelings we of to-day entertain for the one hundred and fourteen little states of Germany and their pigmy monarchs of the past century, with their thirty-four tariff barriers to commerce and travel on the Rhine, resembling the *Likin* of China."

#### A FRENCH VIEW OF CAPTAIN MAHAN'S THEORIES.

AN English critic once compared the revolution Captain Mahan has brought about in the study of naval history to that made by Copernicus in the domain of astronomy; and the eulogy does not seem extravagant, as applied by an Englishman to the historian who first pointed out the real foundation of the greatness of the British Empire.

But the influence of Captain Mahan's works may be as plainly discerned in all directions and in all countries. "It would be impossible," says M. Auguste Moireau in the *Revue des Deux Mondes* for October 1, "to exaggerate the effect on the events of the last ten years, in Europe and the United States, produced by the introduction into the current of the world's thought of the idea, 'sea power,' under the vivid form given it by Captain Mahan. . . . A number of historians had employed the term before him, and had even grasped its profound meaning; but he has rendered this meaning more intense and more impressive. England has produced some good writers on naval matters, but Mahan is superior to them all; for he is at once more of a historian than those who are strategists, and more of a strategist than those who are historians, and, in a greater degree than either, does he possess philosophic insight. The *ensemble* of his works is a vast analysis—extending over all regions and all periods—of the sources whence spring the growth and might of 'sea power,' of the conditions necessary to acquire and keep it, and the results to which its possession permits a nation to aspire."

The May number of the *National Review* contains an article by Captain Mahan, entitled "Motives to Imperial Federation." "Federation is in the air," remarks M. Moireau. "The united empire is an ideal which seduces the popular imagination. Mahan advises the English to give a positive character to this conception; to incorporate it in an imperial constitution, in which the mother-country and the colonies shall each surrender a portion of their independence, principally in what concerns the control of the foreign policy." The author does not go into details; but he advocates the formation of a great federal council, whose mission it would be to direct the exterior affairs of the "new empire." Difficulties of all kinds would hinder the execution of this plan,—the enormous distance between the different parts of the empire, the jealousies of governors,—for there is no one more sensitive in all that affects his dignity than a colonial premier. It cannot be seen how a common system of military and naval forces could

be formed between so many countries, so far distant from each other. There are still other obstacles. The English colonies will never be interested in the complications of European international politics. At Washington, in official circles, men are fairly well informed on the subject of the internal affairs of the European states; but for the mass of Americans there is, on the other side of the Atlantic, one great power—which is England, and another great power—which is Europe. The names of the different parts of the Continent are well known, it is true, but well known as are the divisions of the Chinese Empire, or the territorial governments of Russia, to the masses in France. Such is exactly the attitude of the English colonies in regard to the affairs of Europe. How, under such conditions, could there possibly exist an imperial diplomacy?"

#### THE MONROE DOCTRINE.

In 1897, appeared Captain Mahan's "Interest of America in Sea Power, Present and Future." In this work Captain Mahan insists on the strategic importance that the Gulf of Mexico and the Caribbean Sea will assume, in consequence of the opening of an interoceanic canal, and on account of the political instability of the states of tropical America. He says:

"The demand for a more regular government must arise in these states torn by internal dissensions. When this demand comes, no theory like the Monroe Doctrine will prevent the nations concerned from trying to remedy this evil by some step which—by whatever name it may be disguised,—will, inevitably, be a political intervention. This intervention will cause collisions which may, perhaps, be resolved by arbitration, but very probably will lead to war. As far as one can judge, the moment will come when the states of tropical America will be given stable governments by the powerful states actually existing in America and in Europe. The geographical position of these countries, and their climatic conditions, clearly establish that 'sea power' will determine to which foreign state will fall the ascendancy. The geographical situation of the United States, and her great resources, will give her an incontestable advantage. But this advantage will not avail her if there exists a great inferiority—from the point of view of organized material force which constitutes the last argument of republics, as well as kings."

"All this volume," says M. Moireau, "however diverse in appearance the subjects singly treated, is a development of the idea that order to sustain the Mon-

roe Doctrine, should become a strong naval power. The articles which compose it have a prophetic tinge; they herald a near future; and yet they begin to date from afar, for the future announced is already being realized. The tone, even, of these studies allows one to appreciate the enormous progress the United States has made in the course which Mahan wished her to pursue. The author would not have to write them to-day; for the majority of the questions which are there put are actually resolved, and have received exactly the solutions which he held desirable. Mahan will not have played the rôle of Cassandra. At the time he was adjuring his country to become a great naval power, in order that the Monroe Doctrine might not become the laughing-stock of Europe, the United States was constructing a war fleet; and a group of patriotic Senators at Washington was preparing the double blow which was to deprive Spain of her last possession in the Antilles and to render the American Government mistress of future interoceanic communication by means of the Central American isthmus."

#### SHALL THE FILIPINOS KEEP THEIR LAND?

PROF. J. W. JENKS, who has recently been studying conditions in the Philippines in the course of a trip around the world, discusses "Some Philippine Problems" in the November *McClure's*. One of these is the question whether the Filipinos shall keep their land.

#### SPECULATORS OUGHT TO BE KEPT OUT.

The Government owns millions of acres of land in the Philippines,—forest, mineral and agricultural,—and much other valuable land is owned by the natives. Professor Jenks emphasizes the point that these lands ought to be developed for the good of all. "Already, even before the Government can grant titles, Americans and foreigners are striving to put claims on valuable hotel sites, hot springs, prospective mines, fine farming lands, and profitable forests. The Government, by Act of Congress, has wisely decided to keep the forests in its own hands, and to lease simply the right of cutting timber under Government direction. The agricultural lands also need to be no less carefully protected."

#### THE FILIPINO MUST NOT SELL HIS BIRTHRIGHT.

Professor Jenks says that if the Filipinos, the Americans, and the Chinese are given equal chances for obtaining land in fee simple, it will not be long before the Americans and Chinese will own the land, and the Filipinos will be tenants,—not much more fortunate than serfs bound to the soil. The Filipinos, although they have

many good qualities, are still so thriftless, on the average, that they will likely sell any property which will bring them any immediate cash.

The United States should allow the Filipinos to sell their lands only with the permission of the local government, and they should be aided in making leases, and in securing terms, which will prevent their land from being cropped.

#### LAND-GRABBING BY LARGE CORPORATIONS.

There is danger that large corporations and wealthy individuals will get great tracts of land, ostensibly for raising sugar, tobacco, hemp, and fruit, but really to hold for speculation. Professor Jenks says we should heed the century-old lessons of India and Java, and have the state hold its lands, leasing them on liberal terms by a perpetual grant, so that the holder may keep possession as long as he pays his rent and cultivates his land, while the state will retain the right to revise rentals, at regular intervals, and insist that those who fail to cultivate their lands shall forfeit their claims. This will cause an outcry from many "patriots" who will claim to have sacrificed much by going to the Philippines, but who are anxious to get rich soon. "It is probably true that there will be less platting of town sites, less granting of franchises, and less advertising of somewhat doubtful resources; but there will be more real prosperity and fewer corrupt dealings, while our country will fulfil much better its obligations to the Filipinos."

#### THE DEARTH OF LABOR.

The native Filipinos, though quick and good-natured, are not strong or well suited for heavy manual labor, nor are they thrifty, and there is a real dearth of labor now in the Philippines. The Chinese now in the islands are not laborers, but shrewd traders who live largely on the thriftlessness of the natives. To do the great work of industrial regeneration that the country needs,—to build the roads, railroads, harbors,—many strong manual laborers are necessary, and there is a growing disposition to bring in the Chinese for this purpose. Professor Jenks, from the experience of other Oriental countries as well as of the United States, argues against opening the Philippines freely to the Chinese. He thinks there will be practically no danger, however, in admitting them in groups under contract, with their employers under bonds to keep them employed in the way specified in the contract: to feed, house, and care for them properly; to see that they do not desert and enter other lines of trade; and to return them to their own country when their task is done.

#### MOROCCO AND ITS SULTAN.

IT is easy to believe that Morocco possesses great interest and fascination, and still easier after reading Captain Fawcett's entertaining pages in the *Pall Mall Magazine* for October. But for the present, at least, it would be difficult for any but men to go there, and in some parts impossible. In Marrakush the half-dozen resident English ladies must wear a *sulham* and *yasmak* in public to avoid insult. The sultan "is a most progressive monarch. He is a good billiard player and photographer, and is a perfect genius on a bicycle. Polo or pig-sticking on a bicycle are favorite amusements. He also has several motor-cars and a cinematograph.

"So far as the tourist is allowed to penetrate," Morocco is quite safe. Beyond the limits of safety a traveler must wear a disguise and court discomfort. Even the Sultan himself requires in much of his dominion a large army.

Why Morocco is now specially interesting is because at least five nations covet its grain-producing lands and their mineral wealth, and the day is nearing fast when its independence and semi-barbarous state must cease. England has at present two-thirds of its trade; Germany most of the other third. English influence at court is paramount, but France has taken most active steps to acquire the country. At present intrigues at court paralyze the much-needed reforms, and there is no permanence for anything.

#### THE ST. LOUIS EXPOSITION IN 1904.

EX-SENATOR JOHN M. THURSTON says in the November *Cosmopolitan*, that the world's fair, to be held in St. Louis in 1904, promises to eclipse in magnificence and grandeur all expositions heretofore held. Its official title is to be The Louisiana Purchase Exposition, and it will commemorate the purchase of the Territory of Louisiana from France, consummated on April 30, 1803.

The company, under the presidency of ex-Gov. David R. Francis, has already several millions of dollars more than was ever appropriated in advance on any similar occasion. It has a stock subscription of about \$5,000,000; \$5,000,000 of bonds voted by the city of St. Louis; and a government appropriation of \$5,000,000. This is over and above the appropriations by the several States to be expended to exhibit their resources. Missouri has appropriated for this purpose \$1,000,000, and Illinois \$250,000.

#### THE IMPORTANCE OF THE ANNIVERSARY.

Senator Thurston thinks that in many respects the addition of the vast territory obtained by

THE MISSOURI STATE BUILDING.

the Louisiana Purchase was the most important event in our whole history. It has a region greater by 3,000 square miles than the entire area of the Federal Union in 1803. The thirteen States and two Territories since carved out of the purchase contain the homes of over 17,000,000 prosperous people.—nearly one-fourth the population of the United States. This territory extended the boundaries of the United States to the Pacific Coast, thereby giving to the new Republic a continental domain from ocean to ocean, and making it impossible for any other nation to obtain a dangerous foothold upon the continent. It also secured for us the great Mississippi River and its tributaries.

#### THE THIRD GREAT AMERICAN EXPOSITION.

It will be the third great American exposition, for, up to the present time, we have had no truly American exhibitions except the Philadelphia Centennial, held in 1876, and the

Chicago World's Fair, held in 1893. There have been so many local exhibitions held in the last few years that many people are coming to look with disfavor upon enterprises of this kind. But the exhibition at St. Louis will rise above all local features, and will assume a dignity and character that must commend itself to the people of this country and of the whole world. It is certain that there will be assembled at St. Louis a greater and more varied exhibit from all parts of the

world than has ever heretofore been brought together.

#### THE SITE OF THE EXPOSITION.

The site of the Louisiana Purchase Exposition will make possible a grander spectacle in architectural and scenic effects than even the Chicago Exposition of 1903. The grounds will embrace about 1,200 acres. The principal buildings, including the Government building and the foreign buildings, are located on the west half of Forest Reserve Park, a beautifully diversified piece of woodland. Ten of the most distinguished architects in the country have been working on the general design. The large architectural plan is severely classic, with modern adaptation.

#### DISTINCTIVE FEATURES OF THE EXPOSITION.

The St. Louis Exposition is going to pay special attention to aerial navigation. "Every fair has had its captive balloon tethered by a long

THE ART PALACE AT THE ST. LOUIS EXPOSITION.

rope, and hauled down ingloriously by a windlass; but here, for the first time, fleets of soaring yachts will beat the air with untrammelled wings. There will be an airship tournament, with a prize of \$100,000 for the winner, and other prizes, aggregating \$100,000 more, for less successful competitors. An enormous number of candidates and varieties of flying machines have responded to the invitation. The two great schools of aeronauts,—the advocates of the aeroplane, and of the dirigible balloon,—will be represented by their most distinguished leaders, Sir Hiram Maxim and M. Santos-Dumont."

Another feature of the St. Louis fair will be the emphasis placed on processes of manufacture, rather than finished products. "In other words, instead of being a collection of showcases, it will be an industrial city in actual operation."

#### ROBERT HOE, CAPTAIN OF PRINTING PRESS MAKERS.

THE most interesting sketch in the "Captains of Industry" series in the November *Cosmopolitan* is the article, by James H. Bridge, on Robert Hoe, the great manufacturer of printing presses. The present Robert Hoe is the third of his name. He, his father, and grandfather, have devoted themselves to making printing presses which would keep abreast of the enormously increasing demands of modern journalism and bookmaking. The last marvelous machine under construction in Mr. Hoe's manufactory contains 50,000 pieces of metal, which

are the perfected conceptions of the three Robert Hoes.

This marvelous piece of mechanism uses up 120 miles of white paper every hour it runs. It prints, cuts, pastes, folds, counts, and delivers 180,000 eight-page newspapers an hour—3,000 a minute, 50 a second. Even this machine, baffling to the imagination, does not, in Mr. Hoe's belief, reach the limit of progress in this mechanical field. He thinks a new chapter in the history of printing is beginning, in the application of the rapid rotary system to bookwork and other fine printing. There will be rapid progress, too, in color printing; although his presses already give as many as eleven separate impressions or colors on a single copy of a paper, and can be made to produce magazine forms,—delivered, folded, cut, and automatically wire-stitched,—with all the pages printed in color or half-tones.

The first Robert Hoe came to New York from England in 1803, when he was eighteen years old. In a little shop in Maiden Lane he began building hand presses, and, in the course of a score of years, became an important press builder. Then the iron age reached the printing press, and, from that time on, its evolution was rapid. The first Robert Hoe, and his two sons, made one invention after the other in improving their presses, and some of their machines made in the first half of the last century are actually in use in small job offices to-day.

The present Robert Hoe was born in 1839, and identified himself, as soon as he was old enough to work, with the great industry of his family. For forty years he has devoted himself to the improvement of printing presses, and his name is as familiar in every town where English is spoken as in New York City.

When Mr. Hoe gets an idea that something should be done by machinery which has hitherto been done by hand, he has one of his sixty draughtsmen outline on paper the first part of his conception, and this is turned over to a specialist in the factory to develop. The next part is then taken up in the same way, and so on. If any difficulties arise, a general conclave of experts is held until the problem is solved. Then the idea is patented, and becomes a part

THE LATEST TYPE OF HOE PRESS.

of the Hoe printing press. The Hoe printing press works in New York cover some fifteen acres of floor space, and there is another establishment in London of nearly half this size.

#### ENGLAND'S GREATEST SURGEON.

**E**VERY one is interested in the career and life of the man who saved King Edward's life so recently. In the *Woman at Home* for October, Sarah A. Tooley praises the great surgeon, and indeed it would be hard to write of him without launching into praise. Sir Frederick Treves is one of the youngest great surgeons, and he is one of the best beloved by his colleagues, his students, and his patients. All who have been under the care of Sir Frederick, or who have met him in every-day life, will endorse all the writer has said in her article.

"He lives a simple life of hard work, rising at 5 o'clock in the morning and usually retiring about 10. His recreations are principally of the aquatic kind. He is an expert swimmer, can manage almost any kind of water craft, and holds a pilot's certificate. He is an enthusiast for boat sailing and sea-fishing, and is never happier and more at home than on a yacht. The King had in him an ideal medical attendant, who could enter fully into his Majesty's anxiety to escape from Buckingham Palace to the sea breezes of the Solent. Yachting is Sir Frederick's own remedy for jaded nerves. Philanthropics connected with the deep-sea fishermen find a very warm advocate in Sir Frederick, as also the children's country-holiday scheme, and he has advanced both causes by public speeches on various occasions. For close upon thirty years has Sir Frederick been familiar with the life of East London, and few know better than he the somber shadows of pain and distress which darken its people. Hospital wards are full of the tragedies of human life, and no one has a more compassionate heart for the suffering poor than the great surgeon who has ministered to them.

"He was born at Dorchester, in 1853, and is consequently in the very prime of his manhood. He received his education at the Merchant Tailors' School, and having decided to become a doctor, pursued his studies at the London Hospital. He was a young man of life and energy, fond of sports of all kinds, and particularly of boating and sailing. Although brilliantly clever, there is a rumor that young Treves was fonder of pleasure than work in his early student days. Suddenly, however, he began to take things more seriously, and gave undoubted evidence of future greatness. At twenty-eight he was ap-

pointed professor of anatomy and professor of pathology at the Royal College of Surgeons, posts which he held for six years with marked success. In 1891-96 he was examiner in surgery to the University of Cambridge."

Sir Frederick Treves specialized to a great extent upon operations affecting the intestines. In England, at least, he was the first to introduce the removal of the appendicitis. That was fourteen years ago, and since then he has operated on over one thousand cases with the most

SIR FREDERICK TREVES.

wonderful success, there having been only two deaths among his patients.

"At the outbreak of the South African War Sir Frederick volunteered for service, and was appointed consulting surgeon to the field forces in Natal, leaving his beloved work at the London Hospital and his consulting practice in Wimpole Street to administer to Tommy on the battlefield. He was with the main column from Colenso to Ladysmith, and did a great amount of splendid surgery, and also found time to set down some observations of the scenes around him in his 'Tale of a Field Hospital,' which, for delicate humor and pathos, descriptive power, and for tender sympathy with the wounded soldier, has no equal in the literature which the war called forth.

"Sir Frederick Treves is probably the most

popular surgeon of the day, and belongs to the generation of practitioners who are carrying to such wonderful perfection the advanced surgery of the internal abdominal organs, which has been rendered possible by Lord Lister's antiseptic treatment. He, like the veteran surgeon, has worked with persistent enthusiasm to gain extended knowledge in his art, and stands unrivalled in the class of surgery which the King's case required. The one ambition of every budding young surgeon is to see Treves operate, and the corridors of the London Hospital are thronged with eager faces at every such opportunity. . . . He has had enough hero-worship and success to spoil him, but knows too much of the possibilities of increased knowledge to be unduly affected by adulation on account of present achievements."

#### LIUTENANT PEARY'S ARCTIC WORK.

LIUTENANT PEARY'S recent return from his last Arctic campaign has occasioned a renewal of interest in his achievements in the far North. His official report—dated Sydney, September 7,—is an exceedingly modest statement, covering his work during the past year. It appears in the *National Geographic Magazine* for October, followed by a brief summary of Lieutenant Peary's explorations during the past twelve years, which runs as follows:

"The results of his long labors in the far North are most important. He has proved Greenland an island, and mapped its northern coast line; he has defined and mapped the islands to the north of Greenland, known as the Greenland Archipelago; he has shown that an ice-covered Arctic ocean probably extends from the Greenland Archipelago to the North Pole; he has accurately defined the lands opposite the northwestern coast of Greenland—Grant Land, Grinnell Land, and Ellesmereland; he has reached the most northerly known-land in the world; he has gained the most northerly point yet reached on the Western Hemisphere, 85° 17'; he has studied the Eskimo as only one can who has lived with them for years; he has added much to our knowledge of Arctic fauna and flora, of the musk ox, the Arctic hare, and the deer; the notes he has made during the past years will benefit meteorology and geology—all these are some of Lieutenant Peary's achievements during the twelve years he has so valiantly battled in the far North. But, above all, Mr. Peary has given the world a notable example of a brave and modest man who, in spite of broken limbs and most terrible physical suffering and financial discouragements, has unflinchingly

forced to a successful end that which he had decided to accomplish.

"To Mrs. Peary, the able seconder of her husband's plans, and to Mr. H. L. Bridgman, the efficient secretary of the Peary Arctic Club, and the loyal members of that club, much credit is due."

#### THE DANGERS OF THE ALPS.

IT is stated on good authority that the Alpine death-roll is not so serious as is commonly imagined. Mr. Harold Spender, writing on this subject in the *Pall Mall Magazine*, says that the causes of accident are far more often rashness, such as trusting to luck that a possible avalanche will not overwhelm you, snowstorms, and even lightning.

"The stock generalizations about guideless climbing are quite beside the mark, and this practice is now confined, in Switzerland, to a small number of men who are for the most part better than any guides. The best guides themselves are no more infallible than any other skilled mountaineer, while the worst are very much more dangerous than none at all."

The three most serious catastrophes this year were all due to the weather,—a snowstorm, an avalanche, and lightning. The parties had plenty of guides. Mr. Spender gives a number of very interesting detailed accounts of Alpine accidents, from which the only conclusion is that a little more care, a little more prudence, would have avoided all, or nearly all. A Swiss doctor at Berne has made a full list of all Alpine accidents, from 1890–1901:

In all, the deaths numbered 305, of whom 218 were tourists, 73 guides, and 14 porters. Taking these figures of nationalities, we get the following result:

German and Austrian.....	190
Swiss .....	48
Italian.....	23
English and American .....	18
French.....	15
Other nationalities.....	11
	<hr/> 305

Considering that about 100,000 people go to the Alps every year, and that some 10,000 of these either climb mountains or cross passes, the number of killed is very small. The Austrian Alps have about half the accidents, they being the most crowded, and with the poorest class of tourists.

The intrepidity of the young Austrian climbers places the performances of cautious Englishmen in the shade. A Tyrolese guide told Mr. Spender once that they had only one fault,—they thought they had two necks, "But they fall like ripe apples."

## THE FRENCH COAL MINES.

FRENCH workmen have been quite as active, if not as persistent, of late, in their efforts for progress as their American brethren. The coal miners, in particular, are now engrossing a large share of the public attention on account of the trouble in the Loire mining region. The dominant idea gleaned from M. Benoit's "Coal Mines" in the *Revue des Deux Mondes* is the great dissimilarity existing between French and American mining methods and conditions, and the difficulty of making a serious comparison between them.

The rule in regard to wages is that men actually engaged in the tunneling of passages and the coal digging are paid by the piece (the piece being either the quantity of coal extracted, or the meter of advancement made in the tunneled gallery), and that those employed for the repairing are paid by the day, as a general thing, though they are paid by the piece if the work is regular and of considerable duration. On the whole, in the determination of the wages, a wide margin is left for the will, intelligence, and industry of the individual miner; no uniform price being given indifferently to all as purchase-price of a certain amount of brute force. The fines imposed are rather heavy in proportion to the wages; but the heaviest ones only apply to cases where the common safety of the underground workmen is concerned; and the profit of all fines invariably goes to the aid-fund for the disabled and superannuated.

No miner can be discharged without a fifteen days' notice unless he insult his superiors, or forcibly interfere with his comrades. The first exception may seem much too vague and allow too much scope for arbitrary dealings; but, as the engineer only has power to discharge, the miner is safeguarded against the anger or hastiness of subordinate officials.

M. Benoist's investigations have led him to a favorable conclusion as to the way in which the fines and severer penalties are administered. He tells an anecdote about a miner who had been transferred as a punishment to a less productive and more arduous vein: "I happened to meet him after his return, and he spoke of his exile as of Siberia; but, with the confiding candor which is one of the characteristics of his class when not influenced by the politician, he gaily told us he had been convicted for theft. 'You didn't steal, did you?' asked the engineer who accompanied me. His whole face twinkling with mirth, the man slyly replied, 'Oh, certainly I didn't!' Such perfect resignation is surely a sign that the justice is without in the severity not excessive."

"Comparing past wages with present,—though statistical comparisons are as misleading historically as geographically, in time as in space,—the increase is certain; and in this, as in the reduction of the working hours, and in the mitigation of hardships, there is a material betterment of the miner's condition. . . . It must be conceded, however, that (although the average wages in the coal mines are not bad, as compared with other industries), from diverse causes—some exterior and beyond his control, others intimate and personal—the average miner is generally on the debit rather than the credit side. And this is true, notwithstanding the gratuitous allowance of coal; the possibilities of additional revenue from small accessory occupations; and the opportunities for economy afforded in many districts for those who wish to profit by them. Yet the very great majority, if not all of the miners, have debts, or, at most, have saved nothing."

This dismal outlook is perceptibly brightened by the citing of incidents like the following. When questioned as to his daily earnings, a miner answered, "About seven francs." And, while complaining that because of his large family he could not take a holiday, he did not seem discontented with the pay in itself; his good-natured grumblings were directed against life rather than against his trade.

"Why the miner generally saves nothing, on the contrary getting into debt, whether it is the pay which is too small for the living which is too dear, or whether it is he who is incapable of adjusting his living to his pay,—is the social and moral question combined for the miner. But social facts, even when one is prudent or presumptuous enough to limit their application to a single domain, are of such great abundance, richness, and complicity, that it is beyond our power to embrace them as a whole—to grasp and to present the *ensemble*. Let us be contented with this makeshift. As regards labor in the coal mines, we can conclude that the work is divided there into a quantity of professional categories, or specialties, entailing as many different treatments and conditions; that miners above fifty-five years of age are rare, and that the working population is migratory; the working hours are shorter than in other similar industries, and the hardships less than in the mines of former times; and moreover, that these working hours are shorter and the pay better in the great mines than in the medium or small ones; and that the scale of wages cannot be considered as low, in any event, having doubled, and more than tripled, since the end of the eighteenth century."

# THE PERIODICALS REVIEWED.

## THE CENTURY MAGAZINE.

THERE is a thorough article on "The So-Called Beef Trust" in the November *Century*, the first of a series on "The Great Business Combinations of To-Day." For many years the beef industry of this country has been controlled by a half-dozen powerful corporations. They have made enormous profits, and have unquestionably furnished the consumer with better and cheaper meat than the small operator could produce. Mr. George B. Fife, the writer, describes the processes of the slaughtering and packing of beef, and the determined effort of the packer to centralize his business. As to the attacks on the alleged Beef Trust, Mr. Fife says that, whatever the Government may succeed in proving, there is no doubt that a working "agreement" has long existed among the large packing corporations. He believes that this agreement is, in effect, that they are not—to their own loss and the destruction of their good will,—to send more beef to a market than it reasonably requires. Another allegation against the so-called Beef Trust is that it has attempted to maintain the price of beef under appearance of establishing a uniform rule for the giving of credit to dealers. These two understandings certainly exist among the packers; but they call them protective, and not oppressive, measures.

## IN A NEW YORK POLICE COURT.

The *Century* opens with a readable descriptive article on "The New York Police Court," by Edwin Biorkman. He describes some of the pathetic and humorous scenes in the court of a police justice, and explains the procedure by which magistrates are persuaded to issue warrants. The principal advantage of the summons is that it gives the magistrate a chance to act as peacemaker, rather than as judge, in a number of instances, when, if settlement were not reached through his mediation, a criminal process would be the final outcome. Two-thirds of the applicants for summonses are women, a majority of whom hail from the big tenements, where all sorts of discordant elements are crowded together without elbow-room. The magistrates often dispose of such squabbles—with a group of women on each side hurling charges and countercharges against each other,—by threatening to arrest every one of them, on the spot, unless they go home and live in peace. It is significant that less than one-half of the summonses granted are returned in court.

This number of the *Century* has refrained from the usual features of colored illustration; there is a delightful description of "The Grand Cañon of the Colorado," by John Muir, and a considerable first chapter of an historical series, "The Prologue of the American Revolution," by Prof. Justin H. Smith, which will give the most complete account yet published of the invasion of Canada in 1775.

## HARPER'S MAGAZINE.

MR. HARRY DE WINDT, the explorer, describes in the November *Harper's* his journey "Through Siberia to Bering Strait," in the effort to go from Paris to New York overland. The explorer left the Trans-Siberian Railway and civilization at Irkutsk, and ac-

complished the 2,000 miles to Yakutsk in a sleigh drawn by horses. From Yakutsk on, northeast, the next lap of 1,500 miles was accomplished behind reindeer to the last Russian outpost on the Kolyma River. From this point on to the Bering Sea dog-sleds were the programme. With five sleds, drawn by sixty-three dogs, the party set out for Bering Sea, with a very scant three weeks' provision, and arrived on May 20, 1902, at East Cape, on the Strait. The expedition had traveled about 11,268 English miles. Mr. De Windt's original idea was to cross over the frozen Strait at Cape Prince of Wales, where the distance from shore to shore is about forty-five miles; but he found that the strait is never completely closed, and that even the Eskimos rarely succeed in getting across.

## WHAT IS LIFE.

In "The Newest Conceptions of Life," Mr. Carl Snyder gives an interesting account of the various stages of the physiologists' work to solve the riddle of what life is. He tells us that they have decided that life is a series of fermentations. Biological chemistry has demonstrated that there is for every vital function—even the brain and the nervous system,—a specific ferment. Now, the further question is, What are these ferments? This has, so far, baffled inquiry. "Their activity seems bound up rather with the peculiarity of their atomic structure and their chemical architecture, so to speak, than with any mystery of ingredients. They are compounded of the simple elements of water, air, and carbon. It is how these are put together that is so puzzling." The puzzle, however, Mr. Snyder tells us, is near solution, and we may be on the verge of manufacturing life in the laboratory.

## THE ASTONISHING INFLUENCE OF RAINFALL.

A brief article on "The Distribution of Rainfall," by Dr. A. J. Herbertson, tells us that the deductions made by meteorologists in the matter of rainfall are drawn from about 50,000,000 observations taken at nearly 9,000 stations. The influence that the question of rainfall has on animal and vegetable life is extraordinary to the layman. Expressed in the terms of sheep, it is shown that in Australia,—land receiving less than ten inches of rain per annum is worth next to nothing unless it can be irrigated,—with ten inches of rain, eight or nine sheep can be kept per square mile; with about twenty inches of rain, 640 sheep per square mile (eighty times as many); and with thirty-four inches of rain,—in Buenos Ayres,—a square mile will support the enormous number of 2,560.

## McCLURE'S MAGAZINE.

PROF. J. W. JENKS, who has recently returned from the Philippine Islands, discusses in the November *McClure's* "Some Philippine Problems," to which we have given attention in another department. The feature of this number is the first installment of Miss Ida M. Tarbell's "History of the Standard Oil Company," which has been compiled with the enterprise and conscientiousness that writer puts into all of her work. The series will be quoted from in a later number of THE REVIEW OF REVIEWS.

Mr. George W. Smalley, in "Personal Recollections and Appreciations of Men of Letters," deals with Robert Browning, John Morley, William Dean Howells, Anthony Hope, Henry James, Matthew Arnold, Swinburne, Lowell, and Alfred Austin. Mr. Smalley says of John Morley: "He looks like a Puritan, and talks like a philosopher." While, as a historian, he finds John Morley austere, unbending, uncompromising, at times narrow, and at all times a fanatic, "on the personal side he has a sweetness of nature and a sweet reasonableness in talk which I can only call loveable." Mr. Morley's "Life of Gladstone" is about to appear. "It will be a unique piece of biography,—the biography of a believer by an unbeliever; of the real, adroit, professional politician of his times by a political amateur; of an Imperialist by a Little Englander; of a *bon-vivant* by an ascetic." Mr. Morley is to receive no less than \$50,000 for this piece of work. He was for many years the reader to the Messrs. Macmillan, and is still their literary adviser.

There is a brief sketch by C. Whibley of the late George Douglas, author of "The House With the Green Shutters," and a further note on the same subject by Robert Barr.

#### SCRIBNER'S MAGAZINE.

THE November *Scribner's* contains the most delicate and beautiful examples of color printing,—the pictures drawn by Sarah S. Stillwell for the pretty little fairy story, "Princess Pourquoi," by Margaret Sherwood.

#### THE OUTLOOK FOR OUR MERCHANT MARINE.

Mr. Winthrop L. Marvin contributes an article on our merchant marine, "The American Ship in 1902." He divides our merchant marine into two classes: First is the immense fleet, of over four and a half million tons, engaged in the coasting trade of our Atlantic and Pacific seaboard, including now Porto Rico, Hawaii, the Great Lakes, and the rivers. For more than a century this magnificent traffic has been reserved to American ships and American seamen; and it now employs the largest, most efficient, and most prosperous coast-wise tonnage in existence. The other half,—the part engaged in over-seas trade,—now stands at only 879,595 tons, only one-third the tonnage of thirty-one years ago. Mr. Marvin says American shipbuilding is not increasing, but is rather falling off. Mr. Marvin argues that this over-seas shipping-trade is the proper object of national solicitude; he says there is nobody whom the Government has so systematically forgotten in the past fifty years as the owner of the American steamer, or sailing vessel, on the high seas; and, that conditions are now such that a great merchant tonnage can spring into existence as soon as the American people give the word.

#### OUR IMMIGRANTS,—COMING AND GOING.

The magazine opens with Mr. James B. Connolly's article "In the Paths of Immigration," in which he pictures the journey of Russian immigrants from their homes to New York. Mr. Connolly complains that the steamship people are very rough on the ignorant immigrants, assuming them to be an inferior kind of creature,—dull brutes,—on whom consideration would be thrown away. When these same immigrants make the trip back, after living in the United States a few years, there is a difference. It is common talk "below decks"

on ocean-liners that steerage going west and steerage going east are not to be handled in quite the same way.

#### THE ARTS OF THE SPELLBINDER.

There is a highly amusing and interesting article on "The Spellbinder," by Mr. Curtis Guild, Jr., who speaks from experience in the art, and places much emphasis on the necessity of clear and distinct enunciation, which is more valuable than a merely powerful bellow. This has been the secret of the success, as an orator, of the Hon. Thomas B. Reed. Nowadays, mere rhetoric no longer convinces; sarcasm is a bad weapon; the professional vendor of comic stories does not accomplish much; and the savage partisan, "who preaches on the text attributed to Horace Greeley, 'that every horsethief is a member of the opposite party,'" only hurts his own cause.

#### THE COSMOPOLITAN.

THE articles on the St. Louis world's fair, on Robert Hoe, of printing press fame, and "Mankind in the Making," that appear in the November *Cosmopolitan*, are quoted from, among the "Leading Articles of the Month."

Other "Captains of Industry" dealt with in this number are the late Winfield Scott Stratton, on whom Mr. Samuel E. Moffett writes; Mr. James R. Keene, whom Mr. Edwin Lefèvre describes as "the greatest stock gambler that ever lived;" Mayor Tom L. Johnson, called by Henry George, Jr., "a monopolist who is spending his wealth to destroy the sources of monopoly;" and F. W. Roebing, the head of the great wire-making industry in Trenton, N. J., which puts out \$15,000,000 worth of wire a year.

#### PERILS OF MODERN BALLOONING.

Mr. Samuel E. Moffett, writing on "Dangerous Occupations," puts first the profession of ballooning, lately come into vogue. The plain balloonist has dangers enough, but Mr. Moffett explains that the man who runs an airship by a machine has infinitely more perils. There is always more or less gas escaping from a balloon, and it seems inevitable that some should find its way to the motor and end the career of the aeronaut. However, this particular kind of catastrophe has not yet come, although Santos-Dumont has experienced almost every other. A dirigible balloon is peculiarly liable to wreck from the fact that its fragile structure is forced against the wind instead of being carried along with it. There is also the danger of explosions from expansion of the gas. It was this that wrecked Severo's *Pax* on May 12, and dashed its rash designer to the ground from a height of nearly 3,000 feet at three times the velocity of the Empire State Express.

#### MILTON'S PLACE AMONG THE POETS.

There is a posthumous essay by John Fiske on John Milton, which ends with a clean-cut classification of the blind poet. "By common consent of educated mankind, three poets—Homer, Dante, and Shakespeare—stand above all others. For the fourth place there are competitors: two Greeks, Æschylus and Sophocles; two Romans, Lucretius and Virgil; one German, Goethe. In this high company belongs John Milton; and there are men who would rank him first, after the unequalled three." Other articles in this number deal with the recent United States naval manoeuvres, "German Court Beauties," "What Women Like in Women," and other lighter subjects.

## THE WORLD'S WORK.

THE November number of the *World's Work* contains the address delivered by Mr. Andrew Carnegie at the University of St. Andrew, Edinburgh, which we have quoted from among the "Leading Articles of the Month."

## THE REAL RULER OF RUSSIA.

The "Real Rulers of Russia," by Wolf von Schierbrand, attempts to explain the limitations of the Czar's power, and to analyze Russian character. This writer says the Czar is not the sole ruler of his people; that three other autocrats divide the power, and that these are three words in the Russian language: *Nitshevo*, *Winowat*, and *Natshat*. The first of these words means "nothing," "never mind." Every disquieting thought is dismissed with a "*nitshevo*," which perhaps means more nearly "What are you going to do about it?" The second word, *winowat*, means literally "I am guilty," "I own up to it," but also implies "What is the use of my denying it?" The third fatal word originally stood "for tea,"—like the French *pourboire*,—then came to be used to mean "for vodka" (corn-brandy); and, finally, it rose to imply the very essence of corruption, probably akin to our "graft." This last autocrat Herr von Schierbrand thinks the mightiest of them all. "Without *nutshat* you would be unable to accomplish anything in Russia, all the orders and the decrees of the nominal Czar at St. Petersburg to the contrary notwithstanding."

## THE FISHERIES OF THE GREAT LAKES.

W. S. Harwood has a well-illustrated article, "Saving the Fisheries of Our Inland Seas." He tells how more than 100,000,000 pounds of trout and whitefish are taken from the Great Lakes in a year, and of the Government restocking to repair the ravages of wasteful fishermen. It is a pretty big task to restock Lake Superior, an inland sea 400 miles long, 1,500 miles in circumference, and averaging 1,000 feet deep; but the Government seems to be accomplishing it. The fish are caught in huge nets and chiefly by Americans. They were pursued so constantly that they would soon become extinct but for the governmental aid in stocking. Thus, in Lake Ontario, the catch of whitefish—the most delicious of the lake fish,—fell from 1,156,200 pounds in 1868 to 126,650 pounds in 1895; and the catch of trout, for the same period, from 612,000 pounds to 109,300 pounds. The basis of the governmental work is collecting the eggs and hatching them artificially. The artificial hatch is very much more prolific than the natural hatch.

## THE COMING DELUGE OF GOLD.

Charles M. Harvey calls attention to "Another Revolutionary Increase of Gold," from the mines of South Africa. He says that, by 1904, a complete resumption of mining in the Transvaal—together with a like increase in the rest of the productive countries,—will send the world's output up to \$400,000,000 a year, as compared with a little over a quarter of that amount in 1890. Mr. Harvey says America will be the largest gainer by the gold deluge, as America is the best field for the investment of money that the world affords, having the most varied, extensive, and profitable of the world's industrial activities.

## OTHER ARTICLES.

Mr. M. G. Cuniff, in a series of first-hand studies of labor problems, writes on "The Human Side of the

Labor Unions," and finds suspicion the prevailing mood of employer and union. He quotes labor leaders to the effect that misunderstandings cause half the labor troubles: "A union hates a typewritten letter, but it likes a man." Julian Ralph writes on "The Moral Soundness of American Life;" Henry Harrison Lewis gives a glimpse of the personality, and of the working habits, of Col. John Jacob Astor, under the title "The Quiet Control of a Vast Estate;" Frank M. Chapman describes the work of the American Museum of Natural History, and how it acts both as an investigator and teacher of natural science; Ivy Lee describes the New Stock Exchange Building in New York, and some remarkable features of its construction, and Mr. James H. Bridge gives the views of important leaders of industrial combinations, under the title "Trusts as Their Makers View them."

## COUNTRY LIFE.

THE November *Country Life* has an eminently timely article on "Turkeys and Cranberries," describing the growing of the turkeys in the State of Rhode Island, and the cranberry at home in the marshes of Cape Cod and New Jersey.

Answering the question, "Does Farm Forestry Pay?," Mr. Allen Chamberlain has a very interesting account of some actual successes of New England farmers, where the father sowed and the son reaped. In one case a Mr. Cutter, of Pelham, N. H., began caring for a forty-acre tract of self-seeded pine timber, thinning out the trees and, furthermore, pruning about an acre each year after the growth was ten years old. This furnished much amusement for the neighbors; but Mr. Cutter's son has recently logged 700,000 feet of lumber from this tract, leaving no less than 300,000 feet standing; this gives an average of 25,000 feet to the acre, and much of the Michigan old pine lands only cut about 5,000 feet to the acre. Another New Hampshire man, the Hon. John D. Lyman, of Exeter, has a hobby of white-pine culture cultivated most successfully. He plants 30,000 white pine trees to the acre,—thick enough to give the young trees long, straight bodies, free from limbs for quite a distance from the ground; these are thinned out until the final stand will have from 50 to 160 trees to the acre. Mr. Lyman reckons the land, before planting, at \$10 an acre; and the interest at 4 per cent., compound, shows that a lot will stand its owner in 54 years about \$80 per acre. On this basis he makes a good profit from his white-pine planting.

Bryant Fleming describes the famous Hunnewell Estate at Wellesley, founded by the late H. H. Hunnewell, with its Italian gardens and magnificent plantations of conifers, on the shore of Lake Waban, opposite Wellesley College. There is a very pleasant account of an old-time-home garden at Cazenovia Lake; an article on quail and quail shooting, and a chapter on staircases, in the series on "The Making of a Country Home."

## THE ATLANTIC MONTHLY.

WE have quoted in another department from Mr. Henry D. Lloyd's article in the November *Atlantic* on "Australasian Cures for Coal Wars," and from the article by Ambrose P. Winston in the series entitled "A Quarter-Century of Strikes."

## THE ARTISTIC HANDICRAFT OF TO-DAY.

Mr. Charles H. Moore writes on "Modern Artistic

title, sees the chief danger for the French in Central Africa in Senussi-ism. "It is very much to be feared," he says, "that the French will have before them the task of finishing the work begun by Lord Kitchener at Khartoum,—that is, to destroy the last force of organized Moslem fanaticism in Africa." The Senussi have always been in contact with the dervishes on the Nile, from whom they have received many reinforcements, and at the same time they have easily obtained supplies of arms and ammunition through Ben Ghazi, though the Turks are supposed to prohibit this traffic.

#### OTHER ARTICLES.

Mr. E. M. Konstam writes a paper on "Indian Caste and English Law." Mr. E. R. Newbegin has a somewhat abstract paper on "The Theory of Government by Democracy," in which he says that the true point of view from which to regard democratic government is that it represents the reciprocal play of expert judgment and common sense. There is a charming article by Dr. Woods Hutchinson describing a visit made by him to an island off the Oregon coast.

Col. Carroll D. Wright's article on American labor organizations is quoted at some length elsewhere.

#### THE NINETEENTH CENTURY AND AFTER.

THE chief distinctions of the *Nineteenth Century* for October are the series of articles on the education bill and Mr. Sidney Low's Conservative programme, which are intended chiefly for British consumption.

#### OLD AGE HOMES.

Miss Edith Sellers, who speaks with the authority of an expert on state provision for the aged, sums up the result of her investigation by saying that were she a wornout worker she would like to change her nationality and become a Dane, an Austrian, or a Russian; for, of all the nations of Europe, these three best understand how to deal with the old and destitute. Their homes are the brightest and cheeriest of resorts. In Denmark, by a law of 1891, any man or woman over sixty years of age who can show a decent record is housed, fed, and clothed at the expense of the nation as an honored veteran of industry. The old folks are content and thankful. The cost per head in Danish homes averages 25 cents a day. "In the most comfortless of all the London workhouses it is 47 cents." The cost is about the same in Russia. It costs England more to make her old people miserable than the Danes spend in making their old people happy. The picture is a beautiful contrast to Miss Sellers' last month's sketch of a London workhouse.

#### WANTED: ONE SUPREME COURT FOR THE BRITISH EMPIRE.

Judge Hodges, of Melbourne, pleads for an imperial court of final appeal. At present the House of Lords is the seat for final appeal for the United Kingdom, and the Judicial Committee of the Privy Council for British dominions over-sea. The writer would make one of these,—or, preferably, a new court,—the finally decisive tribunal. He makes the shrewd remark that not only would this supreme court add to the weight and splendor of London, but it would enlist in the maintenance of the unity of empire the legal profession, whose members would everywhere aspire after a seat in the supreme court as the summit of their ambition.

#### THE PROFESSIONAL CRIMINAL.

Fortified by the recent recommendations of judges and commissioners, Sir Robert Anderson reiterates his plea for exceptional treatment of the small group of habitual malefactors. He would authorize the indictment of a prisoner, after repeated conviction, as a professional criminal. If proved a professional criminal, he would, on a subsequent conviction for crime and after serving out that sentence, be further detained in custody during His Majesty's pleasure. The certainty of such a fate would, in the opinion of the writer, induce the professional criminals to turn their talents into some new and less dangerous calling.

#### A PARALLEL TO THE BRITISH WAR OFFICE.

It is a most instructive parallel which O. Eltzbacher draws between the French War Office on the breaking out of the Franco-German War and the British War Office in the South African War. There was the same rotten class-system, though, mercifully, not the same crushing overthrow.

#### THE FORTNIGHTLY REVIEW.

IN the *Fortnightly Review* for October, Mr. W. H. Mallock concludes his series of nineteen essays on "Science and Religion, at the Dawn of the Twentieth Century." The gist of it all is that there are contradictions in every department of life; therefore, we ought not to recoil from the idea of belief in the religious doctrine of things, although we cannot reconcile it with the scientific doctrine of things.

#### THE ANTI-CLERICAL RÉGIME IN FRANCE.

Mr. Richard Davey, in an article entitled "A Few More French Facts," writes a very powerful article, full of quotations and facts, protesting against the conduct of the present French ministry in enforcing the law against the schools kept by the unauthorized religious orders. He maintains that the experiment which is now being made by the French people is to ascertain whether it is possible for a nation to be governed without the assistance of the greatest of moral forces. Before another year is out, Mr. Davey thinks, events will happen which may reduce the leaders of the third republic to remember the fate of the first. Mr. Davey quotes a saying from M. Thiers that the attempt to establish an anti-religious government was the real cause of the collapse of the French republics, both in the eighteenth and nineteenth centuries.

#### WHAT THE BRITISH GOVERNMENT HAS DONE IN IRELAND.

"An Old Whig of the School of Grattan" writes sixteen pages full of invective against the administration of the Unionist government in Ireland since the year 1895. Never had an English government such an admirable opportunity of administering Ireland in her true interests, and passing legislation adapted to her; but never has any government so bitterly disappointed the expectations with which its advent was hailed. His chief complaint against the government is that it allowed the United Irish League to grow up and flourish. He concludes his long diatribe by suggesting that a thorough inquiry should be held into the land question through the agency of a commission, which should be charged with reporting what changes should be made in the law.

#### THE ATTITUDE OF GERMANY TO ENGLAND.

In an article entitled "German Light on Germany"

Policy," "Calchas" quotes exhaustively from the collected papers which Dr. Schliemann contributed to the *Kreuz Zeitung* in the last few years. From these papers, and from other evidence to which he refers, he comes to some very familiar conclusions. He thinks that Germany trades upon the traditional antagonism between Russia and England; that, if she gets to the Persian Gulf, she will disclaim any intention of hindering Russia from obtaining the same privilege; and that she is much more likely to join the dual alliance in breaking down England's sea-power than to join that nation in case of war with Russia and France.

#### GERMAN COLONIES WITHOUT COLONISTS.

Mr. J. L. Bashford writes a very interesting and well-informed paper concerning the German colonies and naval power. The German population has increased, since 1895, at the rate of from 700,000 to 845,000 every year; but emigration has steadily fallen off. In the year 1892 more than 110,000 Germans emigrated, whereas the number of German emigrants in 1901 was little more than 20,000. There are nine German colonies covering an area of a million square miles, or one-twelfth of the area of the British Empire beyond the seas. But the total number of Germans in all the German colonies was, in 1902, only 4,058. Besides these 4,000 Germans, there were about 2,000 other whites. The total cost of administering this million square miles, with its 4,000 German inhabitants, will amount this year to \$6,250,000. The total revenue collected from the colonies themselves does not amount to \$2,000,000. The German Empire, therefore, spends more than \$4,000,000 every year in subsidizing colonies which afford a home for only 4,000 Germans. Every German colonist, therefore, costs the mother-country \$1,000 a year. It would certainly be better to maintain them at home. But, it may be said, there is a profit in the colonial trade. But German colonies export to Germany goods to the value of only \$330,000 a year, and, if exports to other countries are included, the total colonial export is only \$3,500,000. It comes to this, therefore,—that in order to secure exports from the colonies of \$3,500,000 a year, \$4,000,000 a year is extracted from the German taxpayers.

#### THE WESTMINSTER REVIEW.

THE *Westminster Review* for October is one of the best of the monthly reviews. Topics of special interest to English readers are "Fighting the Plague in India," and "An Order of Brethren of Cleanliness."

Besides these articles there is one very interesting paper, aglow with enthusiasm, in which an English lady, who has adopted India as her home, and the Hindu religion as her faith, vindicates the people of India—especially the women,—from what she declares to be the calumnious misrepresentations of the missionaries.

Mrs. Swiney, writing on "Church and Women," vigorously impeaches the Church for having taken little part in the great work of righting the wrongs of women. She declares that the Church is daily alienating and driving out of her fold her foremost and most devoted supporters, who have hitherto lovingly and ungrudgingly spent themselves on her behalf. As the Church palliated and condoned the immoralities of the Restoration and the Georgian period, so she has been blind and deaf and dumb before the increasing insincerity and moral decadence of modern times. Mrs. Swiney maintains that it requires no gift of prophecy to aver that

the Church stands or falls by her future attitude toward the great industrial, ethical, and spiritual developments of the new century, in which women will take paramount part as workers and initiators.

#### THE NATIONAL REVIEW.

WE have noticed elsewhere Dr. Kramarz's important article on "Europe and the Bohemian Question." The anti-German campaign of the *National* is represented not only by Dr. Kramarz's paper, but also by a contribution from Sir Rowland Blennerhassett on "The Origin of the Franco-Prussian War." The gist of Sir Rowland Blennerhassett's paper is, that owing to the intrigue between France and Austria for united action against Prussia, Bismarck could not be blamed for forcing on war before the enemies of his country had completed preparations. But Prussia had been determined to fight France for the supremacy of Europe as she had fought Austria for the supremacy of Germany.

"Bismarck brought on the war at the right moment for his country. Prussianized Germany is now preparing for the struggle with Great Britain which Cavour foresaw. Should it come about, it will be a war for supremacy on the ocean. She is adding to her fleet a class of ship specially suited for an attack on England. The same methods, exactly, are employed by her against the British Empire which she formerly used against France. The German mind is being trained to receive with enthusiasm the announcement of a war with England when the time comes. *Videant consules*. Though the sands are running low in the hourglass I believe that, with courage and foresight on the part of our statesmen, that conflict may still be avoided."

#### THE AUTOMOBILE PROBLEM IN ENGLAND.

Mr. Alfred Harmsworth contributes an interesting paper on "The Serious Problem of the Motor Car." Mr. Harmsworth says that some means of identification of each car should be provided, but that no identification system can be adopted without proper safeguards against the mendacity and prejudice imported into nearly every motor car case. The regulations in the law of 1899 relating to tires practically prevent the use of safety tires which are popular in Paris and do away with side-slip. English roads require reconstruction; dangerous corners must be widened, and hedges at corners must be cut down; some roads, as in France, should be reserved either for horse-drawn carriages or for automobiles exclusively. Mr. Harmsworth anticipates that soon there will radiate from London a great system of motor ways, for the support of which it will be necessary to reintroduce the toll system. These roads should be constructed of some material free from dust. On the question of the competency of drivers—which Mr. Harmsworth regards as the gravest question of all,—he says that the public will soon demand not only identification, but heavy penalties and damages in case of accidents, the licenses of drivers to be withdrawn in cases of misconduct.

The most interesting of the other contributions is the chapter of Sir Horace Rumbold's "Recollections," which deals with his life in Russia in 1870-71. Mr. J. R. Fisher reviews Mr. O'Donnell's book, "The Ruin of Education in Ireland." There is an article on St. Helena, written in the island by a Boer prisoner as a prize essay in the school which was carried on for the benefit of the prisoners.

## THE CONTINENTAL REVIEWS.

## REVUE DES DEUX MONDES.

**M.** GASTON BONET-MAURY contributes to the first September number of the *Revue des Deux Mondes* a study of R. L. Stevenson as traveler and romance writer. Of course, he naturally pays special attention to "An Inland Voyage" and "Travels with a Donkey in the Cévennes;" and, indeed, he traces the bond between Stevenson the traveler and Stevenson the romance writer to this passion for exploring, this taste for adventure. The influence of Sir Walter Scott he traces in several of the novels, and he also attributes to Edgar Allan Poe, Dickens, and Meredith, a good deal of influence on Stevenson as a writer. At the same time he does bring out very clearly how much Stevenson owed to certain French writers, both great and small; these were the poets Charles d'Orléans and Villon, the critical spirit of Montaigne, and the works of Balzac, Baudelaire, and Victor Hugo. Stevenson hated Zola; indeed, he would not have exchanged a chapter of Dumas père for all Zola's bag of tricks—fiction suffering from smallpox, he called it! After the death of Dumas, he regarded Alphonse Daudet as incontestably the first of French romance writers, and he also appreciated the genius of Bourget and Loti. M. Bonet-Maury divides Stevenson's romances into three groups—those which portray the manners of certain social classes; those which analyze certain curious psychological states; and thirdly, the romances of love, properly so-called.

## PIERRE LOTI IN INDIA.

In the second September number M. Pierre Loti continues his remarkable travel articles on India. It is an extraordinarily rich and splendid style which M. Loti brings to the description of the mingled wonders and horrors of India's ancient faiths. In this article, too, he describes his visit to Pondicherry, which naturally awakens in his loyal French heart very mingled feelings. When Loti was ten years old an aged great-aunt once spoke to him of a friend she had had long ago in Pondicherry, and read to the little boy a passage from one of her letters,—dated even then half a century back,—in which there was much talk of palm trees and pagodas. So it was with a deep sense of melancholy that he arrived at this little, old, dying town, the grave of so many splendid hopes. It must all the same be an intensely interesting place. There are several French families there who preserve the traditions of the old manners of the eighteenth century, the period to which their furniture and their clocks belong.

## OTHER ARTICLES.

Among other articles may be mentioned the continuation of M. Sorel's series on the "Peace of Amiens;" M. Prinz on the collectivist tendency; and M. Charles Benoist on production, wages, and agreements in coal mines.

## REVUE DE PARIS.

**T**HE *Revue de Paris* for September opens with a fascinating natural history article, under the general title of "Pirate Insects," by M. Berthelot.

## THE ANTARCTIC PROBLEM.

-- Rabot attacks the difficult question of what he

calls the Antarctic problem. Up to the present time the North Pole and the South Pole have defied every effort made by man to penetrate their icy fortresses. This is even truer of the South Pole than of the North Pole, for more than one explorer can congratulate himself on having very nearly reached the North Pole; but the portion of the map where the South Pole may be supposed to be still shows a large blank space. Curiously enough, the problem excites the most interest in England and in Germany, and in the summer of 1901 the *Discovery* and the *Gauss* left Europe bound for the South Pole, while a few weeks later a third expedition, commanded by Dr. Otto Nordenskjöld, also set forth on the same enterprise. The French writer points out that this ardent research of what has hitherto baffled the explorers of the Christian era may well be called the twentieth-century crusade, for there is scarcely a civilized nation, save France, which has not made a more or less determined effort to solve the tantalizing problem.

## THE NATIONAL MUSIC OF RUSSIA.

Has Russia a typical music of her own? Yes, says M. A. Bruneau, who was sent by the French Minister of Fine Arts to find out whether this was indeed the case. We are not told with what object this inquiry was set afoot, but the results are not without interest to the lovers of the "heavenly maid." In the seventeenth century the Russian composer, Nikon, reformed the Greek liturgy, and caused the organ to give way, in orthodox churches, to the human voice. During the eighteenth century he was succeeded by several remarkable composers, but they, one and all, devoted their talents to Church music. Then, early in the last century, Titow wrote several operas, some of which are still popular; but not till thirty years later did a Russian composer arise whose fame penetrated beyond his native country. Michael Glinka did for Russian music what Shakespeare did for English literature; he gathered up all the best work of the composers of the past, confirming the popularity of several airs which have been sung by the Russian peasantry during immemorial ages, for it should not be ignored that Russia has long had a folk music of her own, much as other countries have a folk lore of their own. At the present time, according to the French critic, the leading Russian composer is Rimsky Korsakow, who has composed several operas, and who himself conducted the first performance of his greatest, "Antar," during the French Exhibition of 1889. M. Bruneau notes with approval that Russian composers do not seek their libretti among their friends, or among those writers who regard the words of an opera as of little consequence; instead, they seek for inspiration among the works of the great writers; thus, Gogol has inspired more than one opera, and Pouchkine is a mine of wealth to the Russian composer.

## OTHER ARTICLES.

Other articles consist of two long installments of Madame de Rémusat's letters from her provincial home, written from 1815 to 1817, and which scarce possess enough interest to have been worthy of publication; of an historical paper setting forth the oft-told tale of Louis XIV.'s infatuation for Madame de Montespan; and an anonymous attack on the red-tapeism which

makes France's distant colonies compare so unfavorably with those which go to compose Greater Britain.

#### NOUVELLE REVUE.

IN the *Nouvelle Revue*, M. Raquini attempts to explain the new system of public education now being tried in Italy, which seems to be entirely modelled on that of modern France. He gives some curious details concerning salaries. Many university professors receive a total income of something like \$750 a year, rising, when old age is reached, to \$1,200. This scale applies only to the teachers at the great universities. A master at an ordinary public school or *Lycée* considers himself very fortunate when, after twenty-five years' work, he can earn as much as \$600 a year. In spite of the fact that education is in Italy absolutely obligatory, few of the Italian poor, especially in southern Italy, can yet read or write. Each parish is allowed to "run" its own school as it fancies. In Umbria one unfortunate schoolmaster with a total salary of \$100 a year was supposed to manage three parish schools. In another populous little town the teaching of 130 children is confided to one harassed individual.

#### SYNDICATES AND TRUSTS.

M. Arthur Raffalovich contributes to the first September number of the *Nouvelle Revue* a paper on the very timely subject of syndicates and trusts. It is a brief, well-written account of the present position of this movement for the concentration of industry, which has attained such enormous proportions in the last few years. M. Raffalovich observes that the present development coincides with the great prosperity of the United States which followed the Spanish-American War, and the outburst of speculation which then seized upon the great American financiers, though it left the simple public relatively cold. As regards what may be called the ethics of the trust movement, M. Raffalovich has no special remedies to suggest in order to mitigate its ill effects in a social sense. In practice it is not, as a rule, the shareholders who do benefit, but the financial go-betweens, who succeed in effecting the sales of individual businesses to the trust or the syndicate; indeed, it would seem to be a fatal law of the trust movement that every such organization should be over-capitalized. It is interesting to note that the writer hails with satisfaction the success of the Brussels convention on sugar bounties, and he appears to have a wholesale dislike to trade bounties bestowed by the state in any form, for he is well aware how greatly these artificial restrictions assist the operation of trusts and syndicates.

#### LA REVUE.

DR. S. BERNHEIM, as the head of "L'Œuvre de la Tuberculose Humaine," writes for *La Revue* a lengthy article on tuberculosis and how to insure against it. Every year at least 150,000 consumptives die in France; recent statistics prove that 200,000 is nearer the mark. For each tuberculous person dead there are three living; of these 600,000, it is estimated that 300,000 are needy. In Paris the evil is worse than in the provinces. And, whereas tuberculosis is increasing in France, it is decreasing in England and Germany. Out of 1,000,000 there were, in 1899, in Russia over 4,000 deaths; in France, 3,000; in Germany, 2,000; and in England and Scotland, 2,000. These are from

pulmonary consumption alone. Dr. Bernheim then gives many details of the German system of combating consumption. Germany now possesses 82 popular sanatoria, which can hold 20,000 poor consumptives. The sick and old age insurance funds have favored in every way the building of sanatoria. Dr. Bernheim argues that what has been so successful in Germany might be made to succeed in France. The machinery of provident societies is already to hand. Provision would be needed for 30,000 consumptives,—that is, 50 sanatoria, of 150 beds each. Every sanatorium would cost \$100,000. The initial outlay of \$5,000,000 is only the sum which Dr. Bernheim tells the mutual assistance societies they are at present spending so fruitlessly, without real benefit to the sick, whose ever-increasing numbers alarm them.

#### THE OBSCURE HISTORY OF MONTE CARLO.

M. Goldorp, writing on Monte Carlo and how it has come to be what it is, tells a curious story of how in thirty years vice has transformed a village of 600 souls into a principality of 20,000, the richest and most attractive in the world.

The \$5,000,000 revenue of the Casino pays all the expenses of the principality, affords the prince a handsome income, and pays the costly *personnel* and the enormous interest to the shareholders.

#### OTHER ARTICLES.

M. Changeur gives an interesting account of Madame de Saint-Balmon, a truly remarkable and admirable woman, though some of her exploits, he admits, may be partly legendary. At any rate, to her Louis XIII. offered the command of a regiment of infantry.

M. Pottier gives a depressing account of the proletariat in the theatrical and concert world.

#### THE GERMAN MAGAZINES.

THE *Deutsche Revue* opens with an article by Lieut.-Gen. Z. D. Metzler upon the armed peace of Europe and the disarmament question. He goes over much of the ground, now so familiar to us, as to the huge cost of moving and feeding the colossal armies of modern Europe. If, for instance, the whole 4,380,000 men of the German army were mobilized, the cost of maintenance would work out at about \$6,250,000 a day. Add to this the dislocation of trade and commerce which would be an inevitable result, and we have the chief cause of continued peace in Europe. An appeal to arms would now involve such fearful consequences that statesmen are more and more loath to let slip the dogs of war. General Metzler points out that we have had continued wars during the last few years, but wars of a sort which will always occur, and which, in his opinion, no arbitration court can help to avoid. There are wars in which one side is very much superior to the other, and, seizing an opportune moment, decides to attack in order to increase its territory. Such was the case in the South African and in the Spanish-American wars, although in the latter case many would deny the fact that America felt herself very much stronger than Spain. The event proved she was, but beforehand it was surely in doubt.

M. von Brandt gives a short appreciation of Cecil Rhodes. He points out that Rhodes made money not for the sake of doing so, but because it enabled him to strive toward his goal—the extension of British rule in

South Africa. He began with nothing, and presented his fatherland with a territory five times as large as the British Isles.

The *Deutsche Rundschau* completes its twenty-eighth volume with this number, and intends having, as one of its chief features during its twenty-ninth year, a novel entitled "Refugium Peccatorum," by Ossip Schublin. Georg Gerland gives a very full account of the eruption of Mont Pelée in Martinique. He treats the subject from a scientific point of view and gives a great deal of useful information. Mont Pelée is covered with luxurious growth, and it is the wonderful fruitfulness of these islands which induces such comparatively large numbers to reside there; to live in such a volcano-strewn land seems, otherwise, quite foolhardy. August Fourrier writes upon Marie Louise and the downfall of Napoleon, and Alfred Thumb upon the old Persian cuneiform inscriptions. The development of mankind is, he says, one of the first objects of scientific research; and Grotefend, by his researches amongst the inscriptions of old Persia, has done very much to increase our knowledge of the history of the human race.

#### THE DUTCH MAGAZINES.

THE most attractive article in the current *Elsevier* is that on the art of printing on cretonne and other stuffs. Both animals and man have experienced the necessity or desire of decorating themselves, as the writer points out in the opening lines, and man has had recourse to coloring, or to designs affixed in some way or other to plain cloths. Colored decorations on cloth were brought to Holland by Portuguese navigators in the Middle Ages, and the Dutch set to work to copy them; in England, similar attempts were made about the same time; and in 1634, under Charles II.—which is probably a misprint for Charles I.—a patent was granted for "The Art or Mystery of Affixing Wool, Silk and Other Materials of Divers Colours on Linen, Silk or Other Cements; to Make Them Useful for Hangings, etc." In 1720, the wearing of these printed stuffs was forbidden. There is a good deal of interesting information in the article, both historical and technical, and several designs are shown in the illustration. There is a great liking nowadays to learn "how it is done" in respect of everything, so this article will be welcome. Among the other contents of this magazine is a description of a stay in the Berkel district, which forms pleasant reading, but contains nothing remarkable, and is illustrated with the usual country scenes. The art contributions are in evidence again, while a story and the monthly chats make up the list for this month.

*Woord en Beeld* has an account of a visit to a coal mine, written and illustrated by Mr. Oppenoorth and another better-known contributor, Mr. Krabbe. The illustrations show us the type of miners, the boring of a passage, and other incidents in coal mining. The writers give us a good description, with historical data. The portrait of Mr. Cort van der Linden, with a character sketch, makes us better acquainted with a prominent man in Holland; there is another descriptive sketch,—this time of a country district,—a play, music, and an installment of a novel as a monthly supplement.

Passing the novel of Augusta de Wit, previously noticed, the first contribution is "Poetry and Labor," based on a German book called "Labor and Rhythm." The origin of poetry is a difficult problem to solve; but there seems to be some ground for believing that it

came into existence with the performance of tasks which were not pleasurable ones, and these tasks may be summed up in the word "work." To cheer the weary hours of labor the workers sang, keeping time with the movement of their hands or the strokes of the primitive tools or machines. The woman at the spinning wheel, the Chinese tea-pickers, and numerous workers in all parts of the world, have their songs or rhymes to accompany the movements they or their implements make as the task is performed. The work seems to be done more easily when a song accompanies it, and this may well suggest that labor created poetry.

#### THE ITALIAN REVIEWS.

THE *Nuova Antologia* follows up the agitation against the white slave traffic, which it courageously initiated some months ago, by an excellent *résumé* from the pen of Marquis Paulucci de Calboli, of the work accomplished by the international congress, held in Paris last July, at which sixteen countries were represented, and also of the progress made by the movement throughout Italy during the last year. It is gratifying to record that every section of the nation, —Catholic and Protestant, Liberal and Socialist,—has joined in the movement, the need for action being emphasized by the geographical position of Italy, from whose ports girls may be shipped with deplorable facility to Cairo, Constantinople, Tunis, and other haunts of vice. Very much requires to be done before the traffic can be suppressed: but at least, as Marquis Paulucci rejoices, the conspiracy of silence which hitherto has enveloped the subject has been broken down, and that, in itself, is a great step toward moral reform.

The fame of Mr. H. G. Wells has just spread into Italy, thanks to the recent translation into Italian of his "War of the Worlds." Both the *Nuova Antologia* and the *Nuova Parola* for September publish laudatory notices of his work, together with his portrait, and hail him as the creator of an entirely new type of fiction. The leader of modern thought to whom the *Nuova Parola* devotes its monthly biographical sketch is Mrs. Besant, whose life is described at length and with much enthusiasm. It is curious, in a paper otherwise accurate, to find the late Mr. Bradlaugh, of all men, spoken of throughout as "Lord Bradlaugh."

The *Civiltà Cattolica* (September 20), taking as its theme the priceless astronomical instruments which Count Waldersee was pleased to transfer from Peking to Potsdam as part of his country's war-booty, gives a long account of astronomy as practiced by the Chinese, pointing out that they already possessed in the thirteenth century instruments which were not made in Europe before the sixteenth. It was the Jesuits' well-known superiority as astronomers which first secured for them in China the consideration they enjoyed during the seventeenth and eighteenth centuries.

The erection of a new statue of St. Francis on the picturesque hillside of La Verna inspires the *Rassegna Nazionale* to devote two articles to the Saint of Assisi (September 1 and 15). G. Grabinski begins an elaborate study of the life of Montalembert, specially interesting at the present moment as showing how the Catholic party in the middle of the last century secured the right of freedom of education of which the authorities to-day have just deprived them.

# THE NEW BOOKS.

## NOTES ON RECENT AMERICAN PUBLICATIONS.

### AMERICAN HISTORY.

IN the department of history one of the most interesting of the season's publications is a volume entitled "The Struggle for a Continent," edited from the writings of Francis Parkman by Pelham Edgar, Ph.D. (Boston: Little, Brown & Co.). It is possible to compile from Parkman's works an almost continuous account of the efforts of France and England to obtain possession of the American Continent, beginning with the colonization of Florida by the Huguenots in 1502, and ending with the fall of Quebec in 1759. The editor has wisely retained the language of the original, excepting in those cases where it was necessary to supply connecting links between successive historical episodes. Thus, the book represents not only a succinct narrative of early American history, but preserves the literary form of writings which, regarded purely as literature, are unrivalled among the works of American historians. The complete works of Parkman are in thirteen volumes, but they are quite beyond the reach of the multitude. In this one volume are included the more important and picturesque passages selected from the entire series, and the reader is enabled to get the historian's point of view almost as clearly as by the perusal of the entire set.

The greater part of the period preëempted by the historian Parkman is also covered by the new volume of John Fiske, "New France and New England" (Houghton, Mifflin & Co.). This book was left by Mr. Fiske at his death in manuscript. The third chapter, entitled "The Lords of Acadia—Later History of Champlain," has been completed in accordance with Mr. Fiske's own memoranda indicating what incidents he proposed to include. The other chapters of the book were in the form of carefully prepared lectures delivered before the Lowell Institute in Boston during the last winter of the author's life. The work of the editors in preparing these chapters for the press has been chiefly confined to the making of side-notes and annotations calling attention to authorities. This volume completes the series of historical studies projected by Mr. Fiske many years ago, which have covered the whole story of the settlement and development of the colonies from the discovery of America until the adoption of the Constitution of the United States. The notable qualities of style which have made Mr. Fiske's books the most popular among recently published histories of America are present in this posthumous volume.

A subject of such obvious interest that we wonder it has not sooner been treated has been chosen by Mr. Charles Knowles Bolton for a volume entitled "The Private Soldier Under Washington" (Scribners). The actual daily life of the private soldier in our Revolutionary armies can only be understood after a most painstaking search of military reports, letters, and other contemporaneous documents. Mr. Bolton has performed this laborious task with much enthusiasm, and has afforded the reader every means of verifying his statements by giving the names of the authorities who saw

the conditions or events described. Pictures of ancient articles of equipment, reproductions made from plates, and fac-similes of rare posters and manuscripts illustrate the book.

"New Amsterdam and Its People" is the title of a volume of exceptionally thorough social and topographical studies of the old settlement on Manhattan Island under early Dutch and English rule, by J. H. Innes (Scribners). Much attention has been given by Mr. Innes to the character of the early population of New Amsterdam, and it may surprise many readers to learn from his pages that within the first thirty or forty years of the colonization of the place there were to be met with in the town representatives of every country in Europe west of the line of Slavonic peoples, although the Dutch greatly predominated. Says Mr. Innes in his preface: "About the only type which the author has been unable to meet with in his researches is the dunder-headed Dutchman of fictitious history and of historical fiction,—the embodiment of the popular idea of the Dutch phlegmatic temperament; a marvelous compound of Captain Bunsby and the Fat Boy in Pickwick." So thoroughgoing an investigation as Mr. Innes has conducted could hardly fail to dispel many traditions that have little more than antiquity to sustain them. But in partial compensation for the loss of some of these entertaining bits of folk lore, the reader is supplied with a great fund of accurate and well-digested information covering all the operations of the Dutch settlers on Manhattan Island, and much of the work of their immediate successors. The illustrations consist largely of old maps, plans, reproductions of ancient plates, and a few views of modern New York streets by way of contrast.

The fourth volume of Gen. Edward McCrady's "History of South Carolina" (Macmillan) completes the history of the Revolution in that State from 1780 to the conclusion of peace in 1783. Few persons, perhaps, are aware of the importance of South Carolina as the battlefield which decided the destinies of all the thirteen colonies during the last three years of the Revolution. No fewer than one hundred and thirty-seven battles were fought within the boundaries of the State during that time, and it was the author's purpose in the present volume to study the operations in South Carolina as part of the general British campaign, planned and directed by the War Office in London, and to discuss the effect of the defeat of that plan upon the fortunes of the whole country. As his work was written from the South Carolina point of view, the achievements of the partisan leaders,—Sumpter, Marion, Pickens, and their followers,—naturally have a large place in the story, while the volume, as a whole, may be said to contain the history of General Greene's campaign in the South.

In the second volume of Prof. J. P. Gordy's "Political History of the United States," now appearing in a new edition (New York: Henry Holt & Co.), which covers the period beginning with Madison's administration and ends with the election of Jackson, the author an-

nounces two conclusions which he deems especially important: "That unwise financial legislation was primarily responsible for the dangerous position of the country at the close of the War of 1812, and that the public opinion of the North with reference to the negro prior to 1830 differed but little from that of the South, the greater readiness to free him in the former section having been due to the fact that if freed he would live at the South." In order to give the facts that led to these conclusions their proper setting, Professor Gordy has recast the entire volume, thus making virtually a new book.

A little book that should interest all Americans, and especially all Americans of Puritan ancestry, is "Milton's England," by Mrs. Edwin D. Mead (Boston: L. C. Page & Co.). Mrs. Mead begins with a graphic description of the London into which Milton was born. This is followed by several chapters of a biographical nature in which descriptions of localities have an important part, and these, in turn, by detailed accounts of various well-known haunts of English Puritans. Mrs. Mead has made a substantial contribution to our knowledge of the English environment of the Puritan forefathers.

In connection with the article on "The South and Her History," by David Y. Thomas, published in the October number of the REVIEW OF REVIEWS, it is interesting to note that Volumes IV. and V. of the "Publications of the Mississippi Historical Society" (University, Mississippi: Franklin L. Riley, secretary and treasurer) have recently appeared. These volumes include contributions to military, political, religious, and literary history. Many of the monographs contain much genealogical and biographical material, supplemented by entertaining reminiscences of pioneer life and stories of early events in the history of the State. There is a special chapter on political and parliamentary orators and oratory in Mississippi. Volume V. is a valuable report of the Historical Commission to the governor of the State, representing in part the results of the first systematic efforts that have ever been made to take an inventory of the historical materials relating to Mississippi.

In the "Johns Hopkins University Studies in Historical and Political Science" (Baltimore: The Johns Hopkins Press) is presented Mr. George L. P. Radcliffe's monograph on "Gov. Thomas H. Hicks of Maryland and the Civil War." The importance of Maryland in the political struggle immediately preceding the Civil War was due, to a great extent, to her geographical position. It caused the course of events in that State to be anxiously watched, gave great prominence to the governor of the State, and drew unusual attention to his struggle with the so-called "Rebel Legislature." Mr. Radcliffe has based his accounts on contemporary newspapers, private correspondence, and State publications.

In the same series Prof. William E. Martin contributes a paper on "Internal Improvements in Alabama." The author traces the development of the public highways of Alabama, and points out their influence upon immigration and settlement. He indicates briefly what has been done by the Federal Government in improving rivers and harbors and in aiding the construction of railroads, and discusses the policy of the State respecting public aid to such works.

The Johns Hopkins contribution to history is Mr. Harry's paper on "The Maryland Con- This monograph deals with an agita-

tion in Maryland which resulted in the call of a constitutional convention known as the "Reform Convention of 1850." Mr. Harry traces the growth of the idea of constitutional experiment, giving the history of the Convention of 1850 and analyzing the constitution which it gave to the people of the State for their ratification or rejection.

#### BIOGRAPHICAL WORKS.

It is not likely that the character and career of Daniel Webster will ever cease to be intensely interesting to American youth. From time to time short biographies of Webster appear, few of which pretend to be more than convenient summaries of authoritative works which were written within a few years after his death. A brilliant exception to this rule is the illustrated life of Daniel Webster, by John Bach McMaster (Century Company), portions of which have been published during the past three years in the pages of the *Century Magazine*. In its completed form this life of Webster has many points of excellence which we think will cause it to be preferred to most, if not all, of the popular "lives" that have preceded it. Professor McMaster's long-continued researches in the sources of American political and social history have qualified him in a marked degree for the successful performance of such a task as the portrayal of a central political figure like Webster, whose political career was related so closely to the slavery agitation culminating in the middle of the last century. The reader will find, however, that while special attention has been given to Webster's political career, the personal side of his life has by no means been neglected. In fact, the whole treatment of Webster's personality is singularly well adapted to the wants of the youthful American approaching the subject for the first time. The illustrations,—partly drawings, partly reproductions of old paintings, are extremely interesting.

Although many lives of Daniel Boone have been published, there is only one library in the United States which contains the materials for an exhaustive biography of the famous Kentucky pioneer. The late Dr. Lyman C. Draper, of Wisconsin, spent a whole life-time in gathering materials for such a work, but he died before his manuscript had advanced beyond a few chapters. All his materials are now in the possession of the Wisconsin State Historical Society, and from them the secretary of that society, Mr. Reuben Gold Thwaites, has written a life of Boone for Appleton's "Life Histories." Mr. Thwaites is not disposed to claim for Boone all that his many admirers have attributed to him in years past. He does not even hail Boone as the founder of Kentucky; does not regard Boone's services in defense of the West during nearly a half-century of border warfare as comparable to those of George Rogers Clark or Benjamin Logan. As a commonwealth builder, Boone was surpassed by several. "Nevertheless, Boone's picturesque career possesses a romantic and even pathetic interest that can never fail to charm the student of history. He was great as a hunter, explorer, surveyor, and land pilot; probably he found few equals as a rifleman; no man on the border knew Indians more thoroughly, or fought them more skillfully, than he; his life was filled to the brim with perilous adventures."

The late John G. Nicolay's "Short Life of Abraham Lincoln" (Century Company) is an admirable one-volume condensation of the elaborate "Abraham Lincoln: A History" of Messrs. Nicolay and Hay. It is fortunate that Mr. Nicolay was able to complete his editorial

work on this volume shortly before his death. He seems to have included in it all the essential facts of Lincoln's life, and in the strictest sense of the word the book is an abridgment of the ten-volume history.

"Thoreau, His Home, Friends, and Books," by Annie Russell Marble (Crowell), while not strictly a new biography of the naturalist and recluse, still presents a striking picture of Thoreau's personality considered in relation to his environment. The book is in the fullest sense a character sketch, rather than a formal life history.

Two of the recent volumes in the "English Men of Letters" series (Macmillan) are "John Ruskin," by Frederic Harrison, and "Tennyson," by Sir Alfred Lyall. In his introductory estimate of Ruskin as a man of letters, Mr. Harrison makes the striking assertion, which probably cannot be successfully controverted, that "The writer of the Victorian era who poured forth the greatest mass of literature upon the greatest variety of subjects, about whom most was written in his own lifetime in Europe and in America, who in the English-speaking world left the most direct and most visible imprint of his tastes and thoughts,—was John Ruskin." Both the Ruskin and Tennyson volumes in this excellent series meet the demand for brief, reliable, and well-written sketches of two of the great English writers of the last half-century.

The first English woman to have a place in this "English Men of Letters" series is "George Eliot," whose life has been written by Leslie Stephen in a compact sketch of 300 pages. Two other recent volumes in the same series are "William Hazlitt," by Augustine Birrell, and "Matthew Arnold," by Herbert W. Paul.

In a new book on "Sir Joshua Reynolds, His Life and Art," by Lord Ronald Sutherland Gower, F.S.A. (Macmillan), will be found not only an authoritative sketch of the artist's career, but a rather remarkable series of half-tone reproductions from his most famous works. As these illustrations are in many instances made from photographs taken of Reynolds' pictures in private galleries throughout England, their collection in this volume is a matter to be noted by all admirers and students of Reynolds' masterpieces.

Jean François Millet was an artist in whom the American public has always felt a peculiar interest because of the great number of his paintings that have found their way to this side of the Atlantic. This may partly account for the fact that much of the best writing about Millet and his work has appeared in American publications. The latest life of the painter (Macmillan) is the work of an Englishwoman, Julia Cartwright (Mrs. Henry Ady). This writer has made thorough researches which have resulted in the accumulation of letters and recollections that have come from English and American pens since the death of the artist, and in many respects she has been able to make a more complete and well-rounded picture of the man than has before been presented in English. Several excellent photographic reproductions from Millet's most famous paintings accompany the text.

"With Napoleon at St. Helena" is the title of a volume of memoirs of Dr. John Stokoe, naval surgeon (New York: John Lane). The purpose in publishing these memoirs seems to have been to controvert the arguments made by English writers in support of the conduct of Sir Hudson Lowe, the commandant of St. Helena, who was accused by Napoleon's friends of gross acts of cruelty. The statements made by this naval

surgeon, who was on the island from June, 1817, to September, 1819, are certainly derogatory to the reputation of the commandant.

"Samuel and His Age: A Study in the Constitutional History of Israel," by George C. M. Douglas (New York: E. & J. B. Young & Co.), represents the work of the school of higher criticism, so called, in England and America, and is a valuable study in the history and sociology of the Jewish people.

The first biography of Emperor Charles V. since the work of Robertson a century and a quarter ago is a two-volume life by Edward Armstrong (Macmillan). This biography is necessarily very largely a history of the times, and the author has not adhered in all cases to the methods of strictly chronological treatment, preferring to treat the main events of Charles the Fifth's life in the order of their occurrence, but to relegate to separate chapters the discussion of particular phases of policy or action.

A paper in the "Johns Hopkins University Studies in Historical and Political Science" entitled "The Political Activities of Philip Freneau," by Samuel E. Forman (Baltimore: The Johns Hopkins Press), is an attempt to outline the career of Freneau as a politician and publicist. The writer has approached his task in a spirit of fairness, and believes that the facts of Freneau's life, —far from justifying the contemptuous epithets that historians have usually bestowed on him,—should really inspire the gratitude of posterity.

In a volume entitled "Sea Fighters from Drake to Farragut" (Scribners) Jessie Peabody Frothingham sketches the careers of Sir Francis Drake, Admiral Tromp, Admiral de Ruyter, Marshal de Tourville, Vice-Admiral Saint-Tropez, Vice-Admiral Paul Jones, Lord Nelson, and Admiral Farragut. Some of these names are not familiar, perhaps, to American youth, but two of the eight, it will be noted, can be claimed by America, and the English sea fighters Drake and Nelson are almost as well known in this country as Paul Jones and Farragut. There is enough of adventure in the lives of these worthies to make up a thick volume of thrilling sea tales.

In "Naval Heroes of Holland" (Abbey Press), Mr. J. A. Mets traces the careers of Van Heemskerck, Hein, Tromp, and De Ruyter.

#### BOOKS OF TRAVEL AND DESCRIPTION.

The results of Mr. Henry Norman's observations in European Russia, Finland, Siberia, the Caucasus, and Central Asia are included in a substantial volume entitled "All the Russias" (Scribners). During the last few years Mr. Norman has made no less than four journeys in European and Asiatic Russia, one of which was of nearly 20,000 miles. He has lived in St. Petersburg for some time, made visits to other principal cities, and traveled in Siberia as far as Vladivostok and Lake Baikal, and in Central Asia as far as the frontier of Kashgar. The present volume is a rapid journalistic review of the most interesting aspects of contemporary Russia, with especial reference to industrial and commercial development and the possibility of closer commercial and political relations between Russia and Great Britain. The book may be said to have originated in the series of articles recently published in *Scribner's Magazine*, but the completed volume represents a great expansion of scope. Mr. Norman has included an important chapter on "M. de Witte and His Policy," another on "Russian Finance, Commerce, and

Industry," and a full discussion of Russia's international relations. All in all, Mr. Norman's book is the fullest presentation of the subject thus far attempted in English.

One of the editors of the London *Spectator*, Mr. Meredith Townsend, has written a volume entitled "Asia and Europe" (Putnam's), presenting the conclusions formed in a long life devoted to a study of the subject. The author's purpose is to describe the inherent differences between Europe and Asia which, in his opinion, forbid a permanent conquest of either continent by the other. It is interesting to note that this author, while he has nothing to say of the possible influence of America upon Asia, makes the prediction in his preface that "When once the Nicaragua Canal has been cut the trade of the United States with farther Asia will be one of the greatest the world has ever seen, and Asia will fill a large space in American imaginations, always influenced by the spectacle of the gigantic."

Another recent book dealing with the same general topic is Bishop Henry C. Potter's little volume on "The East of To-day and To-morrow" (Century Company). Just after the close of serious hostilities in the Philippines and the quelling of the Boxer insurrection in China, Bishop Potter made a visit to Japan, China, India, the Hawaiian Islands, and the Philippines. In this book, which records the impressions produced by that journey, Bishop Potter writes of the present conditions and future prospects of the people in all of these countries, dealing especially with religion, tradition, class prejudice, method of living, politics, and general development. In his chapter on "The Problem of the Philippines," Bishop Potter affirms his belief, in regard to our army and civil servants in the Philippines, that the standards of conduct at Manila have been quite as high as at Washington or at Boston.

Every returned traveler from China brings new tales of that mysterious, half-explored land. The latest book of this sort is "Through Hidden Shensi," by Francis H. Nichols (Scribners). This volume is packed with information about a country and a people that have never forced themselves on the attention of the so-called "civilized" nations, and yet are well worthy of our study. Mr. Nichols devotes much space to the city of Sian, where, it will be remembered, the Emperor and Empress Dowager of China set up their temporary capital during the Boxer troubles of 1900.

An intimate study of many details of Chinese life not commonly described in travel-books is to be found in Mr. Edward S. Morse's "Glimpses of China and Chinese Homes" (Boston: Little, Brown & Co.). The interiors of Chinese houses; the streets of Chinese villages, and what is to be seen in them; Chinese theaters and Buddhist temples; a potters' town; a soldiers' drill-room, and many other institutions of the country, are sketched with minute fidelity.

Mr. Wilfrid Sparroy, an English tutor at the court of the eldest brother of the reigning Shah of Persia, has written an interesting narrative of his life there, under the title of "Persian Children of the Royal Family" (New York: John Lane). The characteristics of the popular prince in whose family Mr. Sparroy served are clearly brought out in this book, and the descriptions of Persian customs and court life are entertaining. The book is supplied with more than forty full-page illustrations, all reproductions from photographs.

Seized with the desire to observe for himself how men lived and thought forty centuries ago, Mr. Herbert

Vivian, the English traveler, recently made a journey to the center of Menelik's kingdom of Ethiopia, and an account of what he found there is contained in a volume entitled "Abyssinia: Through the Lion-Land to the Court of the Lion of Judah" (Longmans, Green & Co.). Mr. Vivian disclaims any unusual hardships or dangers on this expedition, offering to show that "anybody who possesses average health and strength—a lady almost as easily as a man—can go through the big-game country and visit strange African peoples without much greater danger or discomfort than would be involved in cycling from London to Brighton."

"Wayfarers in Italy," by Katharine Hooker (Scribners), states the impressions formed on a recent journey from the plains of Lombardy, through Milan, Florence, Rome, and Abruzzi, across the Apennines, and up the shore of the Adriatic to Venice. This traveler has sought to put herself in touch with the people of the regions visited by getting off the beaten tracks and seeking the unfrequented villages and country districts on either side of the course. The book is illustrated from photographs.

A great fund of information about the Scottish Border is to be found in Mr. W. S. Crockett's volume on "The Scott Country" (Macmillan). The reason for the title is to be found in the fact that, although Edinburgh was Scott's birthplace, and his home for the greater part of his professional career, the Borderland was the region with which his life was most closely associated, and which he has himself done so much in his works to make known to the world at large. The region covered by the present volume is the triangle included in lines drawn from Berwick-on-Tweed to the Solway, thence northward to Tweedsmuir and Broughton, in Peeblesshire, and again to the east back to the ancient seaport borough. The traditions and memories of this fascinating region, and especially its associations with the life and works of Scott himself form the subject-matter of Mr. Crockett's book. The pictures are numerous and interesting. Here we find "Old Mortality" himself, and others of Scott's favorite characters.

"London, as Seen and Described by Famous Writers," edited and translated by Esther Singleton (Dodd, Mead & Co.), is a compilation of views and impressions of the British metropolis as recorded in various works by travelers, and famous native and foreign writers. In her selection of these materials the editor has restricted herself almost entirely to descriptions of the nineteenth century London. The picturesque features of the city, and those that appeal especially to the artist, have been given much prominence. From this point of view even the London fog has its apologists and eulogists.

A wonderfully compact, useful, and well-written handbook is "France" by Pierre Foncin, edited and translated by H. H. Kane (New York: International Publishing Company). This book was written especially for foreigners, and follows the programme of the Alliance Française, an association which devotes itself to encouraging the thorough study of the French language and literature, and to spreading abroad accurate and impartial knowledge of France and her people. Probably nowhere else can be found so good a description of the land and the people presented in so few pages.

Bishop Goodsell of the Methodist Episcopal Church has written some pleasing sketches of nature, supplemented by studies of human character, which he has brought together under the title, "Nature and Charac-

ter at Granite Bay" (New York: Eaton & Mains), it being understood that "Granite Bay" is the name selected to stand for a certain nook on the shore of Long Island Sound, less than one hundred miles from New York City.

"New England and Its Neighbors" (Macmillan) is the title of Mr. Clifton Johnson's new volume of pen-and-camera pictures. This writer's method of combining authorship and photography has worked out so happily in his descriptions of country life in foreign lands that he has ventured to try the same method nearer home. In the new book there are capital descriptions of "Midwinter in Valley Forge," "A Ruin Beside Lake Champlain," "The Home of Fenimore Cooper," "A Historic Town in Connecticut" (Saybrook), "A Jaunt on Long Island," "A Canal-Boat Voyage on the Hudson," and various other scenes and incidents, all of which serve as a background, or setting, for Mr. Johnson's clever delineation of Yankee traits and characteristics. It is distinctively a book of rural life.

#### SOCIOLOGY AND POLITICS.

The latest publication of the American Economic Association (Macmillan) is a monograph on "The Negro in Africa and America," by Joseph A. Tillinghast. Some interesting facts regarding the origin and purpose of this study are brought out in a brief introduction contributed by Prof. Walter F. Willcox, of Cornell University. The monograph is the work of a Southern white man, the son of a slaveholder, who has pursued his work at Cornell, utilizing for the purpose a library "the nucleus of which in this field is a large anti-slavery collection." As a first step toward an understanding of negro character, Mr. Tillinghast has attempted this investigation into the hereditary influences, as well as the factor of environment, which have entered into the negro's history both in Africa and in America. The negro problem, as Mr. Tillinghast understands it, "how to reduce the divergence in character between the white and black populations." In this monograph Mr. Tillinghast has made a helpful contribution to our knowledge of the basic conditions of which this "problem" is an outgrowth.

In "The Leaven in a Great City" (Dodd, Mead & Co.) Mrs. Lillian W. Betts shows how the standard of living is continually rising in New York through the efforts of the crowded population of frugal and industrious poor. Mrs. Betts describes the attempts made by churches, and other altruistic organizations, to help the working people in maintaining these higher standards and in reaching out in many directions for better things. The numerous illustrations made from photographs of familiar New York scenes do much to enforce the lessons of the text.

In the series of "Handbooks of American Government" (Macmillan) Prof. William C. Morey contributes a compact little volume on "The Government of New York: Its History and Administration." Dr. Morey's survey includes the historical growth, the structural features, and the administrative work of the

State government. In the third section,—in his discussion of the government's work,—Dr. Morey endeavors to counteract the prevalent idea that the government is an end in itself, and not simply a means to a higher end. His purpose is to set forth what the government actually does: in the administration of justice, by defining and protecting individual rights; in the protection of the community, through the exercise of the police power; in the support given to public education; in the supervision of public charities and corrections; in the control of economic interests; and in the management of the public finances.

"School Administration and Municipal Government" is the title of a Columbia University monograph, by Frank Rollins, Ph.D. (Macmillan). Dr. Rollins discusses his subject under the following chapter-heads: "The Interest of the State in the School Administration of Cities;" "The School Board, or Board of Education;" "Administration of External or Business Affairs;" "Supervisory Administration;" "Administration of Instruction and Discipline;" and "The School and the Community." From his study of the situation, Dr. Rollins concludes that it is the duty of the State to regulate city school administration in the interests of the people; that small boards of education should be appointed by the mayor for long terms, with gradual change, large powers, and fixed responsibility; that the routine of business administration should be placed in the hands of paid experts; and that there should be a high standard of qualification for the supervising and teaching force, ascertained by exacting tests, to be followed by large authority and secure tenure of office.

Mr. Harold W. Bowman has written an account of "The Iowa Board of Control: A Centralized System of Administration for State Institutions" (Ann Arbor, Mich.: Michigan Political Science Association). This is a careful study of a plan for unifying the supervision of charitable, penal, and correctional institutions.

In his book on "The Economic Interpretation of History" (Macmillan), Prof. Edwin R. A. Seligman, of Columbia University, gives a succinct history of the theory that, since the existence of man depends upon his ability to sustain himself, the economic life is the fundamental condition of all life. Professor Seligman explains the genesis and development of this doctrine; studies some of the applications made by recent thinkers; examines objections; and estimates the true import and value of the theory for modern science.

A revised edition of Mr. Horace White's "Money and Banking" (Boston: Ginn & Co.) has recently appeared. The first edition of this valuable work was published seven years ago. In the present revision the author has expunged certain controversial and other matter that had become obsolete, and has practically rewritten the book, adding several new chapters. While the question of the standards is no longer a controverted one, there are many other phases of our monetary and banking systems which require lucid exposition. Perhaps no American writer possesses this gift in fuller measure than does Mr. White.

# INDEX TO PERIODICALS.

Unless otherwise specified, all references are to the October numbers of periodicals.  
For table of abbreviations, see last page.

- Accidents to Workingmen, E. van der Smitten, RGen.

**TERMS:** \$2.50 a year in advance; 25 cents a number. Foreign postage \$1.00 a year additional. Subscribers may remit to us by post-office or express money orders, or by bank checks, drafts, or registered letters. Money in letters is at senders' risk. Renew as early as possible, in order to avoid a break in the receipt of the numbers. Bookdealers, Postmasters, and Newsdealers receive subscriptions. (Subscriptions to the English REVIEW OF REVIEWS, which is edited and published by Mr. W. T. Stead in London, may be sent to this office, and orders for single copies can also be filled, at the price of \$2.50 for the yearly subscription, including postage, or 25 cents for single copies.) THE REVIEW OF REVIEWS CO., 13 Astor Place, New York City.

### VERESTCHAGIN'S "BATTLE OF SAN JUAN."

(The painting recently completed by the celebrated Russian painter Verestchagin, and put on view in New York for the first time in the latter part of November. The painting was done with the aid of President Roosevelt's criticism and information. It is regarded as one of the most important works of the famous painter.)

# THE AMERICAN MONTHLY

## *Review of Reviews.*

VOL. XXVI.

NEW YORK, DECEMBER, 1902.

No. 6.

### THE PROGRESS OF THE WORLD.

*Our Slow  
Wheels of  
Government.*

The Fifty-seventh Congress of the United States assembles in Washington, on December 1, for its concluding session. Its official term ends on March 4, 1903. The Congress which was elected last month will not come together for an entire year, unless it should be called to meet in extra session some time between March 4 and next December. In no other country does a radical change of sentiment, when expressed at the polls, take so long to affect the governing machinery. If there had been an overwhelming Democratic victory last month, the newly elected House of Representatives could not have passed a tariff-revision bill, or any other measure of importance, until some time in the early part of the year 1904. Furthermore, the Democrats in such case could scarcely have obtained control of the Senate until two years more had elapsed, and they could in no case have obtained control of the Presidential office and the Executive Government until March, 1905. Thus, if the people of the United States had deliberately made up their minds, in 1902, that the Republicans had been in power long enough, and that the Democrats ought to have a chance to carry on the affairs of the country for a while, there would have been required at least three, and probably four, years in which to give that determination its full effect. What we should need three or four years to accomplish, our British friends, under their constitution, could bring about in three or four weeks. Both systems have their merits and their shortcomings.

*Swifter  
Mechanism  
of States  
and Cities*

It is to be remembered that the greater part of the domestic legislation actually affecting the people of the United States is the work of our State governments; and although, with the exception of New York and two or three other States, the legislatures ordinarily meet only once in two years, this meeting always comes soon after the elec-

tion. Thus, practically all of the legislatures which were chosen last month (and there were legislative elections in many States) will be in session and at work within two months after the date of the election. Questions of State government entered to no small extent into the electoral campaigns of the present year; and with our election of our State legislatures, governors and other State officers, mayors and municipal officials, county officers, school boards, local and State judges, and so on, the American citizen is not without opportunity to overhaul pretty quickly a large range of governmental mechanism.

*The House  
Fairly  
Responsive.*

As for the machinery of the federal Government, it is probably well for us that our numerous checks and balances, and our highly deliberate processes, tend to steadiness. Few of the things that belong to national policy are of a sort that demand swift response to popular judgment. Our Constitution, upon the whole, works exceedingly well, and there will have to be a far more widespread dissatisfaction than exists at present before it can be changed even in respect to a few details. But probably, if it were to be done over again, there are not many people who would favor the present delay in calling together a newly elected Congress. Most people would have the new Congressmen meet a year earlier than now. Since, however, the reapportionment every ten years keeps the seats in the House of Representatives fairly distributed among the different sections, States, and population elements, the members are acquainted with popular sentiment, and usually as responsive to it as could be expected. This year, the election does not show any marked change of public opinion, and the outgoing Congress can do its winter's business, which will be varied and important, with a feeling that it has been sustained in an appeal to the country. It will know what the people expect of it.

ence to the question in their platform. We hear from the Democrats many references in terms of glittering generality to their party principles, and it is not always easy to find out just what they really have in mind as fundamentally distinguishing them from the Republican party. But we think they might fairly claim a higher faith than the party now in power in the good sense and wisdom of the plain people, and particularly in the superior usefulness of a direct resort to the ballot box.

*The States  
and Their  
Senate Seats.*

Another difficult problem that relates to the United States Senate has to do with the equal representation of growingly unequal States. As a condition upon which to get the Constitution adopted at all it was necessary, in the convention of 1787, to remove the opposition of small States by recognizing the principle of equal State sovereignty. And so the Senate was shaped somewhat on the analogy of a congress of ambassadors. However true it may have been that the Union as originally formed was a federation of separate States, it is far less true of the country as it stands to-day. Two-thirds of the existing States never had any rights at all of separate sovereignty, but were parts of the common national domain, rather carelessly and unscientifically divided off into administrative provinces called by us Territories, and then singly or in groups erected into States, and admitted on equal terms to participation in the federal Government. The earlier admissions have almost invariably been justified by subsequent results, this being particularly true of the great series of States lying in the Mississippi Valley. Texas and California were above ordinary rules. Each was an imperial acquisition, and there could be no question about prompt admission to statehood, and about the moral, as well as the legal, title of each to equal rank in the United States Senate.

*Recent  
Admissions  
to the Union.*

But the later admission of a number of States lying on either side of the Rocky Mountain zone was imprudent, because experimental. There was a chance, to be sure, that these great areas would acquire population rapidly, and become the actual equals of Mississippi Valley and Eastern States. But since the scattered inhabitants of these areas were comfortable and well off under their territorial governments, there was no proper reason for making haste to admit them to the Union. Most of the undue and undignified precipitancy that was shown was the result of supposed political necessity and sheer moral weakness in the Republican party. The party had its lesson

when those new States deserted it, adopted free silver as their one idea in politics and government, and with their disproportionate vote in the United States Senate, kept the country on the anxious seat for several years. Ohio has today the population of a hundred Nevadas, and New York will soon have the population of two hundred. Tiny Rhode Island has ten times the population of Nevada. Unassuming little New

HON. REED SMOOT, OF UTAH.

(The Mormon apostle who will become a United States Senator.)

Jersey has more than twenty times the population of Wyoming, and Massachusetts has more than thirty times as many people. If one American citizen were as good as another for purposes of representation in the United States Senate, Idaho's two Senators ought to be offset by no less than eighty from Pennsylvania, and more than ninety from New York.

*Some Useful  
Comparisons.*

There were ample reasons of a different sort why Utah should not have been admitted with its present boundaries seven years ago; yet its deficiency of population alone gave reason enough why it should have been kept on the waiting list for a good while to come, inasmuch as it has not even at this moment one-sixth of the average population of the forty-five States of the Union. To put it differently, the average citizen of the United States, in admitting a State like Utah, so far as the Senate is concerned, waives in favor of the Rocky Mountain man five-sixths of his own representation. Montana still has population enough for only one member of the House

*As to the Senate.* A more difficult problem is that of keeping the United States Senate equally in touch with national opinion and duly responsive. The difficulties arise from several considerations. One of these is the secondary election of Senators. The two seats in the Senate for each State have come to be the most highly coveted prizes of success in American public life. The Constitution directs that Senators shall be chosen by the State legislatures. The candidacy of ambitious and powerful men for seats in the Senate does not, as a rule, await the assembling of the State lawmaking bodies. Since the legislatures have to choose the Senators, the would-be Senators make it their business to choose the legislatures. The whole public life of not a few of our States within the past few years has been demoralized by the struggle for seats in the Senate at Washington. This clause in the Constitution, which specifies that the Senators shall be chosen by the legislatures of the States, has abundantly proven itself an unwise and improper restriction. The States should have been left to choose their Senators as they like. Some States for a long time,

in that case, might have preferred the present plan of election by the two branches of the legislature; but most of the States, and in our opinion all of them,—as the result of an unrestricted opportunity to test different methods,—would have come at last to the plan of direct popular election of Senators.

*Direct Election of Senators.* Every year brings fresh confirmation of the desirability of such a change, and upon few subjects are the people of the United States so nearly agreed. On a question of this kind the one set of men wholly incapable of expressing a wise or valuable judgment are the Senators themselves, who are the beneficiaries of the existing system. The members of the other House, on the other hand, have no reason for expressing a biased judgment; and when they vote,—as they have done, with entire, or practical, unanimity,—in favor of an amendment to the Constitution allowing the States to elect their Senators by popular vote, nothing could be in more shockingly bad taste than the determination of Senators themselves to prevent the question from coming before the States for an expression of final judgment. It is not necessary, of course, to change the existing system in those States which prefer to keep it; but liberty ought to be given to every State to elect its Senators by direct vote, as it elects its governor, if it so chooses. Delaware remains today without any representation in the Senate at all, as the result of a legislative deadlock produced by the aggressive determination of one rich man to fight his way into the Upper House of Congress.

*As a Possible Party Issue.* In many States it has become plain that the legislatures are rendered less fit instruments for their important lawmaking, financial, and administrative duties by reason of the fact that in at least two out of every three of their biennial sessions they must subordinate all other business to the struggle for the choice of a United States Senator. If the Republican party will not respond willingly to what is not merely a popular whim, but an intelligent and profound conviction, the Democrats will do well to make a party issue out of this question of the election of Senators. They have already done it nominally, and they should follow up the proposition as a distinctive party tenet. In their last national party platform they declared in favor of "an amendment to the federal Constitution providing for the election of United States Senators by direct vote of the people." The Republicans, on the other hand, omitted all refer-

ence to the question in their platform. We hear from the Democrats many references in terms of glittering generality to their party principles, and it is not always easy to find out just what they really have in mind as fundamentally distinguishing them from the Republican party. But we think they might fairly claim a higher faith than the party now in power in the good sense and wisdom of the plain people, and particularly in the superior usefulness of a direct resort to the ballot box.

*The States  
and Their  
Senate Seats.*

Another difficult problem that relates to the United States Senate has to do with the equal representation of growingly unequal States. As a condition upon which to get the Constitution adopted at all it was necessary, in the convention of 1787, to remove the opposition of small States by recognizing the principle of equal State sovereignty. And so the Senate was shaped somewhat on the analogy of a congress of ambassadors. However true it may have been that the Union as originally formed was a federation of separate States, it is far less true of the country as it stands to-day. Two-thirds of the existing States never had any rights at all of separate sovereignty, but were parts of the common national domain, rather carelessly and unscientifically divided off into administrative provinces called by us Territories, and then singly or in groups erected into States, and admitted on equal terms to participation in the federal Government. The earlier admissions have almost invariably been justified by subsequent results, this being particularly true of the great series of States lying in the Mississippi Valley. Texas and California were above ordinary rules. Each was an imperial acquisition, and there could be no question about prompt admission to statehood, and about the moral, as well as the legal, title of each to equal rank in the United States Senate.

*Recent  
Admissions  
to the Union.*

But the later admission of a number of States lying on either side of the Rocky Mountain zone was imprudent, because experimental. There was a chance, to be sure, that these great areas would acquire population rapidly, and become the actual equals of Mississippi Valley and Eastern States. But since the scattered inhabitants of these areas were comfortable and well off under their territorial governments, there was no proper reason for making haste to admit them to the Union. Most of the undue and undignified precipitancy that was shown was the result of supposed political necessity and sheer moral weakness in the Republican party. The party had its lesson

when those new States deserted it, adopted free silver as their one idea in politics and government, and with their disproportionate vote in the United States Senate, kept the country on the anxious seat for several years. (The Mormon apostle who will become a United States Senator.)

Jersey has more than twenty times the population of Wyoming, and Massachusetts has more than thirty times as many people. If one American citizen were as good as another for purposes of representation in the United States Senate, Idaho's two Senators ought to be offset by no less than eighty from Pennsylvania, and more than ninety from New York.

*Some Useful  
Comparisons.*

There were ample reasons of a different sort why Utah should not have been admitted with its present boundaries seven years ago; yet its deficiency of population alone gave reason enough why it should have been kept on the waiting list for a good while to come, inasmuch as it has not even at this moment one-sixth of the average population of the forty-five States of the Union. To put it differently, the average citizen of the United States, in admitting a State like Utah, so far as the Senate is concerned, waives in favor of the Rocky Mountain man five-sixths of his own representation. Montana still has population enough for only one member of the House

FOUR REPUBLICAN GOVERNORS-ELECT OF NEW NORTHWESTERN STATES.

(All but Mr. Morrison are reelected.)

of Representatives in the newly elected Congress, while Texas has gained three members in a decade, and is now to have sixteen seats. Montana's one Representative for the coming ten years will meet Texas' sixteen, and New York's thirty-seven; but Montana counts for exactly as much in the Senate as Texas or New York. Experience thus far has not justified the division of Dakota into two States. If admitted at all, Dakota should have come in as one State, although there might have been an understanding that if it were so desired by the people themselves, a division into two States might take effect at that future time when each State thus to be formed should have the average population of the other members of the Union.

*Areas and  
Populations.*

For example, the two Dakotas, taken together, have now about 700,000 people. North Dakota has a population equivalent to one-fifth of the average of all the States, and South Dakota's people are about one-fourth as many as those of the average State. Texas, on the other hand, gets along very well as a single State with an area almost twice as great as that of the Dakotas combined. Washington and Oregon might well have been united, —again with the understanding that if they so desired they should constitute two States at such a time in the future as they had reached the average development of their sister commonwealths. Montana, Wyoming, and Idaho should have been kept in the territorial stage for another decade, and then should have been admitted as one large State. Taken together, they have a population of about 500,000 in an area somewhat exceeding 300,000 square miles. Texas already a population of more than 3,000,000 in an

area somewhat less than 300,000 square miles. With its smaller area, Texas gained more than 813,000 people in the last decade, while with their considerably larger area this group of three States—Montana, Wyoming, and Idaho—together added only 220,000. Little New Jersey alone, meanwhile, had added nearly 440,000 in the same period, while Minnesota had added 450,000. These new Rocky Mountain States have not in rapidity of growth justified those glowing promises made for them at the time of their admission twelve and thirteen years ago. The two Dakotas, Montana, and Washington, were admitted in November, 1889, while Idaho and Wyoming won their statehood in the next year.

*Utah as the  
Latest Mis-  
take.*

It is, of course, the merest nonsense to say that presentation of these plain facts involves any unfriendliness toward the States thus mentioned. The land speculators and ambitious politicians of those Territories, rather than the ordinary citizens, were the people who urged what they called their "claims" to statehood, and they are not to be censured for presenting their case to the best of their ability. All fault-finding should be reserved for the statesmen at Washington, who, for immediate party reasons, conferred the irrevocable rank and authority of statehood upon mere casual divisions of the public domain which had scarcely begun to grow into any organic unity as bodies politic. More recently, at the beginning of 1896, the Territory of Utah was admitted. Utah, as a Mormon center, had indeed become a distinct social and political organism; but its population was too far below the average in numbers, and its civilization was too defective in important respects, to justify its

being made one of the system of States. It should have been kept indefinitely in the territorial rank, with a view to annexing it ultimately to Nevada. But the merits of the case were ignored.

*The Pending  
"Omnibus  
Bill."*

This whole question of the Territories and their admission now comes up in the most concrete and urgent form, because the House of Representatives last winter passed an "omnibus bill" to admit to the Union the Territories of Oklahoma, New Mexico, and Arizona, while the question was only prevented from being acted upon in the Senate by a promise which Senator Quay, of Pennsylvania, was in position to exact, that the measure should be given a leading place on the calendar of the new session, and should be taken up in the very first week of December. Both parties inserted in their last national platforms planks favoring the admission of these three Territories. Undoubtedly, the Democrats are deliberately committed to the policy. The Dakotas and other new Northwestern States were admitted by the Republicans with distinct reference to the possible need of their electoral votes in the Presidential election of 1892. The Democrats have ever since demanded the admission of Arizona and New Mexico on the theory of party compensation, believing, as they do, that in the long run these Southwestern sisters would be Democratic both in the Senate and in the Electoral College.

*As Regards  
Oklahoma.*

Oklahoma's "claims" are based upon the really remarkable growth of a very good piece of farming country. Oklahoma would, in the long run, stand with Missouri, Arkansas, and Texas in the Democratic column. It has been carved with accidental and unscientific boundary lines out of the Western

part of the old Indian Territory, through the extinction of Indian titles and the successive opening up of several tribal reservations. Oklahoma has an area of 38,958 square miles. This includes 5,000 or 6,000 square miles of the long, narrow "No-man's Land" strip, which ought to be added to Texas, as a glance at the map will readily enough show. With that strip detached, and the 31,000 square miles of the present Indian Territory added, Oklahoma would have permanent and scientific boundaries, and a suitable size and shape. It should remain, by all means, in the territorial condition until the process of opening up what remains of the Indian Territory shall have been completed. Oklahoma, as it now exists, merely represents a temporary internal division of the Indian Territory made for the purpose of providing a way to govern that portion which was fully opened up to white settlement. When the full dimensions of the old Indian Territory are restored, the whole region thrown open, and all conditions duly and deliberately considered, the time will have come for taking up seriously the question of admission under the name of Oklahoma, or any other name that the people may choose and Congress may accept. The facts are too plain to be denied.

*Consider  
Oklahoma's  
Future.*

To admit Oklahoma now, with its irregular and accidental boundaries,—and its area only half that of the neighboring States of Kansas, Missouri, and Arkansas,—would be a scandalously unstatesmanlike thing for Congress to do. With all party considerations laid aside, and with patient, intelligent, and honest study given to the question, Congress could not possibly at this time admit Oklahoma. Furthermore, the best people of Oklahoma know that this is true, and that the present

statehood movement is one of boomers and politicians for merely local and temporary ends. The admission of new States to our federal Union is one that involves history of an important sense for centuries to come. Shame upon alleged statesmen at Washington who will not allow such a question to come up for dignified and mature consideration, but who try to settle it upon snap votes, in utter disregard of all the motives that should actuate the national lawmaking body. Oklahoma is making admirable progress as a far

MAP TO SHOW OKLAHOMA'S ABSURD BOUNDARIES.

community. Its people are quite like the people of the farming States lying to the north and east of it, and when its boundaries have been fixed as they ought to be, with the opening of the Indian country completed, it will be welcomed by everybody as a splendid accession to the Union,—a State which will soon take fine rank, and rapidly forge ahead to a position where it will have almost or quite the average population of the rest of the Union.

*Let the President Consider His Geography.*

If Congress shall vote to admit it now, in the wrong shape and at the wrong time, let us hope that President Roosevelt will intervene with a prompt veto. Such an action would be commended by the whole country: for every sensible citizen would appreciate the reasons, and no man would believe in his heart that the President was in the slightest degree affected by the question whether or not Oklahoma, at the next Presidential election, would stand in the Republican or the Democratic column. If participating in the Presidential election, it would in all probability give its vote for Roosevelt; but that is an argument that cannot properly be taken into account. It is a question of our permanent political geography, and of Oklahoma's own best destiny and true glory as a State.

*Arizona and New Mexico.*

As for Arizona and New Mexico, they certainly are not deficient in area. Arizona has nearly 114,000 square miles, and New Mexico nearly 123,000. Taken together, however, they are considerably smaller than Texas, and they have nothing like the prospect of population growth that Oklahoma possesses. At the last census Arizona had nearly 123,000 people, and New Mexico just over 195,000. At its present rate of growth it will take New Mexico several hundred years to catch up with the average population of the existing States. Arizona has only a little more than half the population of an ordinary Congressional district. Oklahoma, with its boundaries properly extended to include the whole of the Indian Territory, would have already a good deal more than twice the population of

both Arizona and New Mexico. According to the latest available statistics, Arizona has 16,500 pupils enrolled in common schools, as against more than 1,200,000 in the State of New York, and more than 1,150,000 in the State of Pennsylvania. Yet Senator Quay, of Pennsylvania, proposes to give the adjacent States of Arizona and New Mexico the same voting power in the United States Senate as that which is held by the adjacent States of New York and Pennsylvania. We have no reason to underestimate all that is excellent in the Spanish-speaking element which forms so large a part of the population of New Mexico; but no one will pretend that this population, largely illiterate and scarcely at all acquainted with our principles and methods of government, is at present fit for statehood.

*Population Conditions.*

Of all the States and Territories in the Union, New Mexico and Arizona have the largest proportion of inhabitants who cannot speak English. The current language of the masses in New Mexico is Spanish, and even the children who learn English in the schools revert to the parent language in later years. New Mexico, also, leads the list of States and Territories, by a large percentage, as respects the proportion of illiteracy among the native white population. Furthermore, in all the inhabited spots of Arizona and New Mexico male population is greatly in excess of female, showing wholly unsettled conditions of society. It

MAP TO SHOW INHABITED PARTS OF ARIZONA AND NEW MEXICO.

(Outside of the shaded areas, the two Territories are practically without population. These inhabited parts have the low average of only from two to six per square mile, excepting the more heavily-shaded districts around the capitals, Phoenix and Santa Fé, in which the population averages, according to the census, from six to eighteen per square mile.)

means mining camps and cowboys, rather than families and settled communities. Taking both Territories, it is only in the Santa Fé neighborhood of northern New Mexico that the males are not in very great excess. The irrigation developments of the next ten or twenty years, let us hope, will greatly change all this. Our map on the preceding page, derived from a volume of the new census, shows the limited areas of inhabitancy in Arizona and New Mexico, like oases in a desert, as compared with great, desolate stretches of virtually unpeopled country.

*The Senate  
Committee on  
the Ground.*

Senator Beveridge, of Indiana, chairman of the Senate Committee on Territories, accompanied by several other Senators, went last month, as a sub-committee, to visit these Southwestern Territories. They did not go on a mere junketing expedition, but with a view to studying the situation seriously and carefully. At the very beginning of the new session Senator Beveridge's committee will hold sessions at Washington, and will be prepared to entertain facts, opinions, and arguments which

qualified people may wish to present on the question of admission. We understand that it will be the disposition of this committee to listen to those who object to admission, as well as to those who favor it. And since the advocates of admission will not fail to push their cause with all possible energy and diligence, it cannot be wrong for those who are opposed to admission to say so with equal frankness. For our part, we wish it to be as widely known as possible that we think the admission of those Territories at the present time is without justification from the larger point of view of the welfare of the United States. Even if Senator Beveridge, with some members of his committee on Territories, should entertain views similar to those we have expressed, it would

nevertheless be quite impossible for the chairman and the committee to prevent action in the Senate unless supported by newspapers and citizens who believe that such issues should be decided upon their true merits, and quite apart from private scheming, political log-rolling, and party exigencies. The work of Mr. Beveridge's committee in the Southwest last month was businesslike and thorough beyond all precedents.

SENATOR BEVERIDGE, OF INDIANA.

(Last month investigating conditions in the Territories of the Southwest.)

*The  
Meaning of  
the Elections.* The principal results of the elections last month show that the period of Republican dominance in the affairs of the nation is reasonably likely to continue at least until the year 1908. This may not prove to be the case, inasmuch as events may greatly accelerate the recovery of the Democratic party, so that it may make a formidable showing two years hence. But, in so far as this year's election may be taken as a prognostic, it points to the election of Mr. Roosevelt as President two years hence. According to normal precedents, a strong reaction was due last month. That the reaction as a whole was only slight,

and in some States not visible at all, is regarded by authorities in both parties as due to the confidence of the people in President Roosevelt more than to any other factor. Not a single State was completely carried by the Democrats last month outside of the former slaveholding group, with the sole exception of Nevada, where results never have any outside significance. In addition to carrying all the Northern States except Nevada, the Republicans also prevailed in Delaware, Maryland, and West Virginia. Thirty-one States were carried by the Republicans, and fourteen by the Democrats. If the Presidency of the United States were to be determined by last month's voting, it has been estimated that the Republican candidate would have 322 electoral votes, as against 154 for the Democratic cand

From the *Harper*.

GOVERNOR-ELECT PARDEE, OF CALIFORNIA, AND HIS INTERESTING FAMILY.

date, the Republican majority being 168, or considerably larger than McKinley's majority over Bryan. Of the twenty-two governors of States elected on November 4, all but six are Republicans. Apart from Nevada, the only Northern State electing a Democrat for chief executive was Rhode Island, although in that State the Republicans have the Legislature, and carried more than one-half of the general State ticket. A list of the governors elected will be found in our "Record of Current Events" department.

*Republican  
Losses in  
Congress.*

The Republicans, however, lost more seats in the House of Representatives than they gained, and their majority in the next Congress will be reduced to about thirty. Nearly all of the Republican losses of Congressional seats occurred in urban districts. New York had gained three seats by the new apportionment, due chiefly to the rapid growth of New York City. The great metropolitan district happened last month to go Democratic by an overwhelming majority, and this gives the Democrats several additional members of the next Congress. Likewise, the Democrats gained a Boston district, a densely-populated Rhode Island district, the *Scranton* district of Pennsylvania, a *Baltimore* district which had previously been Repub-

lican, the Detroit district in Michigan, the Omaha district in Nebraska, the Minneapolis district in Minnesota, one in Wisconsin, one in Iowa, and two in California, including the San Francisco district now represented by the well-known chairman of the Committee on Post Offices, Mr. Loud. With few exceptions, therefore, the radical changes at the polls have been in the cities rather than in the country districts, and these changes are chiefly significant as showing tendencies. They point to a greatly increased percentage of independent voting on the part of populations that read the daily newspapers, and that, in recent years especially, have come to care more for actual things than for the mere traditions that go with the names Republican and Democratic.

*The Senate  
Unaffected.*

Last month's elections will not affect relative party strength in the Senate. The Republicans will lose three or four seats as the result of the election of new State legislatures, and will gain an equivalent number. Thus, a nominal Republican seat in Maryland will be filled by the return of a strong Democratic leader, Mr. Gorman. The North Carolina and Kentucky seats now held by Senators Pritchard and Deboe revert naturally to the Democrats, Mr. McCreary having already

been named as Senator from the latter State. In Nevada, the distinguished Congressman, Mr. Newland, who has won great prestige by reason of the part he played in securing for the West the passage of the irrigation bill, is to have the seat in the Senate for a long time past held by Mr. Jones. As against these four losses, the Republicans will gain Senators from the following four States.—Kansas, Utah, Idaho, and Washington. Senator Harris, of Kansas, owed his seat to a successful coalition of Democrats and Populists six years ago. The Republicans seem now to have fully regained control of Kansas, and Senator Burton will have a Republican colleague after March 4. In Utah, a Republican victory will give the Senatorial seat now occupied by Mr. Rawlins to an interesting and vigorous personality. Mr. Reed Smoot, who is known not only as a successful business man of large and varied interests, but also as an avowed Mormon and an apostle of that church. It is distinctly affirmed that he is not, and never has been, a polygamist. Idaho, which had left the Republican column on the silver question, has now returned, and Senator Heitfeld will give place to a successor who will vote with the majority. In like manner Senator Turner, of Washington, who represented the fusion movement, will give way to a Republican.

*Rivalries for  
Senate Seats.*

It does not follow that Senatorial seats will be easily filled, even where party victories have been emphatic. Thus, the Republicans have again carried the Delaware Legislature by a good majority; but, as our readers will remember, the party has long been divided into intensely hostile factions, with the result that during the present Congress

both Senatorial seats from Delaware have been vacant, while in the previous Congress only one was filled. For many years a candidate named Addicks, with a great fortune made in the exploitation of gas companies, has been trying, by what he would probably call "modern methods," to capture the little State of Delaware, in order to obtain the coveted prize of the United States Senatorship. Addicks, if we mistake not, is a Massachusetts man, who seems to have chosen Delaware as the field of his political operations after looking the country over and deciding that this little State offered the best opening for a man of means and energy who desires to reach the United States Senate as the crowning reward of a life of endeavor.

On two or three former occasions *Mr. Addicks and Delaware.* Mr. Addicks has come within three or four votes in the Legislature of gaining the desired end. He has now twenty-one legislators, and he will need six or seven more to control the situation. The so-called Republican "regulars" hold eight seats, with one or two of them regarded as doubtful. If Addicks could win over four or five votes from the Democratic minority, he would be elected; but Democratic sentiment in Delaware hitherto has been so strongly against him that legislators have been deterred by well-grounded fears of personal violence. The situation is not merely a local one. It is not as if Addicks aimed at the governorship of Delaware. A Senator help to make the laws and shape the policies of the great nation. There are no Addicks Republicans worth speaking of outside of the 10,000, 12,000 voters,—mostly poor and ignorant,—Delaware who have gradually been shaped in

FOUR DEMOCRATIC GOVERNORS CHOSEN LAST MONTH.

a compact and inalienable Addicks following. The situation is too notorious to be ignored. There is no Addicks public opinion in Delaware, or anywhere else, that is entitled to a shred of respect. The minority of regular Republicans in Delaware, who have long refused to compromise and take one Senatorial seat at the price of allowing Addicks to have the other, are deserving of the outspoken support of all high-minded men, Republicans and Democrats alike, in every part of the country. Meanwhile, the political life and legislative work of the State of Delaware must remain distracted and demoralized.

*In Colorado,  
Oregon, and  
Idaho.*

In the Upper House of the Colorado Legislature there are enough hold-over Senators to keep a clear majority in favor of the return of Senator Teller; but the other branch, newly elected, is decisively Republican. If the Republicans have their way, Senator Teller will be retired and ex-Senator Wolcott will reappear at Washington. The situation is likely to be a severely contested one. There has been a marvelous change in Colorado political sentiment since Wolcott was condemned, in 1896, for supporting McKinley, while Teller was almost unanimously extolled as the hero of the State for going over to Bryan at that time. In Oregon the Republicans are overwhelmingly in control of both branches of the Legislature, but are almost equally divided among themselves into two factions. There bids fair to be some difficulty, therefore, in filling the seat that will be vacated by Senator Joseph Simon. The Idaho Republican Legislature will also, according to reports, have a Senatorial fight on its hands.

*Some  
Foregone  
Conclusions.*

In New York, Senator Thomas C. Platt has said that he will be a candidate for reelection, while Governor Odell and the party leaders have also said that Senator Platt would meet with no opposition. In Illinois, Republican success means that Congressman Hopkins will succeed Senator Mason. In spite of factional trouble in Wisconsin, it may be regarded as almost certain that Senator Spooner will be reelected. In Michigan it is

JOHN E. ADDICKS,

(Who seeks to represent Delaware in the Senate.)

also quite certain that General Alger will be chosen to fill the seat made vacant by the death of Senator McMillan. He will, in any case, appear in the Senate during this coming session as temporarily appointed by the governor. The Vermont Legislature, which assembles early, met in October, and it has already reelected Senator Dillingham. It seems to be expected that William J. Stone will succeed Senator Vest, of Missouri, that State being almost alone in its pronounced adherence to the Bryan wing of the Democracy. Speaker Henderson will continue to preside over the House during the present term, while the question who is to be Speaker in the next Congress will be a very absorbing one at Washington. Many candidates have appeared, Mr. Cannon, of Illinois, still being clearly in the lead. There is nothing in the Constitution or laws to prevent the House from going outside its own membership to select a Speaker, and this idea was discussed last month; but there is no reason to suppose that it will be seriously considered for a moment. The Republican candidate was successful in carrying Speaker Henderson's district, as against the vigorous Democratic canvass made by ex-Governor Boies. In Minnesota, on the other hand, ex-Governor Lind carried the usually Republican Minneapolis district against the present incumbent, Hon. Loren Fletcher. We have already alluded to the defeat of Mr. Mercer in the Omaha district, Mr. Corliss in the Detroit district, and Mr. Loud in the San Francisco district, all of these men being prominent members of the present House.

*The Drift  
Within Parties.*

Where manhood is virile, and people think for themselves, it is impossible to keep political life running in the grooves of old parties. That is why Addicks, in capturing a majority of the dominant party in Delaware, does not necessarily win his case. In other States, as well as in Delaware, the struggle between party factions is often more intense and more significant than the opposition between the parties themselves. Thus it is significant to note this year that in parts of the East there has been a very large increase in the vote of the Socialist Labor party. The Bryan support is disintegrating, a part of it going over to the extreme Socialistic movement, and most of it returning to the regular Democratic camp. Similarly, some of the old-time Democrats who voted the Republican ticket temporarily as a protest against Bryanism, are now calling themselves Roosevelt Republicans, while by far the greater part of them in this last election were working hard under the Democratic banner. There is comparatively little evidence of shift-

## FOUR SUCCESSFUL REPUBLICAN CANDIDATES FOR GOVERNORSHIPS.

ing and realignment among the Republicans, most of the troubles in the camp of the dominant party being of a local and personal nature, and not involving political principles to any great extent. The differences in Iowa over the question of tariff reform have not seemed to the country to be very radical. The election results would not indicate that Iowa is prepared to break away from the protectionist column; while, on the other hand, it is evident enough that the Hawkeye State would be glad to see the present tariff schedules a good deal modified.

*Local issues in Wisconsin.* The Wisconsin situation attracted a great deal of attention. Governor LaFollette will not be able to prevent Mr. Spooner's reelection to the Senate, while those opposed to the governor will scarcely be able any longer to prevent the adoption of a primary-election system and certain methods of taxing corporations to which Governor LaFollette stands pledged. The following quotations from a private correspondent probably represent the Wisconsin situation as fairly as any one observer could state it:

The reelection of Governor LaFollette by a majority, as compared with two years ago, cut down one-half, is nevertheless regarded as a substantial endorsement and victory. LaFollette's largest losses were in Madison and Dane County (where he lives), and this unfortunate fact is explained by those who love him by saying that the State capital is the storm center of the opposition to him, while those opposed to him say that those who know him best distrust his powers and suspect his motives. However, generally speaking, LaFollette is still very much on top in Wisconsin. He was confessedly "cut" by thousands of Republicans, including party leaders, who made no bones of the fact. This, of course, is unusual, and indicates that his propaganda is to an extent above, or at least outside, party lines. His champions talk much of him as the prime exponent of an

American movement against corporate power. They look to see him in the Senate later.

As for Spooner: The composition of the new Legislature is practically that of two years ago, the expected encroachments by the Democrats not being realized. They gained but two or three seats in the whole body of one hundred and thirty-three (Senate and Assembly). An easy majority is definitely pledged to return Spooner, and we look for this thing to come to pass. The chasm between Spooner and his lieutenants and LaFollette is permanent; and there is no question that the LaFollette inner circle would delight in an anti-Spooner *coup d'etat* in January next. Normally it would seem impossible, but so adroit are the LaFollette leaders, and so bitter their opposition to Spooner, that some train of circumstances may prevent his reelection. It is not likely; but seeing the State convention hypnotized and unhorsed by Governor LaFollette and his trusted few, nothing can longer surprise me in the Wisconsin political situation. The session of the Legislature will be devoted almost exclusively to tax reform and the primary elections. I expect that there will be dull, sodden opposition, but LaFollette will drag some achievement and prestige from it.

*The Political Revival in Chicago.*

A rather tangled Republican situation in Illinois seems to be improving by virtue of intelligent Republican reorganization in the great city of Chicago. The State gave a majority last month of over eighty thousand for the Republican ticket, and the city itself furnished perhaps one-sixth of this majority. However great the merits of the Republican State administration, it has not won a striking popularity. Republican victory in Illinois cannot be ascribed in considerable measure, as in some other Republican States, to fortunate local conditions. After enumerating the grounds of dissension among the Republicans of the State and of Cook County, a private correspondent, in explaining the situation last month, continues as follows:

vote and an honest count, by scores of thousands. The estimates privately given by well-informed men point to wholesale corruption in Philadelphia last month so appalling as to be almost beyond the belief of people elsewhere.

*The Election  
in New York.*

If Philadelphia's vast Republican majority represents venality, repeating, and ballot-box stuffing, nothing of that kind has been alleged with respect to the huge Democratic majority in the city of New York. This reached about 122,000. In the early evening of election day it seemed impossible that the State outside of New York City could roll up a Republican majority that would overcome Coler's enormous vote in the metropolis. It happened, however, that the State at large was as emphatically Republican as New York City was Democratic, and Governor Odell was reelected by a plurality of more than 10,000 votes. The political philosophers do not agree upon the reasons for the weakness of the Republican ticket among the voters of the great city; and although many have tried to charge it against the administration of Mayor Low, to our minds it is rather an indication,—as was the election of Mayor Low and the fusion ticket last year,—of the growing independence of the average New York voter. Mr. Coler, the Democratic candidate, was popular in his home city, and he was supported with particular fervor by newspapers like the *New York Journal* (which, by the way, is now renamed the *American*), that have the widest circulation among workingmen. The coal strike, which had produced great scarcity of fuel in the tenements of the metropolis, undoubtedly had far more political effect there than in the coal-fields of Pennsylvania. One of the lessons for the local Republican managers is to be learned from what our correspondent already quoted has said about party reorganization in Chicago. Except in a few districts, Republican organization in New York City is a farce. As for the Low administration, its worst fault seems to be that it does not provide sensations enough for a community that likes startling headlines. In most respects, New York City is well governed, prosperous, and fortunate.

HON. FRANK W. HIGGINS.  
(Elected Lieutenant-governor  
of New York.)

*A Broad  
Democratic  
Outlook.*

The great factor in the Democratic campaign in New York was ex-Senator David B. Hill. A New York correspondent of independent Democratic views writes to us as follows upon the Democratic outlook in New York and the country at large:

I feel confident that the result in New York State means the final elimination of Mr. Hill from any real importance in either State or national councils hereafter. The people of short memories have, curiously enough, considered him as a conservative since the Bryan 1900 episode, and incidentally that of Chicago in 1896; but, fortunately for good morals as well as better politics, his utterly useless and senseless acceptance, and even more absurd defense, of the coal plank has opened the eyes of very many.

I consider the Republican majority in Maryland to indicate that Mr. Gorman, who has never had any moral strength, cannot be considered a factor of great influence hereafter in the councils of the party, although, being Senator, I fancy he will be more of a factor than Mr. Hill. The return of the Populists so largely to the Republican camp in the far West will, I think, completely disrupt the alliance with the Southern Democrats, which has given Mr. Bryan his real strength heretofore.

I consider that the elimination of these three men and the influence that they represent, to some extent, means great good to the country at large in opening the way to a return of the Southern Democratic leaders to their former alliance with the Middle and Eastern States. This, I believe, would be very certain to follow any general recognition of one important man as standing for true democratic policy, which is essentially conservative, and for the rights of the people, which are rarely gained by radical action.

IT'S A ROUGH ROAD FOR DAVID B. HILL.  
From the *Inquirer* (Philadelphia).

If those dissensions had continued as they were a year ago, Cook County (Chicago) would have been lost by a large majority. That would have meant the loss of the Legislature, and perhaps of the State ticket. Last winter, a number of Republican leaders set out to find some means of improvement. A committee of ten was appointed for the Hyde Park wards of Chicago (the great Republican wards of the south side). It made a very careful and detailed study of the causes of dissatisfaction, and after much consideration, recommended a plan for the complete reorganization of the party in that territory. This plan involved the opening of the ward and precinct clubs to all Republican voters, definiteness of time and place for all caucuses and party elections, and provisions for publicity and fairness in the conduct of party matters. These recommendations, amounting to a complete revolution in party organization (in my ward, the Seventh, the Republican ward club formerly had about 700 members,—there are now nearly 6,000), were adopted with practical unanimity by all the different factions concerned, and had considerable influence in modifying similar evils in other parts of the county. The result was the practical union of the party, the nomination of a county ticket in the spring convention which was in every respect unexceptionable, and which won the respect of the independent newspapers and of all independent voters, and a considerable improvement in the quality of nominees for the State Legislature. In our part of the city, at least, these nominees were in every case beyond criticism, and in some cases were peculiarly strong.

At the election the Hyde Park wards gave a Republican majority of about ten thousand, instead of the scanty two or three thousand which we apprehended. I think that the work in the interest of Republican harmony was at least an important factor in the success this fall.

After all, however, the main cause of the general victory in this State was in the personality of President Roosevelt. From the first, those of us who were interested in the policy of the party this year made that a prominent issue, and insisted that the election should be a vote of confidence or of want of confidence in his administration. We held that as Roosevelt was not elected to the Presidency, but came to it under very distressing circumstances, and as this was the first general election since his accession, the question was whether the voters of Illinois should be counted among those who were satisfied with his administration. The result shows very plainly just what the people of Illinois think on the subject.

One of the most picturesque and striking features of last month's campaign, which in many other States was decidedly commonplace and apathetic, was the part taken by Mr. Tom L. Johnson,—mayor of Cleveland, Ohio, author of the Democratic State platform, and an acknowledged candidate for the next Presidential nomination. Mr. Johnson's Democratic canvass in Ohio resembled, in some respects, Mr. LaFollette's Republican canvass in Wisconsin. Mr. Johnson carried his own city of Cleveland, but the Republicans rolled up tremendous majorities at Cincinnati, in the

opposite corner of the State. This was due chiefly to the fact that John R. McLean,—owner of the Cincinnati *Enquirer*, and Johnson's rival for Democratic control and political honors in Ohio,—used his powerful influence and his great machine against the platform and the State ticket that Mr. Johnson had put in the field. Ohio went Republican by an average plurality of more than eighty thousand, this being a gain of 50 or 60 per cent. over the plurality of the last Presidential election. It must not be too readily assumed, however, that Mr. Johnson's powerful appeals for the taxation of the securities of railways and other corporations have not sown seed broadcast that will bear fruit in years to come. An intelligent and sincere private correspondent takes the ground, (1) that in the city of Cleveland, where Mr. Johnson had stated his case very fully and completely, the Democratic vote showed a great increase over that of a year ago; (2) that but for the Cincinnati defection, Mr. Bigelow, who headed the Democratic ticket as candidate for secretary of state, would have shown gains everywhere over Kilbourne, who was last year the Democratic candidate for governor; (3) that in most counties visited by Johnson there were gains over the Kilbourne vote; and (4) that it takes time to educate the people on such subjects as taxation, but that Mr. Johnson has been encouraged to work more vigorously than ever for such reforms, and particularly for better city government in Cleveland. It would appear also that Mr. Johnson would, in any case, prefer to come before the people as a Presidential candidate in 1908 rather than in 1904, believing that the ideas he represents will have gained far wider adherence in the next few years.

#### *Pennsylvania and the Strike.*

It had been expected that the great coal strike, directly affecting several hundred thousand voters in Pennsylvania, might have some marked bearing upon the election in that State,\*but it did not so turn out. There was a large Republican majority, aided materially by President Roosevelt's success in ending the strike. If it had not been ended, or if there had been a serious collision with the militia, results might possibly have been different. It happens that Judge Pennypacker was elected governor by a majority independent of that which the State's two large cities supplied. A trusted correspondent remarks that this was a fortunate circumstance, inasmuch as the irregularities in Philadelphia were never before so gross. We make no charges, because we have no knowledge of the facts. Yet it is commonly alleged that Philadelphia election returns ordinarily do not represent an honest

*Tom Johnson's Ohio Campaign.*

vote and an honest count, by scores of thousands. The estimates privately given by well-informed men point to wholesale corruption in Philadelphia last month so appalling as to be almost beyond the belief of people elsewhere.

*The Election  
in New York.*

If Philadelphia's vast Republican majority represents venality, repeating, and ballot-box stuffing, nothing of that kind has been alleged with respect to the huge Democratic majority in the city of New York. This reached about 122,000. HON. FRANK W. HIGGINS.  
(Elected Lieutenant-governor  
of New York.)

*A Broad  
Democratic  
Outlook.*

The great factor in the Democratic campaign in New York was ex-Senator David B. Hill. A New York correspondent of independent Democratic views writes to us as follows upon the Democratic outlook in New York and the country at large:

I feel confident that the result in New York State means the final elimination of Mr. Hill from any real importance in either State or national councils hereafter. The people of short memories have, curiously enough, considered him as a conservative since the Bryan 1900 episode, and incidentally that of Chicago in 1896; but, fortunately for good morals as well as better politics, his utterly useless and senseless acceptance, and even more absurd defense, of the coal plank has opened the eyes of very many.

I consider the Republican majority in Maryland to indicate that Mr. Gorman, who has never had any moral strength, cannot be considered a factor of great influence hereafter in the councils of the party, although, being Senator, I fancy he will be more of a factor than Mr. Hill. The return of the Populists so largely to the Republican camp in the far West will, I think, completely disrupt the alliance with the Southern Democrats, which has given Mr. Bryan his real strength heretofore.

I consider that the elimination of these three men and the influence that they represent, to some extent, means great good to the country at large in opening the way to a return of the Southern Democratic leaders to their former alliance with the Middle and Eastern States. This, I believe, would be very certain to follow any general recognition of one important man as standing for true democratic policy, which is essentially conservative, and for the rights of the people, which are rarely gained by radical action.

IT'S A ROUGH ROAD FOR DAVID B. HILL.  
From the *Inquirer* (Philadelphia).

*E. M. Shepard's Views.*

Mr. Edward M. Shepard, last year the Democratic candidate for the mayoralty of New York, and recognized as one of the ablest thinkers and foremost personalities in the party, summed up the election last month as showing three things, as follows :

First,—The tendency in the Northeastern States and in States of the Central West to return to the traditional doctrines of the Democratic party.

Second,—The dislike of the American people for anything which they deem reckless or revolutionary ; and

Third,—The powerful and even decisive influence of the independent sentiment not closely allied to either party.

Mr. Shepard finds intelligence, wisdom, and vigor now prevailing among New England Democrats, and believes that, "if they adhere to their present programme, that section of the Union will become Democratic." Mr. Shepard accounts for the situation in New York on the ground that "the metropolis shows much sooner than the country districts the trend of public opinion." Sympathizing with Tom L. Johnson's campaign, Mr. Shepard thinks, nevertheless, that his programme was theoretically in advance of public opinion ; and he also thinks the coal plank in New York similarly harmful to the Democratic party. Mr. Shepard puts tariff reform first in his programme, and he believes that if the Democratic party "be wise, if it avoid every suggestion of demagoguery or attempt to gain some immediate and merely factitious advantage, there is a large probability of success in 1904."

*The Southern Situation.*

The political situation in the South is interesting chiefly as it relates to three things : (1) the changing attitude of the Democratic party ; (2) the elimination of the negro vote, and (3) the attempt to form a white Republican party. A correspondent from Virginia says :

Undoubtedly the Democrats of Virginia are more closely united than they have been since 1896. This is due to the practical admission that the silver issue is dead, and the reappearance in the fold of men like Cleveland, Olney, and so on. The disfranchisement of the negro in Virginia will tend gradually to divide the State, which will be for the betterment of the whites and for the great advantage of the negro.

A well-informed North Carolina correspondent, noting the fact that "the negroes did not vote to any great extent," remarks of those who did : "Many voted the Democratic ticket for the first time in their lives." He goes on as follows : "The independent sentiment is growing ; there was more scratching than has ever been done in a State election here before. As a result, the machine will be afraid to put up any but good

men hereafter." Our correspondent believes that the business interests of North Carolina are demanding a higher order of ability and character in politics, and he adds that "the situation, on the whole, is better than it has been for years, and the prospect of honest and decent politics in the future is good."

*Alabama and the Negro Suffrage.*

The South itself is taking great interest in the effect in various States of the constitutional amendments and new statutes intended to eliminate, or largely diminish, the negro vote. In answer to our inquiries on this point, a correspondent in Alabama sends the following notes, which seem to us too interesting to be paraphrased or abridged :

As to the working of the suffrage provisions of the new constitution, we have had no chance to test anything except what is called the temporary plan. Under this plan all applicants who could satisfy the temporary registrars as to their fitness have been registered. Practically no white men have been barred out, and only about three thousand negroes have been registered in the State. The Republicans have gone the Democrats one better (or one worse), and have cut out of the convention of the party all negroes of any kind, so that the Republicans are in the position of refusing to give political recognition to even those negroes who have met the test of the most rigorous Democratic scrutiny. The Republican party had a great opportunity to stand for a principle, but they have now left the State in the position of having no party of protest.

The permanent-suffrage plan contemplated in the constitution, which goes into effect next year, puts the suffrage test evenly and squarely upon both races. The present probabilities are that, as there is no party of protest, the Legislature will put the registration of voters again into the hands of arbitrary boards, who will defeat the intention of the constitution by the way in which discretion is exercised.

But perhaps I am not altogether the right one to interpret the provisions of the new constitution, as I openly opposed the laxity of its attitude toward the vagrant, venal, and illiterate elements in our white population. We will have no strong and constructive political leadership so long as our leadership is bound, as to a body of death, by the ignorant and venal white vote. So long as these men constitute so large a fraction of our voters they will hold the balance of power, and while they hold the balance there is no hope for a campaign of vital ideas and constructive policies.

This is well illustrated by the latest vote for governor. Jelks, the Democratic nominee, received a vote of 65,000. His plurality was 42,000, the Republican vote being 22,500. You will thus see that the total vote cast in the State was approximately 88,000. Yet the total registered vote of the State was about 190,000.

The vote, even in the primaries, where Governor Jelks had the vigorous opposition of ex-Governor Johnston, was but 90,000. The large unvoting mass is the real burden and terror of our Democratic leadership. When constructive proposals are suggested, there is always the fear that these illiterate voters will desert the party again, as they did under Kolb in the great Populist movement of ten years ago.

*The Texas  
Amendment.*

The Democratic candidate for the governorship of Texas was, as usual, elected by a large majority. The chief interest in the Texas election, however, centered in the vote upon an amendment to the State constitution. This amendment was carried, and is self-enacting. It makes the payment of a poll tax by February 1 of each year a condition for voting. A very intelligent correspondent from Dallas, Texas, informs us that this amendment will disfranchise nine-tenths of the negroes, as it will also cut out the floating and vagrant white vote. The poll tax amounts only to \$1.50,—one dollar of which goes to the public free-school fund, and fifty cents to the general-revenue fund. It was generally supported by the newspapers and the best elements in Texas. The Republican convention of the State, dominated by white men, disregarded the demand of the negroes that this poll tax should be opposed, and the Republican platform made no mention of the subject. Leading white Republicans, as a rule, voted for the amendment. Any State, North or South, would probably be all the better for the exclusion from the polls of elements so floating, heedless, or irresponsible as to be unwilling to register their names some months in advance: while in States which have found the vote of certain ignorant or improvident classes positively harmful, it would not seem an oppressive thing to exact the payment of a poll tax of \$1.50. So long as such provisions are made to work impartially as between races, the negro leaders ought to favor them, in order that they might use these moderate conditions as an additional lever by which to advance thrift and forethought among the people of their race.

*The "Lily-  
White"  
Republican  
Movement.*

Texas, in this amendment, is only following the example of several other Southern States. A more novel situation is that presented by the action of white Republicans in various Southern States in setting up race exclusiveness in the party organization. The valued Texas correspondent to whom we have alluded writes on this subject as follows:

As you are aware, the various executive committees of the Democratic party, in the different Southern States, generally provide in the qualifications for their party primary elections that the voter shall be a white Democrat. After an opinion from the attorney-general of the State, that "a white man's primary" would not be in violation of the law, the Democratic party of Texas adopted this test about six years ago, and I believe that it is now in pretty general use by the Democratic party throughout the South. For the past six or eight years there has been a tendency, quite noticeable to observant people living here among the business or non-profes-

sional element of the Republican party in the South, to gradually eliminate the negro from that party. In the South you will constantly hear Republican business men say that the only chance for a good wholesome growth for their party, so that it may at the least become a vigorous opposition party, is to eliminate the negro.

This sentiment among the Southern Republicans has grown tremendously since the adoption by the different States of the poll tax and the educational qualification for voters, which have had the effect of eliminating the negro as a political factor in the States where adopted. Thus it frequently happens that the negro, on account of his superior numbers, is able to dominate the conventions and control the party's action, yet in the general election, on account of being unable to read, or not having paid his poll tax, he casts only a fractional part of the vote which his party receives.

This tendency to refuse to allow the negro to participate in the councils of the party was manifest in the last State conventions of the Republicans in nearly all of the Southern States. The chairman of the last Republican State convention of North Carolina, in his speech congratulating his party upon the fact that the negro as a political factor had been eliminated from their State, and in speaking of his baneful influence in the past upon the growth of their party, used this significant language: "He (the negro) has been a dead weight around the neck of the Republican party."

The Republicans of Alabama drew the color line in their last State convention as tight as the Democrats of that State had ever done. In other Southern States, while the sentiment was not so outspoken as in North Carolina and in Alabama, it strongly manifested itself. In the Republican State convention of Texas the negro was so completely relegated to the rear that it became a standing joke. As one of the newspaper reporters facetiously expressed it, "The colored brother was allowed to do nothing except the praying."

In this State (Texas) the negroes demanded that their race be given representation on the State ticket by having a negro placed in nomination for some minor State office. This the white Republicans refused to do, but finally compromised the matter. By this compromise they agreed to make nominations for but two State offices, though an entire set of State officers was to be elected. The nominations were made for the offices of governor and treasurer, and both nominees were white men. Then there was a demand, on the part of the negroes, that a strong plank be put in the platform opposing the poll-tax amendment to the State constitution which was to be voted on at this election. This the white Republicans refused to allow to go into their platform. While the platform was silent as to the amendment, there is no concealment of the fact that the white Republicans, in large number, supported it. Of my acquaintances among the Republican business men of this city, I did not hear one express himself on the amendment without saying he intended to vote for it.

*From the  
Negro's Stand-  
point.*

The negroes of the South ought to have found out by their experience since the withdrawal of federal troops from the South by President Hayes, some twenty-five years ago, that their alliance with the Northern Republican party has done them no good at all. It has simply impelled the white men to

community. Its people are quite like the people of the farming States lying to the north and east of it, and when its boundaries have been fixed as they ought to be, with the opening of the Indian country completed, it will be welcomed by everybody as a splendid accession to the Union,—a State which will soon take fine rank, and rapidly forge ahead to a position where it will have almost or quite the average population of the rest of the Union.

*Let the President Consider His Geography.*

If Congress shall vote to admit it now, in the wrong shape and at the wrong time, let us hope that President Roosevelt will intervene with a prompt veto. Such an action would be commended by the whole country; for every sensible citizen would appreciate the reasons, and no man would believe in his heart that the President was in the slightest degree affected by the question whether or not Oklahoma, at the next Presidential election, would stand in the Republican or the Democratic column. If participating in the Presidential election, it would in all probability give its vote for Roosevelt; but that is an argument that cannot properly be taken into account. It is a question of our permanent political geography, and of Oklahoma's own best destiny and true glory as a State.

*Arizona and New Mexico.*

As for Arizona and New Mexico, they certainly are not deficient in area. Arizona has nearly 114,000 square miles, and New Mexico nearly 123,000. Taken together, however, they are considerably smaller than Texas, and they have nothing like the prospect of population growth that Oklahoma possesses. At the last census Arizona had nearly 123,000 people, and New Mexico just over 195,000. At its present rate of growth it will take New Mexico several hundred years to catch up with the average population of the existing States. Arizona has only a little more than half the population of an ordinary Congressional district. Oklahoma, with its boundaries properly extended to include the whole of the Indian Territory, would have *already a good deal more than twice the population of*

both Arizona and New Mexico. According to the latest available statistics, Arizona has 16,500 pupils enrolled in common schools, as against more than 1,200,000 in the State of New York, and more than 1,150,000 in the State of Pennsylvania. Yet Senator Quay, of Pennsylvania, proposes to give the adjacent States of Arizona and New Mexico the same voting power in the United States Senate as that which is held by the adjacent States of New York and Pennsylvania. We have no reason to underestimate all that is excellent in the Spanish-speaking element which forms so large a part of the population of New Mexico; but no one will pretend that this population, largely illiterate and scarcely at all acquainted with our principles and methods of government, is at present fit for statehood.

*Population Conditions.*

Of all the States and Territories in the Union, New Mexico and Arizona have the largest proportion of inhabitants who cannot speak English. The current language of the masses in New Mexico is Spanish, and even the children who learn English in the schools revert to the parent language in later years. New Mexico, also, leads the list of States and Territories, by a large percentage, as respects the proportion of illiteracy among the native white population. Furthermore, in all the inhabited spots of Arizona and New Mexico male population is greatly in excess of female, showing wholly unsettled conditions of society. It

MAP TO SHOW INHABITED PARTS OF ARIZONA AND NEW MEXICO.

(Outside of the shaded areas, the two Territories are practically without population. These inhabited parts have the low average of only from two to six per square mile, excepting the more heavily-shaded districts around the capitals, Phoenix and Santa Fé, in which the population averages, according to the census, from six to eighteen per square mile.)

means mining camps and cowboys, rather than families and settled communities. Taking both Territories, it is only in the Santa Fé neighborhood of northern New Mexico that the males are not in very great excess. The irrigation developments of the next ten or twenty years, let us hope, will greatly change all this. Our map on the preceding page, derived from a volume of the new census, shows the limited areas of inhabitancy in Arizona and New Mexico, like oases in a desert, as compared with great, desolate stretches of virtually unpeopled country.

*The Senate Committee on the Ground.* Senator Beveridge, of Indiana, chairman of the Senate Committee on Territories, accompanied by several other Senators, went last month, as a sub-committee, to visit these Southwestern Territories. They did not go on a mere junketing expedition, but with a view to studying the situation seriously and carefully. At the very beginning of the new session Senator Beveridge's committee will hold sessions at Washington, and will be prepared to entertain facts, opinions, and arguments which

qualified people may wish to present on the question of admission. We understand that it will be the disposition of this committee to listen to those who object to admission, as well as to those who favor it. And since the advocates of admission will not fail to push their cause with all possible energy and diligence, it cannot be wrong for those who are opposed to admission to say so with equal frankness. For our part, we wish it to be as widely known as possible that we think the admission of those Territories at the present time is without justification from the larger point of view of the welfare of the United States. Even if Senator Beveridge, with some members of his committee on Territories, should entertain views similar to those we have expressed, it would

nevertheless be quite impossible for the chairman and the committee to prevent action in the Senate unless supported by newspapers and citizens who believe that such issues should be decided upon their true merits, and quite apart from private scheming, political log-rolling, and party exigencies. The work of Mr. Beveridge's committee in the Southwest last month was businesslike and thorough beyond all precedents.

SENATOR BEVERIDGE, OF INDIANA.

(Last month investigating conditions in the Territories of the Southwest.)

*The Meaning of the Elections.* The principal results of the elections last month show that the period of Republican dominance in the affairs of the nation is reasonably likely to continue at least until the year 1908. This may not prove to be the case, inasmuch as events may greatly accelerate the recovery of the Democratic party, so that it may make a formidable showing two years hence. But, in so far as this year's election may be taken as a prognostic, it points to the election of Mr. Roosevelt as President two years hence. According to normal precedents, a strong reaction was due last month. That the reaction as a whole was only slight,

and in some States not visible at all, is regarded by authorities in both parties as due to the confidence of the people in President Roosevelt more than to any other factor. Not a single State was completely carried by the Democrats last month outside of the former slaveholding group, with the sole exception of Nevada, where results never have any outside significance. In addition to carrying all the Northern States except Nevada, the Republicans also prevailed in Delaware, Maryland, and West Virginia. Thirty-one States were carried by the Republicans, and fourteen by the Democrats. If the Presidency of the United States were to be determined by last month's voting, it has been estimated that the Republican candidate would have 322 electoral votes, as against 154 for the Democratic candi-

From the *W.A.P.*

GOVERNOR-ELECT PARDEE, OF CALIFORNIA, AND HIS INTERESTING FAMILY.

date, the Republican majority being 168, or considerably larger than McKinley's majority over Bryan. Of the twenty-two governors of States elected on November 4, all but six are Republicans. Apart from Nevada, the only Northern State electing a Democrat for chief executive was Rhode Island, although in that State the Republicans have the Legislature, and carried more than one-half of the general State ticket. A list of the governors elected will be found in our "Record of Current Events" department.

*Republican  
Losses in  
Congress.*

The Republicans, however, lost more seats in the House of Representatives than they gained, and their majority in the next Congress will be reduced to about thirty. Nearly all of the Republican losses of Congressional seats occurred in urban districts. New York had gained three seats by the new apportionment, due chiefly to the rapid growth of New York City. The great metropolitan district happened last month to go Democratic by an overwhelming majority, and this gives the Democrats several additional members of the next Congress. Likewise, the Democrats gained a Boston district, a densely-populated Rhode Island district, the Scranton district of Pennsylvania, a Baltimore district which had previously been Repub-

lican, the Detroit district in Michigan, the Omaha district in Nebraska, the Minneapolis district in Minnesota, one in Wisconsin, one in Iowa, and two in California, including the San Francisco district now represented by the well-known chairman of the Committee on Post Offices, Mr. Loud. With few exceptions, therefore, the radical changes at the polls have been in the cities rather than in the country districts, and these changes are chiefly significant as showing tendencies. They point to a greatly increased percentage of independent voting on the part of populations that read the daily newspapers, and that, in recent years especially, have come to care more for actual things than for the mere traditions that go with the names Republican and Democratic.

*The Senate  
Unaffected.*

Last month's elections will not affect relative party strength in the Senate. The Republicans will lose three or four seats as the result of the election of new State legislatures, and will gain an equivalent number. Thus, a nominal Republican seat in Maryland will be filled by the return of a strong Democratic leader, Mr. Gorman. The North Carolina and Kentucky seats now held by Senators Pritchard and Deboe revert naturally to the Democrats, Mr. McCreary having already

been named as Senator from the latter State. In Nevada, the distinguished Congressman, Mr. Newlands, who has won great prestige by reason of the part he played in securing for the West the passage of the irrigation bill, is to have the seat in the Senate for a long time past held by Mr. Jones. As against these four losses, the Republicans will gain Senators from the following four States,—Kansas, Utah, Idaho, and Washington. Senator Harris, of Kansas, owed his seat to a successful coalition of Democrats and Populists six years ago. The Republicans seem now to have fully regained control of Kansas, and Senator Burton will have a Republican colleague after March 4. In Utah, a Republican victory will give the Senatorial seat now occupied by Mr. Rawlins to an interesting and vigorous personality, Mr. Reed Smoot, who is known not only as a successful business man of large and varied interests, but also as an avowed Mormon and an apostle of that church. It is distinctly affirmed that he is not, and never has been, a polygamist. Idaho, which had left the Republican column on the silver question, has now returned, and Senator Heitfeld will give place to a successor who will vote with the majority. In like manner Senator Turner, of Washington, who represented the fusion movement, will give way to a Republican.

*Rivalries for Senate Seats.* It does not follow that Senatorial seats will be easily filled, even where party victories have been emphatic. Thus, the Republicans have again carried the Delaware Legislature by a good majority; but, as our readers will remember, the party has long been divided into intensely hostile factions, with the result that during the present Congress

both Senatorial seats from Delaware have been vacant, while in the previous Congress only one was filled. For many years a candidate named Addicks, with a great fortune made in the exploitation of gas companies, has been trying, by what he would probably call "modern methods," to capture the little State of Delaware, in order to obtain the coveted prize of the United States Senatorship. Addicks, if we mistake not, is a Massachusetts man, who seems to have chosen Delaware as the field of his political operations after looking the country over and deciding that this little State offered the best opening for a man of means and energy who desires to reach the United States Senate as the crowning reward of a life of endeavor.

On two or three former occasions *Mr. Addicks and Delaware.* Mr. Addicks has come within three or four votes in the Legislature of gaining the desired end. He has now twenty-one legislators, and he will need six or seven more to control the situation. The so-called Republican "regulars" hold eight seats, with one or two of them regarded as doubtful. If Addicks could win over four or five votes from the Democratic minority, he would be elected; but Democratic sentiment in Delaware hitherto has been so strongly against him that legislators have been deterred by well-grounded fears of personal violence. The situation is not merely a local one. It is not as if Addicks aimed at the governorship of Delaware. A Senator helps to make the laws and shape the policies of this great nation. There are no Addicks Republicans worth speaking of outside of the 10,000 or 12,000 voters,—mostly poor and ignorant,—in Delaware who have gradually been shaped into

FOUR DEMOCRATIC GOVERNORS CHOSEN LAST MONTH.

a compact and inalienable Addicks following. The situation is too notorious to be ignored. There is no Addicks public opinion in Delaware, or anywhere else, that is entitled to a shred of respect. The minority of regular Republicans in Delaware, who have long refused to compromise and take one Senatorial seat at the price of allowing Addicks to have the other, are deserving of the outspoken support of all high-minded men, Republicans and Democrats alike, in every part of the country. Meanwhile, the political life and legislative work of the State of Delaware must remain distracted and demoralized.

*In Colorado,  
Oregon, and  
Idaho.*

In the Upper House of the Colorado Legislature there are enough hold-over Senators to keep a clear majority in favor of the return of Senator Teller; but the other branch, newly elected, is decisively Republican. If the Republicans have their way, Senator Teller will be retired and ex-Senator Wolcott will reappear at Washington. The situation is likely to be a severely contested one. There has been a marvelous change in Colorado political sentiment since Wolcott was condemned, in 1896, for supporting McKinley, while Teller was almost unanimously extolled as the hero of the State for going over to Bryan at that time. In Oregon the Republicans are overwhelmingly in control of both branches of the Legislature, but are almost equally divided among themselves into two factions. There bids fair to be some difficulty, therefore, in filling the seat that will be vacated by Senator Joseph Simon. The Idaho Republican Legislature will also, according to reports, have a Senatorial fight on its hands.

*Some  
Foregone  
Conclusions.*

In New York, Senator Thomas C. Platt has said that he will be a candidate for reelection, while Governor Odell and the party leaders have also said that Senator Platt would meet with no opposition. In Illinois, Republican success means that Congressman Hopkins will succeed Senator Mason. In spite of factional trouble in Wisconsin, it may be regarded as almost certain that Senator Spooner will be reelected. In Michigan it is

JOHN E. ADDICKS,

(Who seeks to represent Delaware in the Senate.)

also quite certain that General Alger will be chosen to fill the seat made vacant by the death of Senator McMillan. He will, in any case, appear in the Senate during this coming session as temporarily appointed by the governor. The Vermont Legislature, which assembles early, met in October, and it has already reelected Senator Dillingham. It seems to be expected that William J. Stone will succeed Senator Vest, of Missouri, that State being almost alone in its pronounced adherence to the Bryan wing of the Democracy. Speaker Henderson will continue to preside over the House during the present term, while the question who is to be Speaker in the next Congress will be a very absorbing one at Washington. Many candidates have appeared, Mr. Cannon, of Illinois, still being clearly in the lead. There is nothing in the Constitution or laws to prevent the House from going outside its own membership to select a Speaker, and this idea was discussed last month; but there is no reason to suppose that it will be seriously considered for a moment. The Republican candidate was successful in carrying Speaker Henderson's district, as against the vigorous Democratic canvass made by ex-Governor Boies. In Minnesota, on the other hand, ex-Governor Lind carried the usually Republican Minneapolis district against the present incumbent, Hon. Loren Fletcher. We have already alluded to the defeat of Mr. Mercer in the Omaha district, Mr. Corliss in the Detroit district, and Mr. Loud in the San Francisco district, all of these men being prominent members of the present House.

*The Drift  
Within Parties.*

Where manhood is virile, and people think for themselves, it is impossible to keep political life running in the grooves of old parties. That is why Addicks, in capturing a majority of the dominant party in Delaware, does not necessarily win his case. In other States, as well as in Delaware, the struggle between party factions is often more intense and more significant than the opposition between the parties themselves. Thus it is significant to note this year that in parts of the East there has been a very large increase in the vote of the Socialist Labor party. The Bryan support is disintegrating, a part of it going over to the extreme Socialistic movement, and most of it returning to the regular Democratic camp. Similarly, some of the old-time Democrats who voted the Republican ticket temporarily as a protest against Bryanism, are now calling themselves Roosevelt Republicans, while by far the greater part of them in this last election were working hard under the Democratic banner. There is comparatively little evidence of shift-

## FOUR SUCCESSFUL REPUBLICAN CANDIDATES FOR GOVERNORSHIPS.

ing and realignment among the Republicans, most of the troubles in the camp of the dominant party being of a local and personal nature, and not involving political principles to any great extent. The differences in Iowa over the question of tariff reform have not seemed to the country to be very radical. The election results would not indicate that Iowa is prepared to break away from the protectionist column; while, on the other hand, it is evident enough that the Hawkeye State would be glad to see the present tariff schedules a good deal modified.

*Local issues in Wisconsin.* The Wisconsin situation attracted a great deal of attention. Governor LaFollette will not be able to prevent Mr.

Spooner's reelection to the Senate, while those opposed to the governor will scarcely be able any longer to prevent the adoption of a primary-election system and certain methods of taxing corporations to which Governor LaFollette stands pledged. The following quotations from a private correspondent probably represent the Wisconsin situation as fairly as any one observer could state it:

The reelection of Governor LaFollette by a majority, as compared with two years ago, cut down one-half, is nevertheless regarded as a substantial endorsement and victory. LaFollette's largest losses were in Madison and Dane County (where he lives), and this unfortunate fact is explained by those who love him by saying that the State capital is the storm center of the opposition to him, while those opposed to him say that those who know him best distrust his powers and suspect his motives. However, generally speaking, LaFollette is still very much on top in Wisconsin. He was confessedly "cut" by thousands of Republicans, including party leaders, who made no bones of the fact. This, of course, is unusual, and indicates that his propaganda is to an extent above, or at least outside, party lines. His champions talk much of him as the prime exponent of an

American movement against corporate power. They look to see him in the Senate later.

As for Spooner: The composition of the new Legislature is practically that of two years ago, the expected encroachments by the Democrats not being realized. They gained but two or three seats in the whole body of one hundred and thirty-three (Senate and Assembly). An easy majority is definitely pledged to return Spooner, and we look for this thing to come to pass. The chasm between Spooner and his lieutenants and LaFollette is permanent; and there is no question that the LaFollette inner circle would delight in an anti-Spooner *coup d'état* in January next. Normally it would seem impossible, but so adroit are the LaFollette leaders, and so bitter their opposition to Spooner, that some train of circumstances may prevent his reelection. It is not likely; but seeing the State convention hypnotized and unhorsed by Governor LaFollette and his trusted few, nothing can longer surprise me in the Wisconsin political situation. The session of the Legislature will be devoted almost exclusively to tax reform and the primary elections. I expect that there will be dull, sodden opposition, but LaFollette will drag some achievement and prestige from it.

*The Political Revival in Chicago.*

A rather tangled Republican situation in Illinois seems to be improving by virtue of intelligent Republican reorganization in the great city of Chicago. The State gave a majority last month of over eighty thousand for the Republican ticket, and the city itself furnished perhaps one-sixth of this majority. However great the merits of the Republican State administration, it has not won a striking popularity. Republican victory in Illinois cannot be ascribed in considerable measure, as in some other Republican States, to fortunate local conditions. After enumerating the grounds of dissension among the Republicans of the State and of Cook County, a private correspondent, in explaining the situation last month, continues as follows:

vote and an honest count, by scores of thousands. The estimates privately given by well-informed men point to wholesale corruption in Philadelphia last month so appalling as to be almost beyond the belief of people elsewhere.

*The Election  
in New York.*

If Philadelphia's vast Republican majority represents venality, repeating, and ballot-box stuffing, nothing of that kind has been alleged with respect to the huge Democratic majority in the city of New York. This reached about 122,000. In the early evening of election day it seemed impossible that the State outside of New York City could roll up a Republican majority that would overcome Coler's enormous vote in the metropolis. It happened, however, that the State at large was as emphatically Republican as New York City was Democratic, and Governor Odell was reelected by a plurality of more than 10,000 votes. The political philosophers do not agree upon the reasons for the weakness of the Republican ticket among the voters of the great city; and although many have tried to charge it against the administration of Mayor Low, to our minds it is rather an indication,—as was the election of Mayor Low and the fusion ticket last year,—of the growing independence of the average New York voter. Mr. Coler, the Democratic candidate, was popular in his home city, and he was supported with particular fervor by newspapers like the *New York Journal* (which, by the way, is now renamed the *American*), that have the widest circulation among workingmen. The coal strike, which had produced great scarcity of fuel in the tenements of the metropolis, undoubtedly had far more political effect there than in the coal-fields of Pennsylvania. One of the lessons for the local Republican managers is to be learned from what our correspondent already quoted has said about party reorganization in Chicago. Except in a few districts, Republican organization in New York City is a farce. As for the Low administration, its worst fault seems to be that it does not provide sensations enough for a community that likes startling headlines. In most respects, New York City is well governed, prosperous, and fortunate.

HON. FRANK W. HIGGINS.  
(Elected Lieutenant-governor  
of New York.)

*A Broad  
Democratic  
Outlook.*

The great factor in the Democratic campaign in New York was ex-Senator David B. Hill. A New York correspondent of independent Democratic views writes to us as follows upon the Democratic outlook in New York and the country at large:

I feel confident that the result in New York State means the final elimination of Mr. Hill from any real importance in either State or national councils hereafter. The people of short memories have, curiously enough, considered him as a conservative since the Bryan 1900 episode, and incidentally that of Chicago in 1896; but, fortunately for good morals as well as better politics, his utterly useless and senseless acceptance, and even more absurd defense, of the coal plank has opened the eyes of very many.

I consider the Republican majority in Maryland to indicate that Mr. Gorman, who has never had any moral strength, cannot be considered a factor of great influence hereafter in the councils of the party, although, being Senator, I fancy he will be more of a factor than Mr. Hill. The return of the Populists so largely to the Republican camp in the far West will, I think, completely disrupt the alliance with the Southern Democrats, which has given Mr. Bryan his real strength heretofore.

I consider that the elimination of these three men and the influence that they represent, to some extent, means great good to the country at large in opening the way to a return of the Southern Democratic leaders to their former alliance with the Middle and Eastern States. This, I believe, would be very certain to follow any general recognition of one important man as standing for true democratic policy, which is essentially conservative, and for the rights of the people, which are rarely gained by radical action.

IT'S A ROUGH ROAD FOR DAVID B. HILL.  
From the *Inquirer* (Philadelphia).

*E. M. Shepard's Views.*

Mr. Edward M. Shepard, last year the Democratic candidate for the mayoralty of New York, and recognized as one of the ablest thinkers and foremost personalities in the party, summed up the election last month as showing three things, as follows :

First,—The tendency in the Northeastern States and in States of the Central West to return to the traditional doctrines of the Democratic party.

Second,—The dislike of the American people for anything which they deem reckless or revolutionary ; and

Third,—The powerful and even decisive influence of the independent sentiment not closely allied to either party.

Mr. Shepard finds intelligence, wisdom, and vigor now prevailing among New England Democrats, and believes that, "if they adhere to their present programme, that section of the Union will become Democratic." Mr. Shepard accounts for the situation in New York on the ground that "the metropolis shows much sooner than the country districts the trend of public opinion." Sympathizing with Tom L. Johnson's campaign, Mr. Shepard thinks, nevertheless, that his programme was theoretically in advance of public opinion ; and he also thinks the coal plank in New York similarly harmful to the Democratic party. Mr. Shepard puts tariff reform first in his programme, and he believes that if the Democratic party "be wise, if it avoid every suggestion of demagoguery or attempt to gain some immediate and merely factitious advantage, there is a large probability of success in 1904."

*The Southern Situation.*

The political situation in the South is interesting chiefly as it relates to three things : (1) the changing attitude of the Democratic party ; (2) the elimination of the negro vote, and (3) the attempt to form a white Republican party. A correspondent from Virginia says :

Undoubtedly the Democrats of Virginia are more closely united than they have been since 1896. This is due to the practical admission that the silver issue is dead, and the reappearance in the fold of men like Cleveland, Olney, and so on. The disfranchisement of the negro in Virginia will tend gradually to divide the State, which will be for the betterment of the whites and for the great advantage of the negro.

A well-informed North Carolina correspondent, noting the fact that "the negroes did not vote to any great extent," remarks of those who did : "Many voted the Democratic ticket for the first time in their lives." He goes on as follows : "The independent sentiment is growing ; there was more scratching than has ever been done in a State election here before. As a result, the machine will be afraid to put up any but good

men hereafter." Our correspondent believes that the business interests of North Carolina are demanding a higher order of ability and character in politics, and he adds that "the situation, on the whole, is better than it has been for years, and the prospect of honest and decent politics in the future is good."

*Alabama and the Negro Suffrage.*

The South itself is taking great interest in the effect in various States of the constitutional amendments and new statutes intended to eliminate, or largely diminish, the negro vote. In answer to our inquiries on this point, a correspondent in Alabama sends the following notes, which seem to us too interesting to be paraphrased or abridged :

As to the working of the suffrage provisions of the new constitution, we have had no chance to test anything except what is called the temporary plan. Under this plan all applicants who could satisfy the temporary registrars as to their fitness have been registered. Practically no white men have been barred out, and only about three thousand negroes have been registered in the State. The Republicans have gone the Democrats one better (or one worse), and have cut out of the convention of the party all negroes of any kind, so that the Republicans are in the position of refusing to give political recognition to even those negroes who have met the test of the most rigorous Democratic scrutiny. The Republican party had a great opportunity to stand for a principle, but they have now left the State in the position of having no party of protest.

The permanent-suffrage plan contemplated in the constitution, which goes into effect next year, puts the suffrage test evenly and squarely upon both races. The present probabilities are that, as there is no party of protest, the Legislature will put the registration of voters again into the hands of arbitrary boards, who will defeat the intention of the constitution by the way in which discretion is exercised.

But perhaps I am not altogether the right one to interpret the provisions of the new constitution, as I openly opposed the laxity of its attitude toward the vagrant, venal, and illiterate elements in our white population. We will have no strong and constructive political leadership so long as our leadership is bound, as to a body of death, by the ignorant and venal white vote. So long as these men constitute so large a fraction of our voters they will hold the balance of power, and while they hold the balance there is no hope for a campaign of vital ideas and constructive policies.

This is well illustrated by the latest vote for governor. Jelks, the Democratic nominee, received a vote of 65,000. His plurality was 42,000, the Republican vote being 22,500. You will thus see that the total vote cast in the State was approximately 88,000. Yet the total registered vote of the State was about 190,000.

The vote, even in the primaries, where Governor Jelks had the vigorous opposition of ex-Governor Johnston, was but 90,000. The large unvoting mass is the real burden and terror of our Democratic leadership. When constructive proposals are suggested, there is always the fear that these illiterate voters will desert the party again, as they did under Kolb in the great Populist movement of ten years ago.

*The Texas Amendment.*

The Democratic candidate for the governorship of Texas was, as usual, elected by a large majority. The chief interest in the Texas election, however, centered in the vote upon an amendment to the State constitution. This amendment was carried, and is self-enacting. It makes the payment of a poll tax by February 1 of each year a condition for voting. A very intelligent correspondent from Dallas, Texas, informs us that this amendment will disfranchise nine-tenths of the negroes, as it will also cut out the floating and vagrant white vote. The poll tax amounts only to \$1.50,—one dollar of which goes to the public free-school fund, and fifty cents to the general-revenue fund. It was generally supported by the newspapers and the best elements in Texas. The Republican convention of the State, dominated by white men, disregarded the demand of the negroes that this poll tax should be opposed, and the Republican platform made no mention of the subject. Leading white Republicans, as a rule, voted for the amendment. Any State, North or South, would probably be all the better for the exclusion from the polls of elements so floating, heedless, or irresponsible as to be unwilling to register their names some months in advance; while in States which have found the vote of certain ignorant or improvident classes positively harmful, it would not seem an oppressive thing to exact the payment of a poll tax of \$1.50. So long as such provisions are made to work impartially as between races, the negro leaders ought to favor them, in order that they might use these moderate conditions as an additional lever by which to advance thrift and forethought among the people of their race.

*The "Lily-White" Republican Movement.*

Texas, in this amendment, is only following the example of several other Southern States. A more novel situation is that presented by the action of white Republicans in various Southern States in setting up race exclusiveness in the party organization. The valued Texas correspondent to whom we have alluded writes on this subject as follows:

As you are aware, the various executive committees of the Democratic party, in the different Southern States, generally provide in the qualifications for their party primary elections that the voter shall be a white Democrat. After an opinion from the attorney-general of the State, that "a white man's primary" would not be in violation of the law, the Democratic party of Texas adopted this test about six years ago, and I believe that it is now in pretty general use by the Democratic party throughout the South. For the past six or eight years there has been a tendency, quite noticeable to observant people living here among the business or non-profes-

sional element of the Republican party in the South, to gradually eliminate the negro from that party. In the South you will constantly hear Republican business men say that the only chance for a good wholesome growth for their party, so that it may at the least become a vigorous opposition party, is to eliminate the negro.

This sentiment among the Southern Republicans has grown tremendously since the adoption by the different States of the poll tax and the educational qualification for voters, which have had the effect of eliminating the negro as a political factor in the States where adopted. Thus it frequently happens that the negro, on account of his superior numbers, is able to dominate the conventions and control the party's action, yet in the general election, on account of being unable to read, or not having paid his poll tax, he casts only a fractional part of the vote which his party receives.

This tendency to refuse to allow the negro to participate in the councils of the party was manifest in the last State conventions of the Republicans in nearly all of the Southern States. The chairman of the last Republican State convention of North Carolina, in his speech congratulating his party upon the fact that the negro as a political factor had been eliminated from their State, and in speaking of his baneful influence in the past upon the growth of their party, used this significant language: "He (the negro) has been a dead weight around the neck of the Republican party."

The Republicans of Alabama drew the color line in their last State convention as tight as the Democrats of that State had ever done. In other Southern States, while the sentiment was not so outspoken as in North Carolina and in Alabama, it strongly manifested itself. In the Republican State convention of Texas the negro was so completely relegated to the rear that it became a standing joke. As one of the newspaper reporters facetiously expressed it, "The colored brother was allowed to do nothing except the praying."

In this State (Texas) the negroes demanded that their race be given representation on the State ticket by having a negro placed in nomination for some minor State office. This the white Republicans refused to do, but finally compromised the matter. By this compromise they agreed to make nominations for but two State offices, though an entire set of State officers was to be elected. The nominations were made for the offices of governor and treasurer, and both nominees were white men. Then there was a demand, on the part of the negroes, that a strong plank be put in the platform opposing the poll-tax amendment to the State constitution which was to be voted on at this election. This the white Republicans refused to allow to go into their platform. While the platform was silent as to the amendment, there is no concealment of the fact that the white Republicans, in large number, supported it. Of my acquaintances among the Republican business men of this city, I did not hear one express himself on the amendment without saying he intended to vote for it.

*From the Negro's Stand-point.*

The negroes of the South ought to have found out by their experience since the withdrawal of federal troops from the South by President Hayes, some twenty-five years ago, that their alliance with the Northern Republican party has done them no good at all. It has simply impelled the white men to

the South to a solid alliance with the Democratic party of the North. Such a situation has been bad for both races, and bad for both parties. The Northern Republican party has looked on at the recent disfranchisement of Southern negroes without any proffer of practical help. From a certain narrow point of view, the situation looks gloomy indeed for the colored race. From the broader and better-informed standpoint, on the other hand, the situation has now begun to change from a dreadful and impossible one to something that has a fairly hopeful promise. The Southern States are not doing less than before for the education of the negro, and there is much to indicate that more is going to be done for the negro's real development, as a self-supporting and intelligent citizen, than ever before. As a race, his possession of the ballot during the past thirty years has not proved itself a valuable asset. To many negroes worthy to exercise the full privileges of citizenship, the present tendencies are both painful and shocking; but let us hope that the shock will forever rid them of the delusion that the Republican party, as such, either North or South, is one whit more friendly to the negro race than is the Democratic party.

*From the  
President's  
Standpoint.*

Everybody knows that there are historic reasons why the negroes should have called themselves Republicans. We are not discussing history, but present facts and conditions. As for the Republican party in the further South, it has accomplished very little for a long time past except to figure discreditably in Republican national conventions, and to hold out greedy hands for federal office. It will never amount to anything valuable until it has its fair share of the ablest, the most intelligent, and the most upright men in the various States and communities. The transitional condition of parties in the South naturally presents difficulties to President Roosevelt when it comes to making necessary federal appointments. He proposes to appoint only good men and fit men to public office, and he desires, in so far as possible, whether appointing men in Northern or Southern States, to do that which is acceptable to the communities where such men have to perform their functions. We carry on government in this country under the party system, and all practical Democrats understand that, as a Republican, Mr. Roosevelt cannot ignore the members of his own party in any section of the land. Nor can he properly be quick to give the prestige of his support to a movement within the party which would exclude faithful Republicans merely on account

of their color. He may accept situations after they have been established that he could not suitably or honorably promote at the outset. Doubtless he will continue to appoint some white Republicans, some black Republicans, and some Democrats to office in the Southern States, and it will require much calmness and courage in many instances to take his own course. A correspondent from Tennessee sends a strong plea for the white Southern men of good business or professional standing who are not office-seeking politicians, and who find themselves at heart Republicans on national questions. He greatly fears that President Roosevelt does not appreciate the situation, and he counts it very unfortunate that the President should be regarded as opposed to the exclusive white Republican movement in Alabama and elsewhere. His argument seems unanswerable from the point of view of those men in the South who would like to build up a Republican party of permanent strength and character. But he does not quite understand the position of the President, who must deal with facts, not projects.

*The  
President's  
Message.*

Forecasts of the President's annual message to Congress, which was to be made public on December 1, pointed to a lucid and well-reasoned document of considerable length, though not so long as the message of one year ago. As respects various policies, the President had already given the coun-

FARMER: "Say, boy, just let me have that whetstone, and I'll show you there's nothing the matter with the scythe."  
From the Pioneer Press (St. Paul).

try much knowledge of his views. Upon the tariff question, for example, it has been known that the President would like to see some revision of schedules without a general overhauling, and that he believes in the plan of a permanent expert tariff commission. This commission is in no way to assume the duties or usurp the authority of Congress; it is rather to study conditions, collate information, and give Congress the benefit of great technical knowledge and experience. It would naturally include some men with the sort of qualifications possessed by members of the permanent board of general appraisers at the New York custom house. It is hardly necessary to revert again to the President's position on the trusts. He will undoubtedly advise legislation upon lines not unlike those laid down by Attorney-General Knox in his recent speech at Pittsburg. Mr. Knox's speech on the legal aspects of the regulation and control of trusts, and Secretary Root's speech in New York at the end of October, on the broad social and economic conditions of the country, in view of present methods of wealth production and distribution, are fortunate indications of the trained ability that President Roosevelt finds at hand in his official advisers. The President's message will again have presented the need of a reciprocity arrangement with Cuba, and will, doubtless, have advised Congress to make reciprocity arrangements in various other directions.

*Activities of  
the State  
Department,  
(1) Cuba.*

The administration meanwhile has been negotiating a reciprocity treaty with Cuba, and the result will probably have the approval of Congress. It is to be noted that an advance in the price of raw sugar in the world's markets, due to various causes,—among them the prospective abolition of the European bounty system, and the partial failure of the European beet crop,—has already much improved the economic position of Cuba. It has also made the American beet-sugar men more independent of tariff conditions; and thus, while Cuba, on the one hand, does not so urgently need the proposed concessions, the opposition to them in this country bids fair to be relaxed.

*(2) A Trade  
Treaty with  
Newfoundland.*

Besides this work upon a scheme of reciprocity with Cuba, our State Department has been negotiating with Newfoundland, and a reciprocity treaty on behalf of that colony has already been agreed to by the British Government. This treaty was signed on November 8 by Secretary Hay and the new British ambassador, Sir Michael Herbert. The man chiefly identified with the arrangement is Mr. Bond, prime minister of New-

foundland. Under this treaty various products of the fisheries of Newfoundland will be admitted into the United States free of duty. In return, the fishing vessels of the United States in the waters of Newfoundland obtain the long-coveted privilege of purchasing bait fishes without restriction. Furthermore, many articles of American manufacture are to be admitted to Newfoundland free of duty, and various other specified supplies at merely nominal rates. It is an excellent treaty for all concerned.

*(3) A Canal  
Treaty with  
Colombia.*

A more absorbing task for the State Department has been that of negotiating with the distracted republic of Colombia for the control of a stretch of land through which it is proposed to construct the Panama canal. Attorney-General Knox had made a report to the President, now embodied in an interesting volume, dealing with the question of the title of the French Panama company and its right to sell its concessions and properties to the United States. Mr. Knox finds the title valid, and the French Government authorizes and supports the transfer. It seems that, instead of an outright grant of full and final sovereignty over the canal strip, the government of Colombia prefers to give a long-time lease, subject to renewals in perpetuity. It is understood that this strip is to be six miles wide. For all practical purposes the land will belong to the United States. Since our government, in any case, is responsible for order in the isthmus, there is much reason to think that Colombia would be better off to sell to us outright that whole region. It is the general opinion that there no longer remain any serious obstacles to the adoption of the Panama route, and that nothing would seem to stand in the way of the very early beginning of the actual construction work. The transfer of the Danish Islands to our government has received another check through the failure of the Upper House of the Danish Parliament to ratify the treaty. It is reported that the inhabitants of the Danish Islands are much disappointed. There is nothing further that our State Department can do in the matter, and it is regarded as probable that in due time the opposition in Denmark will be overcome.

*Investigating  
the Coal  
Strike.*

The commission appointed by President Roosevelt to investigate the recent anthracite coal strike, and find a plan for adjusting differences, took up its work at once and pursued it with diligence. The coal miners declared the strike at an end on October 21. The members of the strike arbitration commission met at the White House on October

and they effected organization on that date, Judge Gray being made president of the commission. Colonel Wright, who was originally appointed as recorder of the commission, was, by the consent of all parties, added to the board as its seventh member. The commission decided, after an opening conference with the parties in the controversy, to visit the mining districts and look into facts and conditions on the ground. The early days of November were spent in a tour of the anthracite region and in visits to many mines. On November 14, public hearings were opened at Scranton, Pa., with President Mitchell, of the United Mine Workers, as the first witness, and a vast and dazzling array of lawyers present to represent the coal-carrying roads and cross-examine Mr. Mitchell. The utmost latitude was allowed, and Mr. Mitchell was kept on the stand for about five days,

undergoing an ordeal at the hands of astute lawyers to which he proved himself easily equal, but which, to the country at large, seemed of doubtful value for the practical purposes of the commission. At the rate of progress made in those opening days, it was evident that months, or even years, might be consumed in the hearings if a different method were not adopted. Great confidence, however, was felt in the wisdom and impartiality of the commission. Meanwhile there continued widespread apprehension, due to the continued shortage in the supply of coal. A month after the end of the strike, a considerable proportion of those who had always relied upon the use of anthracite coal found it impossible to get any at all, while those more fortunate could obtain only very limited quantities. Prevailing prices remained high, and there was no prospect of an abundance of coal at any

THE COAL STRIKE ARBITRATION COMMISSION IN SESSION.

time during the approaching winter. Fortunately, the first three weeks of November were exceedingly mild in the vicinity of New York.

*Growth of  
Railway  
Traffic.*

The month of November was one of unprecedented industrial activity in this country; and, although it was election month, the real interest of the people centered in economic rather than political matters, and the history-making factors were chiefly in the realm of the business world. The railroads were never so busy in all their experience. The statistics of freight business for the years 1900 and 1901 were much the largest on record, but those of 1902 show a further gain beyond the predictions of the most sanguine. In many parts of the country the demand for freight cars has been so great that the car famine can only be likened to the fuel famine that has existed in the East on account of the coal strike. At other points last month, as at Pittsburg, there was such a congestion of freight on loaded cars that the railroads had neither locomotives enough nor sufficient trackage to relieve the blockade; and Mr. Cassatt, president of the Pennsylvania Railroad, adopted the most energetic measures possible in the emergency. A similar situation existed last month in Chicago and elsewhere.

*Railway  
Wages  
Advanced.*

In the face of increased business and correspondingly large earnings, the principal railroad managers of the country have adopted two lines of policy that show far-reaching wisdom. First, they have recognized the fact that labor is in a position to make successful demands for increased pay,

while also admitting frankly that the cost of living for the workingman has increased; and so they have quite generally increased the pay of their employees by an average of 10 per cent. This, on the part of the Pennsylvania Railroad Company alone, is said to have meant an increased annual payment to labor of \$6,000,000; and an amount almost or quite as great is involved in the increase of wages granted by the New York Central and other so-called Vanderbilt lines. The other progressive policy adopted by the principal railroads of the country, in view of their enhanced prosperity, is the undertaking of vast betterment projects on thoroughly sound engineering plans. Thus, the Pennsylvania Railroad system is to spend \$200,000,000. A quarter of this will be absorbed in the great tunnel under the Hudson, and related terminal facilities at New York City. All these improvements mean abundant wages for hundreds of thousands of workers in contributing industries of various kinds. It means prosperity is on a sound basis.

*Great  
Business  
Events.*

The season's output of iron ore has broken all records, and the advance orders of the United States Steel Corporation show that there is to be no slackening in the near future of the activity that has for two years marked the greatest of American industries. It is expected that the season's shipments of ore from the Lake Superior region will have amounted to more than 26,000,000 tons,—an increase over last year of more than 25 per cent.; and several million more tons will undoubtedly be moved in 1903 than in the year now ending. Two events of great import

THE NEW HOME OF THE NEW YORK CHAMBER OF COMMERCE.

(Dedicated last month.)

in the transportation and shipping world are duly noted in contributed articles published elsewhere in this number of the REVIEW OF REVIEWS. One of these great events is the completion of the Atlantic steamship combination; the other is the opening of the new power canal on the Michigan side of the St. Mary's River, commonly called the Sault Ste. Marie. It was an auspicious time,—this season of splendid prosperity,—for the dedication last month of the stately new home of the New York Chamber of Commerce. Distinguished guests came from England, France, and other countries, and President Roosevelt spoke with a felicity that charmed everybody.

*A Lack of Currency.* The reaction in Wall Street last month seemed to have no detrimental effect upon business conditions throughout the country. It was due in some degree to the shortage

of currency; which, in turn, has been produced in part by the unprecedented growth of the country's business. The Treasury Department had, earlier in the season,—by the purchase of bonds, the advance payment of interest on the public debt, and the deposit in banks of large sums of revenue receipts,—done everything that it could within the limits of the law to put into active circulation the money which would otherwise be lying idle in the Treasury. But these exceptional measures on the part of the Treasury cannot always be relied upon for relief. It is high time that Congress should amend the banking and currency laws in such a way as to provide an elastic scheme of note issues for times of need. The subject was prominently considered last month before the bankers' convention, which met at New Orleans, under the presidency of Hon. Myron T. Herrick, of Cleveland. It is also one which it was expected last month that President Roosevelt would mention in his message. Congress will never have a more favorable time than the present winter in which to pass some simple measure providing for an expansion of the currency to meet the demands of business. The farmers of the country were ready last month for a joyous Thanksgiving, in view of the abundant crops and good prices, and the battles of the bulls and bears in Wall Street did not disturb them in the least,—see the cartoon below.

*Labor and Immigration.*

It was natural that the annual meeting of the Federation of Labor, at New Orleans last month, should have been exceptionally interesting, in view of the recent importance and prominence of labor

FARMER TO BULLS AND BEARS: "Go it! I'm out of danger."

From the Journal (Detroit).

THE EDUCATION BILL IN PARLIAMENT,—MR. BALFOUR SPEAKING.

(On the government bench are Chamberlain, Wyndham, Ritchie, Brodrick, and others, while to the right are seen three opposition leaders, namely, Campbell-Bannerman, John Morley, and Sir W. Harcourt.)

movements. Although the debates disclosed some differences in point of principle, and some personal acrimonies among leaders, the meeting as a whole showed a growth at once in the strength and the moderation of labor. Poverty was never so little visible in our cities, and work was never so abundant. In England, and on the Continent, however, there are many men out of work. The prosperity of the United States has, therefore, naturally stimulated immigration; and the tide is rising in a way which makes it probable that 1903 will bring the largest number of aliens to our shores that has ever come in any one year. It is a condition that affects both labor and citizenship. To meet this situation, it is said that Senator Lodge will at once urge upon Congress the new importance of his favorite measure for the restricting of immigration.

*Affairs in England.* England does not cease to look aghast at the so-called "American invasion," and there is reason enough, of course, why Mr. J. P. Morgan's name should be most frequently mentioned,—in view not only of the successful launching of the great Atlantic steamship combination, but also of the part that Mr. Morgan's firm has taken in the

new projects for building an elaborate network of underground railroads, locally known as "tubes," for the metropolis of London. Mr. Yerkes, formerly at the head of the Chicago street railways, with a system of projected underground London roads of his own, backed by the well-known banking house of the Messrs. Speyer, is said to have disturbed the Morgan plan by a strategic purchase of control over franchises which had formed a large part of the rival project. In Parliament the education bill has been slowly advancing, section by section, under a new kind of Parliamentary rule for applying closure,—that is to say, stopping debate section by section. Mr. Bryce and his Liberal associates are making a sturdy fight against the measure to give public support to church schools, but behind Premier Balfour is a large and obedient majority. In the field of politics, the chief British topic, apart from the education bill, was the plan of the Colonial Secretary, Mr. Chamberlain, to go in person to South Africa, and to spend some months there, in an endeavor to carry out reconstruction projects on the ground. The British Empire gets on very well when its several parts are left to govern themselves without interference from the center; but Mr. Cham

## THE IRISH PARLIAMENTARY DELEGATION TO THE UNITED STATES.

berlain finds that if he is to settle South African affairs he must be able to deal with them at close range. Undoubtedly, he stands to-day the most powerful statesman in the empire.

*Gala Scenes and Other Topics.* More strenuous topics have been varied by such spectacular scenes as the great procession last month on Lord Mayor's Day to mark the accession to that

coveted office of a multi-millionaire Jewish merchant, Sir Marcus Samuel. Some days earlier there had occurred the royal progress of King Edward and Queen Alexandra through London streets,—a pageant which had been postponed from the coronation festivities on account of the King's physical weakness at that time. Two commissions relating to the recent South African War have been at work in London, one of these, called the Remount Commission, dealing with scandalous charges relating to the purchase of many thousands of cavalry horses, and the other and far more important body being known as the War Inquiry Commission. This board has been sitting in secret, and is said to be making a thorough inquiry into the methods by which the late war was carried on.

COMMISSION ON THE CONDUCT OF THE SOUTH AFRICAN WAR. (In front are Lord Strathcona and Sir John Edge. The others, from left to right, are (sitting) Earl of Elgin, who is chairman, Lord Esher, Sir G. D. Jaubman-Goldie, and (standing) Sir John Jackson, Admiral Hopkins, Sir Frederick Darley, and Field-Marshal H. W. Norman.)

*The Irish Troubles.* The Irish question continues to cause great disturbance. It is not easy for Americans to understand why the

Irish leaders have assumed a tone so bitter and, in many cases, so openly disloyal. On the other hand, the government's new policy of persecution and imprisonment seems to mark the climax of English folly and stupidity. The immediate Irish demand is for a more rapid and thoroughgoing application of government credit to the buying out of landlords and the resale on easy terms to the tenant farmers. But it is not clear how the present tactics of the Irish party can advance this cause. In a general way, American sympathy has always gone out toward the Irish demand for peasant proprietorship of land, and for home rule of a kind analogous to our State governments. The visit to this country of John Redmond, head of the Irish Parliamentary party, accompanied by John Dillon, Michael Davitt, and Edward Blake,—three of the ablest and most prominent of his associates,—attracted great attention among Americans of Irish ex-

JOHN ST. LOE STRACHEY, ESQ.  
(Editor of the London Spectator.)

traction, and resulted in the raising, at mass meetings in Boston, New York, and elsewhere, of many thousands of dollars for the Irish cause. Mr. Redmond's brother was, last month, sentenced to prison for six months on account of a so-called incendiary speech, and the Irish leader cut short his American visit and hastened back home.

*The Visit of Emperor William.* King Edward was sixty-one years old on November 9, and his nephew, the Emperor William of Germany, came to visit him at that time, and remained for some days with the King, subsequently making other visits in England, and taking active part in the shooting season. His visit occasioned an extraordinary amount of discussion in the English newspapers. In a speech at the Lord Mayor's banquet, Premier Balfour called the anti-German alarms of the newspapers "fantastic dreams." The *Spectator*, which has for some time taken the lead in warnings against Germany as England's one dangerous enemy, declared that the Kaiser had visited England to make trouble between Great Britain and the dual alliance of Russia and France. Specifically, the *Spectator* believed that the Emperor wanted to get England's active

support in the form of a mail contract for the Indian postal service over Germany's new Bagdad railway line, of which Russia is said to be extremely jealous. It so happens that just as the Emperor was arriving in England, Germany's sharpest critic, Mr. Strachey, the brilliant editor of the *Spectator*, was embarking for the United States, where, last month, he made the acquaintance of New York and Washington. The *Daily News* and other London journals thought that the Emperor's visit had more to do with Delagoa Bay and the future of Portuguese East Africa than with the Bagdad railway. The *Daily Mail* and other papers made the visit the occasion for criticising Germany's latest acts in China as hostile to British interests.

*Boer Generals and Other Berlin Topics.* One reason for anti-German feeling in England is the continued ovations given to the Boer generals by the people of Berlin and other parts of Germany. The Germans have not, however, contributed as much money to the Boer relief fund as had been hoped for, while the House of Commons, early in November, voted a grant of £8,000,000 in aid of the Transvaal and Orange River colonies for expenses consequent upon the termination of the war. It is hard to take stock in the theory that Germany is seeking to stir up international strife, when the Kaiser's country has so much to occupy it at home. The debate on the tariff bill has been dragging slowly along in the Reichstag without conclusive results. The trade depression in Germany still continues. A trust conference was held in Berlin recently, but it did not attract wide notice.

*France at Home and Abroad.* The French Government, it appears, has not been successful in its attempts to apply arbitration to the dispute in the coal mines that had led to extensive strikes in northern France. The trouble had proved more serious than we had anticipated last month, and it was not at an end when these pages were closed for the press. France and Siam have set a good example by signing a treaty which settles long-standing disputes, particularly regarding boundaries between Siam and French Cambodia. Siam now cedes to France 20,000 square kilometers of territory, and France, in turn evacuates Chantabun, and restores to Siam the right to occupy the twenty-five kilometer zone on the right bank of the river Mekong. Various other provisions relating to ports, canals, railways, and so on, and looking toward increased intimacy of relationships, are contained in the treaty. The statistics for 1901 now show that France has ceased to decline in popula-

M. Jusserand.  
(French Ambassador.)

Don Emilio de Ojeda  
(Spanish Minister)

TWO NEW DIPLOMATS AT WASHINGTON.

and is appreciably gaining. The transfer of Ambassador Cambon from Washington to Madrid has called out many expressions of hearty regard at Washington, New York, and in the American press. A remarkable dinner in his honor was given in New York last month by Senator Depew and Mr. James H. Hyde, attended by Cabinet ministers, governors, and eminent representatives of American business and professional life to the number of two or three hundred. There is a warm feeling in America for the French Republic. M. Cambon's successor at Washington will be M. Jusserand, who will enter upon his duties in January.

*Spanish  
Affairs.*

Monsieur Cambon goes from America to an interesting country, whose fortunes have always been closely related to those of France. It is particularly important that France should continue to exercise a strong influence in Spain, and that closer bonds should unite these two Latin peoples. The young King is winning much praise for his active and zealous interest in the affairs of the government and in the life of the people; but political conditions remain turbulent, and Premier Sagasta was obliged to tender the resignation of the entire cabinet on November 10. He has since formed a new cabinet, however, made up almost entirely of his former colleagues, with the redoubtable Weyler its strong member. The new Spanish minister to this country, Senor Don Emilio de Ojeda, was presented to President Roosevelt on October 23.

*Other  
European  
Notes.*

Another young king whose general excellence of attitude and conduct has public approval is the sovereign of Italy. Queen Helena presented him with a

second daughter on November 19. Economic distress in the southern part of the peninsula has called for a government relief programme. The growing intimacy of France and Italy has led to the proposal of a visit by President Loubet to the King; but the Vatican is strenuously objecting on the score that such a visit would impair papal prestige. King Oscar of Sweden has made a decision in the matter of damage claims growing out of the joint action of the United States and England in Samoa several years ago that is favorable to the claims of Germany and adverse to our own. This decision must help to discredit the casual sort of arbitration that refers a dispute to the sovereign of some small state; but it will correspondingly increase the prestige of so well-constituted a tribunal as the permanent court at The Hague. Russia's economic position is not favorable, and there is much distress from famine in Finland, from plague in the region tributary to Odessa, and from heavy taxation burdens everywhere. The most fortunate development in Russia is the resignation of Pobiedonostseff, the Procurator-General of the Holy Synod,—a great man, indeed, but the arch enemy of liberal ideas. Russia's much talked of retirement from Manchuria is merely taking the form of a concentration of her forces along the line of the railway, in strict accordance with her treaty rights. There have been many reports of illness in the Russian royal family, and particularly of the Czarina's serious ill health.

*Important  
South American  
News.*

The favorable reports concerning revolutionary progress in Venezuela in the early part of October were followed by adverse news later in the month, and in November the word was confirmed that President Castro's victories were decisive. He entered Caracas in triumph on November 9. The revolutionists had plenty of men, but were out of ammunition; and Castro, learning of their needs and their discords, forced conclusions relentlessly. There was reason to believe that the success of General Matos would have been a fortunate thing for Venezuela; but the revolution is crushed for the present. In Colombia, also, the government has prevailed,—General Uribe-Uribe having surrendered, on October 25, with 1,300 men, 10 pieces of artillery, and a large supply of ammunition. General Castillo also surrendered at the same time. Thus the Colombian revolution has died out, excepting for a detached phase of it on the isthmus. It is to be regretted that the Liberal leader, General Uribe-Uribe, should not have overthrown the present arbitrary and unrepudican régime.

# RECORD OF CURRENT EVENTS.

(From October 21 to November 19, 1902.)

VICE-GOVERNOR LUKE E. WRIGHT, OF THE PHILIPPINES.

(Who shared with President Roosevelt the honors of a great reception at Memphis, Tenn., on the occasion of his return to his native State, November 19.)

## POLITICS AND GOVERNMENT—AMERICAN.

October 25.—Attorney-General Knox reports to President Roosevelt that the United States would receive from the French Panama Canal Company "a good, valid, and unencumbered title" to the property of that corporation.

November 4.—Representatives in Congress, State officers, and legislatures are chosen in the United States.

Elections to the Fifty-eighth Congress result as follows: Republicans, 208; Democrats, 178.

Of the States in which United States Senators are to be chosen, the following elect Republican legislatures: California, Connecticut, Delaware, Idaho, Illinois, Indiana, Kansas, Michigan, New Hampshire, New York, North Dakota, Pennsylvania, South Dakota, Utah, Washington, and Wisconsin. Democratic legislatures are chosen in Colorado, Florida, Missouri, Nevada, North Carolina, and South Carolina.

The following State governors are elected: Alabama, William D. Jelks\* (Dem.); California, Dr. George C. Pardee (Rep.); Colorado, James H. Peabody (Rep.); Connecticut, Abiram Chamberlain (Rep.); Idaho, John T. Morrison (Rep.); Kansas, Willis J. Bailey (Rep.); Massachusetts, John L. Bates (Rep.); Michigan, Aaron T. Bliss\* (Rep.); Minnesota, Samuel R. Van Sant\*

\* Re-elected.

(Rep.); Nebraska, John H. Mickey (Rep.); Nevada, John Sparks (Dem.-Silver); New Hampshire, Nahum J. Bachelder (Rep.); New York, Benjamin B. Odell, Jr.\* (Rep.); North Dakota, Frank White\* (Rep.); Pennsylvania, Samuel W. Pennypacker (Rep.); Rhode Island, Dr. L. F. C. Garvin (Dem.); South Carolina, Duncan C. Heyward (Dem.); South Dakota, Charles N. Herreid\* (Rep.); Tennessee, James B. Frazier (Dem.); Texas, Samuel W. T. Lanham (Dem.); Wisconsin, Robert M. LaFollette\* (Rep.); Wyoming, De Forest Richards\* (Rep.).

New York City gives a Democratic plurality of 121,000.

The election in Ohio for minor State officers results in an overwhelming Republican victory.

The Georgia Legislature reflects United States Senator Alexander S. Clay (Dem.) for the six-years' term.

November 7.—Adjutant-General Corbin, in his annual report, recommends the restoration of the army canteen.

November 15.—Suit is brought in the United States Court at Norfolk, Va., to prevent Governor Montague and other members of the State Canvassing Board from awarding certificates of election to Congressmen chosen on November 4, on the ground that no election was held, and that all acts under the new State constitution are invalid.

November 17.—The candidacy of United States Senator Spooner, of Wisconsin, for reelection is announced.

## POLITICS AND GOVERNMENT—FOREIGN.

October 21.—Owing to his attitude on the question of tariff revision, Minister of Public Works Tarte, of the Canadian Government, resigns office at the request of Sir Wilfrid Laurier, the prime minister.... A conference representing 124 borough, county, and urban district councils of the United Kingdom advocates the adoption of the American principle of special assessments on land for improvement purposes.... In the German Reichstag the amendments to the tariff bill reported by the committee are carried against the proposals of the ministry...

The French Chamber of Deputies discusses the coal strike.

October 23.—General Uribe Uribe, the Colombian insurgent leader, with 1,500 men, surrenders to the government forces at La Cienaga.... Further proposals of the German Reichstag tariff committee are carried against the government.... Premier Combes of France

HON. B. P. BIRDSELL.

(Elected to Congress to represent Speaker Henderson's district in Iowa.)

SIR MARCUS SAMUEL.  
(New Lord Mayor of London.)

announces in the Chamber of Deputies that the government will propose arbitration of the French coal strike.

October 24.—James P. Farrell, M.P., is sentenced to imprisonment under the Crimes Act in Ireland.

October 27.—The general election to the Swiss National Council takes place.

October 28.—The debate on the meat and cattle duties is continued in the German Reichstag.

October 29.—The German ministry suffers another defeat in the Reichstag on the tariff bill; the schedule of minimum duties on cattle, as amended in committee, is adopted.

November 3.—The dismissal from the Russian army of the Grand Duke Paul Alexandrovitch, uncle of the Czar, is officially announced.

November 4.—The Venezuelan Government declares the revolution ended.... A fresh uprising is reported in Hayti.... William Redmond, the Irish Nationalist, is arrested and sent to prison under the Crimes Act.

November 5.—In the elections of members of the Lower Austrian Diet, the Christian Socialists, or Clerical Anti-Semites, capture all but one of the seats for Vienna, and will command 50 of the 78 seats in the Legislative Assembly; Dr. Lueger, the burgomaster of Vienna, thus gains complete control of both the Lower Austrian Diet and the Vienna town council for the next six years.... The British Parliament votes the additional grant of \$40,000,000 in aid of the South African colonies.

November 8.—Sir Marcus Samuel is installed as Lord Mayor of London.

November 11.—King Alfonso of Spain requests Prime Minister Sagasta to form a new cabinet.

November 13.—The German Reichstag amends the tariff bill so as to permit the government to retaliate against countries that discriminate against Germany.

November 14.—Señor Sagasta forms a new Spanish cabinet, made up as follows: Prime Minister, Señor

A RECENT PICTURE OF KING LEOPOLD OF BELGIUM.  
(Whose assassination was attempted on November 15.)

Sagasta; Minister of Foreign Affairs, Duke of Almodovar; Minister of War, General Weyler; Minister of Marine, the Duke of Veragua; Minister of the Interior, Señor Moret; Minister of Public Instruction, Count Romanones; Minister of Justice, Señor Puigcerver; and Minister of Finance, Señor Equillor.

November 15.—An Italian anarchist, named Rubino, makes an unsuccessful attempt to kill King Leopold of Belgium.... Dr. Rodrigues Aloes is inaugurated as President of Brazil.

#### INTERNATIONAL RELATIONS.

October 21.—The text of the Anglo-Chinese treaty is published.... It is announced that King Oscar of Sweden and Norway has decided as arbitrator in the Samoan controversy in favor of Germany and against the United States and Great Britain.

October 22.—The Danish Lands-thing, by a tie vote, refuses to

MINIATURE LANDAU AND PONIES PRESENTED BY THE SHOWMEN OF GREAT BRITAIN  
TO THE CHILDREN OF THE PRINCE AND PRINCESS OF WALES.

DR. ADOLF LORENZ.

(The eminent Austrian surgeon now operating on American children. See page 674.)

ratify the treaty ceding the Danish West Indies to the United States.

October 25.—It is announced that Wu Ting Fang, Chinese Minister to the United States, has been appointed to succeed Sheng, formerly Director of Telegraphs and Railroads, as commissioner to negotiate the new commercial treaties.

October 27.—Minister Wu Ting Fang is recalled from Washington by the Chinese Government.

October 28.—It is announced at Paris that Great Britain, Germany, France, and Japan have agreed to refer to the Hague Tribunal the clauses relative to

perpetual leases under which foreigners possess property in Japan.

October 29.—The Turkish Government declines to withdraw troops near Aden until the frontier question is settled by Great Britain.

November 8.—A treaty for reciprocity between the United States and Newfoundland is signed at Washington by Secretary Hay and Ambassador Herbert.... Minister Wu Ting Fang presents his letters of recall to President Roosevelt.

November 12.—It is announced that Germany assents to the proposal of the United States to submit to the Hague Tribunal the question of the payment of the Chinese indemnity in gold or silver.... President Roosevelt appoints Leslie Coombs, of Kentucky, United States Minister to Guatemala, to succeed W. Godfrey Hunter.

November 19.—It is announced that a Persian ambassador to Greece has been appointed for the first time since 491 B.C.

#### OTHER OCCURRENCES OF THE MONTH.

October 21.—The convention of the United Mine Workers at Wilkesbarre, Pa., calls off the anthracite miners' strike by unanimous vote.... Dr. E. J. James is inaugurated as president of the Northwestern University.

October 23.—The Tuberculosis Congress opens at Berlin, Germany.

October 24.—The Anthracite Coal Strike Commission receives instructions from President Roosevelt, and organizes by the election of Judge Gray as chairman ;

Copyright, 1902, Am. Architect and Building News Co.

THE DEBORAH COOK SAYLES PUBLIC LIBRARY AT PAWTUCKET, R. I.

(Gift of the Hon. Frederic C. Sayles, and recently dedicated.)

mining is generally resumed in the anthracite region.... Volcanic eruptions in Guatemala lay waste an extensive tract of country and cause the loss of thousands of lives.

October 25.—The French coal operators and unionist miners agree to accept arbitration.... The new power canal at Sault Ste. Marie is opened (see page 689).... Dr. Woodrow Wilson is inaugurated as president of Princeton University.

October 27.—Seventy thousand Scotch miners demand an increase of 12½ per cent. in wages.

October 30.—The Anthracite Coal Strike Commission begins an inspection of conditions in the mines.

November 1.—The University of Halle, Germany, celebrates its quadricentenary.

NEW HOME OF THE GLADSTONE LIBRARY AT HAWARDEN.

November 3.—Members of the Scottish National Antarctic Association, headed by William S. Bruce, of Edinburgh, leave the Clyde on the steamer *Scotia* for the Antarctic regions.

November 4.—By a fireworks explosion in Madison Square, New York City, 15 persons are killed and many others seriously injured.

November 5.—The arbitrators of the French coal miners' strike decide against an increase in the rate of wages.

November 8.—The Canadian Government sends out mounted police to stop an insane pilgrimage of Doukhobors.

November 11.—Roland B. Molineux is acquitted, in New York City, on his second trial, of the charge of causing the death of Mrs. Katherine J. Adams in December, 1898.

November 18.—The congress of French miners at Lens votes to order the resumption of work.... The American Federation of Labor meets at New Orleans, La.

November 14.—The Anthracite Coal Strike Commission begins the taking of testimony at Scranton, Pa.

November 17.—The ashes of Christopher Columbus are deposited in a mausoleum in the Cathedral of Seville, Spain.

November 19.—A great reception is tendered by the people of Memphis, Tenn., to President Roosevelt and Vice-Governor Luke E. Wright of the Philippines.

#### OBITUARY.

October 21.—Adelbert H. Steele, prominent New York Republican and Civil War veteran, 57.... Dr. Emerson Elbridge White, of Columbus, Ohio, educator, author, and lecturer, 78.

October 22.—Hector A. Holmes, of Austin, Minn., inventor of the first patent twine binder, 78.... M. Hauser, head of Swiss Finance Department, 65.

October 23.—Congressman Charles Addison Russell, of Connecticut, 40.... Ex-Congressman John H. Bagley, of Catskill, N. Y., 75.

October 24.—Judge H. W. Flournoy, of Virginia, 52.

October 25.—Rt. Rev. William Vaughan, D.D., Bishop of Plymouth, England, 88.... Frank Norris, of San Francisco, Cal., the novelist, 82.

October 25.—Mrs. Elizabeth Cady Stanton, 87 (see page 715).... Thomas Embly Osmun ("Alfred Ayres"), of New York, orthopedist and critic, 76.... Henry Probasco, a prominent citizen of Cincinnati, Ohio, 82.

October 27.—P. S. Blodgett, general manager of the Lake Shore Railroad, 59.

October 28.—David Charles Bell, of Washington, D.C., author and educator, 85.... Gen. Christian Botha.

October 29.—Rev. Dr. C. S. Gerhard, of Reading, Pa., 58.... Ex-Judge James A. Logan, of Bala, Pa., general solicitor of the Pennsylvania Railroad Company, 62.

October 30.—Samuel Houston Bengie, of Fort Gibson, I. T., a veteran of the Civil War and last surviving signer of the treaty of 1866 between the United States and the Cherokee nation, 70.... Admiral Sir Edward Bridges Rice, R.N., 88.

November 1.—Francis Asbury Palmer, president of the Broadway Savings Bank, New York, 90.

November 2.—Charles H. Miller, for many years consulting landscape engineer of Fairmount Park, Philadelphia, 73.

November 3.—Oliver B. Stebbins, a writer on dramatic and historical subjects, of Boston, 69.

November 4.—Rev. Dr. Edward Taylor, of Binghamton, N. Y., 81.

November 6.—Prof. George Huesmann, pomologist, 76.

November 7.—Dr. Robert C. Kedsie, professor emeritus of chemistry at the Michigan Agricultural College, 79.... William H. Bulkeley, a veteran of the Civil War, and formerly lieutenant-governor of Connecticut, 62.... Roswell Beardsley, of North Lansing, N. Y., oldest postmaster in point of service in the United States, 90.

November 8.—Ex-Congressman Felix Campbell, of Brooklyn, N. Y., 73.... Very Rev. H. C. Mignot, rector of the New Orleans Cathedral, 60.

November 9.—Dr. Robert Newton Tooker, a prominent Chicago physician and writer on medical subjects, 61.

November 10.—George Gerhard, of New York, a portrait painter, 72.

November 12.—Prof. Ogden Nicholas Rood, head of the department of physics at Columbia University, New York, 71.... Richard Butler, a prominent New York citizen, 71.... Countess Cecilia von Budinger Machivet, of Longwood, Ill., 99.... Dr. A. G. Mason, a writer on bee culture, 74.... Dr. Caskie Harrison, head of the Brooklyn Latin High School, 54.

November 13.—Col. Henry D. Beall, a veteran of the Civil War, and a member of the staff of the *Baltimore Sun*, 65.

November 15.—Ex-Congressman Clinton B. Beach, of Ohio, 57.... Dr. William Henry Haynes, president of the Brooklyn Medical Society, 46.

November 16.—Prince Edward of Saxe-Weimar, 79.... Judge Edward Stake, of Maryland, 56.... George Alfred Henty, the author of books for boys, 70.

November 17.—Rev. Hugh Price Hughes, the well-known London preacher, 55.... Lieut.-Gen. Sir John Stokes, senior vice-president of the Suez Canal Company, 77.... George Harding, a prominent patent lawyer of Philadelphia, and owner of the Hotel Kaaterskill, in the Catskill Mountains, 76.

# THE MISSION OF DR. LORENZ TO AMERICAN CHILDREN.

BY V. P. GIBNEY, M.D.

(Surgeon-in-chief of the New York Society for the Relief of the Ruptured and Crippled.)

**C**ONSIDERING the infrequency of a disability which is known as congenital dislocation of the hip, it is strange that so much interest should attach to the visit of a distinguished orthopedic surgeon to this country.—a surgeon whose reputation is based largely upon the relief he affords to the class afflicted by this particular deformity. It should be clearly understood that the hip socket in this deformity is improperly formed at birth, and permits too much play of the head of the bone. For a great many years,—at least fifty,—the profession has been taught to regard the efforts at cure as a greater affliction than the deformity itself. It is closely allied to harelip or cleft palate, both of which are disfiguring, and both of which are alike amenable to repair at the hands of the surgeon.

Dr. Adolf Lorenz is one of several orthopedic surgeons who have made relentless war on all kinds of deformities and diseases which cripple a child. Where permanent lameness comes in adult life, the sympathy is not so acute as when it attacks a child in its earliest years. The appeal of the father and mother becomes truly pathetic, and it is not surprising that the best years of a man's life are devoted to the cure of these little ones. It is only within the last two or three decades that hip disease itself has been regarded as a curable malady. After all, however, the large number of cases of disease involving this joint are not so relieved that the functions of the joint are perfectly restored, and it is no wonder that thousands of children with stiff hips and shortened limbs are longing for the advent of this distinguished Viennese surgeon. If his mission to this country can be regarded as an impetus to greater zeal in the prevention of deformity after hip disease, then his name will become a household word throughout the extent of this broad land.

What many surgeons in the large cities of this country, as well as in England, have been working at for many years, under all sorts of discouragements, Dr. Lorenz has the reputation of working out with greater success. Long before he announced his conversion to the non-bloody method of reducing congenital dislocation of the hip, he was one of the foremost ex-

ponents of the bloody method, and the statistics furnished by Lorenz of Vienna and Hoffa of Wurzburg had startled the scientific world. It may interest the readers of this magazine to learn that, after the profession had learned to accept his results by the bloody methods as extraordinarily good, closer analysis on the part of Dr. Lorenz, both of the immediate and the ultimate results, led him to abandon this method for the one of which the public has come to recognize him as the greatest living exponent. It may interest the readers also to learn that, at the time when he was operating by the open or bloody method, antiseptics were in vogue rather than aseptics. By the antiseptic method is meant the employment of certain chemicals which are supposed to destroy germs. By the aseptic method is meant absolute and unconditional cleanliness both in the field of operation and in the person of the operator and his assistants. Dr. Lorenz laid the foundation for his great reputation during the antiseptic period, and the report is that he suffered more from these agents than did his patients.

The non-bloody method means this: the forcible stretching of all the soft parts about the hip, sometimes even to the point of breaking the skin (which is rare), until the head of the bone can be brought to the place where the socket should be. If one can employ enough force to bring the head into this position, it naturally follows that a great effort is made to retain the bone sufficiently long for the formation of a socket more or less substantial. Many surgeons in this country and abroad have been able to accomplish the former, and the percentage of cures (by which is meant the retention of the bone sufficiently long for this socket to be serviceable) is just large enough to enlist still greater efforts. Now this great effort has been so persistent in the hands of Dr. Lorenz that his statistics furnish a larger percentage of perfect results.

His visit will make both the parents and the children the more willing to endure long periods of confinement in plaster-of-paris, and thus the surgeon will get more of that all-important factor in the attainment of success, home co-

DR. ADOLF LORENZ.

operation. The stages of treatment are as follows: (1) The exaggerated position of the bone as related to the pelvis, extending over a period of from six to twelve months. (2) A less exaggerated position, wherein the thigh is brought midway between what is known as extreme abduction and the vertical line. This period extends over from three to six months. (3) The limb is brought into a normal position when the fourth stage of treatment is begun,—namely, massage,—active and passive movements, until the function of the joint is made normal.

Many patients weary of these long periods of confinement, and parents are unwilling to subject their children to such treatment when they know how active they were before such

measures were adopted. When the writer of this paper was serving his apprenticeship in the Hospital for Ruptured and Crippled as interne, his attention was frequently called to the grace with which a young girl or a young woman with double dislocation of the hip went through the mazy dance. And even now, in the midst of all good work that is being done for this deformity, he is often compelled to dissuade mothers from subjecting children with double dislocation to the course of treatment.

We all expect great things from Dr. Lorenz, and it is to be regretted that we shall have to wait so long for the realization of our hopes. American students who have profited by his instruction in Vienna return impressed with his zeal, with his honesty, and with his enormous capacity for work. When the first reports of his operations by this method came to this country, his admirers told, in dramatic terms, of the peculiar click with which the head of the bone was thrown into its place by his magic touch. The reports

of his work since his arrival in October have but confirmed these earlier statements. While the restoration of the head of the bone to its normal position is so easily accomplished in children under five or six years of age, it is sad to think that those beyond the age of eight or nine can get no such relief. For these children recourse must be had to the open operation, unless men like Lorenz and Hoffa and Paci can devise a more attractive method.

The mission, then, will be the earlier recognition of this disabling deformity, the more general adoption of the method which promises such a happy outcome, and during the next decade there must needs be fewer children who fail to profit by the visit of Dr. Lorenz to this country.

# GOVERNOR ODELL: A CHARACTER SKETCH

BY ROBERT H. BEATTIE.

(Pastor of the Reformed Dutch Church, Newburgh, N. Y.)

THE figure of Benjamin B. Odell stands out prominently against the background of the autumn's harvest of campaigns. He has been conspicuous in the affairs of the Republican party in New York State for a number of years, but he now stands before the nation. That a strong party man—a machine man as was supposed prior to January, 1900,—could be elected governor for one term was a matter of course, but that such a man could be reelected against a strong opposition, and by an increased vote in a majority of the districts, is by no means a matter of course. It forces the candidate outside the realm where partisan motives rule, and sets him in the other realm where men rule by virtue of what they are,—the realm of character.

His recent victory, then, is far more significant than the earlier one. When the returns came in it looked for an hour as though Mr. Odell's defeat were assured. New York City turned against him with unexpected vigor. But the city's rejection of him was doubtless very largely due to local conditions.

The rest of the State, however, turned to him. Heartily disgusted with the method used against him, they rebuked it heartily. They declared their confidence in his personal aims. They expressed their cordial approval of his administration of State affairs. His home county illustrates the temper of the State. Orange increased the vote of 1900 by more than a thousand, and the city of Newburgh, which had at the earlier election expressed her pride at having one of her sons as governor by giving him a splendid majority, gave him four hundred more votes this fall.

And the test has been severe. The governor's administration has been along business lines. He had dared to reform much of the State's finance. This had thrown many out of the easy berths to which the occupants felt they were properly entitled, and had made each of them a center for anti-administration influence. The reduction of the tax rate, however, won him many friends, who were counted at the polls. He had utterly failed to show sympathy with the liquor men. They were naturally out of sympathy with him. Besides this, in the conferences with the coal operators no man had been more  *outspoken in his denunciation of the capitalists'*

methods and motives than this same governor. In that issue he distinctly espoused the side of the public as against the trust.

In spite of all these influences, which tended to weaken the support given at the earlier election, Governor Odell was reelected. Men in New York State wanted him as governor. He is therefore conspicuous, not so much as a man, but rather as a public man, whose sense of the public has been markedly independent.

Character is a product. The treasure most men give to the world they lay up in early years. Out of the good treasure of hearts they bring forth good things, and where treasure has been evil they bring forth evil things. The home, then, can tell the secret of this man's power. When election day came the governor was at his father's house in Newburgh. There, in the library, he received the returns that night. His wife, children, and brothers, and father were about him. It is characteristic that he went home to receive the returns. His own residence was dark. He slept at his father's house.

This father, whose name the governor is, is a patriarchal figure in the community. A little lad who came to town at holiday-time a couple of years ago, saw him on the street, impressed with the strong face set off by white hair and flowing beard, ran quickly up to him and queried, "Are you Santa Claus?" Needless to say that before he left town the lad was sure he had found the saint. Seven or eight years of life have been his, but his eyes are not dim nor his natural force abated. With rapid, springy step he walks down to his familiar office every morning and puts in a day attending to business.

His life has been full of activity. He worked his way up from the farm. County and municipal politics interested him. For more than forty years he has been in active service. He was one of the last trustees of the village of Newburgh, and in 1866 was one of the aldermen who organized the newly chartered city. He served the county as supervisor and as sheriff, and served the city as its mayor for six terms. The city park, which extends over many acres and occupies the highest ground in the city, is a site commanding an extended view of Or-

and Dutchess counties, while in the foreground lies the Hudson, held by the Beacons, Storm King, and the Narrows, as it sweeps down against the West Point peninsula,—this the ex-mayor wants to be known as his monument. Such is his interest in the better life of the city. The oldest son claimed the birthright in public affairs, took up his share of the inheritance, and has worked it well.

The governor's attachment to his home was cemented long before politics concerned him. To this home he brought President Roosevelt, that the eyes of his mother might rest on him, and she might share to the utmost the good things that filled up her son's life. This mother was a Bookstaver, a descendant of one of the staunch Dutch settlers of the county. A strong character occupied her vigorous body and voiced itself through an unusually alert mind. Her hands toiled for her children. She seconded her husband in his enterprises and helped him gather a comfortable fortune. She pushed the education of her children and started them in the world with three strong things,—strong bodies, strong minds, strong wills, and these three under the strong control of the Christian religion. The family went to church,—the old Reformed Dutch Church, that led the procession of denominations on Manhattan Island and up the Hudson, the church to which the President also declares allegiance.

To these elements of the home life there has been added a deal of heart training. The accidental death of the first Mrs. Odell, the mother of the governor's sons, broke up his home for a time, and the boys were welcomed into the fam-

Phot. by Marceau, N. Y.

GOV. BENJAMIN B. ODELL, JR., OF NEW YORK.

ily of their grandfather. A few years later the home was reconstituted, with the present Mrs. Odell as its mistress. The husband was then leading the quiet life of one of Newburgh's business men, with a large interest in local politics.

Soon after this Walter, the oldest son, then attending the academy, was stricken with paralysis after a vigorous game of football. During the six years that he lived Walter's life was the life of the mind. The body, as soon appeared, could never become normal. The intel-

lect, keen at the beginning, grew wonderfully acute during the following years. The father's interest broadened, the scope of his political aims widened, and the boy breathed the atmosphere of his father's busy life. He went to Washington with him, met men of mark, and soon became skilled far beyond his years in

MR. BENJAMIN B. ODELL, SR.

theoretical and practical politics, while he enjoyed a widely cultured outlook upon the world's life.

Until he had drained the bitterness of these sorrows Mr. Odell lived a quiet life. He had shown no marked ambition, but was simply the intelligent citizen, industrious, respected, but not at all on the highway to renown. Now the eagle's nest was stirred. He became ambitious to gain wealth. He wanted place and power, not chiefly for himself, but for his son's sake. He awakened to intense activity. Larger business affairs were laid hold of. Concrete financial problems attracted him. Naturally a man of strong will power, he laid hold of everything he touched with a master hand. He picked up

the old one-horse street railway of the town, and shortly after it was a busy trolley line. He promoted the affairs of the electric system and soon bought out the competing company. One business matter after another he handled successfully, and all the while he was becoming a growing factor in politics. He was State committeeman, then chairman of the State Committee, then sent on to do valued work as a member of the Assembly. He was elected governor for the first term. Now, as the reelected governor, he stands conspicuous before the nation as the champion of right for the people. But it was the impetus of sorrow that sent him on his way.

Here, at home, we know him as a modest, unassuming man, who takes life seriously. He is too strong to feel the need of outdoor sports, and too busy to need them as a time-killer. His own residence is not on one of our high hills, surrounded by a broad domain, but in one of the city streets, where he can walk to business or the City Club. His spare time, if he spares any from the exacting duties of his office, is spent at home. When he wants rest he travels.

The governor first governs himself. He must look upon the man who is consumed with passion as we look upon wild beasts. Sober-minded, he will not eat too much, drink too much, nor talk too much. He holds himself in command, while forethought and foresight are the twin qualities of his mind. Reserved, he listens to you as you put your case, and when you cease talking you know he has decided. If a monosyllable is enough for answer, why multiply words? He is fitted with a rapid-fire judgment, yet he does not form his judgment till the evidence is in. He attends to business, and therefore dispatches business. He has no time or inclination for small talk.

He is used to conflicts; they do not disconcert him. Once his mind is made up, only the access of new facts can make it over. Opposition he rather likes,—it draws him out. He is not tossed about with every wind. You are sure that he has his root in himself.

Yes, the governor's character is a product. It was placed in a home where it was directed by the teachings of Christianity, exercised in the direction of practical interest in the welfare of others, and informed by a wide and intelligent interest in public affairs. Then it was thrown into the crucible of sorrow, whence it has come forth solid, stable, strong, to stand for the highest things in public life.

# THE GREAT SHIP "COMBINE."

BY WINTHROP L. MARVIN.

IT is a strange economic contradiction that, though the deep-sea steam fleet of the United States is the starveling of the nations, the greatest of ocean steamship companies should have been wrought out by American brains and money, and organized under American laws. The International Mercantile Marine Company, in its formal title,—the Morgan ship "combine" in the vernacular of the "street,"—was incorporated on October 1, 1902, under a hospitable New Jersey charter, with eight American and five British directors. The chief figure among American shipowners, the head of our one transatlantic steam line, becomes the president and ruling force of this mighty combination, and the major portion of its stocks and bonds is held in American ownership. For twenty years such a union of maritime interests had been dreamed of. President Griscom confesses that he had this bold thought stirring in his head "as far back as 1884." But the fulfillment of the splendid ambition waited for the extraordinary vigor and acumen and immense wealth, which had created the United States Steel Corporation the year before this other epoch-making Trenton charter was issued to a second group of the fortunate friends and associates of Mr. J. Pierpont Morgan.

The significance of the International Mercantile Marine Company has not been exaggerated. It marks the beginning of a revolution in ocean traffic. It really means much more than that the new company is the largest shipping corporation in existence, with its 141 steamers and its total tonnage of 1,100,000. The world's second ship corporation, the Hamburg-American, with 127 steamers of 630,000 tons, is almost a pygmy by comparison; and the greatest of British companies, the India Steam Navigation, owns only 117 steamers of 361,000 tons. There are but 147 steamers of 327,284 tons in the entire fleet of the United States actively engaged in foreign commerce.

No nation save Great Britain and Germany possesses an ocean steam shipping equal to that of this one corporation. The "combine" includes all but one of the first-class passenger and freight lines plying between the United States and the United Kingdom. Its vessels, most of them, are of the largest size, and thoroughly modern in design and in construction.

Size, combined with moderate engine power, spells economy in ocean transportation.

The more than a million tons of the international combination represent nominally one-third of the 3,000,000 tons of steam shipping required for the ocean trade between the United States and Europe. This, however, is not a full measure of the real importance of the allied fleet, for the 141 vessels of the "combine" are nearly all of a notably high character, worth a great deal more money, ton for ton, and capable of rendering more service and earning more dividends than the older and feebler ships of small rival corporations. Though the two great German lines, the Hamburg-American and North German Lloyd, are not technically within the combination, they have formed a hard-and-fast "working agreement" with it, which involves a certain division of revenue. Thus, for all practical purposes, the 500,000 tons of German shipping in the North Atlantic trade must be reckoned among the resources of the Morgan-Griscom combination. Allowing for the superior efficiency of the 1,600,000 tonnage of the allied fleets, it is easy to accept Commissioner Chamberlain's estimate that the International Mercantile Marine Company will actually control 60 per cent. of the enormous passenger and cargo carrying between the ports of the United States and those of the United Kingdom and the Continent.

## HOW THE "COMBINE" BEGAN.

It is an interesting story,—the process by which this huge confederacy of ocean interests has come into existence. The first step was the purchase, sixteen years ago, of the celebrated British Inman Steamship line by the International Navigation Company,—a group of far-seeing American citizens, led by Mr. Clement A. Griscom, of Philadelphia. The British Government promptly withdrew the liberal subsidy which it had been paying to the Inman liners; but Mr. Griscom and his comrades brought the *New York* and *Paris* beneath the Stars and Stripes, built the *St. Louis* and *St. Paul*, secured a subsidy from the United States, and gave the first-class British lines a most formidable Yankee competitor. Indeed, commercial rivalry in high-grade ships on the North Atlantic soon became too keen to permit of reasonable dis-

THE "WINIFREDIAN," OF THE LEYLAND LINE.

(One of the largest of the forty-six ships of this line.)

dends, and Mr. Griscom found British ship-owners in a responsive mood when he broached anew the great idea of an international combination.

This union was made all the easier by the fact that meanwhile another important British steamship concern, the Leyland line, had been acquired by Mr. J. Pierpont Morgan in the spring of 1901. This line, itself the fruit of several consolidations, controlled the largest British tonnage in the North Atlantic trade. It owned no fast mail ships, no greyhounds. But it did possess forty or fifty good, useful steamships of moderate speed, many of them of large tonnage, and fit for passengers as well as freight. The main Leyland service lay between Boston or New York on this side, and Liverpool or London on the other, and the business of the company had been so profitable for a long term of years that its shares were quoted at a handsome premium.

Mr. Morgan paid a generous price for his maritime investment. It is said that he gave £14 10s. for each £10 share, or a bonus of 45 per cent. But amazement at Mr. Morgan's "liberality" ceased when the next stage in the great, far-sighted negotiation was unfolded.

This was the dramatic uniting of the Leyland line with the American and Red Star lines of the International Navigation Company, and the Atlantic Transport line, another British steam fleet owned by American capital. Later still it transpired that the famous White Star

line of fast mail, passenger, and freight ships and the smaller but excellent Dominion line were embraced in the huge consolidation. The White Star was one of the two lines—the Cunard was the other—which performed the British mail service between Queenstown and New York. Its fleet included the great liners *Oceanic* and *Celtic*, the swift *Teutonic* and *Majestic*, and the favorite *Britannic* and *Germanic* which had held ocean records in their day, together with a considerable number of large and efficient freighters. The American purchase of the White Star line was long disputed, and when it was finally confirmed, something like consternation seized the British press and people, for the White Star fleet had been regarded as distinctively a British institution as the Bank of England. Its fast ships received not only the mail pay of the post office, but the subventions of the Admiralty, and were enrolled on the "merchant cruiser" list. It was almost as if the Yankees had surreptitiously acquired a section of his Majesty's navy.

The Dominion line, as its name suggests, originally ran in the trade between Great Britain and Canada. But without altogether surrendering its Canadian service it had developed a larger and steadier traffic and more generous profits out of the New England ports of Portland and Boston, and for the Boston passenger trade it had built three admirable steamers, the *Canada*, *New England*, and *Commonwealth*. From a relatively small concern the Dominion line had

Copyright, 1902, by Pach Bros., N. Y.

MR. J. PIERPONT MORGAN.

grown in a few years into one of commanding importance.

The Atlantic Transport line, like the International Navigation Company, was the outgrowth of energetic American methods applied to ocean carrying. In default of encouragement at home,

Mr. Bernard N. Baker and his associates had invested their capital in British tonnage, and their capacious passenger and freight ships to London were sharp competitors with the similar ships of the Leyland line. The advantage of a friendly understanding was manifest.

The relative strength of the constituent companies, when the "combine" was formed, stood just about as follows :

Lines.	Ships.	Tonnage.
Leyland.....	46	293,015
White Star.....	26	250,000
International Navigation (American and Red Star).....	26	186,000
Atlantic Transport.....	12	78,798
Dominion.....	8	73,749
Total.....	118	881,562

To this total must now be added enough new ships under construction to bring the tonnage up to 1,100,000. This 1,100,000 tons of fine large serviceable steamers stand capitalized at Trenton for \$120,000,000, or less than \$120 a ton, in the charter of the International Mercantile Marine Company. A first-class 10,000-ton steamer costs from \$150 to \$300 a ton, and it ought to have twenty years of active and profitable service.

As President Griscom's International Navigation Company was the real nucleus of the gigantic new combination, it was appropriate that he should be the active head and front of it, and that the "combine" in its process of incorporation in the United States should be built up on the older company, amending its charter and retaining the distinctive portion of its name. The International Navigation Company, owning the *St. Louis*, *St. Paul*, *New York*, and *Philadel-*

*phia*, was chartered at Trenton with a capital of \$15,000,000, on June 6, 1893. The new charter of October 1, 1902, revises and extends the old one, changes the name of the new corporation to the International Mercantile Marine Company, and increases the capital stock to \$120,000,000, equally divided into \$60,000,000 of preferred stock bearing 6 per cent. cumulative dividends, and \$60,000,000 of common stock. There are certain points of similarity between this great ship charter and that of the United States Steel Corporation. An issue of \$50,000,000 in 4½ per cent. bonds has been authorized, and it is understood that the issue was promptly absorbed by men on the "inside" who knew the earning power of the "combine" and the strength of its securities as a conservative investment.

#### DETAILS OF ORGANIZATION.

The actual relation of the International Mercantile Marine Company to its constituent lines still remains rather vague to the general public. No official statement has yet been forthcoming, though one of the Board of Directors has informally said :

"The International Mercantile Marine Company will not be a holding company, and the subsidiary lines will be permitted full liberty in managing their own affairs. The new company, however, includes all of the various companies in the combination."

The British Merchant Shipping Act provides that a ship shall not be deemed British unless it is owned by British subjects or persons made

THE "MINNEAPOLIS," OF THE ATLANTIC TRANSPORT LINE.

(The ships of this line were originally built for the cattle trade; are now carrying passengers as well as freight.)

"COMMONWEALTH," OF DOMINION LINE.

(Passenger steamship plying between Boston and England.)

denizens by letters of denization, or corporations established in British dominions under British laws, with their principal place of business in those dominions. It is obvious, therefore, that the British steamers of the great "combine,"—and they are nearly all its steamers,—could not retain their British registry if they were directly owned by a New Jersey corporation. This legal difficulty has apparently been solved by the organizing in Great Britain of a separate British concern, which will stand in the same attitude as that in which the International Navigation Company of Liverpool, owning the British ships of the Griscom fleet, long stood toward the International Navigation Company of Trenton.

All the shares of the British companies in the "combine" will be transferred to this British corporation, and British subjects will predominate in its management. It is only the great board of the "combine" which is held in the control of an American majority. Mr. Morgan and his colleagues gave early and emphatic assurance to this effect, in order to soothe the patriotic sensibilities of the British people, and perhaps forefend hostile action by their government. Moreover, the British ships themselves will retain their national allegiance, will be officered by British subjects and manned in part at least by British crews, and will even be held available for use as British merchant cruisers or transports in case of war, whenever the nation may require their services. The leaders in the combination have declared again and again that they do not wish to secure American registry for their British steamers, that they never have

desired it, and that they would not seek it even if our laws did not forbid the naturalization of foreign craft without the express authority of Congress.

#### BETTER SERVICE, LOWER COST.

Of one fact travelers and merchants can be certain,—that it is no part of the calculations of Messrs. Morgan, Griscom, and their colleagues to wring increased profits out of Atlantic traffic by an arbitrary advance in passenger and cargo rates. Their purpose is very different. They frankly expect to make the business of the allied companies greater and more lucrative than it has ever been before, but they propose to achieve this end by the legitimate means of improved efficiency and economy. It is said that Mr. Morgan looks for an ultimate saving of \$12,000,000 or \$15,000,000 in operating expenses, which would of itself yield from 10 to 12½ per cent. on a capital of \$120,000,000. A great deal of the costly administrative machinery and equipment which each rival line has maintained can now be dispensed with. There need no longer be the extravagance of sending to sea on the same midwinter day two or three stately greyhounds, each with its cabins one-quarter filled with passengers.

President Griscom has intimated that there may some time be established a regular system of daily departures from New York,—a boon not only for travelers and the mails, but also for general commerce. In other words,—to quote the indomitable American captain of ocean industry who heads the combination,—“Our object is to try to give a better transatlantic service at a decreased cost.” To this end an economical management will be introduced. It is possible that the combination will carry its own insurance. President Griscom promises “steadier and more uniform rates, a just distribution of traffic among all American and Canadian seaports, increased lines on the Pacific and services to South America as traffic may be found to justify them.” Or, as President Griscom told a gathering of merchants and manufacturers at the Commercial Museum in Philadelphia:

Your transportation must be conducted on a large scale. As exporters, the time has come for you to be able to contract with one party which will stand ready nearly every day in the year to take cargoes in large quantities at any of our great seaports and, without transshipment, deliver them on a fixed date at any of the great seaports of Europe. It is not our aim to advance average freight charges. Through the magnitude and diffusion of its business, such a company can guarantee a reasonable stability of rates. Such stability is an invitation to capital. It assures the exporter that he can prosecute his plans for the extension of his agency

and requires only twice as large a fireroom force, as a 10-knot steamer. As a matter of fact, the difference, instead of being as two to one, is as seven to one. The United States Commissioner of Navigation, in his report for 1900, gives the cost of coal and handling for a 10-knot steamer as \$33,180 a year; for a 20-knot steamer, \$231,000. It is probable that the economic limit of speed progress in our present steam propulsion has been reached at about 17 knots, in such excellent cargo and passenger ships as the *Finland* and *Kronland* of 12,500 tons, just built for the American line at Philadelphia. According to the commissioner's computation, such ships could be navigated with a fireroom bill of \$131,000 a year, as compared with the \$281,000 of the 21-knot *St. Paul* or *St. Louis*.

Left to themselves the steamship companies, or at least the American and British, would build few vessels of above 17 knots. If higher speed is desired for mail ships or "merchant cruisers," it must be liberally paid for by government, and charged off against the postal or war account. A very large majority—probably four out of five—of the steamers built for the chief Atlantic companies in the past half-dozen years have been given only moderate engine power and a speed of from 13 to 17 knots, with a relatively large cargo capacity and a fair space, generally amidships, for passengers. Most of the new German ships are of this description, and it is reasonable to assume that it is these "steady-going liners" which "pay best." The greyhound of 20 knots or more is an occasional luxury, useful for advertising purposes,—indispensable, indeed, to a certain impatient, short-season passenger trade, but, something which can be indulged in only seldom, and not at all by the American and British lines without

THE RT. HON. W. J. PIRRIE.

government assistance.

The International Mercantile Marine Company, through its own lines or its partnership with the Germans, controls all but six of the eighteen fast ships of 20 knots and upward in the noble, great trade between America and Europe. The six exceptions are the four Cunarders *Campania*, *Lucania*, *Etruria*, and *Umbria*, and the French *La Savoie* and *La Lorraine*. Thus, the combination controls directly or indi-

rectly two-thirds of the first-class steam fleet on the North Atlantic. But the four American and three British fast ships of the combination are, after all, only one-nineteenth in numbers of its whole great fleet. All the rest of the 136 are of moderate speed, efficient but economical. It is chiefly in these "steady-going liners" that the strength of the "combine" exists; to them it must look for its largest and most constant dividends.

#### THE "COMBINE" AND AMERICA.

One thought which the great shipping combination brings home instinctively to all of us is,—what effect will it have upon shipbuilding and shipowning in America? At present any reply to this vital inquiry must be mere guess-

(Sister ship of the *Finland*.)

work. Unfortunately, the "combine" is now American in only its majority ownership and management. Its vessels are nearly all foreign-

MR. P. A. B. WIDENER.

built; they are officered abroad and manned abroad. They fly British, or in a few cases, Belgian colors. The four fast ships of the American line, of course, sail under the Stars and Stripes. So do the 17-knot *Finland* and *Kroonland* already mentioned. Besides, there are six American ships in process of construction at Camden and Baltimore for the Atlantic Transport line; that is, there are just a round dozen Yankees, present and prospective, in the huge fleet of the combination. The four small iron steamers of the original American line have now been drawn away to the Pacific coast-wise trade, and are scarcely to be included; but if they are reckoned, there are only 16 Americans out of 141!

As to whether this small Yankee squadron shall grow, time and the wisdom of Congress must determine. The American managers of the combination earnestly desire to increase the number of their American ships, but they cannot afford to sacrifice British subsidies in order to achieve this. The new subvention to the White Star steamers requires absolutely that they shall not only keep their British flag and register, but be controlled and navigated by British subjects, and held rigidly as a part of the Royal Naval Reserve.

Moreover, there is the further problem of wages. It is labor at once low paid, intelligent,

and effective which has enabled German competition to cut deeply into the British steam marine. But German shipyard and shipboard wages are probably not so much below British as British wages are below American. One purpose of the new Cunard subsidy is to equalize British and German labor cost. Mr. Morgan, Mr. Griscom, and their comrades are as patriotic as any of their fellow countrymen. But they can scarcely be expected to pay \$11,300 a month for an American crew of 380 men, while a British crew of 427 can be hired for \$9,891.\* Nor will they, without some especial inducement, give \$1,846,000 for an American steamship, while a

(President of the International Mercantile Marine Company.)

British craft of exactly the same dimensions and speed can be constructed for \$1,419,000.\* It may be said right here that the tariff has nothing whatever to do with the question of the relative cost of American and British ships, for a full rebate of duty is allowed on foreign materials used in the construction or equipment of ships for deep-sea service. American shipbuilding, therefore, is substantially on a free-trade basis, so far as ocean vessels are concerned.

\*These figures are not conjecture; they are absolute facts of official record.

MR. GEORGE W. PERKINS.

A word as to the *personnel* of the ship "combine." First and foremost, of course, is the master-mind of the whole gigantic enterprise, Mr. J. Pierpont Morgan. For long years the ablest steamship managers on both sides of the ocean had dreamed of a union of interests to enhance the stability of the great trade, and to make it at once more efficient and more prosperous. Not, however, until they invoked the genius of the mightiest financier of his time could they reach the goal which had enthralled their imagination.

Mr. Morgan's chief lieutenant in America is naturally our greatest shipowner, Mr. Clement A. Griscom, president of the International Navigation Company; his chief lieutenant in Great Britain is the Rt. Hon. W. J. Pirrie, head of the famous Belfast shipyard of Harland & Wolff, which receives the important right to build all the new British vessels of the combination. Mr. Pirrie is closely allied with the White Star interests, and to his influence is credited the winning over of that important line, as well as the *soothing* of the fears of the British Government. *Another notable figure on the Board of Directors*

of the "combine" is Mr. Bernard N. Baker, of Baltimore, the head of the Atlantic Transport line; another, Mr. P. A. B. Widener, the Pennsylvania capitalist who was a leader in the International Navigation Company. Still another American director who bore a strong part in the forming of the "combine" is Mr. Charles Steele, a member of Mr. Morgan's banking firm. Mr. George W. Perkins, also a member of the banking firm, is associated with Mr. Steele on the executive committee of the "combine."

Thus the American managers of the shipping combination include both great steamship managers and great financiers. Indeed, in the dis-

MR. CHARLES STEELE.

tinguished president of the concern, Mr. Griscom, steamship manager and financier are united. These gentlemen have brought a colossal undertaking to final victory. They are sure of their profits—sure of the stability of their investment. Their project cannot but bring large benefit to Atlantic commerce. Whether it will hasten the revival of American shipbuilding and shipowning for deep-sea trade, now so pitifully shrunken, depends not so much upon these gentlemen as upon their country. They have done their part; they have made their beginning.

# THE GIANT GROWTH OF THE "SOO."

## WONDERFUL INDUSTRIAL PLANTS CREATED BY THE POWER CANALS OF SAULT STE. MARIE.

BY CY WARMAN

**L**AKE SUPERIOR, covering an area of 30,000 square miles, belches forth every minute into Lake Michigan from 3,600,000 to 7,000,000 cubic feet of water. This overflow, rushing through a channel a half-mile long and a half-mile wide, with a fall of 20 feet, makes the Sault Rapids; and the Sault has a minimum force of 130,000 and a maximum force of 260,000 horse power.

Seven years ago the Canadian village of Sault Ste. Marie—"Sasantmary" as they hurriedly pronounce it here,—was dead. A young engineer had longed to use this mighty power of the Sault, dugged a canal, broke the town and his own heart, and sat brooding on the bank of a big ditch that was no good to anybody. An explorer in search of water power stumbled over the engineer. "Let me take your ditch," said the stranger; "I'll dredge it and deepen it, sell power to the town, and to others who will rush in to build shops and mills here on the great rapids,—come, you shall help me."

But when the canal had been completed nobody came to rent the power, so the fortune-hunter organized the Consolidated Lake Superior Company, built a pulp mill, and began making ground wood pulp. Immediately those who thought they controlled the pulp market of the world put the price down 25 per cent. The pulp made here and elsewhere at that time contained over 40 per cent. of water, so it could not be exported.

Instead of a misfortune, this temporary embarrassment proved a blessing to the Sault company, for the president, having gathered about him by this time a number of skilled men,—experts in chemistry and other lines,—set to work

on a machine to make dry pulp. They succeeded in doing this, but it was now so nearly like paper that they were unable to export it as raw pulp. Then they painted little red spots on the great rollers over which the pulp in sheet form is rolled in the drying process. The pulp would not stick to the paint spot, and the result was a row of half-inch holes right across the sheet at regular intervals, and these holes let it pass to the export market free of duty, for nobody would buy "paper" full of holes.

The next achievement, or invention, was a chemical pulp plant. It was a success from the beginning, but the sulphur necessary for the successful operation of this plant had to be brought from Sicily.

Mechanical and chemical wood pulp are both made from spruce. Mechanical, or ground wood pulp, is made by simply holding a stick of spruce sideways to a grindstone, by means of hydraulic pressure. The whole stick is ground

Drawn for the *Scientific American*.

VIEW OF POWER CANAL, SAULT STE. MARIE, MICH.

up, including all the resinous matter, and one ton of ground wood pulp requires about one cord of spruce wood.

Chemical pulp is made by first chipping up the spruce, and in a steel digester, lined with bricks to prevent corrosion of the shell, it is "cooked" by steam and an acid hereafter mentioned. The acid dissolves the resinous matter in the spruce and leaves only the long wood fiber, which is, therefore, much stronger than the fiber produced by grinding the wood, and is, of course, much more costly. One ton of

chemical pulp requires about two cords of spruce wood.

Various grades of paper are made from the medium of the two pulps, by mixing the pulps in various proportions. It is bleached white, and afterward colored, if required.

There are two kinds of chemical pulp made, "sulphite" and "soda" pulp; but most chemical pulp is "sulphite," the small proportion of "soda" pulp made being used principally for the well-known glossy surfaced magazine paper.

The chemical pulp made at Sault Ste. Marie is "sulphite." The liquor used to dissolve the resinous matter is calcium sulphite, made from limestone, water, and sulphurous acid. The process here is the same as in other sulphite mills, except that, instead of importing the sulphur, it is obtained by roasting Sudbury nickel ore. The sulphur from the Sudbury ore has heretofore all been wasted.

The resourceful head of all this industry had seen clouds of sulphur floating away from the stacks at the nickel smelters at Sudbury, so he set his experts to work out a way of saving the sulphur from the smelter smoke. This was soon pronounced possible, and immediately they began smelting nickel ore.

Then, by an electrical treatment entirely original, they fused nickel and iron into a metal that

A GENERAL VIEW OF THE GREAT STEEL PLANT, STE. MARIE, ONTARIO, SHOWING A YARD FULL OF PIG IRON.

made the finest nickel steel, for which they find a ready market.

Well, this thing has gone on,—the actual fast building, developing, and inventing,—until to-day the Canadian side of the Sault looks like a world's fair, and a walk through it is simply bewildering. There is nearly a square mile of mammoth mills, machine shops, smelters, and factories, and a half-mile of ore docks. These industries, that five years ago employed less than five hundred men have nearly five thousand upon their pay roll to-day, and this does not include men indirectly employed by contractors. Twice as many people draw pay to-day from the big Sault company as lived here when the explorer came and waked the sleeping village. The best general-view photograph obtainable shows not much more than half the building on the Canadian side alone. The new steel plant and the big battery of blast furnaces that stand by the ore docks, the car shops, the veneering plant, the sawmill, and great charcoal ovens,—where

everything but the smoke is saved,—have all been added since the latest photographs were made.

One is amazed that so much could be accomplished with no revenue coming in, and, again, that it could be accomplished in so short a time. Thousands upon thousands of dollars have been spent upon experiments alone. The sewage system alone cost \$100,000 before they could begin to build.

A railway,—the Algoma Central & Hudson

OLD BLOCKHOUSE, WHERE THE MANAGER STILL LIVES.

Bay,—is building north to Hudson Bay, 480 miles. Eighty miles of the main line have been graded, and 50 miles, laid with 80-lb. steel rails, are in operation, with nearly thirty miles of terminals at the Sault. A branch line is being built to Michipicoten harbor. At Sudbury the company has 12 miles more in operation, and along this short line they have four copper mines that produce 1,000 tons of ore daily.

Ten miles out the main-line locomotive plunges into the forest, and there is tall timber as far north as the engineers have surveyed. Naturally, there must be a great temptation to seize the best of the timber and look after the little trees later; but the men who direct the work up here seem to count it wicked to waste anything. Every tree in the forest is used,—the spruce, of course, for pulp, the hard wood for furniture and veneering, and the roughest for charcoal. The white birch is made into spools.

At Goulais, 30 miles from the Sault, are mills manufacturing lumber, lath, and shingles. Another mill at Sault Ste. Marie has a capacity of 125,000 feet per day. At Wilde, 25 miles out, there is a nest of 16 charcoal kilns, at Goulais 20, and at Bellevue 20. These are to supply charcoal for the smelters and steel works.

At the Sault an immense charcoal plant has been constructed which will consume 200 cords of wood a day. At this plant all the by-products, such as acetic acid, will be preserved, rectified, and marketed. These charcoal kilns alone will consume 625 cords of wood a day. Twenty-five acres of land must be cleared daily to supply these furnaces; and, when these people pass over it, it is cleared. To watch them at work reminds one of a harvest scene, so completely do they clear the ground. Here is the stubble, and there the waving grain. Three hundred farms of 25 acres each will thus be opened annually, and 300 families can make a living here growing truck for the market.

Beside the wood consumed by the charcoal kilns, the sawmills must be supplied, and the veneering plant, which will eat up 40,000 feet per day; counting trainmen, teamsters, inspectors, and all help engaged in handling the raw material from the forest, this industry alone will give permanent employment to a thousand men. The company takes a cord of wood out of the forest, and works with it until they spend five dollars; when everything has been saved but the smoke, they sell it for six dollars. This last dollar represents the company's profit; the rest goes to labor.

The Helen mine at Michipicoten is a great mountain of iron. They don't mine it; they simply blast and break it off, and slide it into

the ore docks. A number of experts have guessed as to the amount of ore in sight; but, of course, it is only guesswork.

It would appear that the only thing lacking is coal, but these men say they can make better steel with charcoal; still, they can bring back the coal in their empty ore boats cheaper than anybody else can bring or furnish it to them. They have now a fleet of seventeen steamers, some of them ocean-going, on the lakes, with an aggregate tonnage of 45,000 per trip, and are still building.

The steel plant alone,—including blast furnaces,—when completed, will cost \$10,000,000, will employ 1,000 men, and consume 2,000 tons of ore daily with a product of 1,000 tons of steel. The two pulp mills will employ 300 men, and make 160 tons of pulp a day.

There are many other enterprises carried along by the company; there is an electric street-railway system,—to operate on both sides,—connecting the two Saults by means of a ferry system; they have, organized and in operation, an express company.

Not far from the main works a model town has been laid out. Many solid blocks of neat, comfortable cottages have been built and are occupied by the employees of the shops. Some have been turned into temporary schoolhouses. On the principal street a block of stately, two-story frame houses are just being completed; these will be occupied by the office clerks and skilled workmen, who will want to keep up a more pretentious establishment than usual. Hedges have been planted, streets graded, and miles of walks have been put down by the company that seems to overlook nothing.

The management of this vast property is thoroughly systematized. There is a responsible head to each branch or department, and these make up the president's general staff. There is a regular cabinet meeting every two weeks. After a substantial dinner,—at which tea and coffee flow like water,—they adjourn for business; and it's all business until the business is disposed of. Here the various heads of departments make suggestions which are taken up and discussed. If a project has been under way, some one is expected to report upon the practicability of the scheme. If he pronounces the thing a success, that ends it; but if he reports otherwise, he must explain why to the entire satisfaction of the gentleman at the head of the table. It is a remarkable fact that, so far, whatever they have sought has been found; whatever they have conceived has become a reality. The great secret of this success is that nothing has been done by chance. Everything has been

carefully thought out and worked out on practical and scientific principles. It is the inevitable result of research, of intelligent conception, tireless energy and the enthusiastic coöperation of 300 clever men who have been assembled at the Sault to assist in carrying forward to success one of the grandest industrial schemes that has ever been undertaken on this continent.

The interests and industries here are so varied, so well planned,—each working to help the other (the bark of the spruce pole bleaches the pulp),—that, if one should fail utterly, the rest would go on. A dozen Banks of Montreal might be forced to close their doors and abandon a dozen towns in Canada, but it would not be felt at the head office; business would continue at the old stand. And if steel and nickel and iron, and all the hard things that are made here, should fail of a market, they would still have this 150,000 square miles of wilderness to harvest and work up. More than this: Away to the north, past the highlands that rim the lake region, this Hudson Bay road will tap a great swale that will some day yield wheat, as the Red River valley does; only it will all be "No. 1 hard."

One stream they cross on a bridge 135 feet high; but, just below the bridge, the river takes a sheer drop of 170 feet; so that it will be 305 feet from the rail to the river.

Beyond these rocks and rills,—the haunt of the deer, the moose and the caribou,—the line will drop gradually to the lower warmer lands, and then on through—they are not quite sure what—to Hudson Bay.

On the Michigan side, the same company that has accomplished so much on the edge of the Canadian wilderness has scooped out a power canal beside which the drain that connects the Mediterranean and the Red seas would look like

an irrigating ditch. It is 30 feet deep, 200 feet wide, and two miles long. Near the mouth it flares, fan-shaped, pouring its waters in under the mammoth power house that is just a little over a quarter of a mile long.

From a wide fore-bay,—flowing at the rate of 108,000,000 cubic feet an hour,—this vast flood will sweep through the greatest power house on earth, and turn the turbines; of these there are 320, each having the power of 125 horses. This job has already cost in the neighborhood of \$4,000,000, and they have not yet begun building the mill, which, like all their other plants, will be the biggest and best in the world. It may be said, despite the fact that millions have been spent on the Michigan side, that work is only begun.

On the Canadian side, however, they are getting down to steady work. Street cars are stopping at the corner of the grounds, picking up the tired employees and carrying them home in the twilight. There is an electric automobile at the door of the general office building, and a yacht in the harbor. A magnificent house is being built on the highlands overlooking the Sault; and here,—with his parents, his brother who has worked with him, and his sisters,—the young man who has been the ruling genius in all this great industrial development will make his home. From his wide veranda he can watch by day the dark clouds floating from the mills; and by night the glare of the blast furnaces will remind him of the Fourth-of-July of his boyhood home in Bangor, Maine. And at evening,—when the wind holds steady from the south,—he can hear the roar of furnaces, the singing of the circular saw, the hum of wheels, and the glad cry of the iron horse coming out of the forest; and this is the grand new song of the Sault.

WOOD-PULP MILLS ON THE CANADIAN SAULT.

# NEW JAPAN: THE SCHOOLMASTER OF ASIA.

BY JOHN BARRETT.

[Mr. Barrett, who is well known to all American readers as a leading authority upon the politics and trade of the far East, and who represented us for some years very ably as minister to Siam, is now revisiting Japan, China, Siam, India, Australia, and other parts of the East as a commissioner-general on behalf of the great World's Fair to be held at St. Louis, and the present article represents some phases of the larger Eastern situation as he now finds it.—THE EDITOR.]

JAPAN has astonished the world by her marvelous strides to an acknowledged position among the first powers of the earth. Her development during the last half century is, in some respects, more remarkable than that of the United States. Fifty years ago, when Commodore Perry rapped somewhat roughly at her gates, she was, in material progress, governmental administration, and educational development, little beyond where she stood a thousand years before. Now her snug little realm is traversed with railways and spotted with manifold industries, her political system compares favorably with the monarchies of Europe, and her colleges and schools are graduating hosts of young men fitted for every position of responsibility. Her foreign commerce has expanded in thirty years from \$30,000,000 to \$300,000,000 per annum. This is an increase of 1,000 per cent. per annum, a record unrivaled by any other country in the same time or under similar conditions. Starting with no merchant marine, she now has her cargo and passenger steamers running to all parts of the globe in successful competition with the fleets of the older and richer nations. With no modern war vessels twenty years ago, she now has a navy ranking next to our own in effectiveness. With an army a few decades past that was barbaric in equipment, she possesses to-day a trained armed force that, in comparison to her area and population, is second to none.

## THE NATURE OF JAPAN'S LEADERSHIP IN THE FAR EAST.

Although she entered upon ambitious responsibilities when she engaged in war with China and threw off the swaddling clothes of youth when she negotiated her new treaties for the abolition of extraterritoriality, she is now preparing to play a part in Asia more ambitious and more pregnant with responsibilities than any she has yet undertaken. Her new rôle may be described as that of the schoolmaster of Asia. In other words, recent events would indicate that Japan will be the chief influence to modernize China, to awaken Korea, to help Siam, and even,

incongruous though it seems, to coöperate with Russia in making Eastern Siberia habitable and prosperous. The Japanese army officer, lawgiver, merchant, and general utility man seems to possess more all-round capabilities for bringing out what is best in his fellow Asiatic than any other national. The average Japanese understands thoroughly and completely the average Chinese, Korean, Siamese, and miscellaneous Asiatic, where the European and American labors in mystery and ignorance. This is natural. The Japanese people are akin to other Asiatics. They are probably of Malay origin and so have racial sympathies with the southern Asiatics. Their written language is the same as that of China and Korea in its higher forms, and hence they have in this a bond of closer union than any possessed by the Caucasian races. They understand the Asiatic point of view, and this is a matter of cardinal importance. They look at Europeans and Americans largely through the same glasses as gaze upon the rest of the Asiatic peoples. They are not compelled to reverse their methods of reasoning to appreciate how the Chinese, Koreans and Siamese reach a conclusion. They can teach and lead with a directness and efficiency that is lacking among Europeans. In bringing out these comparisons, I do not mean that the Japanese have not their weaknesses and shortcomings, or that in the comprehensive economy of the world they are in any way superior to the progressive races of Europe and America. They are simply better suited to deal with their own kind, and they have added to that quality immeasurable strength by studying, adopting, and mastering, to a commendable degree, the influences that have done so much to build up the nations and peoples of America and Europe. This argument is not a eulogy of Japan; it is a frank description of what she is preparing to do at this hour. In playing the part of the schoolmaster of Asia she certainly will have the good will of America.

## HER EDUCATIONAL FUNCTIONS.

By way of comparison, it might be said that Japan is establishing throughout eastern Asia

an educational Monroe Doctrine ; she is demonstrating the principle that there is nothing like Asia for Asiatics ; she is not in any way crying hands off to other nations ; but she is proving by peaceful effort that she can accomplish more than if she undertook to do the same thing with a vast armed force. If we note specifically how Japanese influence is exerting itself quietly throughout the countries of Asia, we can more readily appreciate the significance of the schoolmaster position. Especially is this true if we treat this educational process as not referring merely to schools and books, but to commercial exploitation, assistance in governmental administration, organization of armies, and general adaptability of services where they can be of direct advantage both to Japan and to the country served. A secret of Japan's success along these lines is this : Europeans want to do everything for Asiatics in the sense of monopolizing the doing ; the Japanese wish to teach the Asiatics to do for themselves as they are doing for themselves. In China it has been found that a Japanese army officer, or instructor along any line, will accomplish more with greater interest on the part of the student in a given time than any other foreigner. Japanese merchants, principally on a small scale, are locating themselves in all parts of the interior of China where no European merchant has ever thought of going.

In Manchuria, where Russia is supposed to have supreme control, the Japanese tradesmen outnumber the Russians fifty to five. If one journeys over the Russian railways, from Port Arthur and Dalny north to Harbin, and then across to Vladivostok, he sees almost as many unofficial Japanese traveling as Russians. Recently, in going from Port Arthur to the new Russian port of Dalny, I counted ten Japanese and two Russians in the first-class car, and was informed that this was not an exceptional ratio. As we stopped at different stations and walked up and down the platform, well dressed Japanese strolled about with as much nonchalance as at stations along the Tokaido from Yokohama to Kyoto. Some British friends who were my companions—including Dr. Morrison, the celebrated Peking correspondent of the *London Times*, and Charles Kinder, the Director of the Peking-Shannai-kwan Railway,—said that they believed that many of these Japanese gentlemen were army and navy officers in disguise studying the country for their government's intelligence office. Of this I have no positive knowledge, but the judgment of my two friends is considered good in these parts. We observed, also, many Japanese photographers, who were taking pictures of everything in sight. They were open and

polite about it, however, and were certainly well treated by the Russians. If Russia has any ill feeling toward Japan, or the latter toward the former, it is not manifested by the way the Russians and Japanese mingle in Manchuria and Siberia.

There is much talk throughout the far East concerning possible war between Japan and Russia, but I saw no signs of actual conflict. Such a struggle would be a great strain on both nations, and it is to be hoped that it will never come. As one learns to respect the Japanese more than ever by actual contact with the work they are doing at home and abroad, so is the regard for what the Russians are accomplishing for the material progress of eastern Siberia strengthened by an inspection of the vast improvements they are making and undertaking. For instance : As the railway the Japanese are constructing from Seoul to Pusan through the heart of Korea will be of signal advantage to the commercial exploitation of that land, so the system of railways that Russia is laying down over Manchuria and Siberia will make that section accessible to the world and a market for foreign products.

#### JAPAN'S WORK IN KOREA.

Reverting to the rôle of the schoolmaster in its comprehensive sense, Japan is bending every energy in a quiet way to bring out the best there is in Korea. She has agencies at work that no other country can employ. These are her own emigrants to Korea. Japanese settlements are springing up from the Manchurian border to the southern cape. These villages and the Japanese sections of the Korean cities are always well governed, and the people seem prosperous and contented. They are not ground down by the squeeze of Korean officialdom that takes the life out of the average Korean, and the example of their welfare and good government is unmistakably teaching the Korean people and convincing the Korean officials that a new order of things must be presently inaugurated, either alone or with Japanese coöperation, if Korea would maintain her independence and lasting welfare. It is not within the province of this discussion to consider Japanese political intentions in Korea, but it can be safely stated that Japanese material exploitation has so far been to Korea's commercial advantage. The conformation of the land, the products of the soil, the mineral resources, and the climatic conditions are not unlike those of Japan ; so that the Japanese merchant or coolie quickly finds himself at home, and proceeds to make the most of the situation. He is not so selfish, however

that he fails to take into consideration the rights of the Koreans, or that he saves up everything with the purpose of returning eventually to Japan. The merchant or contractor employs Koreans in considerable numbers, pays them higher wages than they were getting before, and teaches them new ideas of economy and industry. The coolie, who may have been an ordinary laborer in Japan, soon finds an opportunity of branching out, and buys a bit of land or rents a small shop. The Korean coolie sees this change and progress, and aspires to follow in the steps of the Japanese immigrant.

If ever one nation made a peaceful conquest of another along legitimate lines of settlement and material development, it would seem as if Japan were accomplishing this result in Korea. In the literal meaning of schoolmaster we find Japan exercising her capacity within the borders of her neighbor. Wherever there are Japanese settlements in Korean towns, or new villages are located, a schoolhouse is immediately built to which all the Japanese children are required to go and receive systematic instruction from a Japanese teacher. There were practically no schools in Korea, except those of the foreign missionaries, until the Japanese opened their own. In Chemulpo and Seoul I heard the same buzz in passing the modest little schoolhouses that is heard all over Japan and is so characteristic of her inland towns.

#### RELATIONS WITH SIAM.

A few years ago there was no Japanese legation in Siam. Now there is one established in Bangkok, its capital, and the Japanese minister is the dean of the diplomatic corps. Siam has reciprocated and installed a minister in Tokyo. Soon after the opening of the Japanese legation in Bangkok, Japanese army and navy officers, merchants, and travelers, began to visit this wonderful little kingdom of southern Asia. Presently a Japanese photographer, who is usually the pioneer of Japanese exploitation, started a modest studio. He was followed by barbers and small tradesmen. Now larger agencies and interests are opening branches there. Siam is studying Japan in order that she may imitate her more powerful ally in the north. Young Siamese are being sent to Tokyo to be educated in the military, naval, and general colleges. The Siamese Government is employing Japanese scholars and authorities as advisers and assistants in the various departments of her state administration, and they are teaching the Siamese by actual contact with the Siamese what *Asiatics* can do for themselves when they make a serious effort.

It has been announced in recent dispatches that Siam is trying to avail herself of such protection and help as might come under the new Anglo-Japanese treaty. This is natural, and not inconsistent with Siam's political status and environment. British territory forms the western boundary of Siam and British trade is 60 per cent. of her foreign commerce. At the same time Japan is anxious to build up her own trade there, for there is an excellent market for many of her products; and she is jointly desirous with Great Britain of maintaining the independence of Siam. On the other hand, it is contended by the Siamese, that the French, whose territory of Indo-China makes her eastern boundary, are endeavoring to assimilate part of the Siamese domain and generally to cripple her independence and development. France denies this accusation, and claims that she is well within her rights; but the situation is certainly a delicate one, and the world may yet see an application of the meaning of the new Anglo-Japanese treaty in Siam before it does in Korea or elsewhere. Judging from my own observations, made while I had the honor of serving as United States minister to Siam, King Chulalongkorn of that progressive nation could do far worse than promote friendly and intimate relations with the Emperor of powerful Japan.

#### THE JAPANESE MERCHANT MARINE.

A description of Japan's new position in the Pacific and far East would not be complete without a reference to the wonderful increase of her merchant marine. When I first traveled up and down the Asiatic coast in 1894, the Japanese flag was seldom seen outside of Japanese ports, and even there it was often in the minority. In less than ten years her ships have begun to sail on every Asiatic sea and navigate every Asiatic river of consequence. Not only in Japanese waters, but in the Gulf of Pechili, in the north and south China seas, up the great Yang-tse River system, and on the ocean routes to America, Europe and Australia, are to be seen in increasing numbers her passenger and freight carriers. Here again she is playing the rôle of the schoolmaster of Asia, and teaching China and other Asiatic countries that they can successfully do for themselves what was formerly done exclusively by Europe and America. In view of the fact that there never was a time in the history of our relations with Japan when her government and people were more fraternally disposed to America and Americans than now, American sentiment can reciprocate in no better way than by congratulating her upon the success of her new rôle.

# ANDREW D. WHITE, EDUCATOR AND DIPLOMAT.

BY E. J. EDWARDS.

ON November 7 of this year, Dr. Andrew Dickson White would have presented to the German Emperor his successor as ambassador from the United States, Charlemagne Tower, had the Emperor William not been, upon that day, absent upon a visit to the King of England. Dr. White chose that day as the one upon which his resignation as ambassador should take effect, because it was the seventieth anniversary of his birth.

In an informal, and yet ceremonious and memorable, manner there was recognition, both in the United States and in Germany, of Dr. White's birthday. Here, a company of distinguished German-Americans, with others, celebrated, upon that day, Dr. White's achievements and his memorable services as diplomat, public citizen, and educator. In Berlin, on the evening of November 11, the chief intellectual forces of the empire met at a banquet given in honor of Dr. White, to express their sense of appreciation of the intellectual and more intimate personal qualities which have so greatly endeared the American ambassador to the German people. Men preëminent, not only in Germany, but throughout the world, for achievements in science, scholarship, art, finance, and statesmanship, gathered there to give this greeting to Dr. White, and chief among them was the venerable Professor Mommsen,—perhaps the most eminent living German, with whom Dr. White has long maintained both the intimacy of congenial personality and of scholarship. The thought which was expressed at this banquet is embodied in the speech in which Professor Harnack proposed the health of Dr. White. He said, "Scholars are seldom diplomats, and diplomats are seldom scholars, but you stand on the list with von Humboldt, Niebuhr, Bancroft, and Waddington. The United States, like Germany, has its face turned toward the light."

Dr. White will not return to the United States until some time in the spring of 1903. In June of next year, if all goes well, he will meet the remnant of the class of which he was a member at Yale, a class which was graduated in 1853, and whose surviving members will therefore be able to celebrate the fiftieth anniversary of their graduation next June. The class of '53 was conspicuous even before its graduation by reason

of the membership of an unusually large number of young men of exceptional promise. Of it the prediction was made by the faculty and undergraduates that it would gain that distinction as a class which high achievement in the great world beyond the college life justifies. Upon the fiftieth anniversary the promise of that graduation day in the summer of '53 will be spoken of as realized even beyond the fondest expectations. From that class went forth graduates, some of whom became cabinet officers, some governors of States, some Senators, some justices of the Supreme Court, and others princes in the world of commerce, finance, and industry, chieftains in the field of science, scholars, and orators.

Mr. White's father was one of the earlier generation that perceived the opportunities that awaited those who carried railway construction into the West. His abilities were of a kind that placed him in entire sympathy with the creative and constructive energies that were pushing our railroad systems from the Atlantic across the Alleghanies. He was identified with the building of what is now the Lake Shore Railway, and with other railroads. Much of his fortune was gained in enterprises of this kind, and it was from this business capacity, that was true business statesmanship, of the elder White that the inheritance of his son was made possible.

## EARLY STUDIES ABROAD.

Upon graduation day, therefore, Mr. White was almost unique among his classmates in this respect,—that it was not necessary for him to earn his living. All of his classmates realized, as Mr. White himself did, that the republic is opportunity, and that that day was rich in opportunities in whatever direction ambition pointed. But his classmates were compelled to choose careers which, first of all, would give to them a livelihood. He stood at the threshold of the greater world, with no obligations of that kind. Mr. White, however, chose no life of idleness, and did not contemplate any yielding to the charms which literature throughout his college days had had for him. By temperament and by intellectual qualities he had capacity both for scholarship and for executive action, and that is a combination which often gives to the world its greatest of achievements. Whether or not

had any clear purpose in mind as to his career at the time of graduation, it is certain that he was convinced that it would be well if he were fortified by profounder scholarship than that of the undergraduate curriculum at Yale of that day. He, therefore, went immediately to work as a scholar. He studied both at Paris and at Berlin, and his studies were of the kind that fitted him for both historical work and for diplomatic service. At the same time he mastered the French and the German languages, acquirements that were of especial value to him in his career as diplomatist.

Opportunity for public service came to him in a sort of preliminary or apprenticeship way. He was appointed an attaché of the American Legation at St. Petersburg at the time when Thomas H. Seymour, who had been governor of Connecticut and one of the corporation of Yale College, was serving as minister there. At St. Petersburg Mr. White found in diplomatic service a college friend. Daniel C. Gilman, afterward president of Johns Hopkins University of Baltimore. Mr. Gilman, as a young diplomat, pursued studies that would be of advantage to him in the career he had chosen, that of an educator. Mr. White, on the other hand, discovered at that early day in the field of diplomacy a career in which he might gain distinction and be of service to his country.

#### PROFESSORSHIP AT THE UNIVERSITY OF MICHIGAN.

Soon after Dr. White's return from St. Petersburg he became identified with the University of Michigan. There had been close scrutiny, especially among his classmates, of his career since college days, for to them and to all who knew him his possession of wealth was looked upon as the least of his advantages. His character, intellectual and temperamental, his purpose and worthy ambition, and his scholarship while in his student days seemed to justify the most confident predictions of a brilliant career. When he entered diplomatic service at St. Petersburg, his friends were convinced that he had found the way appropriate and congenial to high successes. When he accepted the professorship of history at the University of Michigan, these friends were persuaded that he had done this that he might make his career that of the historian. But his service at the University of Michigan came apparently somewhat suddenly to a close. He seemed again to have chosen a new career, and one too for which his abilities and his personality especially fitted him, that of *political life*. He was elected a member of the *State Senate of New York*, to represent the

Syracuse District. His name was upon the same ticket as that one at the head of which stood the name of Abraham Lincoln as a candidate for second election as President of the United States.

#### FOUNDING OF CORNELL UNIVERSITY.

The New York Senate, which Mr. White entered in the middle year of the Civil War, contained a larger number of able men perhaps than any other State Senate since the days of the Albany Regency, or when William H. Seward was a member of that body, and it was itself in part the Appellate Court of the State. Among these Senators, Mr. White easily, naturally, stood in the place reserved for those who were recognized as leaders in thought and action. It was at this time that Ezra Cornell was ready to proclaim the purpose that had long occupied his attention, that of founding and endowing a university, and upon a basis somewhat different from that which was characteristic of the older institutions of learning,—a university "where any person can find instruction in any study."

Mr. Cornell's career is one of the romances that tell of accepted opportunity in this republic. A carpenter in his young manhood, he was the possessor of millions in his mature years, accumulated through his part in the development of the electric telegraph. He had clearly formulated to himself the basis upon which his contemplated university was to be built. He was able to explain these views when face to face with any man of intelligence. But he had no technical knowledge of the legislative methods by which charters were to be secured from the State. Happily, Mr. Cornell discovered in the Senate the one man, possibly in all New York State, at that time exceptionally qualified to aid him in the consummation of his plan. Senator White was doubly qualified for this aid. His training, tastes, and acquirements were those of scholarship, and he had been brought into touch with active life, both that of the older nations and with the young and vigorous activity in this country, which in his own day had pushed our frontier from the lakes and the Ohio and the Mississippi valleys to the Rockies, and was at that very time carrying it over the gigantic barriers of the Sierras by means of the telegraph and the railroad to the Pacific coast. It was due to Senator White, both as a Senator and as an educator, that the Legislature of New York received a clear understanding of the purposes of Mr. Cornell, and gave enthusiastic support to the accessory measures which he asked of the State. The charter upon which Cornell University is founded was drafted by Senator White, was guided on its way through the Legislature

DR. ANDREW D. WHITE IN HIS OFFICE AT THE AMERICAN EMBASSY, BERLIN.

by him, and it was at his hands that the governor received the perfected measure, and cordially gave it his approval as executive. Mr. White was a member of the Senate for four years. If he entered that body with political ambitions, he abandoned them that he might accept Mr. Cornell's urgent appeal to him to organize the university and to become its president. As president he opened the university in 1867.

By one master stroke he gave the university international renown, for he called to his faculty as lecturers some of the world's preëminent scholars. When it was announced that President White had secured one of Oxford's most distinguished sons, Professor Goldwin Smith, as a lecturer upon history, the announcement was one of the chief topics of the day. That one selection identified Cornell with the aims of the highest scholarship and the most competent instruction. The announcement was followed by

others of like nature, telling of the coming of James Russell Lowell and Professor Agassiz, George William Curtis, and others. In this and other ways, too recent not to be familiar to every one, President White not only brought Cornell to an early maturity, but he illustrated a personality which explains in part much that has been successful in his career; for he is a man utterly free from that demoralizing and incapacitating taint that is the contamination of so many brilliant natures,—the fear of rivalry, the jealousy of personal consequence and authority, the overshadowing of one's reputation.

#### BEGINNINGS OF A DIPLOMATIC CAREER.

During President White's administration of Cornell there were several incidental distractions entailing temporary absence. They were due to the recognition of his ability, and especially of the tact, the intuitive and accurate judg-

ment, that capacity that is vaguely called common sense, which, combined with experience, scholarship, and a profound understanding of human nature, qualifies one for the higher services of diplomacy. General Grant nominated him as a special San Domingan commissioner. Dr. White's report,—exhaustive, profound, and peculiarly illuminating in its statement of conditions characteristic of the tropical islands of the Caribbean Sea,—became an authority, and will be in any future relations that may be established between the United States and any of these islands the basis of preliminary and, in fact, final negotiation. Upon this report the administration of President Grant justified the treaty, which, had the Senate seen fit to ratify it, would, thirty years before Porto Rico became our own, have given us one of the larger islands of the West Indian archipelago. Again, in 1878, President White was temporarily diverted from his work at Cornell through his appointment as United States commissioner to the Paris Exposition. He was not permitted, after his return from France, a long period of exclusive attention to his duties as university president, for, in 1879, President Hayes nominated him to the Senate as minister from the United States at Berlin, a nomination that was speedily and unanimously confirmed.

#### DR. WHITE AS AN AUTHOR.

He had done a considerable amount of miscellaneous writing before he accepted the mission to Germany. His historical studies justified the publication, in 1861, of the outlines of a course of lectures on history, supplemented by another work of the same character published fourteen years later, and by other works that were accepted as proofs of high scholarship, all bearing upon historical subjects or treatment. But the literary work by which Dr. White will be chiefly remembered was published in 1893, entitled, "The Warfare of Science and Theology." It was professedly a historical contribution setting forth the world-stirring clashes between the theories deduced from scientific investigation and the established dogmas of theology. The work attracted attention not only in the English-speaking nations, but in other countries, having been translated and widely circulated throughout Europe. It was not as many, upon superficial information, believed to be the case, a defense of science and a criticism of religion. It was exactly what its title signifies, a statement of the conflict or warfare between science and theology. It revealed profound learning, its style was peculiarly appropriate to the subject, being lucid, simple, dignified and

often vigorous, and it stands to-day one of the standard histories describing the progress of certain world-moving events.

Dr. White's interest in historical subjects was manifested in another way than through writing, for he established, soon after his resignation as president of Cornell, the department of Historical and Political Science, and endowed it with his historical library,—a collection that was very valuable both in a money sense and in its facilities for research.

#### SERVICE AT ST. PETERSBURG AND BERLIN.

His resignation as president of Cornell was due to his conviction that the personal work that he was called upon there to do had been done, and that he was justified in looking for that abundant leisure which would enable him to complete several literary and scholarly undertakings which he had in mind. He was, however, not to be permitted long to enjoy his leisure. In 1892, President Harrison nominated him as minister to St. Petersburg, where, forty years before, he had served as an attaché. When, by reason of a change of administration at Washington, a successor as minister to Russia was named, Dr. White again contemplated with content a period of privacy; but he was named by President Cleveland a member of the Venezuela Commission, and upon the meeting of the Senate, after President McKinley's inauguration, he was nominated to that body as ambassador to Germany, a nomination which met with unanimous approval, for it was looked upon as the one preëminently appropriate to make.

Upon his return to the German court, Dr. White was received with courtesies and cordiality that must have reminded him of the gratification that was felt throughout Germany when he became, seventeen years earlier, minister from the United States to Berlin. Congress had since that earlier service raised the mission in rank, so that its head was recognized as ambassador from the United States. Dr. White was especially a *persona grata* to that most powerful of all the aristocracies of Germany, that which controls university life. Intellectual power, scholarship, and the utilization of that scholarship to the well-being of mankind are the influences that are all powerful in Germany. And when to qualities of that kind there are added a singular personal charm, a tact that is often the diplomat's most potent ally, a firmness that is not obstinacy, and a capacity to speak fluently the language of those about a diplomat, then the ideal ambassador is discovered. Dr. White's intimates at Berlin were men who were the intellectual authorities of that empire, as well as

its political and military rulers. The Emperors William I. and William II., Bismarck and Moltke, Virchow, Helmholtz, the faculties of the universities, the men who are compassing the great achievements of scientific investigation, were the companions, both social and official, of Dr. White during his term as minister and his later term as ambassador. They chose him a member of the Berlin Academy, an honor never before conferred upon an ambassador. It was through an influence and a recognition of this character that Dr. White, as ambassador, has been enabled, with a success that is conspicuous among the achievements of diplomatists, to obtain and maintain relations between Germany and the United States that have been of utmost consequence. It was, doubtless, in recognition of the high character of his achievements as ambassador and diplomatist, and also because of the peculiarly cordial relations established by Dr. White at Berlin, that he was chosen as the chairman of the American delegation to the conference at The Hague.

#### THE HAGUE CONFERENCE.

At the Hague Conference that distinctive quality of Dr. White, his utter freedom from any jealous sense of authority, and his willingness and wish to be associated with men of preëminent reputation, were finely illustrated. The American delegation at the Hague Conference determined that, so far as the United States was concerned, this conference should be taken seriously; that there should be some permanent advantage following the deliberations, and that these should be embodied in a formal and binding agreement. This result, which was to be obtained almost at any cost, was the creation of a permanent international court of arbitration, depending, indeed, upon voluntary submission of controversies, but ever ready, and commanding greater respect than would be given to particular arbitrators chosen from time to time. The American delegation, feeling that the time had come when the United States might share in world affairs of universal interest, determined, through the exercise of tact, of kindly consideration, and with the utmost frankness, together with moral pressure wherever necessary, to secure at least this one commanding result.

Another triumph for the American representatives was that in the adoption of the treaty for the peaceful adjustment of international difficulties there was a specific reservation of the Monroe Doctrine, a reservation which is noted in Mr. White's handwriting above the signatures to the treaty, the first formal acknowledgment of that doctrine Europe had ever made.

#### DR. WHITE AT THE TOMB OF GROTIUS.

It may not be too much to say that the climax of Dr. White's career was reached upon July 4, 1899, when there was formal, dignified, and appropriate acknowledgment, at the tomb of Grotius, of what the world owes to that first of the expounders of the policy of conciliation, the first of the formulators of rules of international conduct in wars and peace. It had occurred to Dr. White that there would be special appropriateness if there were, upon July 4, a memorial celebration in the Oude Kerke in Delft, and that upon that occasion, in the presence of the tombs of William the Silent and of Grotius, a silver wreath be placed upon the tomb of the great father of international law. This happy conception was most cordially accepted by the delegates of every nation. There assembled in this Oude Kerke of Delft upon that day the representatives of the civilized world who had met in behalf of international justice, peace, and good will. To them Dr. White spoke as an American and as a member of the human family that looks forward to the coming of the day when there may be peaceful and kindly methods of composing differences. In speaking on behalf of the newest of the acknowledged world powers, Dr. White said, in a closing apostrophe:

From this tomb of Grotius I seem to hear a voice which says to us as the delegates of the nations, "Go on with your mighty work; avoid as you would the germs of pestilence those exhalations of international hatred which take shape in monstrous fallacies and morbid fictions regarding alleged antagonistic interests. Guard well the treasures of civilization with which each of you is intrusted; but bear in mind that you hold a mandate from humanity. Go on with your work. Pseudo-philosophers will prophesy malignantly against you; pessimists will laugh you to scorn; cynics will sneer at you; zealots will abuse you for what you have not done; sublimely unpractical thinkers will revile you for what you have done; ephemeral critics will ridicule you as dupes; enthusiasts, blind to the difficulties in your path, and to everything outside their little circumscribed fields, will denounce you as traitors to humanity. Heed them not; go on with your work. Heed not the clamor of zealots or cynics, or pessimists or pseudo-philosophers, or enthusiasts or fault finders. Go on with the work of strengthening peace and humanizing war; give greater scope and strength to provisions which will make war less cruel; perfect those laws of war which diminish the unmerited suffering of populations; and, above all, give to the world at least a beginning of an effective practicable scheme of arbitration."

And in this sublime apostrophe to Grotius' memory, in imagination the message of Grotius to the world to-day, may be discovered the real character, the high ambition, and the true achievements of Andrew Dickson White.

# THE CONSOLIDATION OF COUNTRY SCHOOLS.

## I. THE PLAN AND ITS MERITS.

BY FRANK NELSON.

(Superintendent of Public Instruction, Kansas.)

**F**OR some years there has been a great deal of discussion on the subject of graded schools for rural and village communities. While the cities have been perfecting the organization of their graded school systems, the villages and rural districts have been unable to make much advancement along this line. One, or even two, teachers cannot carry on a well-graded school on account of the large number of classes which thorough gradation makes necessary. It is almost a physical impossibility for one or two teachers to conduct the large number of classes made necessary by dividing the school into eight separate grades.

Under our present educational system, it has become necessary for the farmer to leave the farm and move into the city to secure the advantages for his children of graded schools. The problem for our rural communities is how best to secure the benefits of a graded school system so as to enable the farmer to give his children instruction in the higher branches of learning without being obliged to leave the farm. It is found that many farmers are not able, or do not find it desirable, to change their place of residence, and consequently the larger educational privileges are limited to a very few of the boys and girls upon the farm.

It is thought that the consolidation of rural schools will solve the problem. This plan of school organization contemplates the disorganization of small districts and uniting them into one good, strong, well-graded school. Consolidation can, in some cases, be made with adjoining rural schools, and in others with the schools of a village, where, in many cases, the nucleus of a graded school exists.

The statutes in most States have been framed to meet the needs of a one-room school district, and before the change to a consolidated school could be made existing laws had to be amended. Legislative bodies move slowly, especially in school affairs; but, after years of persistent effort, the leaders of educational thought have at last succeeded in making some impression in school legislation, and our lawmakers are beginning to realize that the education of our youth is a State and not a local matter. Consolidation is to-day *proving a success in a great many of the States*

of the Union, notably Ohio, Indiana, Iowa, Minnesota, Nebraska, and Kansas.

### PUPILS CARRIED IN PUBLIC WAGONS.

In each case, where consolidation has been effected, provision has been made for the transportation of pupils to and from school by means of wagons prepared for this purpose. The wagons go over a specified route, collecting all the children living on that route, conveying them to school with a promptness which cannot be secured under the old system. In most cases the wagon is scheduled to arrive at the schoolhouse ten minutes before the opening of school. At the hour of dismissal the wagons are in waiting and take the children to their homes without delay.

The location of routes and the residences of families upon them should be given careful attention. Routes should be laid out so as to minimize travel. After the plan has been in operation for a short time a regular time schedule can be arranged for each route, so that the pupils may know the exact hour of the arrival and departure of the wagon. The wagon should have a seating capacity of at least twenty pupils. It should be well constructed, with due regard to light and ventilation. During the winter season it should be enclosed, and provided with lap-robcs and means of heating.

The contract for each route is let by the school board to the lowest responsible bidder. The driver should be required to give a bond for the faithful performance of his work. The board should exercise great care in the selection of a driver for the wagon. In fact, the driver should be a man of good moral character, and his personal influence in his association with the pupils should be in perfect accord with the teachings and precepts of the school-room.

### ADVANTAGES OF THE TRANSPORTATION SYSTEM.

The transportation of pupils has many advantages, both to the pupils and patrons of the school. It is conceded that this method of transporting the pupils is conducive to the physical and moral development of the child. With transportation to and from the central school there are no wet feet and clothing, no frozen toes and fingers, and the children are much bet-

CONVEYANCE USED FOR TRANSPORTING THE SCHOOL CHILDREN OF STEPHENSON TOWNSHIP, MENOMINEE COUNTY, MICH.

(This township, in the upper peninsula of Michigan, now employs two wagons of this type, each of which carries twenty-five pupils. The plan meets with such favor that more wagons will be employed next year.)

ter cared for while the roads are bad and in stormy weather. Experience demonstrates that in the consolidated schools there is a much smaller percentage of colds and sickness among the pupils than in the one-district school, where the pupils are obliged to walk to and from school in all kinds of weather. In several places where the plan has been in operation for many years it has been found that a more rugged generation is produced by reason of the fact that the physical and moral qualities are carefully preserved and developed. This in itself is a serious argument in favor of this plan of school administration.

It should also be observed that the moral atmosphere of the wagon is clean and vigorous at all times, thus doing away with the fighting and vulgar language which, unfortunately, is too often a part of the child life on the way to and from school under the old plan. We have long been wondering how to close the gap between the school and the home. Through this gap many of the demoralizing influences of life enter and poison the lives of the boys and girls while passing to and from school. It is believed that this gap can be closed under the plan of consolidation, because the intellectual and moral atmosphere of the wagon is in perfect line with that of

the school and the home. The older pupils learn to protect and assist the younger ones, and the younger ones are taught to respect those more advanced in age and scholarship. Thus the finer qualities of the lady and gentleman are developed early in the child life. More than this, a friendly and sympathetic relation is developed between the home and the school, and the influence of both of these institutions is solidified and made a positive force in the growing life of the child.

#### ONE GRADED SCHOOL IN EACH TOWNSHIP.

By consolidation all the children of a large territory, usually a whole township, can be brought together in one school building, thus giving them the benefit of a graded school and the inspiration that comes from numbers. In many of our smaller schools the classes range from two to three pupils. Under such conditions it is impossible for the teacher to create or maintain enthusiasm and interest. There is no incentive for the pupils to put forth their best efforts, because, with the small attendance, the work is necessarily tiresome and monotonous. In a consolidated school, however, large classes thoroughly graded can be organized, thus calling forth the best efforts of all the members of the school. Long

recitation periods, better courses of study, and better teachers will give better and larger opportunities for instruction. There is no valid reason why we should not give the pupils of the rural communities the same advantages in the matter of courses of study and instruction as those enjoyed by the pupils of the larger centers of population. The consolidation of schools will concentrate the community wealth in one good school, thus giving to the community larger and better educational advantages.

**ADVANCED WORK IMPOSSIBLE UNDER THE OLD SYSTEM.**

Under the old system the pupils finish the common-school course at from fourteen to fifteen years of age. The parents, even if able to incur the expense of sending their children away to school, do not, in many cases, think it wise at this age to release the children from parental care, and from the restraining and helpful influences of home life. It thus usually happens that for a year or two the boy or girl is either kept from school altogether, or, if continuing in school, undertakes to take up some of the higher branches in the district school. But the difficulty is that the teacher is often unable to give proper instruction in those branches, or, if able, finds the time too fully occupied in giving the necessary instruction in the common branches. It is

an established fact that, in the ungraded country school, where the teacher has all classes from the A B C up, with twenty-five or thirty recitations, but little time is found for instruction in the higher branches. For these reasons the pupils doing advanced work find themselves poorly accommodated, and their interest flags. Then, by the time they have reached an age when the parents are willing to allow them to leave the home, they have, in a large majority of cases, lost interest in school work. But even if, at the age of eighteen or nineteen years, they conclude to begin school work again, they find that they have, in some measure, lost the habit of study which they once had, and that they have two, and in many cases three, years of preparatory work ahead of them before they can take up the college course. This means six or seven years of school life away from home before a college course can be completed. Many become discouraged, and thus fail to secure a higher education. And when we reflect that fully 40 per cent. of our school population is found in the rural schools, the problem becomes one of supreme importance.

**WHY NOT HAVE COUNTRY HIGH SCHOOLS?**

An educational system that takes the child away from the wholesome influence of home during the formative period of life ought to be im-

**SCHOOL CHILDREN EXPOSED TO THE COLD WINDS OF THE ILLINOIS PRAIRIES.**

(This photograph was taken in Winnebago County, Ill., on February 4, 1902. The mercury stood at 12 degrees below zero, and a stiff gale was blowing. Compare the comfortable condition of the Michigan children on the preceding page.)

THE LORRAINE CONSOLIDATED SCHOOL, ELLSWORTH COUNTY, KAN.

proved. The city high school gives the child an opportunity to secure a good education right at home. Why should not the boys and girls upon the farm enjoy the same privileges? The consolidation of schools will equalize educational conditions. It will bring high-school privileges to the rural communities. It will bring to the farm what the boy goes to the city to get. It will bring the best blessing of the city to the country school, thus making it possible for the children to stay at home until they have attained that age when the fibers of character are strong, convictions mature, and habits firmly fixed. Under such conditions parents will not hesitate to send them out into the world. These young people from the rural communities, with a good education and good habits, will not be so easily tempted by the glitter and glamour and hollowness of city life. With high ideals, and a body clean and strong from nature's choicest influences, they will take their places as conservative and useful members in the honorable pursuits of active life. If the consolidation of schools will bring these larger opportunities to the farm, thus enabling us to rear a generation of men and women free from the enticing and degrading influences of the large cities, it seems to me it is worthy of our earnest support and coöperation.

## AN INCENTIVE TO TEACHERS.

Consolidation of schools will give us better prepared and better paid teachers. Under present conditions there is no inducement to prepare thoroughly for teaching in the rural communities with only the prospect of being able to earn \$25

or \$30 per month for a few months of the year. If we hope to secure good teachers, we must build good schools. The teacher does not rise above the requirements of the school. The better the pay, the better the service. The better the position, the greater the inducement on the part of the teacher to prepare thoroughly for it. By building up strong graded schools in rural communities we create a condition which will require those who expect to teach to make thorough preparation in the way of high school, normal, and university training. I have such an abiding confidence in the consolidation movement that I believe it will do more than

any other one thing to make teaching a profession.

## AN OBJECT-LESSON IN KANSAS.

The consolidated school at Lorraine, in Ellsworth County, Kan., was organized in the fall of 1896. It is composed of the territory of what was formerly four country school districts. They now have a graded and high school employing four teachers. The school started with three teachers, but last year a two-year high-school course was added, thus making an additional teacher necessary. As in every other place where the plan has been tried, the enrollment and attendance is much larger than before, being almost one-half greater than under the old plan. This increased attendance in school and greater length of term are of great value to the community and to the pupils attending school.

A very positive endorsement of this movement in Kansas is found in the fact that in Ellsworth County the adjoining districts are anxious to join the Lorraine district, and some of the patrons are sending their children to the consolidated school, paying their own transportation charges and tuition. The people of Lorraine are more than satisfied, and would not think of going back to the old plan.

## ENRICHMENT OF SOCIAL LIFE.

It is evident that with the consolidation of schools will come a larger social life for the people of rural communities. A higher standard of intelligence and culture will also be developed. The graded school will bring to the community

libraries, lecture courses, and entertainments of high character. The neighborhood feuds will be broken down, and a feeling of helpfulness and good will will be created instead. This enrichment and preservation of our rural life is one of the important problems of our time. In the degree in which we enlarge the opportuni-

ties for education among the great masses of the people, in the same degree do we add to the interest of higher education and to the permanency of our social institutions. By this union of educational forces we also raise the standard of scholarship and give encouragement to culture and learning along broad lines of usefulness.

## II. NOTES ON THE BASIS AND PROGRESS OF THE MOVEMENT IN MANY STATES.

BY WILLIAM B. SHAW.

THE advantages of the consolidation plan as applied to rural schools are clearly set forth in the preceding article by Superintendent Nelson, of Kansas. From the educationist's point of view, there can be no doubt that, in many instances, the consolidation of country school districts has resulted in a marked improvement of conditions; it has made possible the employment of better teachers, has stimulated school attendance, has secured more thorough superintendence, has enabled teachers to classify their pupils more satisfactorily, and has led to the providing of advanced courses and lengthened terms of instruction. The testimony of educational experts is well-nigh unanimous on these points; and at teachers' conferences, where the matter is discussed, it is said that objections to the plan are seldom raised. State and county superintendents of schools, from Maine to Florida, have long been convinced that the consolidation of small and weak districts must, in nine cases out of ten, be the first step in the actual strengthening of the school systems of State or county. Not, perhaps, in every State, but, certainly, in most of the older commonwealths, it is at last realized that there are too many poorly-attended, inefficient schools in the country districts.

The school superintendents, State and county, were the first to grasp the essential facts of this situation. In the performance of their duties they were brought face to face with conditions that could not be ignored. They saw, better than the taxpayers themselves, how poor a return the rural taxpayers were getting for school taxes which, in the aggregate, mounted up to vast sums of money—expenditures that have long been the boast of this land of the free school and the envy of less progressive peoples.

### THE ECONOMIC WASTE OF THE "LITTLE RED SCHOOLHOUSE."

That these great public funds have suffered grievously from waste and misapplication may

easily be shown. Go to the middle West, and single out the prosperous, well-peopled State of Wisconsin. The story told by the school statistics of that thriving State almost passes belief—316,833 pupils enrolled in the rural and village schools, and an average daily attendance of only 179,913, or 56.7 per cent. ! Now, how does this concern the taxpayer? It means that, while the people of Wisconsin paid out for the maintenance of these schools during the year 1901 the sum of \$3,669,088.77, only 56.7 per cent. of this expenditure was utilized, simply because 43.3 per cent. of the school children failed to avail themselves of the school privileges that were provided. As Superintendent Harvey points out in a bulletin recently issued from his office, there was an actual loss to the taxpayers of Wisconsin from this cause, in 1901, of \$1,588,715.41, this being the amount paid out for teachers' wages, fuel, and supplies to provide school facilities for pupils who were not at school. From other States come similar reports. In North Dakota, on an enrollment of 77,686, there was an average daily attendance last year of 43,560. The year's expenditures for common-school purposes exceeded \$1,500,000, and the superintendent of public instruction estimates the waste from non-attendance at over \$600,000—no small item compared with the annual budget of a small and sparsely-settled State like North Dakota.

In the presence of such facts as these, the tax-paying citizen must be made to see that there is a certain failure of adjustment between the common-school administrative system, as it has come down to us from a former generation, and the conditions of modern life. At any rate, this is obviously true: To an increasing extent the money that is spent for public schools, outside the cities and larger towns and villages, is ineffectively spent, if not actually misapplied. Under the present system, the State of Wisconsin has to maintain nearly a thousand district schools having an average attendance of less than ten pupils each. Leaving out of consideration, for

the time being, the enormous waste of pedagogical effort that this state of affairs involves, we are led to ask whether ten thousand pupils might not be more economically cared for in five hundred or in four hundred schools than in a thousand, and whether the better wages that could then be paid to the smaller number of teachers would not, presumably, yield immediate returns in the form of better teaching. The maintenance funds of our school systems are large in the aggregate. The educational experts tell us that enough money is spent each year to provide every boy and girl, in city and country, with good school advantages; but it is a fact that thousands of boys and girls are still without such advantages. The ten-pupil district school, taught by an inexperienced girl who receives, on an average, a monthly stipend of from \$20 to \$25, is not an institution fitted to start the American youth on the road to successful achievement, much less to inspire a love of learning. It does not and can not do for its constituency what Horace Mann and a long line of apostles of the American free school have proclaimed as its function in our social order.

#### HOW WISCONSIN IS SOLVING THE PROBLEM.

When any State makes the unpleasant discovery that it has a thousand such schools within its borders, it cannot begin too soon to plan for the reduction of the number and for the substitution of something better. The school officials and people of Wisconsin are taking this course. The superintendent of public instruction has issued a special bulletin on the subject of consolidation of districts, and is doing everything in his power to bring the matter to the attention of the local authorities. In several counties districts have already been consolidated, and provision made for the transportation of pupils at public expense. In every case an actual money saving has been effected, while the character of the schools has been changed decidedly for the better. In the village of Cedar Falls, Dunn County, a three-department school has been maintained for some years; three and one-half miles away there was another school, maintained by the same district,—and accommodating about eighteen pupils,—at a cost of \$350 a year; these pupils are now transported to the village school at a cost of \$200 a year, and the increased attendance admits the village school to the list of graded schools of the first class (heretofore it has been but a second-class school). It is estimated that the new arrangement saves about \$150 a year to the district, in addition to \$300 of State aid. The wagon used for transporting the children costs the district \$22 2-9 a month.

In this instance both schools were maintained by the same district before consolidation, but the laws of Wisconsin now permit the uniting of two or more districts in three different ways: (1) By the suspension of school in one or more districts and the payment of pupils' tuition in another school; (2) By consolidation through the action of the town board of supervisors; and (3)—under the township system) By action of the town board of school directors. Both district and town boards are authorized to provide for the transportation of pupils at public expense. In the northern and newer counties, where schools have been organized under the township system, the union of sub-districts in several instances has resulted in large, well-attended, and well-graded schools.

#### THE "OHIO PLAN" OF CENTRALIZATION.

In Ohio, the schools of thirty-three townships are now fully centralized, and there is a partial centralization in 150 others, under a general law which permits the people of any township at the annual town election to vote on the proposition to abandon the small district schools and transport the children at public expense to a central school. This township centralization of schools began at Kingsville, Ashtabula County, in 1894. Five teachers are employed in the Kingsville school, and to it are brought all the children of the township (an area of twenty-five square miles), with the exception of two districts. Four wagons are required, at a total cost of \$97 a month, for the nine months of the school year. There is an actual saving to the township under this plan, and, at the same time, a marked gain in attendance and in school efficiency. In Madison Township, Lake County, the superintendent reports the cost of tuition per pupil—on the basis of total enrollment,—as reduced from \$16 to \$10.48; and—on the basis of daily attendance,—from \$26.66 to \$16.07. The total expense, however, is about the same as under the old plan, and this is explained by the fact that the school attendance has been increased from 217 to 300 pupils since consolidation was effected.

The experience of two Ohio townships, in particular, has attracted the attention of school officers in other States, chiefly because both townships afford first-class examples of school centralization in a purely rural environment. Gustavus Township, Trumbull County, maintains a four-room school, with a principal and three assistants. Nine wagons are employed, which call at every farmhouse in the township where there are children. The drivers are required to have the children on the school grounds at 8:45

CENTRALIZED COUNTRY-SCHOOL BUILDING, GREENE TOWNSHIP, TRUMBULL COUNTY, OHIO.

(To this school are brought all the children of the township, and nine wagons are employed in the transportation.)

A.M., and to leave for home at 3:45 P.M. The cost of this transportation averages \$1.25 a day for each wagon, the longest route traversed being four and three-fourths miles in length. In the adjacent township of Greene the same policy of centralization was adopted, and bonds were voted for a \$6,000 eight-room brick school building, heated by steam and provided with every modern convenience—this in the center of twenty-five square miles of farming country, remote from village or railroad. This township, like its neighbor, reports signal gains in attendance under the new plan.

#### WHAT OTHER STATES IN THE MIDDLE WEST ARE DOING.

The Ohio township plan has not been adopted to any considerable extent in other States, in its complete form, but in Indiana the idea of collecting country school pupils in larger groups has taken a firm lodgment; many districts have been consolidated, and the State superintendent reports that 2,599 children are now transported regularly to and from school in 181 wagons. Illinois is still without a law permitting the transportation of pupils: but Superintendent Bayliss strongly advocates the union of weak districts to make strong ones, wherever practicable. In Michigan legislation, as yet,

goes no farther than to permit the organization of central high schools in townships in which there are not already existing village or graded schools; but no provision is made for the transportation of pupils to the schools. In the Upper Peninsula, however, some school districts have taken up the matter of transportation, without any special sanction of State law, and are well satisfied with the results of the experiment. In Iowa, the Buffalo Center plan of centralization has been in operation for the past five years; this is essentially the Ohio system. The attitude of Kansas on this subject is well set forth in Superintendent Nelson's article; Nebraska also is alive to the importance of consolidation as a first step toward the betterment of her country schools. The same thing is true of Minnesota and the two Dakotas.

#### THE MOVEMENT IN NEW ENGLAND.

The older States of the East, whose rural population has been drained by the Western migration, have found it necessary to attempt some sort of reconstruction of the district-school system of half a century ago. Massachusetts enacted a law providing for the conveyance of pupils at public expense as early as 1869. In 1874, the town of Quincy took action under this law, closing two schools and transporting the children to other schools. Since that time the consolidation of rural schools, especially in the "abandoned-farm" regions of the State, has

A CONSOLIDATED COUNTRY SCHOOL IN HAMILTON COUNTY, IND.

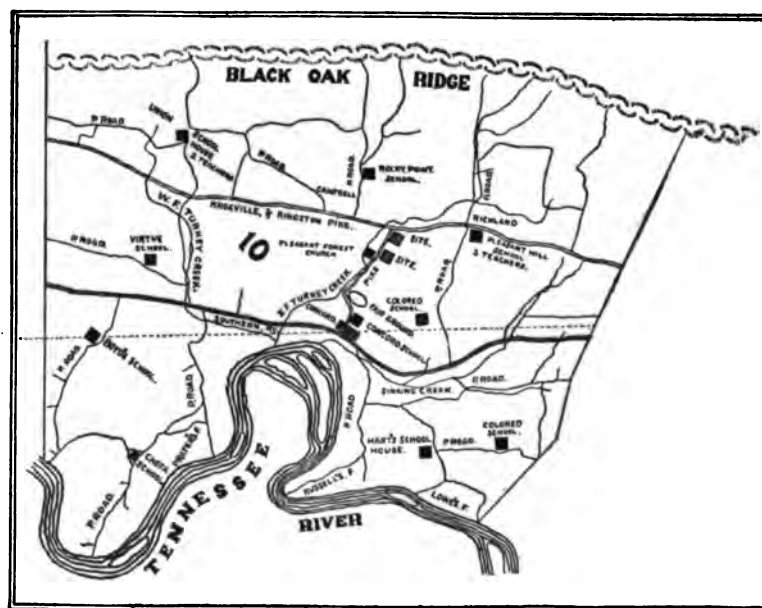

gone on apace, and in 1901 the sum of \$151,773 was expended for transportation. Of nearly two hundred towns which recently answered inquiries made by the State Board of Education, 60 per cent. reported the cost, under consolidation, as less than before, but the results as better; 15 per cent., the cost as the same, but results better; 8 per cent., cost more, but results better; 8 per cent., cost more, but results not stated; and 8 per cent., cost less, but results not stated. The other New England States are working along the same lines, with satisfactory results.

#### ENCOURAGING PROGRESS IN THE SOUTH.

Some of the most interesting experiments in rural school consolidation and improvement have been in progress for several years past in the part of the country that has heretofore been regarded as the least progressive in educational matters. In the States of North Carolina and Georgia the conditions are quite different in every way from those prevailing in New England and the Middle West, where the school-consolidation movement has attained its greatest impetus. Yet it has been fully demonstrated in each of these States that it is cheaper and better to transport a dozen children four or five miles to a central school than to employ a teacher and provide a schoolhouse for these children near their own homes. The State school commissioner of Georgia has asked the Legislature to confer upon the county boards of education the authority to consolidate the weak and inefficient schools of a number of sparsely-settled communities into one strong central school whenever, in their judgment, such consolidation is deemed wise and proper. In North Carolina the number of school districts was reduced last year more than a thousand; the patrons of the schools in that State continue to ask for consolidation and centralization. Farther south, in Florida, one county—Duval—has concentrated schools over an area of about one hundred square miles. Here, as in other Southern States, where the transportation system has

been introduced, the wagons are owned by the counties. Drivers and teams are hired by contract let to the lowest bidder.

A conference of the county school commissioners of Georgia, held at Athens in September last, devoted much attention to the subject of school consolidation and transportation of pupils. In the course of this discussion Superintendent Smith, of Greene County, stated that, in his county, three schools had been consolidated with great success. Wagon frames and horses were purchased by the county, and a contract was made for the transportation of children to school at five cents per head per day. Previous to consolidation the cost of maintaining the schools was  $17\frac{1}{2}$  cents per pupil per day; the cost now, including that of carrying the children, is  $12\frac{1}{2}$  cents per day. This testimony was followed by a statement of Superintendent Rogers, of Washington County, giving the history of a school which four years ago had twenty pupils and paid the teacher a salary of \$30 a month, and to-day has one hundred pupils, with one teacher at \$90 a month, a second at \$70, and a third at \$30, the school being carefully graded. Twenty-six of these pupils are transported, at a cost to the county of \$5 per term for each pupil. All this was brought about by abolishing two little schools and transporting the pupils who could not, otherwise, reach the

DISTRICT NO. TEN, KNOX COUNTY, TENN.

(This district is about ten miles long by seven wide. It comprises nine white schools and two colored schools. The two colored schools are to be united, and the nine white schools will be merged in a large model industrial school, centrally located.)

schoolhouse. The increased interest that this school has aroused has caused the people willingly to raise the money that it takes to maintain a well-graded school. Superintendent Rogers also reported that in many instances, by the use of wagons, children were reached who lived near the swamps and the river, and who would not, otherwise, have been able to attend any school. In that county, whenever it is possible so to do, one of the older pupils is employed to act as driver, and this is thought to be a good policy, because the driver is brought under the direct supervision of the teachers.

All the superintendents who had had experience with consolidation agreed that the attendance was largely increased as a result of the better facilities afforded by central schools; and, in one instance, it was stated that land near the central school which formerly could be bought for \$8 an acre has recently sold for \$100. It was also stated that there is a growing sentiment in Georgia in favor of schools where more than one teacher is employed. "They are finding out that work done in schools where two or three teachers are employed is much better than the work done in schools where there is only one teacher. Two teachers can teach eighty pupils better than one teacher can teach twenty-five." State School Commissioner Glenn, of Georgia, gives it as his judgment that this movement will go forward rapidly in the State, until all of the weak, ungraded schools in the rural districts will be consolidated into strong, well-graded central schools.

State Superintendent Joyner, of North Carolina, has recently issued a special bulletin on the subject of consolidation of districts. As an object-lesson in his State, Superintendent Joyner cites Durham County, where the number of districts has been reduced from 65 to 49, and still more than nine-tenths of the children are within less than two miles of the school, and less than one hundred of them are as far as three miles from the school, while many improved school-houses have been built in the county. In many other counties of the State, where districts have been consolidated, funds have been raised by private subscription for the erection of school buildings, and citizens are apparently ready and willing to go to this expense if assured of better instruction and equipment in the central schools.

#### AN OBJECT-LESSON IN TENNESSEE.

One of the school districts of Knox County, Tenn.,—the county in which Knoxville is situated,—is now attracting much attention as the seat of an attempt to establish a model rural-industrial school in which instruction will be

given in both indoor and outdoor manual training. The people of this district—the tenth—are intelligent citizens, and are dissatisfied with the schools now in operation in their district, of which there are nine for white pupils and two for colored. The census of 1900 showed that there were in the district 803 whites of school age, and 124 colored. The average compensation for teachers has been \$32 a month. The people of the district have now determined to unite the nine white schools in one efficient central school, and for this purpose have raised about \$5,000. The General Education Board will coöperate with the citizens in building up their model industrial school, in which will be taught elementary forms of manual training—knife work, carpentering, scientific cooking, sewing, elementary agriculture, horticulture, bee-culture, and the like. Ten acres of land will be secured as a school site, and this will be added to, if necessary. It is intended that this school shall be a growth, and probably at least four years will be required for its completion. The progress of this model school will be watched with great interest, especially in Tennessee and the South, and will no doubt provide a stimulus to like undertakings in other sections.

#### SUCCESS UNDER DIVERSITY OF CONDITIONS.

These notes on the school-consolidation movement, north and south, show that the scheme has been found practicable, in one form or another, under widely diverse conditions. The systems under which school funds are raised and expended differ greatly in the different States; but we have seen that, whatever the system may be, a way has been found to bring about the merging of feeble schools in strong ones, to the satisfaction of patrons, and that this has been accomplished with seemingly equal facility in district, township, and county systems. No scheme of consolidation or centralization can be devised that can be applied with equal success to every locality. The local situation must be considered in each separate case. Because the people of Ohio have succeeded in centralizing their schools under the township plan, it by no means follows that the people of Georgia can do precisely the same thing in precisely the same way, working under their county system. For some communities that have not yet adopted any plan of action, Ohio's methods may seem practicable; for others, particularly in the South, the experience of Georgia may have far more useful lessons. No advocate of consolidation, so far as we know, believes that identically the same scheme can be employed in all the States.

INTERIOR OF CLASS-ROOM OF OLD SCHOOL AT KOWALIGA, ALA.

## AN ALABAMA NEGRO SCHOOL.

BY OSWALD GARRISON VILLARD.

IT is something of a shock to the average Northern traveler, accustomed as he is to thinking of the Southern States as long-settled communities, to learn that there are large stretches of territory which have never been thoroughly cultivated. In Alabama, for instance, there is a hill country thirty-five miles from Tuskegee, and not much farther from Montgomery, where many of the trees found by the earliest white settlers are still standing. Within its boundaries there are acres upon acres which have never known the plow or the harrow. Its cabins are widely scattered, its settlements generally mere crossroad hamlets. Since the Cherokees gave it up to the white man, whose business agent was Alexander McGillivray, a skilled negotiator employed by President Washington and his first Secretary of War, Knox, it has never known war of its own observation, not even when its young men rode away to don the gray beyond the mountains.

Unlike many other portions of the South, it has more fields which are annually whitened by the cotton plant than it did in the days when the South's greatest industry had the institution of slavery as its corner stone.

Without railroads, or even stage lines, to bring them into touch with the outer world, whites and negroes live here side by side, seeking each year to clear more and more fields of their ancient timber, and to send more and more bags of cotton to the marts of Wetumpka and Tallahassee. Their mutual relations have been much of those of the ordinary Southern rural districts. There are good negroes and bad negroes, good whites and bad whites, and of the good negroes a large number are earnest, hard-working men, who have the respect and liking of their white neighbors, and who are showing in more ways than one their desire to progress and to uplift themselves. Still more characteristic of the South is the fact that the

census-taker finds the enumerating of the educational facilities of the district under consideration an extremely easy undertaking. The familiar low, wooden schoolhouse is generally in ill repair, and often remote from any other building. In this white or black school the teacher has a struggling attendance for only three months in the year, while he "boards around" among the parents of his scholars, a custom as well known south as north of Mason and Dixon's line.

But there is one place in this hill country where the last census-taker must have received

AN OLD CABIN HOME.

something of a shock. Instead of a one-room log cabin he found, at a place called Kowaliga, a well-constructed frame building of three stories, with several neat white outbuildings, all plainly devoted to the teaching of the young. But his surprise must have been still greater when he discovered that this was a school for colored children, and not one for the offspring of the whites of the neighborhood. Not only did he find in this little colony between one hundred and fifty and two hundred children under instruction by six teachers, nearly all college graduates, but he was informed that the school undertakes to board a dozen pupils of each sex, that they may come directly under the influence of the teachers, and that the girls may be trained in housework and the rudiments of domestic science. On inquiry he was informed that the institution not only aims to give its pupils a good common-school education, but to train them to use their hands in the workshop and in the fields, for which purpose it gives limited instruction in manual training and plenty of experience in tilling the land.

"Doubtless a branch of Tuskegee," th

A NEW HOUSE BEING BUILT ON THE OLD HOMESTEAD.

will say. Yes and no. That Mr. Booker T. Washington's influence has penetrated to Kowaliga goes without saying. Wherever there are intelligent negroes there will be found some knowledge of Mr. Washington's teachings and ideals. Mr. Washington, too, was for some time trustee of the Kowaliga Institute, as this struggling school is called. But it owes its inception and development to a father and his son. The former is John J. Benson, born a slave, who by his own efforts has come "up from slavery" until he is to-day the most influential colored

ONE OF THE FIRST CABINS BUILT BY MR. BENSON WHEN HE SETTLED AT KOWALIGA IN THE "SEVENTIES."

man in his county, and one who has the respect and confidence of his white neighbors. He has not only acquired by ceaseless industry the acres which he helped to till for his old master when in bondage, but has added to them, has built himself an excellent house and a sawmill, and has become known throughout his county as the foremost of his race. It is but natural that a man of this type should give his children the best possible education he could afford. But he has done more than that,—he has instilled into his children an intense desire to better the conditions of their race in the country round about their home. To William E. Benson, his son, who is guided by this fine altruistic spirit, is largely due the existence of the Kowaliga Institute. In its growth he finds abundant reward for his unselfish labors.

Returning, in 1896, from his college course, William E. Benson succeeded in arousing seventy farmers of the Kowaliga neighborhood to a realization of the educational needs of the community, and these poor, hard-working tillers of the soil gave freely of their limited means and time toward the school's first building, called Patron's Hall. They cut down the trees given them by an interested white neighbor and carted them to the senior Benson's mill, where they were transformed into boards and shingles, for Kowaliga has been no foreign growth grafted upon the community, but was conceived and created by its founders without white inspiration or aid until it was well under way. While their fathers toiled on the building some of the farm boys

formed a glee club and fairly sang \$300 into the school's treasury. Then the American Missionary Association became interested in this plucky effort to let the light of education shine into the darkness of one of the most ignorant communities of the South, and through its support, and

MR. JOHN J. BENSON.

the Northern trips for help of young Mr. Benson, the school now has land and property valued at \$10,000,—ten acres of the land on which the school stands being the gift of the man who has worked himself up from slavery into prosperity. This summer has seen still another evidence of the best kind of a commercial spirit, for some of the farmers, under the Benson leadership, have paid for their children's tuition by lending their time and strength to the erection of a boys' dormitory, which shall also contain additional and much-needed class-rooms.

And as the school has grown materially, so it has developed along educational lines. Not, of course, without making the mistakes inevitable in such an enterprise, but always seeing more clearly the needs of the surrounding country. It has begun to draw pupils from Georgia and Alabama, and

THE NEW SCHOOL BUILDING AT KOWALIGA.

from a far larger section than that surrounding Kowaliga and its neighboring hamlets. The school term has been extended from three to eight months, and by absorbing three district schools the Institute receives the State aid which would have been paid to them. "Its situation in the heart of an agricultural region," says Mr. Benson, "makes it the hope of hundreds, if not thousands, of boys and girls who cannot expect to go to Hampton or Tuskegee,—indeed, have never heard of these places." In place of the ignorant "Jack-leg" district schoolmaster, there are refined men and women who know something of the science of teaching in addition to mere book learning, and who, from the principal, Mr. C. W. Driskell, down, are persuaded that agricultural training is the principal need of the hour in this region.

Kowaliga is a non-sectarian school, and adapts its curriculum to the needs of the neighborhood. Thorough instruction is given in the grammar grade, but on practical farming, the care of live stock, and on the elements of manual training the main stress is laid with the boys. Cooking, sewing, laundry work, house-keeping, and the care of poultry and the garden are part of the girls' course. Naturally a community of such limited opportunities cannot af-

ford to support an institution as large as this. The State contributes less than \$300, the American Missionary Association \$400. The rest of the money necessary comes from tuition fees and from friends in the North, and further aid is urgently desired.

No one can see all this growth, as the writer has done, and not marvel at the change which, in a few years, has been brought about in this community by the school, or be else than deeply impressed with the utility of this attempt at self-help. It is distinctly a type of the negro school that is certain to spring up all over the South as more and more graduates of Hampton and Tuskegee go back to their one-room cabins and help to transform them into clean and respectable frame dwellings, as is being done at Kowaliga in many instances. For education brings with it a desire for better methods of living, and the Bensons, not content to let the school absorb all their efforts to uplift their race, have founded a land company, whose special object is home-building and the development of the negro farmer. With such an advance will go much of the picturesqueness of the present crude methods of living, but it means better and more prosperous citizens and more valuable neighbors to the whites of the section.

THE OLD CABIN SCHOOLHOUSE.

Copyright, 1902, by Rockwood.

THE LATE MRS. ELIZABETH CADY STANTON.

## ELIZABETH CADY STANTON.

BY IDA HUSTED HARPER.

THE death of no woman in the United States,—save one, perhaps,—would call forth such widespread and eulogistic notice as that of Mrs. Elizabeth Cady Stanton, which occurred on October 26, at her home in New York City. The long and thoughtful editorial comments indicated not only the ability of the woman, but also the vitality of the cause of which she was a chief exponent. Mrs. Stanton herself, thinking, speaking, and writing with clearness and vigor on the living questions of the day to the age of eighty-seven, refuted conclusively the tenacious opinion that women are not physically

capable of sustained mental effort. The fact that, in all the present discussion of her long-continued work that for woman suffrage takes the most prominent place, shows the mistaken estimate of those who assert that this is a dead or dying issue. There was no time in her life when she would not have been willing to die to prove these two points.

The father of Mrs. Stanton was Daniel Cady, an eminent lawyer, judge, and member of Congress; her mother was Margaret Livingston, granddaughter of Col. James Livingston, of General Washington's staff. She was born in

MRS. STANTON, FROM A PHOTOGRAPH TAKEN IN 1885.

Johnstown, N. Y., November 12, 1815. If she had been a boy, the fine, logical mind and strong reasoning faculties which distinguished her above all other women would have been regarded approvingly as a direct inheritance from her paternal ancestor. If she had been a boy, her powerful fighting proclivities would have been hailed with delight as worthy of the maternal progenitor who, in the absence of his superior officer, took the responsibility of firing into a British vessel, which led to the capture of André the spy. But for a girl to have either legal or military genius was an unfortunate anomaly which must be counteracted by the most rigorous measures. These were faithfully applied at home during her childhood, and continued through her early womanhood by the world at large with all the ingenuity which the most bitter opposition could devise, but never for one hour was that dauntless spirit subdued.

#### A REFORMER FROM GIRLHOOD.

The inspiration of Mrs. Stanton's life can be expressed in one word—liberty. She came into the world only twenty-eight years after the Constitution had been adopted which established the independent government of the United States, and when the true significance of liberty was but

imperfectly understood. The people had thrown off the tyranny of a king, but they had not yet learned tolerance toward their fellow men. Freedom of religious observance was grudgingly conceded; but freedom of religious thought, outside the recognized orthodox forms, was practically denied. Liberty of personal action was exceedingly circumscribed, and any deviation from conventional forms was visited with severe criticism if made by a man, and with fatal consequences if made by a woman. The individuality of the child was sternly suppressed, and the word continually dinned into its ears was "Don't." Mrs. Stanton tells in her "Reminiscences" that, when she was in deep thought one day, and the nurse asked if she were planning some new mischief, she answered passionately, "No, but I am wondering why everything we like to do is a sin, and everything we dislike is commanded by God or some one on earth. I am so tired of that everlasting no! no! no! At school, at home, everywhere, it is *no!* Even at church all the commandments begin 'Thou shalt not.' I suppose God will say 'no' to all we want in the next world."

She was born a rebel and a reformer. At school she rebelled against the narrow limits of the education permitted to a girl, and determined to fight for her admission to the colleges. Before she was eighteen she was in the throes of a rebellion against the gloom and despair of Calvinism, which had taken such a hold upon her vivid imagination as almost to shatter her reason. By the time she had reached her early twenties, however, all other wrongs began to recede into the background as she realized the terrible injustice of the laws and customs regarding woman. Fortunately, she married a man in full sympathy with her ideas,—the well-known Abolitionist, Henry B. Stanton,—who fanned the smouldering flames in her heart of another rebellion, that against negro slavery. They went on their wedding tour, in 1840, to the World's Anti-Slavery Convention in London. Her first meeting here with that gentle but resolute Quaker, Lucretia Mott, and the outrageous treatment accorded the women delegates, sent her home with a renewed determination to do something to raise the status of her sex.

#### FIRST WOMAN'S RIGHTS CONVENTION.

The children came rapidly, she was overburdened by the cares of a large house with such inefficient help as alone was possible in a small place like Seneca Falls, N. Y., and she witnessed all about her the sufferings of women from cruel laws, intemperance, poverty, and unwelcome motherhood. She said of that time:

"My experience at the World's Convention, all I had learned of the legal status of woman, and the oppression I saw everywhere, together swept across my soul, intensified now by many personal experiences. It seemed as if all the elements had conspired to impel me to some onward step. I could not see what to do or where to begin,—my only thought was a public meeting for protest and discussion. In this tempest-tossed condition of mind I received an invitation to spend the day with Lucretia Mott, who was attending Yearly Meeting in Waterloo. There I met a number of Friends,—earnest, thoughtful women,—and I poured out the torrent of my long accumulating discontent with such vehemence and indignation that I stirred myself, as well as the rest of the party, to do and dare anything, and we decided then and there to call a Woman's Rights Convention."

The story of this convention,—which met in Seneca Falls, July 19–20, 1848,—is familiar,

with its remarkable declaration of sentiments and set of resolutions, demanding for woman every legal and civil right which has since been granted, and the additional right of the franchise, which is still largely withheld. Mrs. Stanton often said afterward that, with all her courage, if she could have had the slightest premonition of the storm of ridicule and denunciation which followed, she never would have dared risk it.

#### ASSOCIATION WITH MISS ANTHONY.

In 1851 occurred what may well be termed the most important event in Mrs. Stanton's life, her meeting with Susan B. Anthony. The latter was thirty-one years old, electric with the spirit of reform, filled with as holy zeal as ever inspired crusader, fearless, persistent, perfect in physical health, and free to come and go at will. There was an instantaneous, mutual attraction, and before a year had passed a working

partnership was formed which was to revolutionize the position of one-half the race during the next forty years, and a friendship was established which was to remain unbroken for half a century. How much of Mrs. Stanton's world-wide fame is due to Miss Anthony cannot possibly be computed. Never two persons more thoroughly complemented each other. Each was strong where the other was lacking, and the two made a perfectly rounded and most effective whole.

It would not be amiss to say that Mrs. Stanton furnished the base of supplies to which Miss Anthony went for the ammunition to rout the enemy. Or that she represented the loom and the warp, Miss Anthony the shuttle and the woof, and by the two was woven the enduring fabric of woman's present position. Mrs. Stanton had no intellectual superior among women, few among men, but she reared seven children to maturity; she was a

MISS SUSAN B. ANTHONY AND MRS. ELIZABETH CADY STANTON.

(From a photo taken in 1868 on the porch of Miss Anthony's house in Rochester, N. Y.)

voted mother, an unsurpassed housekeeper. It would have been inevitable, during the twenty-five or thirty years of her life while these children were growing up around her, that she would have laid aside in a large degree both writing and speechmaking, had it not been for the relentless mentor who averted this calamity. The reader will find nothing more delicious in history than the accounts in Mrs. Stanton's "Reminiscences" and Miss Anthony's "Life and Work" of the conditions under which were prepared those great state papers and addresses that will go down to posterity. Miss Anthony was not a writer; but as a worker, a planner, a general, a campaigner, she never has been equalled by any woman. She would have a bill prepared for the Legislature, organize her forces, start them out with petitions, and when everything was under headway, betake herself to Mrs. Stanton for a speech. The latter would protest, rebel, but Miss Anthony was inexorable. She would send the writer off to a quiet spot, take upon herself the care of the children and the house, and hold the fort till the speech was finished. Then she would arrange a day for its delivery, and produce the speaker if she had to go and fetch her bodily. Afterward she would appeal to friends for money, have the speech published, and circulate thousands of copies.

This programme was repeated hundreds of times. When the International Council of Women met in Washington, in 1888, Miss Anthony literally compassed sea and land to get Mrs. Stanton over from England, only to find that she had come without any papers suitable for the occasion. Miss Anthony locked her in a room in the hotel and stood guard at the door till she had prepared the brilliant opening and closing addresses which were the leading features of that notable meeting. She really enjoyed writing, however, and when in the spirit of it would spend hours in perfecting the literary style of a single paragraph. She loved best to argue and philosophize, and depended wholly on Miss Anthony for necessary dates and statistics; but between the two were produced innumerable papers which deserve to rank with any in the Government archives.—appeals to the President, Congress, and legislatures, resolutions, addresses for conventions and committees, and in addition numerous articles for magazines and newspapers. For the fifteen years beginning about 1870, when the lecture season was at its zenith, both women were almost continuously on the platform, but during vacations they found time to write the three large volumes of the "*History of Woman Suffrage*," comprising about 3,000 pages

Mrs. Stanton had no interest in organization, and hated conventions. She disliked the restrictions of organized work and the responsibility involved in official position,—she wished to be accountable to no one for her utterances. When a convention was imminent, she would write to Miss Anthony: "All I ask is that you will leave me alone in my chimney corner with my goose quill." The latter would go straight forward with the arrangements, advertise Mrs. Stanton as the principal speaker, journey to her home a few days before the date of meeting, pack up her belongings, carry her to the convention, and see that she was reelected president. The happiest moments of her life were when, at the close of a great speech, she saw her beloved friend greeted with cheers and waving handkerchiefs, and felt that the cause of woman had been moved forward a notch. At the age of eighty, Mrs. Stanton gave her "Reminiscences" to the world, and she dedicated them to "Susan B. Anthony, my steadfast friend for half a century."

#### IMPROVEMENT IN WOMAN'S STATUS.

The powerful influence of Mrs. Stanton and Miss Anthony on the revolution which has taken place in the status of women during the past fifty years is sometimes denied, and the assertion is made that this has been merely a part of the natural evolution of the race. The battle of Lexington did not secure the independence of the colonies, but here was fired the shot that echoed round the world. That First Woman's Rights Convention, and those which followed in the early '50's, did not obtain emancipation for woman, but they attracted the attention of the whole country to the injustice under which she struggled, and set people to thinking. If these two leaders had waged their preliminary fight in any other State, it probably would not have made so widespread an impression; but a half century ago, as now, New York set the pace for other parts of the Union. Although it made the innovation, in 1848, of empowering a married woman to hold property, it was not until 1860, and after Miss Anthony and Mrs. Stanton had been circulating petitions and besieging the Legislature for ten years, that the sweeping laws were enacted which enabled her to carry on business in her own name, possess her earnings, bring action and defend suits, make a contract and a will, and be joint guardian of her children.

From that time there has been a gradual concession of these privileges in various States, until now, in about three-fourths of them, a wife may own and control her separate property; and in all of them she may dispose of it by will. In about two-thirds she has a right to her earnings.

In a great majority of them she may make contracts, bring and defend suits, act as administrator, and testify in the courts. Although the New York Legislature gave mothers equal guardianship of children in 1860, it took this away in

olized the remunerative employments." The present industrial position of women, with three and a quarter millions engaged in employments outside of domestic service, needs no comment.

Still another grievance was the denial to

PORTRAITS OF MRS. STANTON AT DIFFERENT STAGES OF HER CAREER.

1862, and did not restore it till 1893. This concession has been slowly made, and now it obtains in only nine States; but as it has been secured in most of these within the past seven years, there is reason to believe the precedent is fully established, and others will speedily follow.

Mrs. Stanton was the first to demand that habitual drunkenness should be held as cause for divorce—in that first State Temperance Convention of Women, called by Miss Anthony in Rochester, N. Y., in 1852—but she was not sustained by more than half a dozen of even the most radical reformers, though always by Miss Anthony. In 1860 she presented her views on this question at a Woman's Rights Convention in New York City, and even so broad-minded a man as Wendell Phillips demanded that her resolutions be expunged from the minutes. To-day habitual drunkenness is named as a cause for divorce in all but eight of the States, although, strange to say, not in New York.

One of the grievances set forth at the convention of 1848 was, that "man has denied to woman the facilities for a thorough education, all colleges being closed against her." At that time not even a high school was open to girls. To-day they are admitted to every one in the United States and to every State university except three—those of Virginia, Georgia, and Louisiana.

Another grievance was that "man had monop-

olized the right to speak in public, and here, again, there is no necessity for specifying as to the tremendous revolution of the past fifty years, of which the concrete facts must ever stamp Elizabeth Cady Stanton as a leader.

#### AN UNIQUE LEADERSHIP.

Mrs. Stanton was able to disarm every criticism made of the early advocates of woman's rights. She was a wife, a mother, far from angular, beautiful in person, and exquisite in dress. Her voice was rich and musical, and the powerful philosophy and logic of her arguments, with the keen sarcasm of which she was master, were relieved by a fine humor and graceful wit that conquered prejudice and captivated an audience. But it seemed as if no woman ever so deeply felt the disgrace, the humiliation, of her legal and political condition,—certainly none ever so strongly expressed it by voice or pen. In lofty eloquence and noble patriotism many of her speeches may be justly classified as masterpieces, among them "The Degradation of Disfranchisement," "Self-Government the Best Means of Self-Development," and that beautiful classic, "The Solitude of Self." The world may indeed echo the words of Miss Anthony as she gazed on the face of Mrs. Stanton in the grandeur of death: "Oh, this awful hush! It seems impossible that voice is stilled which I have loved to hear for fifty years."

## LEADING ARTICLES OF THE MONTH.

### THE BOERS AND THE EMPIRE.

**T**HE first place in the *Contemporary Review* is allotted to an article signed by General Botha, under the above heading.

General Botha, in the course of his article, says :

"We rest our case mainly on the community of interests between the two. I say nothing now, therefore, of the other arguments : that the government, having taken over our assets, has *ipso facto* assumed our liabilities as well, and that the guarantee it gives us of our lawful property covers all debts due to the subject by solvent debtors, and therefore all property destroyed by necessity of war."

### THE REASONS FOR THE APPEAL.

So much by way of introduction. General Botha opens his article by saying :

"Swords may be readily beaten into plowshares, but it is not so easy to turn them into fine pens, nor is the rough and racy language of soldiers and farmers,—serviceable enough for the every-day needs of the people of South Africa,—a suitable medium for diplomatic discussions in Europe."

Notwithstanding this disadvantage, the Boer generals were deputed by their fellow countrymen to come over to England and place their case before the British Government. General Botha says :

"We hoped that the whole subject would be dealt with in a humane, in a generous spirit. We were all the more confident of it that in this case generosity and national self-interest converge in a single point. And having come in that frame of mind to plead a cause which seemed to speak eloquently enough for itself, we were sorely disappointed by the result. At least we had every reason to consider that we had failed in our errand. We had never regarded the fund of three millions mentioned in the Peace Articles as sufficient for the purposes for which, we understood, it was to be set apart. We are farmers, not financiers, and the subject of the three million pounds,—insufficient for the purpose to which it was to be devoted,—together with the loan, which was to bear interest after two years, but to be without interest until then, appeared to us to be wanting in clearness. We therefore did what we thought was necessary and sufficient in order to have light shed upon the matter. But the financial question, we are told, was not to be *reopened*. We respected that decision while re-

gretting it, for we took it to mean that no appeals for help would be listened to and that generosity would be compressed within the limits of legal obligation under the treaty. We may have been mistaken in drawing this inference from facts which apparently admitted of none other. But if so, it would have been easy to convince us of our error, which opened before us a gloomy, a harrowing prospect. This was not done, and we then took a step, at once necessary and painful, in a direction which we would modify to-morrow, if the fears which compelled us to take it were shown by acts to be no longer real."

That is to say, they decided upon making an appeal to the world for assistance. General Botha repudiates the nonsensical proposition gravely advanced in some quarters that the Boers would object to take the needed millions as a loan. Beggars cannot be choosers ; and if they could not get the money as a free gift, they were very willing to take it as a loan.

### AN APPEAL FOR A COMMISSION.

All that General Botha says as to the amount of money needed is, that they would like the extent of the compensation due to them to be examined by an impartial commission. He says :

"The number of farms destroyed is larger far than people in England,—aye, and than many Englishmen in South Africa,—imagine. We ourselves, who know the country and the people, are reduced to estimates which, laying no claim to absolute accuracy, would, if our request for help were entertained, require to be officially verified by some impartial commission. By the report of such a body of men we would willingly abide."

The worst of it is that neither the British Government nor the British public have as yet recognized the fact that under the terms of peace they are bound to restore these farmsteads and to restock the farms, and until that is admitted what need is there for a commission ? Such a commission could only be appointed if the obligation to pay compensation for damages or to make restitution were acknowledged. But Mr. Chamberlain has hitherto refused to admit any such liability. It is to this point that the efforts of the generals and their friends should surely be directed.

General Botha says :

"We should deeply regret if the necessity of seeking abroad what we should have been grateful to obtain from our new fellow subjects in

England were, unfortunately, likely to retard the welding process."

It is not merely acquiescence in the inevitable that is required to secure the success of the new settlement.

"Active zeal, hearty coöperation, is an essential condition of the prosperity of South Africa and of the attainment of the aims which the government has professedly set itself. It likewise represents a material gain, inasmuch as it renders economy in military matters possible."

#### TWO POINTS OF SUSPICION.

Toward the close of his article General Botha alludes, but with very bated breath, to two of the points which are rankling in the minds of the Boers:

"Most of our people in the new colonies have their suspicions aroused by the action of the government in still maintaining some concentration camps, and in buying up the ground of the Boers there and of others outside the camps who, had they been assisted a little, could and would have resumed their peaceful labors. For whom, they ask, is our land being purchased? Is some vast colonization scheme being matured, and if so, why are we eliminated from it? Evidently because we are distrusted. Now distrust, especially when unmerited, is not an element of harmony in a country occupied by two races who were lately at war. Neither does a policy which tends to cut off a large number of farmers from the land, and set them drifting into cities, contribute to peace and stability. Their stake in the common weal is *nil*, and their temptation to fish in troubled waters is great. Lastly, I cannot help uttering a word of regret that the delegates of the late South African states now in Europe are not allowed to return home. At the conclusion of peace it was well understood and stated that they would be free to go back after the war was over. And in truth, there seemed no reason why any obstacle should be placed in their way. When they came to Europe they were genuine delegates of a real government, whose orders they obeyed, just as my comrades and myself did, and whose confidence they fully retained to the very last. Would it not be conducive to reciprocal trust if they were told that they might return to their native country? In any and every case, to hinder them or any burghers from going home is an act which cannot be reconciled with the spirit or with the clear intent—as we all understood it—of the treaty of peace."

Generosity, says General Botha, would be as good a policy here as it was in the case of the Canadian rebellions of the last century.

#### BULGARIA AND MACEDONIA.

IT is not generally appreciated what an important part Macedonia plays in the ambitions and jealousies of southeastern Europe. Servia, Greece, and Bulgaria all regard the Turkish province with covetous eyes, but in Bulgaria alone is the absorption of Macedonia preëminently the national idea. M. Georges Gaulis, in the *Revue de Paris*, analyzes the growth of this idea and its influences on the present disturbances in Macedonia.

"The Bulgarian," says M. Gaulis, "especially from the banks of the Danube, is a peasant attached to the soil, who only consents to abandon agricultural pursuits to enter the army or clergy or to engage in public affairs. Of three millions and a half of Bulgarian subjects, one hundred and fifty thousand are Macedonians born in Turkish territory. The Macedonian element is master at Sofia of the small shops. As baker and butcher the Macedonian feeds Bulgaria; as mason, carpenter, or locksmith, he houses Bulgaria; lawyer, professor, official, officer, minister,—perhaps some day he will rule Bulgaria. There is a Macedonian in the present cabinet, and they are to be found in the Court of Appeals and in the high schools, as well as in the most humble posts of the rural administration, and one-fifth of the Bulgarian army officers are Macedonians.

#### MACEDONIAN AGITATION.

There are thus in the principality two hotbeds of agitation, one Bulgarian and the other Macedonian, which, though they have always worked together, comprise two distinct interests under an apparent unity. Bulgaria dreams of annexing Macedonia with the aid of the Macedonians, and the Macedonians aspire to liberation from the Turkish yoke by the aid of Bulgaria. The Macedonians accuse the principality of robbing them of the sympathy of the great powers by proclaiming this Greater Bulgaria, which even the Russians no longer advocate, while there are felt in Bulgaria the same anxieties which the Greeks of Athens recently expressed in the saying, "They will end by annexing Greece to Crete!" Every town and village in Bulgaria has a Macedonian society, whose avowed purpose it is to force Turkey to grant the reforms agreed to by her in the Treaty of Berlin. Delegates from these societies form the Macedonian congress which nominates a central executive committee.

During the last few months the rôle of this executive committee has been less prominent. The communications between Bulgaria and Macedonia are cut off. The long smouldering di-

content has burst forth into the flames of open revolt, and Bulgaria can only look on. For official Bulgaria the situation is embarrassing. The prince poses as the most Macedonian of the Bulgarians. His military popularity, as well as his personal ambition, lead him to cherish the idea of Greater Bulgaria, for he knows that his dynasty will not attain the royal crown until the union of all the Bulgarians is accomplished. But the prince also realizes that until then it would be folly for him to throw off the Turkish protectorate. This badge of servitude is the safeguard of the Bulgarian Church in Macedonia, on which all hopes for the future are founded.

#### ORGANIZED REVOLUTION.

In Bulgaria there is a current proverb, "To own a boat at sea, a Roumanian wife, and a farm in Turkey, means sleepless nights," for the tax collector, the petty official, the police, and the Albanese prey by turn on the Macedonian peasants, and are primarily responsible for the agrarian crisis and the resultant revolution. There is a general interest as to the directing power of this revolution. Is it the Central Committee, or Boris Sarafof, the Macedonian chief, or,—as it is insinuated in Constantinople, is the leader to be found in the palace of Sofia? The truth lies in a combination of these rumors. The motive above all is the economic and moral need of the people, the bond of union is the common desire to shake off the yoke, and the guiding principle is the ardent faith in success. The local committees undertake the rest, accepting everything in the way of aid and encouragement without inquiring whether it comes from Mikailowski (the president of the Central Committee), from Sarafof, or from another.

The number of the bands into which the revolutionary forces are divided has increased, and they are, on the whole, well provided with arms, but the great desire of the insurgents is that each peasant should have a gun and a round of ammunition buried in a corner of his garden, in order that, on a given signal, he may join the rising against the Turks. Indeed, it is in the distribution of weapons that the bands are chiefly occupied, although all their movements cannot be thus explained. They are obliged to descend from the mountains for food, and lately their general aim has been to force, by brigandage, the more timid population to join their standards. This last method has been loudly denounced by the Turkish authorities. Still, professional bandits have only furnished the mere skeleton of *the little army* and the traditional formula of its *tactics*. *The authorized bandits* who rule over

Ottoman society have furnished the troops by driving thousands to desperation, and they have also provided the leaders by systematically reducing to abject want the alumni of the Bulgarian colleges in Macedonia. "So many schools, so many hotbeds of insurrection," declares a Turkish personage. "There is not one Bulgarian in the public employ in Macedonia, not one in the railroad or treasury departments, nor in the tobacco excise. For years the Bulgarian race has rested under the shadow of suspicion, and the Sublime Porte, with his sublime stupidity, has imagined that his safety would be insured by depriving every representative of the means of honest livelihood. Bulgaria formerly absorbed a part of the intellectual overflow of the Macedonian schools, but her capacity is exhausted. Emigration is impracticable, for this culture of yesterday is yet too crude to profit by in other lands, so there remains only the career of hope, the dream of liberty—revolution. The clumsy suspicion, the vile cupidity and tyrannical instincts of the administrative world, are directed against everything Bulgarian, and do not spare the most peaceably inclined, who, when they learn that they are enrolled on the police registers as suspects, swell the insurrection. The revolt thus daily gains numerous adherents."

#### CENTERS OF REVOLT.

Of the battleground, M. Gaulis remarks: "There are six revolutionary districts adjoining each other, but not merging. The country is ill prepared by nature for a great common rising. It is divided into small basins, in which a group of partisans is at great advantage, but to which the divisions of a regular army could easily penetrate, so the Macedonians are in danger every day of being surrounded and exterminated in detail, despite all their vigilance. They aggravate this physical weakness by a moral evil. Two parties are undermining the revolution. The *Uchovists* are the partisans of pan-Bulgarism and of annexation to Bulgaria, and the *Centralists* are partisans of Macedonian autonomy. The latter party goes so far as to resent the influx of patriots coming from Bulgaria. Last winter a band of Macedonians, near Porvi, barred the way of a band of Bulgarians, and there were many killed in the resulting conflict.

"In the southwest, near the town of Monastir, the struggle against the Turks is now going on openly. This region, with its mountainous chains, its narrow defiles and forests, has become the favorite hiding-place of the bands.

"Under the pretext of repression," concludes M. Gaulis, "the civil or military functionaries

only rob. These wretched agents of authority have one excuse: they are not paid. And as long as they are not paid the Sultan will be unable to stamp out the revolt of his subjects; he will only oppose brigands to the brigands who menace his throne. His justice may sentence more than a thousand ignorant and wretched peasants within two years, may drag to his tribunals poor creatures mutilated by torture, and vainly clamoring their innocence. His soldiers may battle with the revolutionary bands thirty times, as they did in the district of Kastria alone during last summer, or they may go to the assault of the Bulgarian homes, pushing before them the wives and children of the besieged, as at Patili in July. But the Sultan will never crush the revolutionary spirit as long as he will not grant this people rulers worthy of them, and as long as he sanctions this crew of starveling tyrants. The only way to pacify Macedonia is to accomplish the reforms promised in the Treaty of Berlin. In this event only can Europe hope for even a truce between Turkey and Macedonia ever thus goaded on to revolution."

#### THE TRIUMPHANT TURK.

UNDER the somewhat misleading title of "Macedonian Intrigues and their Fruits," Captain Gambier, R.N., contributes to the *Fortnightly Review* a very remarkable and extremely interesting article upon Turkey and her future; or, more correctly, upon the Turks and the Mohammedans generally, and their present state and future aspirations. With the Macedonian problem, which is the nominal subject of his article, Captain Gambier deals briefly, his main points being that none of the Macedonian races is fit to dominate the country, and that the true Macedonians are the Moslems. He ridicules the idea of degenerate Greece founding a new Byzantium via Macedonia, and scoffs at the idea of Italian pretensions in Albania. "Left single-handed in an encounter with Turkey in Albania or in Tripoli, the *fiasco* of the Abyssinian campaign would be repeated ten-fold."

#### THE RENAISSANCE OF ISLAM.

It is the Turk who is really on top in the East, and he intends to remain so. There is no question of degeneracy in that quarter. The Turk is not an expiring race. When we remember how the Ottoman Empire has dwindled away we are apt to think of the Turks as a dying people. But looking under the surface, and remembering that Islamism is a matter of faith, not of territory, one can well agree with many Moslems that the shrinkage of their power

in Europe is not a misfortune. A deep-thinking Turk once remarked to Captain Gambier: "He would be a bold man who would predict that the polytheism of the Christian would not give place in another six hundred years to the less complicated belief in the one God of Mohammed." The six hundred years represent the advantage in age which Christianity has had over Islamism.

#### THE COMING JEHADE.

To keep alive the faith in the One and Indivisible God is the set purpose of Abdul Hamid's life. He looks on Christianity as dead, while the spirit which conquered half the world is only dormant in his people.

"Doubtless, to many this will seem as absurd as the idea of a crusade, but to hold that view is to be ignorant of the extraordinary religious instinct that underlies Mohammedanism. I know the idea of a Jehade or Holy War presents to many the fantastic idea of men galloping across deserts, shouting the war-cry of the Prophet, and living on dates and water,—hordes to be easily routed by a hundred British soldiers, or swept out of existence by a handful of Germans. But the modern defenders of the faith of Allah, in Turkey alone, consist of some 450,000 to 500,000 fairly drilled, well-armed, incomparably brave and hardy men, all within two hundred miles, or a few hours' rail, of Constantinople itself,—probably the strongest fortress in the world. Then behind these 500,000 stand over 2,000,000 men, still in the prime of their magnificent and sober manhood, not prowling about the purlieus of a great city, or passing their nights in the tramps' ward, but agricultural laborers, boatmen, and others who live by their own hands, all trained men who have passed through the ranks. And again, behind them are unnumbered millions, scattered all over the earth, who would unquestionably rally to the defense of their faith, men more instinct with the fighting quality than any other race."

#### THE PROPAGANDA OF ISLAM.

Do not think, says Captain Gambier, that no preparation for the Turkish renaissance exists. The Sultan makes no pretence to be a great warrior. But he has worked night and day and spent millions in preparing the way for a more militant successor. In the remotest parts of the earth, as well as in the most populous, silently and secretly he has organized a vast agency to carry out his idea. All over Asia Minor, in the very heart of Asia proper, in the entire south of the Russian Empire, through all northwestern China, in Afghanistan, and among the British Mahrattas, this agency is firmly

established, while for every man so employed in foreign parts there lives in Constantinople a counterpart, with whom he is in constant correspondence. And so is kept alive the faith in Abdul Hamid, the Caliph, combined with the most complete and practical missionary effort the world has hitherto known. Reason, fanaticism, argument,—all are instruments in this powerful propaganda. The vices of the followers of Christ, the libertinage of priests, the dependence of religion upon wealth, are all cited in the literature which the Sultan's agents all over the world distribute in thousands.

#### THE OMNISCIENT CALIPH.

To the hands of the omnipotent, omniscient Sultan converge all the threads. The Caliph is indefatigable. Rising early, he works harder than a London accountant. For hours he receives a procession of secretaries, ministers, ulemas, dragomans, petitioners, emissaries from all parts of the world. When their turn comes they find that the Sultan knows all about their business, and disposes of it without asking any one's advice, "that he has cognizance of everything that passes in his empire, inchoate and loosely governed as it appears to be. He knows the exact revenue which every village should produce, and while making allowance for inevitable plunder by the Valis and other officials, exacts that the residue be paid into his own hands at Yildiz Kiosk. What these sums amount to no human being except himself actually knows, and none dare ask. The financial status and banking account of every well-to-do Ottoman subject is known to him, and if an official asks for an advance in salary, or petitions for arrears, his Majesty says: 'Pray, why do you want money? There is £4,722 13s. 2d. to your banking credit. Let that suffice.'"

The Sultan's favorite theory in cross-examination is that, given enough rope, any man will hang himself.

The Sultan is, in fact, triumphant. He made fools of the French over Mitylene, and has used the Germans as an instrument. He is a parsimonious man; he hates equally wasting money and paying salaries, and millions upon millions of his revenues remain unaccounted for and never see the light of day. Is he piling up a war chest for future use? Captain Gambier evidently thinks so. And there is every reason why he should, for "Mohammedanism is as mighty a force in the world as Catholicism,—all the more so because the common intelligence of mankind is in revolt against sacerdotalism,—a curse effectually banned in Islam by the far-seeing wisdom of the Prophet."

#### THE JEWS IN ROUMANIA.

THE action taken by our State Department on the Roumanian-Jewish question, has at least served to focus the attention of the civilized world on the evils complained of in Secretary Hay's note. As to the persecutions endured by the Jews now living, or trying to live, in Roumania, there is general agreement among well-informed writers. From all the apparently reliable accounts that reach us, it would seem that the horrors of the situation can hardly be exaggerated. Chief Rabbi Gaster, of the Sephardi Communities of England, writing in the *North American Review* for November, compares the present condition of the Roumanian Jews with that of the animal under the air pump, gasping for life. To show the grounds of this comparison, Rabbi Gaster mentions some of the laws that have been passed and some of the cases of persecution under the form of law:

#### "ALIENS AS TO PRIVILEGES."

"Firstly, the Jews living in Roumania have been driven out of the villages and rural districts and compelled to live in the artificial Ghetti thus created in the small rural townships and in the larger towns. The Jews, without exception, have then been declared 'aliens not subject to an alien power.' Who on earth understands such a definition? Not to belong to any country in the world is an absolute impossibility, and yet have the powers of Europe, to their lasting shame, winked at such preposterous sophistry. For this remarkable fiction of 'aliens not subject to another power' Austria is morally responsible. For when Roumania aspired to become an independent state, immediately after the Russo-Turkish War, one of the first steps toward official recognition was the abolition of the status of '*protégés*' granted by various powers to aliens living in Eastern countries. This is still the case in Turkey, Morocco, and elsewhere, and as Roumania had, up to then, formed part of the Turkish Empire, such *protégés* abounded. Austria, which counted about 16,000, by a stroke of the pen declared these people thenceforth not to stand any longer under its protection; yet Austria took no steps to ascertain what would become of these people, and what would be their political and civil status; they were left suspended in the air, as it were. Evidently Austria hoped, or expected, that they would pass now under the protection of the Roumanian Government, and would enjoy at least all those civil rights which they enjoyed while still subjects of Austria. Roumania, however, took advantage of this state of things, and declared all the Jews, natives as well as those

who, up to that time, had been subjects of other powers, to be 'aliens not subject to any power.'"

Thus the Jews are shut out from any possibility of obtaining redress, in cases of injury, through the intermediary of foreign ambassadors.

#### "NATIVES" AS TO OBLIGATIONS.

"But they are aliens only as far as the enjoyment of rights is concerned; they are considered as 'natives' when it is a question of duties. They are exempt from none. They must serve in the army, but cannot be promoted. They have to pay all taxes and fees, but are not allowed to benefit by any of the advantages to be derived therefrom. For example, they pay toward the establishment and maintenance of all the public schools, but, in virtue of the law passed in 1896, they are excluded, under the plea of 'foreigners' or 'aliens'; if admitted, they must pay a separate fee, and they can be admitted only if there is room left after all others are provided for. Similarly, though they form the majority of merchants, they are not allowed to vote for the chambers of commerce, nor can any Jew be a member of a chamber. The hardship is the greater, as these chambers pass laws which affect the Jews.

#### RESTRICTED IN PROPERTY AND BUSINESS RIGHTS.

"The Jews cannot own any rural land and they are excluded from agriculture. Not living in the villages, and being prohibited, already as far back as 1873, from selling any liquors, even where they are tolerated, the charge which is sometimes leveled against them, on the head of usury and sale of intoxicating liquors, falls entirely to the ground in the case of the Roumanian Jews.

"By the law passed in 1887, the Jews were prevented from selling tobacco, and by the same law they were excluded from the public service and from participating in any public work. It was also declared unlawful even to employ Jews in any of the above trades, and they will soon be deprived of the right to sell groceries, to keep coffee-houses, or baker shops, etc., in rural districts, according to a law submitted to Parliament in December, 1901. Slowly the whole Jewish population, which, on the basis of accurate statistical returns, numbered about 260,000 in 1895, has been driven more and more into the small towns, increasing the hardships already experienced by those who lived there before.

"In order to understand clearly the economic conditions prevailing in Roumania, it is necessary to remember that, out of five and a half millions of inhabitants, about four millions are peasants, living in the most destitute condition,

worse off than the moujik of South Russia, and perhaps even worse than the Polish peasant of Galicia. These poor people are the prey of the landowner and of the official of the government. They want nothing, spend nothing, and earn just as much in prosperous years as will pay taxes and other obligations, and will, perhaps, keep soul and body together. These are the genuine Roumanians, kind-natured, well-disposed, frugal and honest, not given to persecution or hatred, and even disposed to be friendly toward the Jews who live in their midst. I well remember the scenes at Brusturoasa, some twenty years ago, when armed peasants would not allow the Jews to be driven out from their village by the government officials."

It has been stated that the Jews ought to take to agriculture. To show what obstacles are in their way in that direction, Rabbi Gaster cites a case that came within his own observation during the last harvest season in Roumania. Young Jews offered their services as harvest hands, for small wages, and worked in this capacity for about a fortnight. At the end of the time payment was refused, and the mayor of the village expelled the young men as "vagabonds," who had no right to live in rural places. They were compelled to find their way back to the towns from which they had come, depending on local charity for subsistence.

#### RUSSIA'S CHEAP THEATERS FOR THE MASSES.

NEWS from Russia is so often bad news that the surprise is all the greater when one suddenly comes upon a piece of intelligence not only good in itself, but better than anything of the kind to be heard of in any other country. Mr. R. E. C. Long, the author of an admirable article on people's theaters in Russia, in the *Contemporary Review* for November, draws up the curtain upon one phase of Russian life which is practically unknown to the western world, and discloses a picture which is enough to make Mr. William Archer shed tears of envious despair; for the Russians have succeeded, alone among the nations of the world, in democratizing the theater.

#### THEATERS IN MANY VILLAGES.

The movement to which Mr. Long calls attention is quite recent in its more remarkable developments; it is only within the last three or four years that the institution of the people's theater has spread to the provincial and district capitals, and still more recently to the villages. Of late years, in little centers, with a population of three thousand souls and less, miniature thea-

ters for the people have sprung up like magic palaces in a score of remote provinces: village theaters, with village actors and village audiences, are already in existence. The government of Samara boasts the possession of a modern village theater, in which of late they have been playing operas with the village orchestra and a chorus of thirty trained peasants. In these village theaters the charge for admission is a half cent. The building is put up by the peasants; they have peasant doctors, peasant scene-painters, peasant actors and actresses trained by the village schoolmaster, and most of the costumes are made by the village artists. Very often only the chief actors are dressed for the part, the subordinates appearing in their ordinary clothes. In some of these theaters no charge is made for admittance, in others free performances are periodically given to children. The basis of the theater is mainly personal direction and manual help rather than monetary wealth. The cost of lighting and an occasional fee to a professional elocutionist are the only expenses, and seldom amount to more than \$2.50 or \$3 a performance. When we ask how this marvelous result has been attained, Mr. Long tells us that the vast majority of the theaters spring from the cooperative effort of private societies and local governing bodies; educational societies lead, individual citizens follow their lead, and committees are formed whose especial object is to find recreation and amusement.

#### THE TEMPERANCE BOARDS AND THE THEATERS.

Then came the temperance boards, which were established by M. Witte in 1894, for the purpose of working counter-attractions to the public houses. These temperance boards began by starting tea-rooms, where non-intoxicating drink and light food was sold at cost prices. These tea-rooms did not pay; many of them were either shut up or converted into free libraries. Finding, however, that the popular theater had "caught on," they decided that they could not do better than subsidize it, and finding this answered well, the temperance boards built theaters of their own. They then discovered that, while the tea-room was a financial failure by itself, it paid expenses when carried on in connection with the theater. In 1899, it was officially reported by the Russian Government that it has been found that theatrical representations, concerts, *fétes*, and dances are regarded with so much sympathy by the working classes that they not only almost invariably pay their expenses, but even bring in a surplus sufficient to provide for the extension of the movement.

#### MUNICIPAL ASSISTANCE.

Side by side with the temperance boards worked the *zemstvos*, the municipalities, the schools, and the village communes. Every local organization in Russia which has the control of public funds has contributed, in some degree, to the success of the movement. It is the common practice with Russian *zemstvos* and municipalities to celebrate anniversaries of the births and deaths of famous men by founding courses of lectures, building free libraries, publishing cheap literature, opening cheap dining-rooms for working men, and founding people's theaters. In Odessa the people's theater was founded to commemorate the millenary of the death of St. Methodius; in the first year of its existence the Odessa theater gave thirty-four performances, attended by twenty-eight thousand persons, nearly all belonging to the working class. In Ekaterinoslav there is not only a theater, but in connection with it lecture-halls, concert-room, free library, cheap bookstall, a museum, a gymnasium, and a children's hall, in which free pantomimes are performed. The factory theater is another institution peculiar to Russia; these were founded by wealthy merchants for the benefit of their workmen. The people's theater is often built upon land given as a free grant by the municipality, and receives an annual subsidy from rates; but in many cases they are self-supporting. In towns the people's theater has come to be regarded as the mark of progressive municipalities. Most of the theaters are surrounded by parks, in which an open-air stage is erected for use in the stifling heat of the Russian summer.

#### HOW SIBERIA LED THE WAY.

The first impetus to the establishment of these theaters came from Tomsk, in Siberia, in 1884. An illiterate millionaire supplied funds, with which friends of the local committee of Friends of Education founded an institute, to which was attached a small theater for workingmen. The experiment was so successful that the revenue of the society was trebled, the size of the theater doubled, the museum and a number of classrooms were added to the institute. At the same time a St. Petersburg society was formed for the purpose of organizing *fétes* for the working classes: in these *fétes* the chief attraction was an open-air stage, with clowns, story-tellers, and singers; and the admission was 5 cents. The success was immediate and continuous. The work was begun in 1885 with a capital of less than \$750. In 1900, the society had a reserve capital of \$55,000, and they had built out of

their profits two free libraries, reading-rooms, and are now proposing to build cheap bath-houses, and to establish rival boats and skating-rinks on the Neva. The great People's Palace of Nicholas—the second in St. Petersburg,—was only opened in 1900. It has a revenue from all sources of \$250,000, which covered all expenses and left a surplus. The entrance fee is 5 cents, which covers admission to the theater as well as to the grounds, libraries, and lecture-halls. As many as 20,000 persons have been admitted on one day. Forty-six different plays and nineteen operas were performed in 1901.

#### THE CANTEEN IN EUROPE.

THE crying need for the suppression of intemperance among the nation's defenders is generally recognized by the thoughtful army officer of to-day in Europe, as in the United States. Lately dissension has been rife as to the effect of the sale of alcohol by the canteen. Upon this issue, Captain de Malleray, in the *Bibliothèque Universelle*, gives the results of his personal observations in France, Russia, England, Sweden, and Norway. In Sweden, the Gothenburg system has been crowned with great success. The retailers, since they have become simply employees of benevolent syndicates, have no longer any reason to speculate on the weakness of their clients by repeatedly filling the glass, and they now rigorously dismiss any one showing signs of intoxication. The lovers of alcohol are obliged to pay very highly for their favorite beverage, which is purposely served in discomfort, while the milder drinks are to be had in places made as attractive as possible. The Swedish officer can thus forbid all use of alcohol in the canteen without fearing a rush of his soldiers to the bars in the towns. The Bergen method in Norway prohibits absolutely all trade in alcohol, but smuggling is carried on extensively, and Captain de Malleray thinks the less radical measures adopted by Sweden the more effective.

#### THE RUSSIAN SITUATION.

Of Russia he observes: "At Moscow, in 1894, I visited a canteen which was managed by the regiment—the grenadiers of Tauris—the vodka, so beloved by the Russians, being bought by the corps and retailed without an intermediary to the men. Having no confidence in the honesty of the sutlers, the colonel had suppressed them, but he could not suppress the trade itself. Appreciating the fact that under existing circumstances he could not, without danger to their health, entirely deprive his soldiers of vodka, he

compromised by furnishing them with a good quality, and removed the temptation of going to the city to buy poisonous stuff there. Recruited exclusively from the laboring class, and coming to the regiment with an inherited love for vodka, with very domestic tastes, the soldier only left the barracks to go to the inns. The Russian officer interested in the temperance question was thus confronted by this situation: The soldier naturally inclined to drink by the conditions of the climate could not be hindered from getting drunk in the town, but, on the other hand, it was very easy to keep him in barracks by allowing him to take his glass of vodka there. Naturally, the latter alternative was chosen."

#### FRENCH AND ENGLISH EXPERIENCE.

The differences between the social conditions of Russia and Sweden and those of France render either system impracticable for the French army. The English mess,—with the reading rooms and athletic fields and the coöperative canteen where no alcoholic drinks are sold,—appears to Captain de Malleray more advisable, although he suggests that the large number of soldiers who frequent the Aldershot bars on pay days would probably be decreased if, as in Sweden, a moderate portion of alcoholic drink could be obtained at the canteen. The sale of alcohol has been forbidden in the French canteens, but Captain de Malleray thinks this decree has not produced the longed-for reform. His conclusion is noteworthy. "Let us dispense the alcohol ourselves until our soldiers shall have learned to do without it. But let us serve it, as in Sweden, in small quantity and in conditions disagreeable for the consumer. All the attentions, all the refinements of comfort, should be reserved for those who buy the non-intoxicating drinks. . . . It is, moreover, much to be desired that the principal obstacle to a temperance crusade—the sutler—should disappear from our barracks, and that the canteen should be directed by the corps itself. And this crusade should be launched by word of mouth, by teaching, and by example in all the regiments, even those least tainted by the alcoholic scourge. Spencer has said that the example of leaders—of the strong in character and position—is always followed.

"Let us—the officers—by all the means in our power make temperance fashionable. Let us refrain from appearing regularly at the café. Perhaps we should make our receptions shorter, and have them take place in the daytime. The public impression of these receptions is certainly an erroneous one, but is it desirable for the public to think of them as interminable drinking

### MINIST MOVEMENT IN GERMANY.

erman "woman movement" is taking  
siderable proportions, and M. Wolff  
teresting account of it in the *Nouvelle*  
would be difficult to overestimate the  
ged against a German "new woman;"  
ny enemies in her own household, for  
e German matron, of whatever rank  
a, still considers that womanhood is  
p in the three K's: *Kinder, Kirche,*  
—that is, children, church, and cook-  
revolt against this simple ideal first  
aden, but now it has spread all over

### ERS OF THE FEMINIST MOVEMENT.

ers of the movement were two nota-  
Helen Lang and the late Augusta  
The latter organized and founded,  
ty years ago, a number of feminine  
t, now containing a membership of  
usand. One of the most remarkable  
cieties is only twelve years old, and  
her all women teachers and govern-  
quite lately the German universities  
id all absolutely shut to the woman  
two years ago a great change came  
de of the question, and now there are  
lents at Heidelberg, Freiburg, and at  
also, with a view to university study,  
ls or gymnasiums, as they are called,  
pened, though in Prussia the move-  
arded with great suspicion and dis-

### OF THE WOMAN'S RIGHTS MOVEMENT.

hose women who at the present mo-  
the feminine movement perhaps the  
kable is Anita Augspurg. She has  
er legal examinations, and is an ad-  
maker. Yet another leader is Frau  
the wife of the well-known Social-  
ncerns herself actively with bettering  
position of the poor German woman  
nowhere is the workwoman paid so  
n Prussia. Quite an average price

for a day's skilled needlework is 18 cents, and  
in certain trades women and girls work all  
night, no arrangement being made to insure  
their proper rest all day. Thanks, however, to  
the great extension of the woman's rights move-  
ment, the position of the humble woman worker  
is distinctly better than it was, and M. Wolff  
evidently believes that the time is coming when  
the Reichstag will have its due complement of  
women members.

### WOMEN IN RUSSIA.

I N the second October number of the *Revue*  
*des deux Mondes*, the clever lady who writes  
under the name of Th. Bentzon contributes a  
very interesting study of Russian women. She  
is struck by certain resemblances, which appear  
likely to become more obvious in the future, be-  
tween the empire of the Czars and the United  
States. This is a deeply interesting subject of  
inquiry, but Madame Bentzon limits it for the  
moment to a comparison between the position of  
women in the two countries, in both of which  
the feminist movement has the same character.

### A COMPARISON OF RUSSIAN AND AMERICAN WOMEN.

Neither in Russia nor in America does this  
movement imply any sentiment of antagonism  
or revolt against the stronger sex. In Russia  
the equality of the sexes is recognized by the  
law, and the woman of every class possesses  
privileges unknown in France, such as the free  
disposition of her own property. The Russian  
marriage is a sacrament which imposes upon  
both parties the same duties and the same re-  
sponsibilities. If money questions do arise be-  
tween husband and wife, the law courts gener-  
ally lean toward the side of the woman. It was  
not always so. The Russian family was at first  
organized on an Oriental model, but this led to  
a woman's rights agitation at a much earlier  
period than the rise of the same phenomenon in  
western Europe. The Russian woman owes a  
good many of her rights to Peter the Great,  
and her education,—which, except as regards  
the higher studies, is as good as that of the  
Russian man,—she owes to Catherine.

### THE POOR WAGES, OF RUSSIAN WORKWOMEN.

Madame Bentzon admits that the Russian  
workwoman is ill paid; but as the man is also  
badly paid, the difference, she declares, is not  
very great. Besides, in the professions, such as  
the postal and banking services, the pay is the  
same. Madame Bentzon goes on to explain in  
detail the education of Russian girls, which is  
very thorough, especially in modern languages;

and she also explains the considerable part which the Russian woman plays in the charitable and philanthropic work of the country.

#### IS OUR FINANCIAL SITUATION SOUND?

MR. FRANK A. VANDERLIP, vice-president of the National City Bank of New York, recently delivered an address before the Chamber of Commerce of Wilmington, N. C., which is printed in the December *World's Work*. Mr. Vanderlip sounds a note of warning as to our rapidly expanding credits, and is rather dubious as to the solidity of present financial conditions in the United States. He reviews the phenomenal industrial and financial growth of this country in the past six years, which have brought an increase of \$4,000,000,000 in deposits in our banks, and which have brought us to the position of the greatest of coal-producing and greatest of steel-producing countries in the world. Our foreign trade balance came to show over \$600,000,000 credit in a single year.

But in the past two years there has been a change. Our imports have been rapidly rising, while our exports have fallen off more than \$100,000,000 in the past year.

But what strikes Mr. Vanderlip as most worth the attention of conservative minds is the fact that with an increase in bank deposits of over \$4,000,000,000, as compared with the beginning of 1899, there is no increase at all in specie and legal-tender holding of the banks kept as a reserve against those deposits. This remarkable development of our bank credit has been brought about chiefly by the gigantic "trust" operations. A vast amount of new securities have been created in these half-dozen years, based in large measure upon properties which were before held as fixed investments by individuals, or if standing in the form of corporate property the securities of those corporations were most closely held, and in but small measure entered into the financial operations of the day. This movement,—tending to convert the evidence of ownership of a great amount of fixed property into a form which has been considered bank collateral, and which has been made the basis of loans and of corresponding increase of deposits,—is undoubtedly the most important single cause for this increase of more than \$4,000,000,000 in bank deposits and bank loans of the country in the space of three or four years.

Another influence has been the heavy expenditures of corporations, particularly railroad companies, for the improvement, betterment, and extension of their properties. Now, even if these expenditures have been wisely made,

they have used up so much liquid capital, converting it into a fixed form, so that such capital cannot be fully returned into liquid shape, from the result of increased earnings, before the next ten or fifteen years. Mr. Vanderlip assumes that it must be admitted that we have been converting too great an amount of liquid capital into fixed forms of investment. The cure is, as he thinks, to reduce the expenditures of that character. He believes that nothing will interfere finally with the commercial ascendancy of the United States, because we have the cheapest supply of raw material, the greatest genius in the handling of machinery, the broadest market in the world for domestic business, which will furnish a foundation for foreign commercial conquest. He says we are absolutely certain to be foremost in the world's commercial ranks, but he is just as certain that the facts noted above make it fitting and necessary that our financiers recognize the present time as unfavorable for the expansion of bank credits.

The extensive liquidation of American securities which has taken place since the delivery of Mr. Vanderlip's address gives point to his warning.

#### POOLS AND TRUSTS IN GERMANY.

SINCE Prince Henry's visit and the marked attentions that the Kaiser is showing to us, there has been a notable increase of articles dealing with American affairs in the German periodicals. Our cousins across the sea, at last fully awakened to a sense of our importance, are hastening to inform themselves of this new world-power. It appears to them like a dangerous rival, for the tone of anxiety predominates in many of these articles, and references to the "American danger" are of constant occurrence. This danger looms up before the German mind, according to a contributor to the *Treussische Jahrbücher* for October, not in the shape of the Monroe Doctrine or the Dingley tariff, but in that of the trusts; and Herr Hjalmar Schacht, in his article, "Trust or Kartell," boldly advocates the adoption of American business methods to counteract American competition on German soil. His comparison of the kartell system obtaining in Germany with the trusts, as organized in this country, leads him to a sharp criticism of the former as retarding industry, while the trusts, in his opinion, not only benefit the industries at home, but are also powerful agencies in conquering foreign markets. The German kartell corresponds about to the pools in this country, which, the writer declares, "have had their day." Pools are advocated in Germany for two reasons:

(1) To adjust production and consumption, and regulate prices in proportion to costs, thereby placing the industries on a firm basis, and assuring to the workmen steady, remunerative work; (2) To counteract the American trusts.

#### TRUST VERSUS POOL.

After a succinct statement of the nature of trusts, based on Professor Jenks' "The Trust Problem," the writer compares German and American industrial methods as follows: "Trusts, in the American sense of the word, do not exist in Germany, not only as regards their legal aspect, but also their industrial characteristics. The German kartell is a combination of similar enterprises of the same branch of industry that form an agreement as to price, markets, output, etc., being therefore not a concentration but a coalition of industries. The fundamental difference between the German kartell and the American trust lies in the fact that the trust manages and directs all its factories and plants from one central place, while the different establishments forming the kartell are bound by agreement to observe a certain standard only in regard to some branches of their enterprise, otherwise carrying on their work independently." Among the disadvantages of the kartell system the writer mentions the following: It does not, like the trust, conduce to the cheapening of the goods or the enlargement of the markets, but, on the contrary, tends to restrict the output and keep up prices, with the view of benefiting the manufacturer rather than the public. The standard of production does not rise above the average, as there is neither the incentive of competition found among independent industries, nor the concentration of capital that facilitates superior work, as in the case of the trust. It tends to lower wages and throw the men periodically out of work, when the plants are shut down in dull times as a check to over-production. One great advantage of the trust on its economic side, on the other hand, the writer finds in the diffusion of capital among the public,—e.g., the stocks and bonds of five large British brewery companies are held by about twenty-seven thousand persons. And the workmen themselves may acquire a share and interest in the business by becoming stockholders.

The writer draws the balance in the following pregnant paragraph: "Kartell means stagnation and regress of production, weakening of international competition, strengthening of the anti-social spirit, increased inequality in the distribution of wealth; trust means progress in production, strengthening of international competition, more even ~~distribution~~ of wealth. The social

defects of trusts must be corrected by political measures."

#### CHANGE OF ATTITUDE IN GERMANY.

The attitude of German manufacturers, on the whole, is characterized by the writer as follows: "It seems at times as if there were the honest endeavor on many sides to direct the kartell so as to approach the results and successes of the trusts. As soon as German manufacturers have recognized the defects of the kartell system and the advantages of the trust, it would be strange if they did not favor a movement that conduces to the growth of national industry, instead of merely guaranteeing private profits. Here, as everywhere, it will come to pass that the clever and far-sighted minds will guard and further the real national interests, as against the egotistical self-sufficiency of the sluggish masses. We certainly have men enough in Germany able to direct trusts and to manage them successfully, financially as well as in a truly patriotic spirit. Germany will not lack its Morgans and Schwabs."

#### AN ENGLISH VIEW OF THE SHIPPING SITUATION.

THE story of the international shipping combine is clearly told by Mr. Marvin in this number of the REVIEW OF REVIEWS.

Mr. W. R. Lawson, writing on the Cunard agreement in the *Contemporary Review* for November, raises many interesting questions, among which one of the most important is the theory that the advance of money made to the Cunard Company to enable it to build two gigantic new steamships may lead to the nationalization of the merchant marine of Great Britain. The following passages give the gist of Mr. Lawson's paper:

"While frankly admitting that the government had to do something in the emergency, and that the Cunard agreement is perhaps as good as any other that could have been made in the circumstances, no business man can possibly accept this makeshift as a permanent development of our maritime policy.

"The ultimate result of all the negotiations and manœuvres of the past six months is that the North Atlantic mail service is now subject to three separate agreements,—a German-American agreement, under which Mr. Morgan guarantees £300,000 a year to the German companies; a British-American agreement, under which the British Government guarantees to Mr. Morgan equality of treatment with its own subjects; and the Cunard agreement, under which the British Government is to pay that company

£150,000 a year to have nothing to do with Mr. Morgan. Why Mr. Morgan should have to pay the Germans handsomely for what he gets from us as a gift, and why the Cunard Company should be paid handsomely for what the White Star line undertakes to do for nothing, why the British public should have to pay heavily where the Germans get well paid,—these are all paradoxes beyond the comprehension of the ordinary man."

#### GOVERNMENT OWNERSHIP AS A POSSIBILITY.

Mr. Lawson does not think that Mr. Morgan will be able to divert traffic either by his steamers to his railways, or by his railways to his steamers, with such facility and certainty as is generally assumed. As for the ships which he has bought, Mr. Lawson says: "The Atlantic steamer of the future will carry 20,000 tons of freight and several hundred saloon passengers at £10 per head," and of these none is to be found in the fleet acquired by Mr. Morgan's recent purchase. The most important part of Mr. Lawson's article is that in which he discusses the possibilities of ulterior developments arising out of the Cunard:

"On the other hand, the loan for building two new liners is an equally heroic innovation. When one thinks out what it may lead to hereafter, one can hardly believe that the Board of Trade realized what they were doing when they assented to it.

"The shipbuilding-loan clause in the agreement is nothing less than revolutionary, and there must have been some bursting of red tape when it was first mooted. As we read it, it establishes a perfectly novel relationship between the government and our steamship companies of the Cunard class. It places the Crown in the position of a lien holder of a large commercial undertaking. As security for the advances to be made toward the building of the two new liners, not only the new ships themselves, but the whole of the fleet and general assets of the company, are to be pledged.

"The government will, in fact, have a substantial interest in the undertaking. If the cost of the new ships be estimated at £1,500,000 (which is a moderate figure), it will equal the whole of the existing Cunard capital (£1,600,000). That would give the government a one-half interest in the enlarged fleet,—quite as much as it has in the Suez Canal. In the Cunard agreement we are committing ourselves to the principle of state ownership of commercial shipping. It may seem a very small step we are taking, and one easy to explain away officially; but it is a step,—definite, and possibly momen-

tous. There may even be in it the germ of economic revolution. Carried to its logical conclusion, the Cunard agreement may justify state ownership and operation of ocean mail steamers. Startling as the idea may be, there is nothing in it to shrink from."

#### INVENTIONS FOR SUBMARINE WORK.

ONE hundred and eighty ships are sunk on an average every month of the year, and, with all their cargoes, they are lying at the bottom of the sea. An Italian inventor, Signor Pino, has proved that by the use of his submarine boat this treasure can, in a very great number of cases, be recovered with economy and ease. Dr. Carlo Iberti contributes to the *Contemporary Review* for November a very interesting article concerning the inventions of Signor Pino, who is likely to become almost as famous as Marconi. He is an engineer, whose working submarine boat is used, not for destruction, but for the recovery of treasure from the deep. His boat promises to make an immense fortune for its inventor.

"In order clearly and exactly to realize the value of the invention under notice, the following facts have to be considered:

"1. That every kind of operation for the salvage or recovery of ships or objects can be done with great ease by means of this small boat of about three meters' diameter.

"2. That it has been tested to a depth of 150 meters, and that the inventor, who has descended in it to the sea bottom at least 140 times, has successfully worked at a depth of 130 meters.

"3. That two persons can work in it on the sea bed for twelve hours continuously without needing to return to the surface for air.

"4. That every object lying in the sea is clearly and distinctly seen from it, at any depth, through windows of a special crystal.

"5. That the boat (which can be set in motion or stopped instantaneously) ascends or descends at will at a speed of  $3\frac{1}{2}$  meters per second.

"6. That it will stop and remain perfectly immovable at any depth in perfect equilibrium, and for any length of time.

"7. That it walks on the sea bed, moving freely on an ingenious single wheel, propelled by an electric-driven screw."

#### TAKING PHOTOGRAPHS IN THE DEPTHS.

But his submarine boat is not so wonderful as his other invention, called the hydroscope. By its use a person will be able:

"1. To see clearly and distinctly any object

in the water down to the bed of the sea and practically at any depth ;

"2. To take clear photographs of whatever he perceives there ; and thus—

"3. To recover therefrom with ease and at very small expense anything he likes, however large and heavy it may be, and at whatever depth it may lie.

"And all these three operations will be performed while standing in an ordinary small boat on the surface of the sea.

"A private experiment was made some days ago in the Mediterranean Sea, only one person being present. The result was simply incredible ; a large volume of water—about 15,000 cubic meters, covering an area of sea bed of 1,500 meters perimeter,—was so brilliantly illuminated that all the objects moving in this body of water, or lying on the illuminated sea bed, were clearly and distinctly seen. The hydroscope with which this experiment was made was a very small and cheap one."

#### RICHES OF THE OCEAN BOTTOM.

By the aid of the Pino submarine boat and the hydroscope, Dr. Iberti thinks there is an incalculable store of treasure soon to be brought to the surface. He says :

"Who can tell the value of all the precious artistic objects lying on the sea bottom,—for example, those statues, the masterpieces of great sculptors, which were wrested away from Athens and sunk in the Archipelago during the Pompeian wars, as we are told by Livy, and which Signor Pino has just been urged by the Greek Government to recover ? We can hardly realize the value of the Persian fleet wrecked in the Dardanelles, of the ships sunk in the Egyptian waters during the Napoleonic wars, of the Spanish steamer foundered in the Bahia de Vigo, and of thousands of other ill-fated ships. In order to get a very faint idea of the enormous importance of Signor Pino's invention, it may suffice to recall to mind the wreck of the great transatlantic steamer *Bourgoyne*, which caused a loss of 24,000,000 francs, and contained 16,000,000 francs in zinc ; the steamer sunk off the coast of Holland, with gold to the value of 27,000,000 francs ; the ship wrecked during the North American war, with \$5,000,000 in treasure ; the vessel dashed to pieces in the Strait of Magellan, with ingots to the value of 625,000,000 francs ; the armored ship *Victoria*, sunk in the waters of Tripoli, with a large treasure in gold and modern ordnance ; the warship *Black Prince*, wrecked during the Crimean War in the Bay of *Balaclava*, with (according to the most reliable historians) 40,000,000 francs in grants, money, etc."

#### THE ATLANTIC FISHERIES QUESTION.

IN view of the signing of a reciprocity treaty between the United States and Newfoundland, on November 8, especial interest attaches to a very well-informed article in the December *Atlantic Monthly* by Mr. P. T. McGrath, a Newfoundland journalist, who gives a complete exposition of "The Atlantic Fisheries Question," ancient and modern. This squabble between the United States, Canada, and Newfoundland has dragged along for years. It is of peculiar difficulty, because there are three parties with conflicting interests. The key to the situation is apparently held by Newfoundland, because of her inexhaustible bait supply, her proximity to the Grand Banks, and her political independence of Canada.

#### WHAT THE TROUBLE IS ABOUT.

Anybody can fish on the Grand Banks, because they are outside of the three-mile limit. The trouble is about the bait. In order to take the mackerel, halibut, and cod, it is desirable to have fresh bait, and nowhere in the world can this be taken in such quantities and so conveniently as in the bays and estuaries of Newfoundland. The United States fishing fleet leaves Gloucester and other New England ports in November, and they must first load up with frozen herring for bait. At present Newfoundland allows Americans to catch the herring in the winter, and they take away about 250,000 barrels every season. But after April 1, the Newfoundland bait act requires every fishing vessel to procure a license. The Americans obtain bait through a *modus vivendi* dating from 1889, granting them free access to Newfoundland waters by paying a license fee of \$1.50 per ton of the vessel's register. The French, who, with the Canadians, the United States vessels, and the Newfoundlanders, make up the four fishing fleets, are excluded altogether from Newfoundland bait-catching, because France granted such a heavy subsidy that her fishermen were enabled to undersell all others.

#### THE CANADIANS HOSTILE TO AMERICAN FISHERMEN.

The Canadians are hostile to American fishermen, more so than the Newfoundlanders ; but Newfoundland thinks that if the valuable bait concessions are granted, the \$6,000 per year of license fees are a very inadequate recompense for the hundreds of thousands of barrels of bait that are taken away by the Americans every year. Newfoundland's attitude is that if she furnishes the United States fishermen with bait, her fishermen should have free entry for their catch in the United States markets.

## MR. BLAINE'S ATTITUDE.

Mr. Blaine was in favor of this reciprocal trade arrangement between Newfoundland and the United States. "First, he recognized that Newfoundland, by her bait, controlled the situation, and that if France, with a fishing base near our coast, was unable to cope with us, the Americans, who would be a thousand miles from their own territory, would be helpless altogether. Second, he was aware that Newfoundland, because of her insular position, her remoteness, and the varying character of her fishery pursuits, would not ship very largely to the American market. This demands its own cure of fish, which the Newfoundlanders do not practice. All the cod we take on Labrador and the northern coast is cured specially for the European markets, and is sent there direct, so that only the fish taken on our southern seaboard, and a portion of the lobster catch, would be forwarded to New England for sale. Third, he foresaw that by an arrangement with Newfoundland the American fishermen would be released completely from all dependence upon Canada, and be able to disregard any hostile enactments she might propose."

## CANADA'S POSITION.

"Canada's position with regard to this international dispute is becoming more untenable every season. Her existing markets are inadequate to absorb her yearly catch, and the American control of Cuba and Porto Rico has increased her difficulties by depriving her almost wholly of two large and profitable markets. Her fish in these territories must now face an adverse duty of eighty-four cents a hundred pounds, and this accentuates the congestion at home. Hence Canada strives hard for reciprocity, alleging that the removal of the American tariff will cheapen fresh food for the American consumer, and thus increase the demand in the Republic, not only for Canadian, but also for American fish. But the American treaty makers have not been satisfied that the advantages of free trade would outweigh the detriments of unlimited Canadian competition, and so have declined all overtures from the Dominion."

## THE BOND-BLAINE CONVENTION.

Secretary Hay is now being urged to revive the Bond-Blaine convention of 1890, providing for reciprocity in fishing products between the United States and the colony of Newfoundland, irrespective of Canada. "The United States fishermen will then be able not only to procure bait in our waters, but to enter them in order to

transship their catch by fast steamers, with cold-storage chambers, direct to Boston and New York. The frozen-herring industry can be developed in the same manner, and so far from reciprocity being detrimental to the New England fishery interests, it will be positively advantageous to them. We would, of course, compete against them to some extent, but the lessening of their expenses consequent upon being able to use our coast as an advanced base would enable them to meet us upon more equal terms. Canada will resent our success, if we do succeed, but the British Government seems to be satisfied that Canada's objections are not valid, else Premier Bond would never have been permitted to resume negotiations with the object he has now in view."

## NEWFOUNDLAND'S THREAT.

If the United States continues to refuse a reciprocal arrangement to Newfoundland, the latter threatens to throw herself into the arms of Canada. Then the Canadian government will take over the control of the Newfoundland fisheries and a united policy would be possible. The fisheries of British North America would be absolutely barred to the Americans, because Canada would then have in her own hands the lever by which to force them to grant her reciprocity, or else she would do her best to destroy the New England fishing industry. Mr. McGrath says such a course would absolutely deprive the American fisherman of bait, and that they would gradually be driven from the Grand Banks. The price of fish in the United States would run so high that the import duty would not make so much difference, and Canada and Newfoundland together would supply us with these products. Newfoundland's premier has recently been in Washington trying to revive the Bond-Blaine convention, but Mr. McGrath doubts whether the Senate will favor the project, even if the State Department does draft a new instrument.

## THE NEW COMET.

FOR the past three months astronomers have been discussing the new comet, designated by them as *b* 1902. It was discovered by Astronomer Perrine, of the Lick Observatory in California, on September 1, and was described by him as a faint object, having the appearance in the telescope of a nebula with a small, somewhat well-defined nucleus near the center of the head, with a brightness like that of a ninth-magnitude star. The comet was observed to have a short, bushy tail pointing toward the southwest.

In an interesting statement about the cor

in the November number of *Popular Astronomy*, Prof. W. W. Payne, of Goodsell Observatory, Carleton College, Minn., explains that it is very difficult to determine the length of a comet's tail, because it gradually diminishes in brightness as it extends away from the head.

The new comet's orbit was computed by Mr. Perrine, and also by a German astronomer, Elis Strömngren, at Kiel, using one observation made at Lick Observatory on September 1, one made at Urania on September 2, and a third made at Copenhagen on September 4. From these three observations from three different places, nearly the same results are obtained as from those given by Mr. Perrine from observations made entirely at the Lick Observatory. Professor Payne is confident that these trial orbits must be close approximations to the true path of the comet, which can only be determined by a longer series of observations.

#### BRIGHTNESS OF THE COMET.

From the time of its discovery the comet's light increased very rapidly. Mr. Perrine estimated its brightness on September 1 as about equal to that of a ninth-magnitude star. On the evening of October 7 the comet was observed at Goodsell Observatory, and its brightness was estimated as about the same as that of two stars in Cygnus, whose magnitudes are catalogued as nearly of the fourth. Thus the brightness had apparently increased five magnitudes since September 1.

#### RELATIONS TO THE EARTH.

Professor Payne's explanation of the accompanying diagram showing the path of the comet relative to that of the earth, follows:

"At the time of discovery it was moving almost directly toward the earth, but before it reached the orbit of the earth our planet had passed on beyond the point opposite, so that collision would have been impossible, provided the paths of both bodies were lying in the same plane; but as they are not in the same plane, the points of intersection are such that there could not possibly be any such danger even if their approach had been less than it was.

"(Other interesting features shown by this preliminary path of the comet are its near approach to the sun, its long period of visibility, its short time behind, or on the opposite side from, the sun, its near approach to the earth again in the months of January and February, 1903. If the computers have given us a path for the comet that is nearly correct, its brightness in approaching the earth the second time will not be nearly as great as that which was observed

during the months of September and October of this year. But on January 16, the time of nearest approach, the brightness will be less than six times that of discovery. These predictions do not take into account any of those physical changes which so often take place when a comet is passing near the sun, especially if its perihel-

DIAGRAM OF THE NEW COMET.

ion point falls far within the earth's orbit, as is true of this comet. It is fortunate that this comet has so long a period of visibility that it may be observed thoroughly to determine a definitive orbit and to make a thorough study of its physical changes."

#### THE POETRY OF THE NINETEENTH CENTURY.

THERE is a very brightly-written, epigrammatic, but somewhat too comprehensive, article in the *Edinburgh Review* for October, on "Poetry in the Nineteenth Century." It suffers from its striving after completeness. Beginning with Campbell and ending with Mr. Kipling, it is not an easy thing to sum up, not only all the first-class poets, but even many of the second and third class. The reviewer has therefore put himself in a difficulty from which he is only extricated by the condensation and brightness of his judgments.

What are the characteristics of our poets? Campbell's virtue is his blamelessness; Crabbe, infinitely superior, merely poured new wine into the old bottles of eighteenth-century classicism: "A serious, resourceful Toniers in verse." Coleridge was a shattered, half-redeemed prodigal, whose very creations cry out against him. Scott was clumsy as a versifier.

## SHELLEY AND BYRON.

It is doubtful whether Shelley or Byron will ever have justice done to them. The lightning of their genius was too deeply tinged by the more unpopular and less abiding colors of an epoch whose effervescence was checked by a reaction which wreaked vengeance upon all the most openly avowed products of the period against which it set itself to war. Social isolation was the defect of both. The defect of Shelley was exuberance.

## WORDSWORTH.

"You cannot place Keats, because you cannot tell what would have become of him." Thomas Moore is dismissed with "affectionate remembrance." The range of thought in Wordsworth, his rustic dignity, his power of seeing poetry in common things, his gentle, unaffected mysticism, and his simple method of expressing it, are his chief merits. His defect is a reiteration of subject, begetting monotony of treatment. But his worship of women is as supreme as it is simple.

## TENNYSON.

Tennyson had style defined by the reviewer as a masterly elevation of manner, an inevitable form of phrase, chasteness in rhythm, caution in expression, finish and polish. In these he was supreme. He was a carver of cameos, which he set in a blank matrix. His aim was always lofty; he never wrote a line which would express himself at the expense of his readers.

## THE BROWNING.

The genius of Browning was the contrast and the complement of the genius of Tennyson. Browning's method was not so much a negative lack of style as a positive rejection of it.

"His magnificent imagination, his intellectual force, his instinct for a fine subject, his love for and mastery over landscape, his penetration into the devious passages and closed chambers of human nature, are all undoubted; but so are his willfulness, his roughness, his unliterary avoidance of simplicity, his love of leaving his reader, and perhaps sometimes himself, lost in half-lights of intention and half-thridded mazes of unexpounded philosophy. His burliness and muscularity found acceptance with many persons not too capable of appreciating his highest qualities, but who fancied that they had found in him satisfaction for a lack of virility which they had imputed to Tennyson simply because he was delicate and clear. Many such mistook his obscurity itself for profundity, thinking that what they could not plumb must needs be deep."

As for Mrs. Browning, she had feeling, romance, wit, picturesqueness, thoughtfulness arising into wisdom, and landscape, but none of these were hers in a superlative degree. Her artistic taste was her weakest point.

## THREE MODERNS.

Patmore, Arnold, and Swinburne have all been thoroughly conscientious in form, phrase, workmanship. Arnold may have been dry, without a large stock of melodies; Patmore overfrugal and over-chastened; the trill of Swinburne, exuberant, repetitive, over-prolonged. But their strings are ever in tune; and they never touch their instrument with a slack or slovenly hand. Clough was a dweller on the borderland of genius, and intellectually was picturesque but unkempt, like the landscape of the moor edges. All the poems of William Morris, great and small, are but reproductions of gone forms of life, and of affectations which were superseded by a healthier renaissance. Through all Rossetti's work there runs a sense of moral and nervous decadence.

## EMILE ZOLA AND HIS LIFE WORK.

IN the November reviews there are many tributes to Zola, and criticisms of his works. In the *Contemporary Review*, M. Edouard Rod writes on "The Place of Emile Zola in Literature." M. Rod was an enthusiastic friend of Zola, and his article is one of warm appreciation. He says:

"Zola was judged differently by those who came near to him and by those who only knew him through his writings. To the latter he is a hard realist, an ambitious man, a proud and violent polemic. The former knew him as a familiar and friendly figure,—an example of the simple, quiet, and good man, which alone will live in their memory. If I ventured to sum up in a few words what I think of his more immediate rôle, I would say his great merit has been, while saturated with romanticism, to have grasped its inadequacy. He can never be praised too highly for having shaken the intellectual tyranny of that unhappy school, and for having brought novel-writing back into the straight paths of observation and simplicity."

## Zola's Art

One of the best of these literary papers is that of Mr. Francis Gribble on "The Art of Emile Zola" in the *Fortnightly Review*. Mr. Gribble's main point is that Zola was not a realist at all. There was a fundamental fallacy in his view of human nature, in that he ignored

conventional illusions and tore off masks, which are quite as much a part of our nature as our animal appetites. Zola was also not a realist, because he failed to depict what was real. His material was taken from real life, but he compressed much more of it into one novel than could actually have happened in the space and time which his novel occupied. His documents differ from those of the man of science in consistently sacrificing the truth to the tableau. He never drew a character from within or realized any emotion except that of hunger.

#### An American Tribute.

Mr. W. D. Howells, writing in the *North American Review* for November, says of Zola :

"To me his literary history is very pathetic. He was bred, if not born, in the worship of the romantic, but his native faith was not proof against his reason, as again his reason was not proof against his native faith. He preached a crusade against romanticism, and fought a long fight with it, only to realize at last that he was himself too romanticistic to succeed against it, and heroically to own his defeat. The hosts of romanticism swarmed back over him and his followers, and prevailed, as we see them still prevailing. It was the error of the realists whom Zola led, to suppose that people like truth in fiction better than falsehood ; they do not ; they like falsehood best : and if Zola had not been at heart a romanticist he never would have cherished his long delusion, he never could have deceived with his vain hopes those whom he persuaded to be realistic, as he himself did not succeed in being.

"He wished to be a sort of historiographer writing the annals of a family, and painting a period ; but he was a poet, doing far more than this, and contributing to creative literature as great works of fiction as have been written in the epic form. He was a paradox on every side but one, and that was the human side, which he would himself have held far worthier than the literary side. On the human side, the civic side, he was what he wished to be, and not what any perversity of his elements made him. He heard one of those calls to supreme duty, which from time to time select one man and not another for the response which they require ; and he rose to that duty with a grandeur which had all the simplicity possible to a man of French civilization. We may think that there was something a little too dramatic in the manner of his heroism, his martyrdom, and we may smile at certain turns of rhetoric in the immortal letter accusing the French nation of intolerable wrong, just as, in our smug Anglo-Saxon conceit, we laughed at

the procedure of the emotional courts which he compelled to take cognizance of the immense misdeed other courts had as emotionally committed. But the event, however indirectly and involuntarily, was justice which no other people in Europe would have done, and perhaps not any people of this more enlightened continent."

#### WHICH ARE THE BEST PICTURES IN THE WORLD?

MR. FREDERIC DOLMAN submits the question, "What are the most precious pictures in the world?" to the curators or directors of all the best picture-galleries outside of Great Britain, and he embodies in an article contributed to the *Strand Magazine* for November the answers he received. The following catalogue of pictures is interesting. In each case the selection of the picture has been made by the official custodian of the gallery in which it appears :

- The Louvre : Leonardo da Vinci's "La Gioconda."
- The Prado : Velasquez's "Meninas."
- The Rijks Museum, Amsterdam : Rembrandt's "Night Watch."
- The Hague Gallery : Paul Potter's "The Young Bull."
- The Vienna Belvedere : Rubens' "Ildefonso Altar."
- The Berlin Gallery : H. and J. van Eyck's "Worship of the Lamb."
- The Dresden Gallery : Raphael's "Madonna."
- The Munich Pinakothek : Murillo's "The Melon Eaters."
- The Antwerp Museum : Quentin Mast's "The Descent from the Cross."
- The Florence Uffizi Gallery : Titian's "Flora."
- The Florence Pitti Gallery : Raphael's "La Madonna della Seggiola."
- The Borghese Gallery, Rome : Titian's "Sacred and Profane Love."
- The Academy of Fine Art, Venice : Titian's "Assumption of the Virgin."

#### TUBERCULOSIS IN HUMAN BEINGS AND IN CATTLE.

A DISCUSSION of the question as to whether the disease of tuberculosis is identical in man and in cattle is being given in a series of articles by Dr. A. von Székely, of Budapest, in the *Centralblatt für Bakteriologie*.

In the great tuberculosis congress held in London, Koch urged the necessity of striking at the root of the evil and not wasting energy by fighting the disease with ineffective measures. Basing his conclusions upon experiments made in Berlin, he contended that human tuberculosis differed from that of cattle and could not be transmitted to them, but, for the more im-

portant question of the susceptibility of man to the tuberculosis of cattle, he believed a direct answer to be impossible, because, obviously, experimental proof upon man is excluded. By indirect results, however, he felt justified in the assertion that, if man were susceptible to the tuberculosis of cattle, such cases were very rare, and it was not necessary to take precautions against them. Koch's assertion led to contradictions in the congress. Other investigators arose and declared that his conclusions were too far-reaching and his evidence was not conclusive; accordingly, the resolution was voiced that, "in the light of our present knowledge, the health officials do all in their power to prevent the spread of tuberculosis through meat and milk."

The question raised by Koch is evidently of great significance for the control of tuberculosis, and many experiments were begun in different places to clear up the matter of the identity of the two diseases, as Koch himself had indicated as being highly desirable.

The investigations of Koch and Schütz were divided into three main groups,—*i.e.*, those on calves, on swine, and on sheep; with the further variation of the methods of infection by feeding, by subcutaneous or intra-abdominal injection, intravenous injection, or by inhalation. The calves were first treated with tuberculin, in order to insure their freedom from the disease.

In the experiments with feeding, calves were fed daily with sterilized milk mixed with sputum from a man suffering with consumption, or else the milk was mixed with a pure culture of tuberculosis. The animals were killed within one hundred and ninety-eight to two hundred and thirty-six days, but their tissues showed no traces of the disease. Parallel experiments for comparison, made upon animals of the same kind, kept, as far as possible, under the same conditions, except for the substitution of animal for human tuberculosis bacilli, do not seem to have been carried on.

In three cases of subcutaneous injection of from 5 to 10 ccm. of an emulsion, consisting of one part human tuberculosis germs with one hundred parts of water, the animals showed no signs of the disease when killed about two hundred and forty-three days later. Parallel experiments,—conducted with animal tuberculosis germs,—showed the effects of the disease, and one calf died within forty-nine days.

Intra-abdominal injections made upon three calves produced tubercles in one individual in the region of the injection. Parallel experiments, conducted with the tuberculosis of cattle, produced the disease in all the animals.

Similar results followed intravenous injection of calves with the two kinds of bacilli; with the additional result of increased weight in the cases treated with human tuberculosis, and loss of weight in the control experiments with tuberculosis of cattle.

In the experiments with inhalation of germs calves were made to breathe air filled with the dust of finely-powdered cultures of tuberculosis. Three of them showed no changes, but examination of the fourth showed a few tubercle in one lung.

Experiments made upon sheep and swine produced similar effects, although some cases were doubtful, and, on the whole, the results were not so conclusive.

The critics of this work claim that the evidence is not sufficient to prove the presence of two distinct diseases; that there is no essential distinction—merely a difference in degree, and the experiments only show that, in general human tuberculosis is less infectious than that of cattle. Even if all the evidence showed that infected animals never contract human tuberculosis, it would not prove that the two diseases are distinct. It has been shown for many pathogenic organisms that they may be carried through many generations upon one kind of animal and become more strongly infectious for this kind of animal; on the other hand, however, their power of infecting other kinds of animals remains unchanged. On this principle, it is easily explained how the bacillus of human tuberculosis is less virulent for cattle: it has become adapted to human nutrition and body temperature; consequently, it thrives best in man. The body temperature of cattle is higher than in man; the fluids of the body may be considered as different; and, quite naturally, the human germ does not thrive so well if it is transmitted to cattle.

Chauveau experimented upon calves with both kinds of bacilli, but found no difference between those inoculated with human and those inoculated with animal tuberculosis.

Sidney Martin fed calves with food mixed with the sputum of consumptives, and, when the calves were killed later, found some of them perfectly healthy and others tuberculous; but the parallel experiments with animal tuberculosis were all affected. From this he concluded that the bacillus of human tuberculosis is less infectious.

Similar results from the experiments of other investigators seem to give evidence in favor of this explanation of the difference in effect of the same bacillus upon man and upon cattle.

## THE PERIODICALS REVIEWED.

### THE HOLIDAY ILLUSTRATED MAGAZINES.

FOR several years past the December issues of the illustrated magazines of fiction and miscellany have shown a tendency to depart from direct and formal references to the Christmas anniversary. The magazines for December, 1902, continue to show this disposition to disregard the conventional holiday insignia, but there is no lack of endeavor on their part to make up for the absence of Christmas pictures, poems, and stories by an added sumptuousness in their illustrations and covers. Some of them, too, still recognize the anniversary with features which breathe more of an air of spirituality and, perhaps, mysticism than is usual in their pages.

#### HARPER'S, THE CENTURY, AND SCRIBNER'S.

In the work of making the Christmas magazines beautiful this year, Mr. Howard Pyle, the illustrator, easily has first place, even remembering that Mr. Edwin A. Abbey has made a number of illustrations of "King Lear" for *Harper's Magazine* which are very effectively reproduced in colors in this number. Mr. Howard Pyle begins the *Century* with four paintings reproduced in colors and a decorated text of his own,—"The Travels of the Soul." These four pictures of Mr. Pyle's in the *Century* make the high-water mark of color printing in the American magazines. Mr. Pyle's magnificently virile work is seen, too, in *Harper's* in a field of illustration peculiarly his own,—the pictures for "The True Captain Kidd," going with Mr. John D. Champlin, Jr.'s, sketch of that worthy. There are other examples of color illustration in *Harper's* not nearly so effective. *Scribner's Magazine*, not to be behind, uses a striking colored reproduction of an illustration by Maxfield Parrish for a frontispiece, prints in colors Mr. Edward Penfield's pictures for his story, "A Christmas at Café Spaander," and gives in a series of bold full-page colored illustrations Miss Jessie Willcox Smith's sympathetic attempt to portray "A Mother's Days."

Of the more utilitarian features, which are scant in these magazines for December, the most noticeable is Mr. Henry Loomis Nelson's article on the United States Steel "Trust" in the *Century*, the first of a series of articles on "Great Business Combinations of To-day." Mr. Nelson sketches the history of the formation of the Steel "Trust," and makes a useful collection of the facts which have been published concerning the finances and properties of the "Trust;" but he does not tackle any of the great questions concerning the evils of the "trust" business, the overcapitalization of the Steel "Trust," nor the relation of the state to such organizations. Mr. Nelson shows that whatever the proper price of steel, it is true that the formation of the United States Steel Corporation has saved enormous expenditures for material, and also losses which might have resulted from bitter competition, and which might have brought serious disaster to the steel trade. He says that the saving already accomplished by what is called the standardizing of the work has already amounted in one process alone to about \$3,000,000 a year.

#### McCLURE'S AND THE COSMOPOLITAN.

*McClure's Magazine* makes no attempt to celebrate Christmas otherwise than in the pretty little story of

slum children, "A Christmas Present for a Lady." There is a capital account of the bronco-busting contest at Denver for the championship of the world, by Mr. Lincoln Steffens. In this article, "The American Man on Horseback," Mr. Steffens tells the story of the ride for the championship with thrilling dramatic effect and considerable humor. Mr. John Mitchell writes on "The Coal Strike," and sums up his and the miners' position. Incidentally he declares that there can be no such thing as compulsory arbitration. Miss Ida M. Tarbell, in her second chapter on the history of the Standard Oil Company, gets right down to bed-rock facts in her exposition of the process by which discrimination in freight rates brought about the rise of the monopoly. This chapter shows that her history of the "Trust" will be no perfunctory affair.

The *Cosmopolitan*, like *McClure's*, pays no attention to Christmas embellishments, other than one short Christmas story, by Walter Juan Davis. In the "Captains of Industry" series there appears a sketch of Nicholas Murray Butler, by Samuel E. Moffett, who explains why it is entirely fitting that a university president should be included among "captains of industry" to-day, and how Mr. Nicholas Murray Butler is preëminently just that type of university president, who, in administrative ability, enterprise, and hard-headed common sense, is so closely analogous to a great personality in the business world. The other "captains" sketched in this issue are Henry Phipps, Mr. Carnegie's former partner, to whom Mr. James H. Bridge, the biographer, gives credit for a very large part of the Carnegie success; and Mr. John F. Dryden, president of the Prudential Insurance Company.

#### COUNTRY LIFE.

The most ambitious Christmas issue, as such, is the December number of *Country Life*, the Christmas Annual, with elaborate supplements, increased size, and double price. The publishers of this enterprising young periodical have determined, according to their announcement, to pass the standard set for such holiday numbers by the great English periodicals. The number begins with a poem by Rudyard Kipling, "Pan in Vermont,"—a clever fling at the smooth-tongued salesmen of the seed and nursery concerns. A pretty Christmas story by Eleanor Hoyt, author of "Misdemeanors of Nancy," illustrated articles on ice-boating, hockey, curling, skating, tobogganing, ski-ing, snowshoeing, and other winter sports, and many features, reproducing in large pictures and text the Christmas morning atmosphere, give the requisite winter and holiday flavor to the number.

#### EVERYBODY'S MAGAZINE.

*Everybody's Magazine* gets its holiday flavor from the collection of very brief stories, by various authors, all under the title "A Christmas of Good Deeds." An excellent feature is the Gaucho horse-story, by William Bulfin, illustrated from plaster models made for the magazine by Solon H. Borglum, the Western sculptor who has such a remarkable genius for figuring the broncho.

#### OUTING.

While there are no perfunctory Christmas allusions in *Outing*, the December number is notably strong and

readable. An excellent account of the Saratoga of to-day, the new resort for pleasure and sport, is given by Mr. Jesse Lynch Williams in as excellent a piece of descriptive writing as one would wish. Articles such as "Where Wild Fowl Breed," "A Glance at the Grouse," "The Little People of the Sycamore," and "Hunting the Big Game of Alaska" do due justice to nature-study and field sports, and Mr. Whitney has added some charming features appealing to a wider class than the nature students and sportsmen.

#### THE WORLD'S WORK.

MR. FRANK A. VANDERLIP has a discussion of the present financial situation of the United States in the December *World's Work*, and we have quoted from it among the "Leading Articles." Another financial article in this issue is an unsigned discussion of "The Bonds of American Corporations," which calls attention to the tendency on the part of important corporations since the summer of 1901 to issue bonds instead of shares of stock. The writer thinks it time to inquire concerning the possibilities of "watering" in bond issues, and notes the extraordinary temptation, where the public is so kindly disposed toward bonds, to capitalize earnings, as well as properties, in this form.

There is a good sketch of John B. McDonald, the man who is the contractor for the great subway tunnel in New York. Few people have walked or ridden in New York in the past year without wondering how any mind or group of minds could have had the hardihood to undertake such a gigantic piece of work as this subway. Here is Mr. McDonald's comment when some one was afraid the job would prove difficult: "Difficult? Not a bit. It's cellar digging—just a lot of cellar digging. Put all the cellars in New York in a row and they'd make a tunnel from here to Philadelphia. There's nothing hard about digging a cellar, and a row of cellars isn't any harder. It takes longer—that's all."

A well-illustrated personal article is the sketch of George Grey Barnard, the sculptor, by Alexander B. Thaw. Mr. Barnard is now at work on the great sculpture scheme for the new capitol of Pennsylvania, the largest contract ever given to a single sculptor in this country. Mr. Edwin A. Abbey is to do the mural decoration.

Other articles deal with the various experiences of employers in profit-sharing; "A Means to Effective Arbitration," by F. W. Job; Mr. Clement A. Griscom, the head of the International Mercantile Marine Company; "Subduing the Nile," being an account of the great Assouan irrigation dam; "The Traveling Post Office," and the novel profession of reorganizing industries.

#### THE ATLANTIC MONTHLY.

IN the *Atlantic Monthly* for December there is an excellent discussion of "The Atlantic Fisheries Question," by Mr. P. T. McGrath, which we have reviewed in another department. An interesting article on "Chinese Dislike of Christianity," is by Mr. Francis H. Nichols. Mr. Nichols thinks that China needs nothing so much to-day as she does the Gospel, but he admits that Christianity is making very little progress throughout the eighteen provinces. There is a very small number of converts after a century of Protestant and three centuries of Roman Catholic endeavor. But

worse than this, a real hatred of and antagonism to Christianity prevails throughout the empire. One of the chief reasons for this, according to Mr. Nichols, is the methods of the missionary. Much as he desires to do good, he has made the impression among the Chinese that he is teaching disloyalty, that converts are denationalized. The missionary knows it, but rather likes to be hated, because he feels that it is a heathen hate. Mr. Nichols says that he has heard missionaries even approve of the opium traffic, because a certain number of Chinese in the last stages of opium degradation take refuge in missionary opium cures. "If the time shall ever come when we hear less talk about a 'missionary spirit' and more of the spirit of Christ in mission work, then, and not till then, will there be hope for the Gospel in China?"

In "Some Impressions of Porto Rico and Her Schools," Mr. C. H. Henderson protests against our stepping in to spend the insular revenue as we think best. He calls it "a bit of paternalism which we ourselves, with our strong Anglo-Saxon bent for self-government, would never tolerate. Either Porto Rico ought to be immediately organized into a territory, with the prospect of speedy statehood, or else her period of preparation for these responsibilities ought to be made effective and fruitful by adequate national aid."

This number begins with an essay on "The Ideals of America," by President Woodrow Wilson, with the power and vigor and optimism that one would look for in his treatment of such a theme; there are some very clever paragraphs on every sort of subject from the notebook of Mr. Thomas Bailey Aldrich,—"All Sorts of a Paper;" there is a Christmas poem by Mrs. Josephine Dodge Daskam, and a darky Christmas story by Beirne Lay.

#### THE NORTH AMERICAN REVIEW.

EACH month the *North American* gives a fresh proof of its cosmopolitanism. At least half of its articles have to do with other than "American" topics, in the strict sense. And yet the topics treated are almost invariably interesting to American readers. This is true in a marked degree of the November number, to which Secretary Reitz, of the late South African republic, contributes an article dealing with the promises made by the British Government in concluding peace with the Boers, while Karl Blind gives personal recollections of the late Dr. Rudolf Virchow, the Rev. Dr. W. E. Griffis writes on "The Development of Political Parties in Japan," and Lady Henry Somerset tells the story of an English farm colony for women addicted to the drink habit. In another department we have quoted from Rabbi Gaster's article on Roumania and the Jews and from the estimate of Zola by Mr. Howells.

#### SECRETARY REITZ ON THE SOUTH AFRICAN "PEACE."

The personal attitude of Secretary Reitz in regard to the "Articles of Peace," signed at Pretoria on May 31 last, is clearly set forth in his article. He denies that the document is binding "upon the consciences of those men who, to save the remnant of their wives and children, signed it—signed it, so to speak, with the knife at their throats." Secretary Reitz declares that he himself signed the treaty in his representative, and not in his individual, capacity, and that Lord Kitchener accepted that condition. On the legal principle that a contract made under compulsion is not a binding contract, he holds that the Boer signatories are not bound

by the terms of peace. Furthermore, he contends that the terms themselves have been broken, as well as the solemn promise of the British representatives regarding a general amnesty to Cape rebels—which releases the other party.

#### AMBASSADOR WHITE AND THE SPANISH WAR.

Readers of Mr. Edwards' sketch of Dr. Andrew D. White in this month's number of the REVIEW OF REVIEWS will find an interesting account of Dr. White's German ambassadorship in the November *North American*. The writer, Mr. Wolf von Schierbrand, praises very highly Dr. White's well-directed and successful efforts during the Spanish-American war to secure a strict maintenance of neutrality and to counteract the effect of the numerous slanderous attacks upon this country made by the press and public men of Germany. Dr. White's Fourth-of-July speech at Leipsic is described as "a diplomatic deed of the greatest and most far-reaching importance."

#### OWNERSHIP OF THE NATIONAL SECURITIES.

In his concluding article on the national debt of the United States, Mr. O. P. Austin, chief of the Bureau of Statistics of the Treasury Department, discusses the question of the ownership of the national securities. All but a very small share of these securities, says Mr. Austin, are held in the United States. "In 1893, the number of holders of United States securities was estimated by Seybert's 'Statistical Annals' at about 15,000, and in 1880 they were estimated at over 80,000. In the Spanish war loan of 1900, the number of subscribers was over 300,000, and the number to whom bonds were issued was, in round terms, 290,000. Presumably, however, a large share of these bonds soon found their way into the hands of the banks and trust companies, since, as is shown elsewhere, about one-half of the outstanding bonds of the United States are now held by the national banks alone, while the savings banks, trust companies, and other organizations of this character are also large holders. The number of holders of registered bonds is now about 58,000, and as about 85 per cent. of the total interest-bearing indebtedness is in registered bonds, it may be estimated that the total number of holders of all classes of bonds does not at present exceed 75,000."

#### AMERICA IN CHINA.

Mr. John Barrett, author of the article in this number of the REVIEW OF REVIEWS on "New Japan: The Schoolmaster of Asia," writes in the November *North American* on "America in China: Our Position and Opportunity." As a result of his observations in China, Mr. Barrett declares that America is more respected and trusted in China to-day than at any previous time in her history. The Government at Washington, he says, "has succeeded in placing the political, commercial, and missionary interests of the United States in a position of unprecedented strength."

#### OTHER ARTICLES.

The veteran financier, Jay Cooke, relates the history of "A Decade of American Finance" from the point of view of one of the chief actors in the drama, the decade in question comprising the eventful years from 1863 to 1873, when Mr. Cooke was a power in the counsels of the Washington Government, as well as in Wall Street; Mr. J. A. Hobson writes on "Compulsory Arbitration in Industrial Disputes;" and Mr. Samuel J. Barrows sums up the tendencies of American legislation.

#### THE ARENA.

"THE President and the Trusts" is the subject of the opening article in the November *Arena*. The writer, Prof. Frank Parsons, specifies these six powers of the national Government, any one of which, he affirms, is sufficient to deal with the trusts:

- "1. The power to control interstate commerce.
- "2. The power to provide for the public welfare.
- "3. The power of eminent domain.
- "4. The power to tax.
- "5. The power to control the postal service.
- "6. The power to make contracts, and grants of land and money."

Professor Parsons admits that President Roosevelt's proposed amendment to the Constitution would be a good thing—the more power the Government has over trusts and corporations the better—but the immediately important and entirely practical thing is to elect men to Congress pledged to use with vigor in the public interest the powers already in existence."

#### THE REFERENDUM AND INITIATIVE.

In addition to an interesting article by Mr. Elweed Pomeroy, explaining the initiative and referendum, the *Arena* for November contains some important data furnished by Mr. George H. Shibley, chairman of the National Federation for Majority Rule, relative to the progress of this reform. In the course of a "conversation" with the editors of the *Arena*, Mr. Shibley says:

"In practically all municipalities throughout the Republic the workers for majority rule through the referendum and the initiative have become acquainted with the rule of procedure system for installing it—the Winnetka system. A campaign has been entered upon in many cities, and in two of them the system has actually been installed—Detroit, Mich., and Geneva, Ill. At

Chicago a majority of the aldermen elected last April were pledged in writing to adopt the system as to franchises for city monopolies; but as half the number hold over, there is not as yet a majority who were elected on that platform. A rule of procedure was introduced in the council last June, and will be pushed to a vote, now that the summer vacation is over. Before the spring election rolls round the system is likely to be installed—the aldermen who desire a reelection must vote for majority rule or be defeated. In Detroit the election of aldermen takes place in November, and last June there was a unanimous vote for the majority-rule system. When election day is close at hand the aldermen are responsive to the will of the majority. In several cities there are organizations for installing the Winnetka system. Among these cities are Norwalk, Conn., Hartford, Conn., Paterson, N. J., Niagara Falls, N. Y., Chicago, Ill., Port Huron, Mich., Minneapolis, Minn., Evansville, Ind., and Topeka, Kansas. In these, and in other cities where the rule of the few prevails, it is expected that the unions will inaugurate a non-partisan movement for installing the optional referendum and the initiative in the spring campaign."

In June last, the people of Oregon, by a vote of 11 to 1, adopted the optional referendum and the initiative as to all State legislation, except laws immediately necessary for the preservation of the public health, peace, or safety, and the support of the government and its institutions. This is the third State in which the system has been installed by amendment of the constitution, South Dakota and Utah being the other two. Missouri seems likely to adopt the system very soon.

## THE CENTENARY OF THE EDINBURGH REVIEW.

THE *Edinburgh Review* for October completes the hundredth year of publication. It is a good number in itself—a centenary number, which summarizes a great part of the literary history with which the *Review* has ever been brilliantly associated. The special article, dealing with the poetry and fiction of the last hundred years, we have noticed in its proper place. But it is necessary to read the opening article of the *Review* dealing with its own history to realize the close association between the brilliant organ originated by Sydney Smith, and first edited by Jeffrey, with the literature and politics summarized elsewhere.

The *Edinburgh Review* in its day was an entirely novel venture, and proved a success from the first. It was essentially the creation of young men. In the year of its foundation, Sydney Smith and Jeffrey were only thirty, Brougham was twenty-four, and Horner only twenty-three. It was written, without pay, by young men "who were more fond of displaying their critical acumen than the contents of the book." It was not until the third number that a change was made, and payment given at the low rate of \$1,000 a year to the editor and \$50 a sheet of sixteen pages to the contributors. Before long the minimum remuneration was raised to sixteen guineas a sheet, and it was on this scale that Mr. Gladstone was paid for the celebrated "Silver Streak" article of October, 1870.

The first *Edinburgh Review* externally was identical with that now being noted. Internally its organization was somewhat different, for it contained no fewer than twenty-nine articles, some of them only a page long. Nine of them were written by Sydney Smith, and six by Jeffrey. The principle of "one man one article" has apparently never been recognized, for in April, 1835, the *Review* published six articles from the pen of Lord Brougham, on subjects varying from the British Constitution to the Memoirs of Mirabeau. Yet, Lord Brougham complained that the *Review* did not print enough of his matter.

The circulation of the *Review* was immense in early years, if the cost and proportion of reading public be considered. In 1814, over 12,000 per quarter were printed; and in 1817-18 the circulation rose to 13,500, the highest point ever attained.

## FAMOUS CONTRIBUTORS.

So much for the *Review*. To name its contributors is to give a list of the most eminent men of the last century. Famous articles and incidents arising therefrom are the landmarks of its history. Thus we have Jeffrey reviewing Moore's poetry in 1806, and the resultant duel at Chalk Farm, celebrated by Byron in "English Bards and Scotch Reviewers." Moore afterward became a contributor to the *Review*. In November, 1814, appeared Jeffrey's much more famous article on "The Excursion," beginning "This will never do," Macaulay, most famous of all *Edinburgh* reviewers, published his first contribution, the Milton article, in August, 1825. Of all the praises Macaulay ever earned the most valued was that of Jeffrey: "The more I think the less I can conceive where you picked up that style." The two most brilliant talkers of the day, Macaulay and Sydney Smith, were hardly made for one another. Sydney Smith was an inexhaustible talker; but Macaulay's flow of conversation was so rapid that he spoke with panting anxiety.

Macaulay's contributions were as interminable as his talk. His article on Lord Bacon originally ran to 120 pages, and his essay on Warren Hastings to 95. The total number of pages in the *Review* varied from 260 pages in early days to 800 in the middle of the century.

Of the political tendencies of the *Review* not much is said. It was Whig from the first, and remained so. But the reviewer boasts, with justice, that on the whole the influence of the *Review* was thrown on the side which the wisdom that comes after the event declared to be right. It warmly combated that craven fear of its own countrymen—the dread of the people—which was the unhappy legacy to England of the French Revolution. It maintained the fight against sacerdotal ascendancy in the middle of the century. On the subject of Home Rule the *Review* parted company with many of its old friends, and one of its most notable contributors, Mr. Gladstone. It would not have Home Rule at any price. "It would tolerate no combination with those who were avowedly aiming at the disintegration of the kingdom." The *Review* was the oldest and most constant of Liberals; but it had always maintained in political controversy that party should be based upon fundamental principles, not on mere personal allegiance to leaders, however eminent. Whether the wisdom that comes after the event will justify the *Review* in this question, may be doubted.

Dealing with its later years the *Review* is less personal, therefore less interesting. The names of its living contributors are not mentioned. One of the characteristics of the *Review* is that its contributors have always been largely drawn from among those who are not exclusively men of the pen.

## THE FORTNIGHTLY REVIEW.

THE *Fortnightly Review* for November opens with a paper by "A Dissident Liberal" on "The Reversion to Toryism." We have dealt elsewhere at length with Captain Gambier's extremely interesting article on "Macedonian Intrigues and Their Fruits." Nearly all the other articles are well written and instructive, and the standard of the review for literary criticism is well maintained.

## TO EXPLORE AFRICA.

Sir H. M. Stanley contributes a paper entitled "New Aspirants to African Fame." He says that we have seen the last of the old pathfinders. There are no more great lakes, or great rivers, or snowy ranges, to discover in Africa. But in every department of research Africa offers many opportunities for the explorer and scientist. From a sociological point of view the African man, for instance, has never yet been treated scientifically. Sir H. M. Stanley makes the following remark as to the effect of altitude upon stature:

"The tallest men I found lived in high altitudes, from 5,000 feet above sea-level and upward; the sturdiest from 3,000 feet to 5,000 feet; the shortest, excepting the pygmies, from sea-level to 3,000 feet."

## THE GERMAN EMPEROR.

Mr. "O. Eltzbacher" contributes another of his papers dealing with Germany, the subject this time being "The German Emperor as a Political Factor." He has a high opinion of the Emperor's powers, but a low opinion of his alleged successes as a diplomatist. His policy has been too flighty and changeable. As long as Bismarck was in office France and Russia were kept asun-

der, and Germany could feel absolutely safe from foreign aggression. She was the most respected power on the Continent. After Bismarck's retirement Germany ceased to be the first power on the Continent, and her place was taken by Russia. Her position is less safe than it was; some of the great coups of the Emperor have miscarried; and as an offset she has acquired a few small and worthless colonies. As regards home politics dissatisfaction within the empire has increased. Like Frederick the Great, the Emperor has a violent passion for increasing his territory. But as a consequence of trying to play the part of Frederick, and interfering in everything, he has failed; German policy has become fitful, enigmatical, and unstable,—a replica of the Kaiser's impulsive character.

#### THE MONROE DOCTRINE.

Prof. H. Brougham Leech writes on this subject. The doctrine, he says, is not of the least value in international law, and will not be regarded when any matter worth fighting about arises. Great Britain, in the Venezuelan case, established a precedent against herself; but this is not binding upon other nations, and European jurists have expressly disclaimed it. Professor Leech criticises severely some of the pretensions put forward by the United States, such as that made before the Cuban War, that the Spaniards should not be allowed to recolonize any of the depopulated parts of Cuba. As to the practical effect of the doctrine, Professor Leech says that within the next half century many subjects of European nations will certainly colonize South America, and when friction arises between them and the local governments, the story of the Uitlanders will be repeated. It is not likely that Germany will do less for her subjects than England has done in South Africa.

#### ARE THE CLASSICS TO GO?

Prof. J. P. Postgate, writing under this head, maintains that they are not to go. The study of Latin should be kept as an integral part of all high education, and that of Greek as an integral part of higher literary training. What is needed is not the abolition of classicism, but its reanimation. If the dead languages are not to retire into the background, they must be taught as if they were alive. Professor Postgate deals with the needed reforms in pronunciation, grammar, etc.

#### OTHER ARTICLES.

There are several other papers of interest. Mr. Gosse writes on the late P. J. Bailey and his poems. Major Arthur Griffiths has a paper on "The War and Its Critics," in which he criticises the composition of the Inquiry Commission, and defends officers as well as men against the attacks of their critics. There is a very good article on "The Limitations of Lord Macaulay," by Mr. H. C. Foxcroft, a short poem, and several other contributions of merit.

#### THE NINETEENTH CENTURY.

THE *Nineteenth Century* for November opens with a paper by Mr. Lionel Phillips on "Mammoth Trusts and Municipal Trading."

Trusts, says Mr. Phillips, are not anti-social, because they can only be successful as long as they do not allow rivals to sell cheaper. A heterogeneous body, says Mr. Phillips, like a municipality, cannot conduct a number of businesses as well as individuals specially trained to their special requirements. If a trust works inefficiently

it fails, and its members are punished by ruin; the inefficiency of a local governing body is punished at most by defeat at the elections.

#### THE "REMOUNTS" SCANDAL.

Lord Denman has a very lucid article on "The War Office and the Remounts." In South Africa altogether, he says, six different classes of horses were employed,—Cape ponies, artillery horses, English and Irish cavalry horses, North American horses, Hungarians, and Argentine horses. According to his observations, the order in which these classes are placed is the order of their merit. The best remounts Lord Denman saw in South Africa were the ponies captured with Prinsloo. The Hungarian horses collapsed quickly, and the Argentines were utterly worthless. Lord Denman insists that the remounts question was the decisive factor in the war. After Paardeberg, and again during the advance on Pretoria, and during the second invasion of Cape Colony, good remounts would have ended the war.

#### EAST AND WEST.

Mr. J. D. Ries, C.I.E., writes a very interesting article comparing the economic conditions of the poorer classes in Asia and eastern Europe. He says:

"I venture to express the opinion that the Oriental in ordinary years is as happy and as well provided with board, lodging, and clothing, according to his wants, as the man of eastern Europe. I think the European works harder than the Indian peasant, one of the great difficulties of dealing with whom is that he is quite content with a minimum wage for work he likes in congenial conditions. My next-door neighbor in my Russian village, during the short summer, got up at 4 o'clock and worked thenceforward till 9 P.M. From early dawn he mowed the hay, which, after drying it in the sun, he carted into the barn, and as his children were growing girls he had no assistance. During the long winter, when the snowdrift darkened his windows, and his wife was busy spinning, he used to gather wood for sale and for use, or go to St. Petersburg with his horse to drive a droshky. That was a bitter winter; a dram too deep and a little folding of the hands to sleep, and more than one driver froze to death upon his box. I have often slept in an Indian hut, and often in a Russian cottage, and taking all considerations together, prefer the former, certainly in summer, and also in winter, for as no one can sleep in the cottage anywhere but on the top of, or close to, the stove, the crowding problem becomes as acute as it is in London."

#### OTHER ARTICLES.

The Hon. Ivor Guest writes on registration reform. Mr. G. R. S. Mead contributes "Some Notes on the Gnostics." Mr. R. Bosworth-Smith's article on owls is one of the most interesting papers in the number.

#### THE CONTEMPORARY REVIEW.

THE *Contemporary* for November opens with General Botha's paper on the Boers and the Empire, which is noticed elsewhere, as also are several other articles. Mr. David Christie Murray argues that it is a great mistake to regard Burns' claim to fame as resting upon his Scottish poetry. His immortality outside Scotland depends upon his mastery of English as a vehicle of poetical expression. Mr. Murray says:

"My contention, in the first place, is that Burns realized this keenly, in the second that he was artistically

right, and in the third that it was this instinct which enabled him to lay soundly the foundations of a world-wide fame instead of building a merely local reputation.

"My purpose has been only to show that he did not *sink* into English, but that he rose into it with complete spontaneity and unfailing judgment in all his more delicate, dignified, and charming work, and that it is to his mastery of a most delicate, dignified, and charming English that he mainly owes the unique place he occupies among poets."

Mr. Herbert Paul writes on "The Shuffled Government," and Mr. Joseph McCabe discourses on "St. Augustine and the Roman Claims." Countess Martinengo Cœsaresco gives a very pleasant picture of the family life of ancient Greece. Dr. Dillon, in his chronicle of foreign affairs, deals chiefly with the Macedonian insurrection; the alleged Russian intrigues in Thibet, and the Franco-Siamese settlement.

#### CHRISTIANITY AND CHRISTIAN SCIENCE.

Mr. E. Wake Cook has a paper on the "Newer Dispensation." It is in reality an article on Christian Science. Mr. Cook says:

"From the beginning of the Christian era there has been a similar movement in deepening and widening religious concepts, in spite of the conservatism of the churches, and we have now materials which, if they could be summed up and united by a great religious genius, would give us a newer 'Dispensation' as far in advance of the new as that was above the old.

"With Christian Science thus unexpectedly reinforcing Christianity just on those points dropped by the churches, and lifting Christians to a higher platform; with Theosophy revivifying and enriching western thought by the wonders of the East; with Spiritualism demonstrating a future life, and the existence of latent faculties and powers, and giving a meaning to life never before discerned; with physical science opening up new vistas into the Infinite, new wonderlands, and giving us glimpses of the awful potencies we are subduing to our service; with all this we have a movement of unprecedented significance. And although the different parts of the advancing army may sometimes wage internecine war, it is fratricidal, as they are all complementary to each other and to the older movements. The broadening and deepening of the religious consciousness by this spiritual renaissance and the wondrous revelations of physical science mark a stage in our development as much in advance of the new dispensation as that was in advance of the old. All the diverse and apparently conflicting movements have yet a strange underlying tendency to unity, and are manifesting a vaster meaning hidden from the workers by the dust of progress."

#### THE WESTMINSTER REVIEW.

THE *Westminster Review* for November opens with a plea by Mr. Hubert Reade for "Amnesty and Compensation in South Africa." In regard to compensation, Mr. Reade estimates that six weeks' cost of war would fully compensate every agriculturist, whether Boer or loyalist, in South Africa. Speaking of amnesty, he gives a number of precedents, all of which proved successful:

"Clemency" Canning was scoffed at and derided for granting an amnesty to the Indian mutineers; if the English loyalists in Canada had been listened to, the

rebels of 1838 and of 1885 would have been shot down like dogs. We have had no serious rising to face in India since India was brought under the direct rule of the Crown, even the Northwest frontier remained quiet during the South African War, and some of the old comrades of Riel were among the first to join the Canadian contingents for South Africa. Spain put down the rebellion in Cuba in 1876 by severity, bribery, and deceit; in that same year she amnestied the Carlist leaders and kept her promise to the Basque provinces, even though she withdrew their 'Fueros.' The Queen Regent made San Sebastian her summer quarters, and King Alfonso XIII. has spoken Basque from his cradle. There was no rising in the Pyrenees even when, as the penalty for the violated treaty of Bayamo, the Spanish flag was being hauled down in all Spain's old dominions beyond the seas."

#### THE REFORM OF BRITISH JOURNALISM.

Mr. J. E. Goffon, writing under the inexpressive title "The Stimulus of Vitiating," discusses journalism and its abuses. After giving a definition of journalists, which excludes reporters altogether, he says:

"It is unfortunate for journalism that there should be so many various grades of journalists. There is the young man who reports football matches and the like, the journalists of so-called up-to-date 'rags,' the ha'penny and penny periodical men, the journalists of the lighter magazines, and those of the purely literary and art weekly and monthly journals,—all widely divergent from each other, yet all journalists in the right sense of the word. Most of them are gentlemen and educated; but a great percentage are neither educated nor gentlemen, and it is those latter gentry that are doing all the mischief, and will continue to do it, so long as no great effort is made to oust them completely from the profession. The effort must be great, a small effort would be absolutely no use whatever for the purpose intended, but instead be of infinite importance to them, for it would result in making them still more secure and powerful."

#### OTHER ARTICLES.

Mr. Geoffrey Mortimer writes on "The Work of Havellock Ellis." Ben Elmy on "The Individuality of Women." Mr. N. W. Sibley has a paper on "The Man in the Iron Mask."

#### THE NATIONAL REVIEW.

IN the *National Review* for November, Mr. Arnold White has a characteristic paper entitled "Gunnery versus Paint." Naval gunnery, he repeats, is neglected; the methods required to produce a high average of straight shooting are unpopular; good shooting is discouraged by the political heads of the navy, and the shooting of the fleet could be greatly improved if the heads of the navy were really in earnest. British men-of-war miss their target more often than twice out of three rounds. Mr. White tells us, as he has told us many a time, that promotion depends upon clothing and gold leaf. He affirms that when three successive hits were made by one captain of a gun in a Mediterranean ship a voice from the bridge called down, "Is that idiot going to keep us out here all day? Take him off!" Sir Cyprian Bridge wrote a report on the *Astræa*, in which he praised the bedding, paint, and tailoring, but said not one word in praise or condemnation of the gunnery. When Mr. White wrote to the Admiralty asking whether the famous gunner, Grounds, was dead, he got

a reply containing, among other things, the following sentence: "I am to add that a claim for the cost of the telegram will be made on you in due course by the accountant-general of the navy." While the Admiralty were so keen about the payment by private persons of a telegram asking whether Grounds was dead, they had rewarded Grounds, for being the best shot of the year, with the sum of 43 cents!

#### WAR AND STARVATION.

Mr. Spenser Wilkinson has a paper under the title "Does War Mean Starvation?" He maintains that all the important points involved in the question should be worked out to a practical result, and the several results should be collected by the government as the basis of its defensive measures. As there is no machinery at the Admiralty for doing this, he calls for the appointment of a royal commission to inquire into the conditions of Great Britain's food supply in time of war.

#### THE EMANCIPATION OF THE TEACHER.

Sir Oliver Lodge contributes under this title a very suggestive paper. His main argument is that one cause of England's educational backwardness is that English school teachers have not yet had a fair chance. Many of them are quite inadequately trained, many neither know their subjects properly, nor how to teach what little they know. But the good teacher, where he already exists, is too curbed and artificially hampered

to give out the best that is in him. On the ground that many teachers are inefficient, the remainder, including many of the best teachers, are put under far too much external restraint. The nature of the restraint which Sir Oliver wishes to see removed he describes as the influence of the universities and of the professional training bodies. The influence of external examinations, each administered externally and applied indiscriminately to all schools alike, examinations in which the teachers have no part—that is the evil. Sir Oliver in particular wishes to see changes in the entrance or pass examinations admitting to the first grade of a profession, or admitting to university matriculation. The papers of these examinations are usually set from a university man's point of view; but a school-leaving examination should not be on this principle, but should take account of the aims and methods of the individual school. By such a reform the teachers would be emancipated from the hard task of cramming boys for examinations conducted on different lines from those they follow at school.

#### OTHER ARTICLES.

M. J. Cornély writes on "France and her Religious Orders," and Mr. O. C. Williams on "Collegers and Oppidans at Eton." There is a certain pathetic irony attached to the paper on the jovial subject of "Fox-hunting in Ireland," by the late Capt. W. E. Cairnes. It is one of the best "sporting" papers we have ever read.

### THE CONTINENTAL REVIEWS.

#### THE ITALIAN REVIEWS.

THE *Civiltà Cattolica*, October 4, publishes an instructive summary of the historical development of the Roman Index of prohibited books, from which we learn that the first book to be officially condemned by the Church was the celebrated "Thalia," by Arius. The condemnation was promulgated by the Council of Nicea in 325. The Emperor Constantine threatened every one guilty of secreting the volume with the death penalty. A first catalogue of condemned writings was issued in 496, and the councils and synods continued the work of condemnation at intervals,—the Council of Constance, for instance, pronounced sentence of excommunication against any one reading the works of John Wycliffe. It was not, however, till the close of the sixteenth century that the Congregation of the Index, as at present constituted, was formally erected by Gregory XIII. The whole work, as is well known, has been revised by Leo XIII., old regulations revoked, new ones laid down, and the Index itself thoroughly revised, with the result that a new "Index Librorum Prohibitorum" was issued in 1900, has already reached a second edition, and is held to be binding on the faithful.

The issue for October 18 begins a useful series of articles on "Trusts," tracing out in the introductory article their historical development.

In *Nuova Antologia*, Professor Chiappelli gives a *résumé* of the teaching of Mr. Herbert Spencer, founded on his latest volume, "Facts and Comments," and, curiously enough, finds points of contact between him and Tolstoy, both in the doctrine he teaches and in the courage with which he carries his theories to their extreme conclusion.

#### REVUE DES DEUX MONDES.

THE *Revue des Deux Mondes* for October is perhaps rather more interesting than usual. We have noticed elsewhere Madame Bentzon's article on "Russian Women."

In a paper on the nature and the future of the Sahara, M. Leroy-Beaulieu urges his countrymen to pay more attention to the future of this wonderful desert. As far back as 1899, as we recorded at the time, M. Leroy-Beaulieu was urging the construction of a trans-saharan railway, and it is evident that, in his opinion, subsequent events have only confirmed the necessity for some such project. He describes the work done by explorers since 1899, and he shows that the popular notion of the Sahara as a vast stretch of moving sands, where no rain ever falls and no vegetation ever grows, is a complete mistake. The greatest part of the Sahara is made up of rocks, and the rest is composed of sand dunes, which are for the most part fixed. He admits that the Sahara is a dry region, but he says that it does rain there sometimes, and, in any case, there are wells or other sources of water to be found, and these wells can, of course, be multiplied. M. Leroy-Beaulieu also denies that the Sahara is destitute of vegetation; parts of it, he declares, are well wooded. The real objection to the Sahara seems to be that the traveler is exposed to perpetual fear of the nomad tribes of brigands, who are always on the lookout to spoil him. For the rest, M. Leroy-Beaulieu considers that the Sahara is important, above all, because it constitutes the shortest route from all the great European capitals to those countries in Africa which have the most splendid future before them.

## NOUVELLE REVUE.

THE *Nouvelle Revue* is decidedly improved, and in the October numbers are numerous interesting articles. We have noticed elsewhere M. Wolff's account of the woman's movement in Germany.

## WHY BE DROWNED?

Of general articles in the first October number the most interesting is undoubtedly that concerning life-saving appliances at sea. Considering the fact that scarce a day goes by but that some lives,—mostly, of course, those of fishermen,—are lost on the British and French coasts, it is extraordinary that a greater effort has not been made to devise some really practical and yet simple life-saving appliance. Of course there have been many such invented, but not one which can claim to be economical, practical, and simple of construction. There has just been held at Nantes a remarkable congress dealing entirely with this subject, and to which most of the great maritime cities of France have sent delegates. Some practical experiments were tried on, or rather in, the Loire, and, on the whole, the palm of honor was given to two apparatuses,—that known as the Robert shirt and the Guérin-Rapok belt and vest. The Robert shirt is made of cork treated with smoke. Its inventor claims that any one wearing this somewhat bulky shirt, even if heavily clothed and still wearing the heavy top-boots affected by French sailors, is sure of floating indefinitely on even the roughest sea. Its disadvantages, however, are obvious, the most serious being that of the rigidity of the cork.

## THE YOUNG SPANISH IDEA.

According to M. de Bray, the young Spaniard, unless belonging to the wealthier classes, has very few chances of learning even to read and write. Even in Madrid, at an establishment grotesquely misnamed the Model School, one master is expected to provide an adequate education for a hundred children of different ages. If this is the case in the capital, what must occur in the distant provinces? And yet, from a nominal point of view, the country which has produced such great heroes and such great writers in the past is well provided with educational establishments, for each municipal council is supposed to arrange for the education of its own town or village. Now and again the tourist visiting the better-known towns of Spain is struck by the sight of a fine building quite new and yet apparently uninhabited: on inquiring he will find that this is the public school! The pay offered to schoolmasters is extremely small, and often in rural hamlets the schoolhouse simply consists of a dank cellar, or even a stable.

## IS ITALY SOCIALISTIC?

M. Raqueni is of opinion that Italy is far more really and practically socialistic in feeling and in theory than any other European country. The municipal authorities in several of the minor Italian towns are frankly socialistic, and do all in their power to propagate their views. If this is indeed so, the Roman Catholic Church and the Royalist party may find themselves forced to join hands against a common enemy.

## EMILE ZOLA.

The *Nouvelle Revue*, alone among the October reviews, pays a tribute to Emile Zola. The writer places him in a very high class, with Stendahl and Balzac. He considers him to have been a man who, almost

alone among his contemporaries, carried out his own ideal of life and work. It is, perhaps, significant of the feeling which still exists in France concerning the Dreyfus case that no reference is made to the great part played by Zola in that tragic affair.

## LA REVUE.

"LA REVUE" for October opens with a very interesting and caustic piece of criticism by Dr. Cheinisse, entitled "How Morals are Taught in France,"—that is, in the French Elementary School. The conclusion which the critic comes to is, that the system of teaching morals and good conduct practiced in France does more harm than good, and is in any case absurd. The system is one of pure formality, moral instruction being given in exactly the same way as any other lesson. It is a system of maxims, rules, and edifying laws enforced on the children in the driest way. Thus one text-book begins, "My children, we are going to begin a new study in which I hope to interest you. . . . This science is a little serious and severe for you, etc." Formulas, instead of being the spontaneous expression of habits inculcated in the child, are made the starting-point of its moral education. Not only is this so, but the maxims taught are open to criticism. For instance, one text-book encourages the thirst for knowledge by saying, "It is the best instructed and most industrious who can choose the most lucrative professions." "Man works to enrich himself," etc. Chauvinism is also taught, the children being taught to exalt their country at the expense of others. Dr. Cheinisse condemns the whole system of moral instruction for its formality and dryness. Another educational question is dealt with by M. Henry Páris, in an article on "The Teaching of French in German Secondary Education." M. Páris praises the German system as logical and interesting.

The same number contains a translation of Mr. Kipling's "Namgay Doola," a short allegorical sketch by the Queen of Roumania, and an interesting paper by Prof. E. Régis on "Madness in Dramatic Art."

## TOLSTOY AND THE RUSSIAN LABOR MOVEMENT.

Count Tolstoy's appeal to the workers of Russia is published in translation in the second number of *La Revue* for October. It is a counterblast against socialism. The count maintains that Marxism is a false doctrine, and that the only way of remedying the position of the workers is for them to get possession of the land. But Tolstoy, as would be expected, lays down the law that this cannot be accomplished by force, not merely because it is immoral, but because it is impossible, as the revolts in Poltava and Kharkoff proved.

## THE TURKISH CENSORSHIP.

Another paper of interest is that of M. H. de Gallier on "The Turkish Police and the Turkish Censure." Dealing with the censorship, M. de Gallier tells us that among the prohibited books are Tasso's "Jerusalem Delivered," "Rabelais," and the "Fables of La Fontaine;" but these and other prohibited books are sold in the streets with impunity by the simple process of removing the cover and substituting that of an authorized book. Zola's works, all of which are prohibited, are sold under such titles as "Traité de la Langue Française," "La Culture Maraîchère," etc.

## NEW BOOKS OF AMERICAN HISTORY AND BIOGRAPHY.

SEVERAL of the most important among recent publications in American history have been noticed in previous numbers of the REVIEW OF REVIEWS. Notable among these are the late John Fiske's "New France and New England," the fourth volume of General McCrady's "History of South Carolina," "Reconstruction and the Constitution," by Prof. John W. Burgess, and "The American Fur Trade of the Far West," by Capt. H. M. Chittenden. These works, all by American writers, serve to indicate some of the lines of investigation that have attracted individual historians. A project has just been announced which promises to enlist the enthusiastic cooperation of many of our younger historical students, and which ought to bring to a focus the results of the latest researches in the field of American history. This is nothing less than a history of the United States, written on the monograph plan already adopted for the great "Cambridge Modern History," projected by the late Lord Acton (Macmillan). The American work is to be edited by Prof. Albert Bushnell Hart, of Harvard. It will comprise twenty-six volumes, to be published by the Harpers.

There are several reasons why the new five-volume "History of the American People," by President Woodrow Wilson, of Princeton (Harpers), should appeal with especial force to the thoughtful and patriotic citizen. In the first place, the spirit of the work is genuinely and unreservedly American, in the fullest sense; the reader instinctively feels that our national experiences have found a sympathetic annalist. Then, too, the complete story is told for the first time by a man of Southern birth; it is profoundly interesting to read here the Southerner's version, not only of what preceded the Civil War, but of what has followed it,—the upbuilding and welding together of the reunited nation. The point of view is not sectional; President Wilson writes not as a Virginian, but as an American of Virginian antecedents, who is able to judge impartially the influences at work since the time of Puritan and Cavalier, above Mason and Dixon's line, as well as below it. Again, the work has a basis in scholarship of a type that has not often contributed to the making of so-called "popular" histories. Dr. Wilson's university studies in American politics resulted, many years ago, in his book on "Congressional Government," a wonderfully clever analysis

Photograph by Pirie MacDonald.

DR. WOODROW WILSON.

(In academic costume, as he appeared at his inauguration as president of Princeton University.)

of our administrative system, developed from original investigation and accepted at once as authoritative by so careful a student of our institutions as Professor Bryce. The later work on "The State," a comparative study of many governmental systems, has long been in use as a text-book in colleges and universities. Then came "Division and Reunion," a study of our national history from 1829 to 1889, followed by other works dealing with cognate topics. The new "History" is the result of years of research in Dr. Wilson's chosen field. The author has his own conceptions of what is required in a history of the American people. He does not believe that a military history is demanded. For his treatment of the Revolutionary War a hundred pages are made to suffice; the Civil War of 1861-65 claims no greater space. Yet the accounts of these great episodes in our history are clear, accurate, and well-proportioned as to the essential incidents, and closely knit into the general narrative. Dr. Wilson is at his best in his discussion of the causes and results of both wars. The task of recounting the details of battles, sieges, and marches he is quite willing to leave to the military historian. To a marked individuality in historical method, which causes this work to stand out distinct from others of its class, there is added the charm of a literary style unrivalled by that of any living American historian. It may be said without flattery of this most notable achievement of the year in historical writing that it bears the hallmark of real literature.

Mr. Winthrop L. Marvin, who contributes an important article to this number of the REVIEW OF REVIEWS, is the author of a work entitled "The American Merchant Marine: Its History and Romance from 1620 to 1902" (Scribners). It is Mr. Marvin's contention, amply supported by his book, that while the United States navy has had many historians and the merchant marine very few, yet the two services are intimately related, are indispensable the one to the other, have like traditions, and for many years were cherished with equal pride by the American people. Mr. Marvin sees

MR. WINTHROP L. MARVIN.

everywhere a quickening of American interest in maritime affairs. This he attributes largely to the recent noble record of our navy and to the victories in the Spanish War. It is a striking fact that, while the United States now has one of the four most formidable navies in the world, our merchant vessels are so few that they convey less than one-tenth of our own seaborne commerce, and almost none of that of other nations. It is Mr. Marvin's hope that when

this great disparity is once fully realized, public opinion will compel Congress to take some action in the direction of creating an adequate fleet of swift mail ships and heavy freighters. Mr. Marvin very shrewdly remarks that the present situation, in which a nation which is reaching out for the commercial mastery of the world permits nine-tenths of its ocean-carrying to be monopolized by its foreign rivals, must appeal to the Yankee sense of humor, as well as to the Yankee passion of patriotism. Several chapters of this book are devoted to the coasting and Great-Lakes traffic, which has developed while our deep-sea ships have been disappearing. There is also a full account of our deep-sea fisheries. All in all, Mr. Marvin's book is a most inspiring record of past achievements, a record fraught with the promise of greater things to come.

The picturesque side of our merchant marine is also the theme of Mr. Willis J. Abbot's "American Merchant Ships and Sailors" (Dodd, Mead & Co.). Like Mr. Marvin, Mr. Abbot has become convinced that the courage, daring, and self-sacrifice of our merchant seamen are as worthy of record as the deeds of our blue jackets. The dangers braved by merchantmen are surely not to be belittled. "The daily life of those who go down to the sea in ships is one of constant battle, and the whaler caught in the ice-pack is in more direful case than the blockaded cruiser; while the captain of the ocean liner, guiding through a dense fog his colossal craft, freighted with two thousand human lives, has on his mind a weightier load of responsibility than the admiral of the fleet."

Mr. Rufus Rockwell Wilson, the author of "Washington: The Capital City," has written an entertaining account of "New York: Old and New," in two volumes (Lippincott). It has been Mr. Wilson's aim to make the history of Manhattan Island real and vivid by constant reference to and elaboration of picturesque details. He has made an accurate topographical study of the island, has located its famous highways, its ancient buildings and marts of trade, and by skillful word-pictures has made the new Amsterdam and New York of past generations pass before us as a panorama. Mr. Wilson's literary method is not entirely new, but its application to the serious purpose of history-writing has seldom been attempted on so comprehensive a scale. The pictures of old New York landmarks which accompany Mr. Wilson's text are numerous and excellent.

Apropos of the approaching centenary of the famous Lewis and Clark expedition, which made known to the world of Jefferson's day the sources of the Missouri River and the indefinitely bounded "Oregon country" beyond the Rocky Mountains, a new edition of the journals of Captains Lewis and Clark has just appeared (Chicago: A. C. McClurg & Co.). The text used is that of the Philadelphia edition of 1814, which has long been out of print. An historical introduction is supplied by Dr. James K. Hosmer, of the Minneapolis Public Library. Dr. Hosmer has also prepared a complete index from the journals. This two-volume edition, with large, clear type, on good paper, supplied with excellent portraits and maps, is suitable for all library purposes. Another reprint of the edition of 1814 in three volumes, with narrow page and small type, has recently appeared in New York (New Amsterdam Book Company). The same publishers have also brought out a reprint of Alexander Mackenzie's "Voyages from Montreal Through the Continent of North America," in two volumes. This work, which may be regarded as a classic

among the records of exploration in the Hudson Bay country, has not had the honor of a reprint since 1814. This intrepid explorer was the pioneer of the great Hudson Bay Company's fur-trading enterprises, the details of which have recently been made familiar to our readers through the medium of Miss Agnes C. Laut's novels.

If John Fiske had lived a few years longer, we should undoubtedly have had another "History of the American People," similar in scope to President Wilson's work. As it is, some of the material that was intended by Mr. Fiske to be embodied in such a work has been included in two volumes of "Essays, Historical and Literary" (Macmillan). The nature of this material is too well known in this country to require extended comment at this time. Several of these essays have been given by Mr. Fiske as lectures in various parts of the country. The first volume is especially strong in its biographical contents, including portraits of such historical characters as Thomas Hutchinson, the last royal governor of Massachusetts; Charles Lee, the soldier of fortune; Alexander Hamilton, Thomas Jefferson, James Madison, Andrew Jackson, and Daniel Webster. In the second volume are included several essays not strictly germane to the general topic, such as "John Milton," "Reminiscences of Huxley," "Herbert Spencer's Service to Religion," "John Tyndall," and "Evolution of the Present Day."

#### BIOGRAPHIES AND MEMOIRS.

Several of the books of personal recollections that have been published during the present season are so full of historical materials,—are, in fact, in themselves such important contributions to history,—that no arbitrary classification should be permitted to divert the reader's attention from their true significance. Such a work is Dr. Edward Everett Hale's "Memories of a Hundred Years" (Macmillan).—a broadly inclusive title, it is true, but one well justified by Dr. Hale's vivid recollections of men who lived not only when the last century was young, but even before it began to be. Dr. Hale is the "human document" who passes on to the Americans of the twentieth century the record of what was achieved by the Americans of the nineteenth and the eighteenth centuries. The marvelous thing about his memoirs is the range of interests which they cover. We had known that Dr. Hale was one of the Boston literary set of whom Lowell and Holmes were brilliant representatives; but few of the present generation, we imagine, had ever connected Dr. Hale very distinctly with the political and social movements of half a century ago. And yet these memoirs furnish innumerable proofs of his personal acquaintance with many of the leaders of political thought and action who were his contemporaries, and of his still more surprising knowledge of the deeds and opinions of the fathers of the Republic, as they had been transmitted to the friends of Dr. Hale's early youth. In all his long life Dr. Hale has used his eyes to good purpose, and has kept in touch with all the developments in art, literature, industry, politics, and religion; and if any man alive to-day is fitted to be the historian in his own proper person of the last hundred years in America, it is certainly he.

Another book that abounds in materials of American history, in this case more distinctively on the political side, is "Col. Alexander K. McClure's Recollections of Half a Century" (Salem, Mass.: Salem Press Company). Colonel McClure was a newspaper editor in Pennsylv-

COL. A. K. M'CLURE.

series of distinct, unrelated chapters or monographs, each dealing with some special personality or episode in American politics. Such topics as "Grant as Chieftain and President;" "The Hayes Election and Administration;" "Cleveland's Three Contests and Two Administrations;" "Harrison's Victory and Defeat;" "McKinley's Triumph and Tragic Death;" "Thomas Corwin, the Greatest of Our Popular Orators;" "Why Seward Could Not Be President;" "Wilmot and the Wilmot Proviso;" "Robert E. Lee, One of the Greatest Commanders of the Century;" "The Rise and Fall of the Negro in Politics;" "General William T. Sherman, the Genius of the Union Army;" "Henry W. Grady and the New South;" "Thaddeus Stevens, the Commoner of the Civil War;" and "Samuel J. Randall: His Sterling Integrity in Public Life," serve to indicate the nature and the range of the topics treated by Colonel McClure in this volume.

In Mr. Murat Halstead's "Life of Theodore Roosevelt, Twenty-fifth President of the United States" (Akron, Ohio: Saalfield Publishing Company), there has been incorporated an extraordinary amount of material which had never before been collected in a single volume, and much of which had never been printed at all. Never before has the story of the President's life been so fully told. Mr. Halstead has succeeded in writing a biography of unrivalled completeness and interest.

There are in American life and letters a few personalities of whom the public never wearies. Biographies of the poet Whittier, authorized and unauthorized, have not been lacking since his death; but the new volume, by Thomas Wentworth Higginson, in the "English Men of Letters" series (Macmillan), strikes a new note, and has much to tell that will interest the present generation, we feel sure, as much as if it had not already been told in a different way by Pickard and others. Colonel Higginson was a personal friend of Whittier for many years, and he knows how to select from the mass of materials in authorized biographies those

vania in the forties and the fifties. Throughout the Civil War he was a confidential adviser of Lincoln, and for more than a quarter of a century, beginning with 1873, he was the responsible editor of the *Philadelphia Times*. Few living Americans have enjoyed a personal acquaintance with so large a number of distinguished public men. Colonel McClure's volume of recollections is not built upon the formal, conventional plan, but consists rather of a

things that have significance as depicting the poet's true life. Colonel Higginson again, besides having literary sympathies with Whittier, was identified with the same reform movements in which Whittier took an active part in the middle of the last century. Colonel Higginson reminds us that Whittier was a politician before his reputation as a poet had been established, and his own career has fitted him to write sympathetically of this episode in the poet's life.

An autobiography that reads more "like a romance" than do most of the intended romances of the day, is Mr. George Francis Train's story of "My Life in Many States and in Foreign Lands" (Appleton). The mere list of achievements recounted in this book would be a severe test of the reader's credulity were the things related not all matters of actual history. It is hard to believe, indeed, that all these things were done in the comparatively brief period of time to which they are assigned by these memoirs, and harder still to realize that they all formed episodes in the life of one man. We read, for example, that it was Mr. Train who organized the clipper-ship lines that sailed around Cape Horn to San Francisco, making a record in sailing time that has not been exceeded in the fifty-three years that have since elapsed; that it was Mr. Train who organized the Union Pacific Railroad; that it was he who built the first street railroads in England; that he participated in the French Commune, and that three times he has broken the record for circumnavigating the globe. In all his varied experiences Mr. Train has come in contact with hundreds of notable people, and his recollections of their sayings and doings make up no small part of the volume before us. We are told that Mr. Train dictated this book to a stenographer in thirty-five hours, yet the story as it appears on the printed page bears no marks of haste or slovenliness in composition, and is a

MR. GEORGE FRANCIS TRAIN DICTATING HIS RECOLLECTIONS.

story that most readers, we think, will regard as well worth the telling.

A volume entitled "Recollections of a Player" (Century Company) contains the memoirs of the veteran actor James H. Stoddart, who has been identified with the American stage for nearly fifty years. During this time Mr. Stoddart has come in contact with nearly every actor or actress of note, and anecdotes of these various celebrities abound in his recollections. A graceful introduction to the volume is furnished by Mr. William Winter, the dramatic critic.

It is because most of the essays in Senator Henry Cabot Lodge's volume, entitled "A Fighting Frigate, and Other Essays and Addresses" (Scribners) are of a biographical nature that we venture to classify the book

in this group. Three great characters in American history are included,—John Marshall, Oliver Ellsworth, and Daniel Webster. There are also addresses on three recent governors of Massachusetts,—Frederick T. Greenhalge, George D. Robinson, and Roger Walcott. Of the non-biographical chapters in the book, "A Fighting Frigate" is the title of an address delivered in the Old South Church, Boston, in 1897, on the occasion of the return of the frigate *Constitution* to the Charlestown Navy Yard. There is also a discussion of "The Treaty-Making Powers of the Senate," a chapter on "Some Impressions of Russia," and the address delivered by Senator Lodge on the occasion of the unveiling of the statue to the Comte de Rochambeau at Washington, on May 24, 1902.

## SOCIAL, INDUSTRIAL, AND POLITICAL STUDIES —WORKS OF REFERENCE.

READERS of Mr. Newcomb's sketch of Commissioner Carroll D. Wright, in the November number of the REVIEW OF REVIEWS, will be especially interested in the essays by Colonel Wright that have been included in the book entitled "Some Ethical Phases of the Labor Question" (Boston: American Unitarian Association). The subjects of these papers are: "Religion in Relation to Sociology," "The Relation of Political Economy to the Labor Question," "The Factory as an Element in Civilization," and "The Ethics of Prison Labor." In his discussion of the second of these topics Colonel Wright says: "The political economy of the coming generation of writers will insist upon proper contracts respecting labor; and while it will throw aside the idea of productive coöperation, it will be able to discover the system of contract which shall improve the whole condition of the employee, so far as his relations to capital and the management of capital are concerned."

Bishop Henry C. Potter, of New York, has been active for many years, and notably as a member of the Civic Federation's Industrial Commission, in efforts to bring about a better understanding between employers and employees. Last year he was asked to deliver the Yale lectures on the responsibilities of citizenship on the William E. Dodge foundation. The subjects chosen for these lectures were "The Industrial Situation," "The Citizen and the Workingman," "The Citizen and the Capitalist," "The Citizen and the Consumer," "The Citizen and the Corporation," and "The Citizen and the State." The lectures have been published in a volume entitled "The Citizen in His Relation to the Industrial Situation" (Scribners). To the capitalist Bishop Potter addresses these questions: "Where did such wealth as you are in control of come from? How was it made? Whom did the making of it rob or wrong? What claim have you upon the respect of honest men, or the companionship of decent people, until you can answer these questions? and, finally, What are you going to do with it?"

By a wholly unforeseen coincidence, Bishop John L. Spalding's book on "Socialism and Labor" (Chicago: A. C. McClurg & Co.) comes from the press just at the time when its author is busily employed as a member of

President Roosevelt's Anthracite Coal Strike Commission. The American public is especially eager to inform itself regarding the views of the Bishop of Peoria on the civic topics treated in this little book. There is no lack of clearness or cogency, we may say, in the presentation of these views. Bishop Spalding is convinced that the organization of workmen into labor unions is "inevitable and indispensable." As to what governments should do in dealing with labor problems, the bishop holds that "the great aim should be not to provide for all men, but to train and educate all men to take care of themselves." Throughout these discussions Bishop Spalding manifests his broad-minded patriotism and his belief in the ultimate triumph of American institutions. That he has been an intelligent student of American history is made evident on more than one page of this book. It is with a mild shock of surprise that we read the declaration by this Roman Catholic prelate that "the Puritans of New England had the truest instinct of political liberty, and that instinct made them serious, earnest, austere, averse alike to childish gayety and loose conduct. It were better for us, if our liberty is dear to us, to have the Puritan Sabbath than the pagan Sunday of parts of Europe." While the bishop

touches on many controverted issues, and of necessity gives utterance to opinions that will not be received with satisfaction everywhere, the whole spirit of his writings is in line with the broadest precepts of Christian charity, and must commend itself to Catholic and Protestant alike.

A book well fitted to stimulate thought, not so much by its striking analogies and attempts at economic analysis as by its statements of social and industrial facts of the freshest interest and im-

Copyright 1902, by Rockwood, N. Y.

BISHOP HENRY C. POTTER.

portance, is Mr. W. J. Ghent's account of "Our Benevolent Feudalism" (Macmillan). Some of the phenomena which this author has observed in the America of to-day, which he examines in this volume, are the enormous growth of consolidation, the increase of farm tenantry and of child labor, the construction of model workshops and villages, the giving of old-age pensions to workmen, and of great benefactions for social purposes. Views may differ as to the element of "feudalism," which the author finds in the various influences that have produced these phenomena, but that in no way detracts from the value of the information which Mr. Ghent has gathered and strikingly presented in two hundred pages. Whatever else may be said of the book, it is a wonderfully vivid picture of the industrial life of our time.

"The Employment of Women in the Clothing Trade" is the subject of a monograph by Mabel Hurd Willett, Ph.D. ("Columbia University Studies in History, Economics, and Public Law.") This writer has made an exhaustive study of the participation of women in the ready-made clothing trade, the division of labor along sex lines in the clothing shops and factories of New York City, the hours of work, wages, time required to learn the trade, relative wages of men and women, and the industrial position of the various nationalities engaged in the trade. There is also a full presentation of the home life of the operatives, of the laws regulating tenement-house manufacture, and of the part taken by women in the labor organizations.

A book of no slight value to the sociologist is Mr. Hutchins Hapgood's "The Spirit of the Ghetto: Studies of the Jewish Quarter in New York" (Funk & Wagnalls Company). In the collection of material for these sketches the author disclaims any philanthropic or sociologic motive. He has attempted merely a sympathetic description of the character, lives, and pursuits of the East Side Jews, with whom he has been in intimate relations. Mr. Hapgood interprets for us the views that these Russian-Jewish immigrants have of our institutions and of government in general. He shows us, too, how public opinion in the Ghetto is molded. Interest is added to the volume by the drawings from life made by Jacob Epstein, a young Hebrew, who has passed all his life in the New York Ghetto.

It is a cheering fact that Mr. Jacob A. Riis is able to declare in his new book, "The Battle with the Slum" (Macmillan), that in the three years that have elapsed since the publication of his "Ten Years' War,"—a series of papers that gave an account of progress in the New York anti-slum movement,—more real advancement has been made than in the thirty years preceding. Mr. Riis first enlisted the attention of thoughtful citizens in his exposition of New York tenement-house conditions, published many years ago in a volume entitled "How the Other Half Lives." Since that time the successive steps in his vigorous campaign to remove these abuses have been recorded in magazine articles and in the daily press. The dominant note in the present volume, as in its predecessors, is one of optimism. Compared with the conditions when Mr. Riis began this battle with the slum, he marvels now that so much has been accomplished, and he exclaims, "It is great to have lived in a day that sees such things done." The frontispiece of the book is a portrait of President Roosevelt, whom Mr. Riis aptly characterizes as "a valiant battler with the slum," and no small part of the

achievements for reform which Mr. Riis so graphically describes is gratefully acknowledged to be due to various policies inaugurated during President Roosevelt's administration of the New York Police Department.

Another book that should be a source of encouragement to all who are interested in the betterment of conditions in American cities is Prof. Charles Zueblin's "American Municipal Progress," in "The Citizen's Library of Economics, Politics, and Sociology" (Macmillan). Professor Zueblin, in this volume, gives a general survey of recent progress in matters of transportation, public works, sanitation, public schools, public libraries, public buildings, parks and boulevards, public recreation, and public control, ownership, and operation in American cities. His introductory chapter is in the nature of an elucidation of the somewhat novel phrase "municipal sociology," which he defines as the science that "investigates the means of satisfying wants through public activity." In accordance with this delimitation, "municipal sociology does not deal with all urban problems, some of which may not be municipal; nor does it deal with all municipal problems, some of which may not be sociological. Municipal sociology treats of the public provision for the needs of the urban district, present and prospective."

"The Coming City," by Prof. Richard T. Ely (Crowell), is a small book with a large purpose, although the author disclaims anything more than a very modest aim in its preparation. The significance of the book comes from the fact that Dr. Ely has for many years been one of the closest observers and students of the American municipal movement. He has seen in his lifetime a remarkable change in the attitude of the American public toward certain municipal reforms. He declares that within the past decade the change in the quantity, and still more in the quality, of thought on the subject of municipal reform is to him nothing less than a source of elation. The title which Dr. Ely chose for a lecture five or six years ago,—"*Neglected Aspects of Municipal Reform*,"—he has now discarded, believing it to be a misnomer. He says that the considerations that he brings forward are no longer neglected, but are receiving generous attention in periodical literature, and are frequently discussed in gatherings held to promote municipal reform. One of the most valuable features of Dr. Ely's little book, therefore, is the encouragement that it offers to all who are interested in our civic welfare and progress.

Still another helpful and important contribution to the science of municipal government is the volume of "Proceedings of the Boston Conference for Good City Government, and Eighth Annual Meeting of the National Municipal League" (Philadelphia: National Municipal League). A valuable feature of the book is the series of descriptive papers showing the situation in the leading cities. Mr. J. Horace McFarland describes "Harrisburg's Advance: A Lesson to Smaller Municipalities;" Dr. Albert Shaw, "The New York Situation;" Mr. George W. Guthrie, "The Pittsburg Situation;" Mr. Charles Richardson, "The Philadelphia Situation;" Mr. E. H. Clement, "The Boston Situation;" Mr. George C. Sykes, "The Street Railway Situation in Chicago;" Dr. E. W. Bemis, "The Franchise Situation and the Referendum in Cleveland." A glance at this volume of proceedings is sufficient to convince one that the National Municipal League is dealing with actualities rather than with purely theoretical reforms.

## A NEW CYCLOPEDIA.

Even the rapid-fire methods of the modern publishing world fail to produce a great cyclopedia oftener than once or twice in a decade. The required expenditure for such a work is too vast, the difficulties, in this country at least, connected with the mobilization, so to speak, of the army of contributors are too serious to admit of frequent enterprises of the kind. On the rare occasions when such works are given to the public, it is well to take account of their make-up and characteristics. The latest undertaking of this nature in the English language is the "New International Encyclopedia" (Dodd, Mead & Co.), to be completed in seventeen volumes, three of which have already appeared, to be followed by one volume each month, until all have been issued. This work is under the editorship of President Daniel C. Gilman, Prof. Harry Thurston Peck, and Prof. Frank Moore Colby. In a previous number of the REVIEW OF REVIEWS we have commented on the general plan and purpose of the work. Conciseness of statement is a distinctive quality of all the articles. The editors have endeavored to compress the maximum of fact into the minimum of space. They have had no room for useless matter of any kind, but diligent paring and boiling have permitted the inclusion of many titles that have not heretofore been regarded as falling within

the scope of works of this general class. For example, the department of contemporary biography, wholly lacking in the original "Britannica" and other cyclopedias of the old type, has been greatly expanded in the "New International." Every living American of special prominence seems to have been included, together with distinguished foreigners of every calling in life. An entirely new feature is the inclusion of noted names in fiction.

Owing, possibly, to Dr. Gilman's well-known interest in geography, that department is one of the strongest. On the political side, especial attention has been given to municipal governments. Every American city of 5,000 population and every city of 10,000 is included, together with such smaller places as are regarded by the editors of sufficient importance. Full information as to the management of public utilities has been collected. Topics in physical geography, especially those of a meteorological bearing, have been in charge of Prof. Cleveland Abbe, of the United States Weather Bureau.

Even in this brief notice we should not omit mention of the educational department, which has been directed by President Gilman, Prof. Paul Monroe, and Prof. Walter L. Hervey, three experts whose names alone suffice to insure a judicious and sympathetic treatment of the whole range of interests embraced in modern educational progress.

## RELIGIOUS AND THEOLOGICAL LITERATURE.

AMONG the new books of the season, at least one of the titles is suggestive of the enlarged conceptions of theology and its relations to modern life that are beginning to dominate the divinity schools. "Theology and the Social Consciousness," by Prof. Henry Churchill King, of Oberlin College (Macmillan), indicates progress, not alone in theology itself, which is a matter of which the layman may not judge, but also in the theologian's views of the influence of the rapidly growing social consciousness upon his science. "The social consciousness" is itself a comparatively new conception; the phrase is employed by Professor King to express "a growing sense of the real brotherhood of man." Between the sociologist who accepts this point of view and the Christian philosopher who seeks to reconcile the social needs of mankind with the divine plan there should be no quarrel. Each science may learn from the other, and fortunate it is that a common ground is recognized. Of course, the adoption of a new point of view involves a recasting

PROFESSOR HENRY C. KING.

PRESIDENT WILLIAM DE WITT HYDE.

and, to some extent, a laying aside of old formulas; but this is only an incident to the general movement so well outlined by Professor King himself in an earlier volume, "Reconstruction in Theology."

A simple and effective statement of Christian ethics is embodied in "Jesus' Way," by President William DeWitt Hyde (Houghton, Mifflin & Co.). It is the aim of this little book merely to show what Christianity was "before Paul had cast it into a theology, or 'John' had developed it into a philosophy; before the Catholic had organized it into an institution, or the Protestant had stereotyped it into a creed." The essentials of primitive Christianity,—i.e., the way of life that Jesus pointed out to his followers,—are stated by President Hyde in a phraseology that is as free from cant as it is forceful.

Both President Hyde and Professor King represent, in a measure, the trend of modern scholarship as related to doctrinal interpretation within the Christian church. They are among the leaders of the schoolmen in our day, and are held responsible, to a degree, for the teaching of the schools. No such representative character is claimed by Major Orlando J. Smith, whose volume on

MAJOR ORLANDO J. SMITH.

active career in journalism; for the past twenty years he has been president of the American Press Association. That a man of such occupations should turn aside to engage in philosophical studies is not the usual or expected thing in American life, although instances of the kind are not wanting, but that such a man should devote much of his time for many years to the working out of a "theory of infinite justice," and then should publish the results of his intellectual labor, patiently elaborated, and in a form which at once invites the notice, and quickens the interest of experts in a theme that has enlisted the best energies of generation after generation of skilled casuists, within and without the church, is not without significance. Major Smith's argument is for the preëxistence, as well as the immortality, of the soul, and it is an argument evolved from the writer's own consciousness, rather than an induction from observed facts. Disregarding, for the moment, the value of Major Smith's contentions, the manner of his reasoning and the cogency of his statements are calculated to win and hold the attention of the trained student as well as of the novice in philosophy.

The conservative, Biblical view of the problem of immortality is set forth by the Rev. Albert A. Lathbury in a volume entitled "Life in Two Worlds" (Baker & Taylor Company). This writer makes a serious attempt, based on ethical and religious motives, to lead men to the consideration of the spiritual side of existence.

While to many religious teachers it seems desirable to seek more zealously for knowledge of the life to come, the title of the Rev. Thomas R. Slicer's new book, "One World at a Time" (Putnam's), suggests that possibly the present life offers ample incentives to good conduct without regard to its relations to the "other world." While Dr. Slicer writes as a Unitarian, he may justly claim, so far as the positions taken in his book are concerned, the active sympathy of a host of believers in other churches. Whatever may be thought of the special chapters in this book in defense of the Unitarian faith, there can be no question as to the wholesome tone and rational conclusions of those chapters which are addressed to people who are not quite sure that life is after all worth while.

The latest contribution to the controversy between science and religion is Mr. W. H. Mallock's "Religion

"Eternalism" (Houghton, Mifflin & Co.) is attracting so much attention from students of philosophy. Major Smith represents only himself. In the methods by which he has arrived at his conclusions, not less than in his manner of stating them, he has shown his independence of all schools and "tendencies" of thought. Since the close of the Civil War, in which he was wounded and captured, Major Smith has had an ac-

as a Credible Doctrine" (Macmillan). In this work, written from the point of view of an inquirer who has long been accustomed to the use of scientific methods, an attempt is made to exhibit theistic religion generally as a system worthy of reasonable acceptance. The writer addresses himself especially to those readers who desire to assent to a theistic system, but find it difficult to do so in the face of the verified facts of science. Perhaps the most important service rendered by the author is in pointing out the faulty methods pursued by controversialists on both sides.

From notes of lectures by the late Dr. Charles Carroll Everett, at the Harvard Divinity School, there has been compiled a little volume entitled "The Psychical Elements of Religious Faith" (Macmillan). These lectures comprise a survey of the methods of theological study, definitions of religion, and a discussion of the relation between science and religion.

As explained by President Jordan, of the Stanford University, in his brief introduction to "Jesus the Jew, and Other Addresses," by Harris Weinstock (Funk & Wagnalls Company), these addresses are designed "not especially for the theologian, nor for the layman; not

for the church, nor for the unchurched; not for the Christian, nor for the Jew; but for all who are earnestly interested in these inquiries." Some of the questions to which answers are attempted in this little volume are as follows: "Is the Messiah Yet to Come?" "Are the Jews God's Chosen People?" "Why Remain Jews?" "Shall Jew and Christian Intermarry?" The author, who is a Jewish liberal, is broad-minded and tolerant in his opinions of what Jew and Christian owe to each other, and in his view of

Photo by Bradley, N. Y.

REV. THOMAS R. SLICER.

Christianity as an ethical force in the world's history. His book ought to have a helpful influence in breaking down prejudice on the part of Jew and Gentile alike.

An eminently fair and impartial survey of modern religious activities is contained in a little volume entitled "The Spiritual Outlook," by Willard Chamberlain Selleck (Boston: Little, Brown & Co.). This writer has made it his business to point out what is good in the various religious movements now in progress in the world; but his optimism, while it may seem to many persons almost extreme, is based on common sense and an intelligent perception of the realities of life. To discuss in the same volume such topics as "Roman Catholicism as a Factor in Modern Civilization," "The Contribution of Protestantism in Spiritual and Social Problems," "The Present Stage of Theological Progress," "The Spiritual Significance of Christian Science," "The Influence of Universalism and Unitarianism," without giving offense to any of the adherents of the various sects involved, would seem to be almost an impossible achievement; but whatever the reader's predilections may be, he cannot fail to be impressed by the author's breadth of view and evident sincerity.

# THE SEASON'S BOOKS FOR THE YOUNG.

BY ERNEST KNAUFFT.

THE publishers this year have spared no amount of trouble in preparing dainty treats for the young folks' Christmas season. Excellent printing, attractive bindings, the pens of well-known authors,—Kipling, Kate Douglas Wiggin, Laura E. Richards, Robert W. Chambers, Andrew Lang, Professor Church,—and the pencils of talented artists, such as Oliver Herford, Reginald Birch, and Alice Barber Stephens, combine to make the book harvest luxuriant indeed! Thick books and thin books, narrow books and broad books, books of history and adventure, of nature-study and of home life! How can Santa Claus do better than to make books the major part of his pack? And will the reindeer be strong enough to draw the load? What a pity there are no automobile sleighs.

## KIPLING.

*Mowgli's all the name—the same | Me and Muvver took, | Like the Wolf-Child's other name, | In "The Jungul Book."*—RILEY'S "The Book of Joyous Children."

It is Kipling who knows best, among all writers, how to ingratiate himself into the hearts and memories of the little folks,—he takes them on his lap and "explains things" to them,—and so it certainly must be that in this season's literary About Ben Adhem's "book of gold" his name "leads all the rest."

Illustration (reduced) from "Just So Stories."

Not only is the volume of "Just So Stories" (Doubleday, Page & Co.) a jolly story book, but the author has drawn the pictures as well as written "the reading that goes all around them, just the easiest part." And while in these illustrations he does not wholly eclipse the picture-book makers to childhood, his graphic creations do dovetail so nicely with his verbal narrations that the young folks will never demand a "Just So" edition with any other illustrations. And these graffiti he has further firmly united to the text by ample explanatory captions, that in a naïve way go into detail of the panorama and explain not only what has been put in the composition, but what has been left out, and the reasons thereof. "I have not drawn Suleiman-ben Daoud," says Kipling, "but he is just outside the picture, very much astonished." Again: "The skin is just under the rocks, below the palm tree, in a cool place; that is why you can't see it;" and, "I haven't drawn the horse-hide curtain at the mouth of the Cave, because the Woman has just taken it down to be cleaned."

Mr. Kipling understands his child audience, and takes them into his confidence with little asides like these, and further admissions of his own shortcomings as an artist or writer, as "There are two other things that look like rats, but I think they are jack rabbits;" and

again, "All that black stuff is the banks of the gray-green greasy Limpopo River (but I am not allowed to paint these pictures)." All will heartily wish Mr. Kipling had been allowed to paint his pictures, and we can only hope that the publishers may issue a future edition with his colored illustrations.

## RILEY—HOWELLS—MARTIN.

*Wasn't it a good time, | Long time ago— | When we were little lads | And first played "show!"*—RILEY.

The mantle of Eugene Field has fallen upon James Whitcomb Riley, and as the children's laureate the first volume of poems he has published for several years, "The Book of Joyous Children," by James Whitcomb Riley, illustrated by J. W. Vawter (Charles Scribner's Sons), will be welcomed by the children and the lovers of children. Surely Mr. Riley carries around in the storehouse of his memory a larger vocabulary of child idiom than any other living author. There is no end to the pretty turns in his verse that depend upon juvenile word-pictures. We have borrowed from this volume for the headlines of our sections.

Illustration (reduced) from "The Book of Joyous Children."

However those who take sides against realists may charge W. D. Howells with selecting his heroines from among common-

place people, they can hardly charge it as a blemish that he paints with ultra-realism the barefooted, trousers-torn, hair-ungroomed, freckled-faced, retrouse-nosed, truant country lad of fifty years ago when he pictures him as a denizen of the Boy's Town. In fact, it is just exactly these touches of uncompromising realism that make his juveniles like those of Mark Twain and Thomas Bailey Aldrich,—*but generic* in contrast to the machine-made boys' book. And among the adult members of the household doubtless "The Flight

of Pony Baker," illustrated by Frances Scovel Shinn (Harper Bros.), will find as many readers as it will among the children.

Among the books that one is not sure should be placed with juveniles, since they are rather about children than solely for a child audience, is "Emmy Lou, Her Book and Heart," by "George Madden Martin," illustrated by Charles Louis Hinton (McClure, Phillips & Co.). Mrs. Mar-

Illustration (reduced) from "The Flight of Pony Baker."

Illustration (reduced) from "Emmy Lou, Her Book and Heart."

thing to build upon its basic foundation an edifice of other text-books, and carry the sum to and fro on an aching arm."

#### ADVENTURE AND HISTORICAL.

*I want to be a Soldier! I A Soldier! I A Soldier! I want to be a Soldier, with a sabre in my hand! Or a little carbine rifle, or a musket on my shoulder. I Or just a snare-drum, snarling in the middle of the band.*  
—RILEY.

"That which pleases long and pleases many," says Dr. Johnson, "must have some merit," and by this token we are forced to place the Henty books first in our list of stories of adventure. The late Mr. Henty knew his audience thoroughly; he wrote neither down nor up to it, but directly to it, so that any one presenting a boy (and we have heard of many a girl too, who was not averse to being classed with his admirers) with a copy of a Henty book for a Christmas gift is sure to bestow a welcome one. This year Mr. Henty's books are: "The Treasure of the Incas," "With the British Legions," and "With Kitchener in the Soudan," all illustrated by Wal Paget (Charles Scribner's Sons).

The success of books like "Richard Carvel," "To Have and To Hold," etc., have brought romantic novels in vogue, and it is not surprising that among the children's books we find similar stories of bygone epochs, where we meet the Puritan and the Cavalier, as in a "Little Captive Lad," by Beulah Marie Dix, illustrated by Will Grefé (Macmillan Company); or sit with King Arthur's knights at the Round Table, as in "Sir Marrok," by Allen French (Century Company); or play with children in the dawn of English history under the reign of King Arthur in "A Boy of a Thousand Years Ago," by Harriet T. Comstock, illustrated by George Darian (Lee & Shepard); follow the excitable French in the fifteenth century in "The Story of Joan of Arc," for boys and girls from eight to eleven, by Kate E. Carpenter, illustrated by Amy Brooks and from famous paintings (Lee & Shepard); or we ride trusty steeds in the time of the robber barons of Germany with the young hero Wulf, in "The Boy and the Baron," by Adeline Knapp (Century Company); or we find ourselves in the thick of the excitement during the sway of the strenuous Peter Stuyvesant during the Dutch occupation of New Amsterdam, in "Barnaby Lee," by John

Bennett, admirably illustrated by Clyde O. De Land (Century Company).

A simpler story, but containing less gallantry and intricacy of plot, is Jessie Andersen Chase's "Mayken: A Child's Story of the Netherlands in the Sixteenth Century" (A. C. McClurg & Co.).

The fact that Cyrus Townsend Brady was in the ministry prior to his devoting all his energies to story-writing, guarantees to parents that a boys' story by him will be wholesome in theme; and the further fact that he was an army chaplain, and smelt powder in the Cuban War, guarantees that his story of a sea-waif in the War of 1812, "In the Wasp's Nest," illustrated by Rufus Zogbaum (Charles Scribner's Sons), will not abound in anachronisms, nor present unfaithful pictures of naval life.

The name of the Rev. A. J. Church on a title-page guarantees that, coming from the pen of "Stories from Homer," the historical data will be correct, so that one can mark with a letter A his "Stories of Charlemagne," illustrated by George Marrow (Macmillan Company).

American History has not been ignored by our writers, and in "The Colonial Series," issued by Lee & Shepard, the reader goes "Marching on Niagara" (or "The Soldier Boys of the Old Frontier," by Edward Stratemeyer, illustrated by A. B. Shute) with Davis and Henry Morris, youthful soldiers in Colonel Washington's army. The foreword in "Brave Heart Elizabeth," a story of the Ohio frontier, by Adele E. Thompson,

illustrated by Lilian Crawford True, and published by Lee & Shepard, tells us that the heroine, Elizabeth Zane, really lived a century ago (it is after the Zane family that Zaneville, Ohio, takes its name), and that that information will make the exciting story of her daring adventures seem more graphic to the youthful reader we feel certain. "America's Story for America's Children," by Mara L. Pratt (D. C. Heath & Co.), is the fifth volume

Illustration (reduced) from "Mayken."

Illustration (reduced) from "Stories of Charlemagne."

of a series. The story is told in a colloquial manner apt to interest children, but the illustrations are not of the best. The illustrations in "From the Old World to the New," by Marguerite Stockman Dickson (Macmillan Company) are much better.

## FAIRY TALES.

*Wunst upon a time wunst | They wuz a Fairy King | An' ever'thing he have wuz gold— | His clo'es, an' ever'thing! | An' all the other Fairies | In his goldun Palace-hall | Had to hump an' hustle— | 'Cause he wuz boss of all!—RILEY.*

A publisher's notice, wishing to be complimentary, speaks of Caroline Wells' ability in "turning out engaging nonsense." In a very few years Miss Wells has suddenly forced herself to the very van of nonsense writers. But should one be apprehensive of her future, he would wince at this very expression of "turning out" nonsense, for unless this garrulous writer is careful she may suffer the fate of the lamentable Echo, and find that she will be able to "turn out" her rhymes only by means of reiteration. We become a trifle nervous for her good name when we read in the "Pete and Polly Stories," illustrated by Fanny Young Cory (McClurg Company) of the Ponderjee who came

Illustration (reduced) from "Folly In the Forest."

sailing "O'er a fibulous, fabulous ferry," "Twas a day in the last of Juvember," or this:

They went to sea in a Christmas tree,  
And merrily sailed away;  
One was a Portable Porcupine,  
And one was a Pig with a Bottle of Wine.

Such lines make the ghosts of Lewis Carroll and Edward Lear arise. Miss Wells must hurry up and secure her laurels, for graphophones are getting cheaper and cheaper every day.

The following, however, is more novel in conception:

A gentle giraffe from a llano  
Sat down at an upright piano,  
But his neck was so long  
That the whole of his song  
Was sung in a super-soprano.

In "A Phenomenal Fauna" (R. H. Russell), Miss Wells writes thus understandingly of "The Brick Bat":

Off through the stillness of the summer night  
We see the Brick Bat take his rapid flight.  
And, with unerring aim, descending straight,  
He meets a cat on the back garden gate.  
The Brick Bat could not fly alone,—  
Oh, no; there is a power behind the thrown.

She is also clever in defining "The Black Sheep," "The Common Swallow" and "The Jail Bird," but the points made are way beyond the comprehension of a child. Oliver Herford makes the pictures and excels in delineating "The Book Worm" and many things that fly,

like "The Shuttlecock," "The Flying Buttress," and "Time Flies."

Miss Wells is also the author of "A Nonsense Anthology" (Charles Scribner's Sons).

"Folly in the Forest"—(Henry Altemus), illustrations Reginald B. Birch,—and "Eight Girls and a Dog" (Century Company), the last a home story, are again by Carolyn Wells.

A goodly-sized folio, with a colored decoration on every page, is "The Princess Kallisto," by William Dana Orcutt, and illustrated by Harriette Amsden. The stories are meant to teach moral lessons of kindness, perseverance, and contentment, etc. (Little, Brown & Co.). Another story-book with plenty of illustrations of old-time favorites is "In a Happy Far-Away Land," by Ruth Kimball Gardiner, from tales told by Frances Palmer Kimball, illustrated by Howard Smith (Zimmerman's).

Illustration (reduced) from "Prince Silverwings."

"A Story of Live Dolls" is by Josephine Scribner Gates (Bowen-Merrill Company); "The Gift of the Magic Staff," by Fannie E. Ostrander, illustrated by Will D. Wiggins and Ella S. Brison, comes from Fleming H. Revell; Miss Mary Inlay Taylor is well known in the West as a novelist, but she makes her debut as a writer for little folks in "Little Mistress Hope," illustrated by Jessie Willcox Smith (A. C. McClurg & Co.).

All sorts of themes are selected by the authors of children's fairy books; but it is surely a little daring in Edward Earle Childs to challenge comparison with Gulliver's travels in Lilliput, as he does in "The Wonders of Mouseland" (the Abbey Press). Coque, the king's jester, is the hero of "Coque and the King's Children," by Cornelia Baker, illustrated by Lucy Fitch Perkins (A. C. McClurg & Co.). It is a very satisfactory piece of bookmaking. "In a Cart of Gold" is by P. L. Gray, and is illustrated by Bernard Gutmann (Saalfield Publishing Company).

J. M. Dent & Co., in England, and the Macmillan Company, in the United States, publish "The Reign of King Oberon," by Walter Jerrold, illustrated by Charles Robinson. The publishers, A. C. McClurg & Co., have evidently spared no pains in the production of "Prince Silverwings." It is by Mrs. Ogden Harrison, the wife of the present mayor of Chicago. Some of the illustrations are in color, and are by Lucy Fitch Perkins.

Illustration (reduced) from "The Reign of King Oberon."

Katharine Pyle, the sister of the well-known illustrator and author of children's books, Howard Pyle, has for several years published attractive juveniles, which she

illustrates herself. Her fairy stories are perhaps a trifle lacking in humor, but her continual output as a writer suggests that she must know how to please the young folks. Her books this year are, "As the Goose Flies" and "In the Green Forest" (Little, Brown & Co.).

#### HOME STORIES.

*Rich, in sooth, the volume's worth ! Not in classic lore, but rich in ! The child-sagas of the kitchen.*—RILEY.

In antithesis to the fairy and romantic books we have an equally long category of realistic books, stories of every-day life, like "Uncle Tom the Burglar" (by Mable E. Wotton, illustrated by Ida Waught and H. M. Brock (the Penn Company); "Two of the Best," by Dorothy Quigley, illustrated by Nam H. Drake (E. P. Dutton & Co.); "Tommy Remington's Battle," by Burton Egbert Stevenson (the Century Company); "The Cruise of the Dazzler," by Jack London (the Century Company); and "The Boys of the Rincon Ranch," by H. H. Canfield (the Century Company). In the Boy Donald series, by Penn Shirley, Sophy May's sister, we have for this season "Boy Donald and His Hero," illustrated by Bertha G. Davidson (Lee & Shepard). The narrative is in simple words for little ones.

The children are to be congratulated that so exquisite a writer as Thomas Nelson Page has penned for them "A Captured Santa Claus," illustrated by W. L. Jacobs (Scribners). The plot is unhackneyed. Colonel Stafford is about to be captured by the Union troops, and being in citizen's clothes, will be hanged if discovered in them. His little son Bob swims an icy brook and visits the Union camp, where he obtains from some Confederate prisoners a gray uniform, which he brings back to his father and thus saves him.

One of the sweetest of books portraying home life is "The Little Girl Next Door," by Nina Rhoades, illustrated by Bertha G. Davidson (Lee & Shepard). It is a story of a little blind girl of the little Lord Fauntleroy character, who succeeds, like that hero, in softening the austerity of a grandfather without knowing that she is his granddaughter. Miss Rhoades, herself blind, draws her heroine's character in faithful lines, and she has, moreover, constructed a rational plot which runs along smoothly from beginning to end.

As the past generation read the "Dotty Dimple" and the "Elsie Books," the present generation read the series which deals with the Pepper Family. This year Margaret Sydney narrates the adventures of "The Five Little Peppers Abroad." The book is well illustrated by Fannie Y. Cory (Lothrop Publishing Company).

#### TRAVEL.

*Where go the children ? Travelling ! Travelling !  
Where go the children, travelling ahead ? ! Some go  
to conquer things ; some go to try them ; ! Some go to  
dream them ; and some go to bed !*—RILEY.

One would have to have a mariner's compass pointing

not only north and south, but N. N. E. and S. S. W., to follow the courses that the geographical and historical tales take us. The authors seem to have left no cranny or corner of mother earth's domains unexplored. Everett T. Tomlinson takes us with four boys "Cruising on the St. Lawrence;" illustrated by A. B. Shute (Lee & Shepard). In another Thousand Island book, but in a lighter vein, the same region is described; it is "Esther at the Thousand Islands," by Flora Longfellow Turknott (Jennings & Pye of Cincinnati, and Eaton & Mains of New York). Eller M. Sexton crowds more novel information and gives us better illustrations than we generally find in such books, in her "Stories of California" (the Macmillan Company).

Illustration (reduced) from "Topsy Turvy Land."

The "Youth's Companion Series" (Ginn & Co.), takes us traveling well-nigh over the whole globe in "The Wide World," "Northern Europe," "Under Sunny Skies," "Toward the Rising Sun," and, "Strange Lands Near Home." A thoroughly up-to-date book, one of the "Pan-American Series," is "The Young Volcano Explorers, or American Boys in the West Indies," by Edward Stratemeyer, illustrated by A. B. Shute (Lee & Shepard), which deals with the eruption of Mont Pelée. Another book which takes children to the many points of the compass is "The Seven Little Sisters," by the late Miss Jane Andrew (Ginn & Co.). "Topsy Turvy Land—Arabia Pictured," by A. E. and S. M. Zwemer, takes us to the ever-interesting far East. It comes from the Fleming H. Revell Company.

#### PICTURE BOOKS AND NONSENSE BOOKS.

*An' ole Santy Claus an' Sleigh  
— ! An' Reindeers an' little Drum  
— ! Yes, an' Picture-books, "Tom Thumb," ! An'  
"Three Bears," an' ole "Fee-Faw."*—RILEY.

Among picture books the palm must be bestowed on Peter Newell's "Topsys and Turvys" (Century Company), with thirty-six reversible pictures, with an accompanying couplet, that will form an unending source of interest to the youngsters as they discern Mrs.

Illustration (reduced) from "Five Little Peppers Abroad."

Illustration (reduced) from "Topsys and Turvys."

Burley stooping over, and read: "Rising early, Mrs. Burley in her garden meets the eye," and then reversing the picture discover, "When it's later, the inspector sees her hang her clothes to dry;" or they become solicitous at the fate of Bertram Bowles, "When Bertram Bowles fell off the dock so loudly did he shout," and then, turning the picture upside down, discover that the same figure serves to show that "Clarence Cowles leaned o'er the edge and hoisted Bertram out."

Mr. Denslow has already made a wide reputation with his "Father Goose," and his "Night Before Christmas," issued this year by Dillingham & Co., will be hailed with delight by his young admirers. The book is admirably printed on buff-tinted paper, from which the copious spaces of blue sing out in high soprano. Mr. Denslow's line is firm and strong, but his humor, we think, is sometimes commonplace, and we find his St. Nick a little too much of a Foxy Grandpa, for our fancy.

#### DENSLOW'S NIGHT BEFORE CHRISTMAS

Illustration (reduced from the "Night Before Christmas.")

The renowned Golliwogs' whilom adventures on the bicycle, at the seashore, the polar regions, and in war, are fittingly continued, in this time of experiment in airoplanes, by their thrilling adventures in an airship. "The Golliwogs'-Air Ship," pictured by Florence K. Upton, verses by Bertha Upton (Longmans, Green).

Illustration (reduced) from "The Golliwogs' Air-Ship."

#### NATURE STUDIES.

*Summer or Winter, Spring or Fall, I Which do you like the best of all?—RILEY.*

It is a pleasant sign of the times that books of nature study are so frequently issued by our publishers. This year the list is an extensive one, including "Secrets of the Woods," by William J. Long, wherein he treats of the wood mouse, the otter, the squirrel, the deer, etc. The book is sympathetically illustrated by Charles Copeland. Clarence Hawkes in "Master Frisky" (Thomas Crowell & Co.) chronicles the doings of a beautiful and spirited collie dog.

When an author and an artist with such reputations

as have Robert W. Chambers and Reginald Birch collaborate in a book, "Outdoorland," and the Harpers publish it, and see that the illustrations (which are in color) are delicately printed; and when, further, the author aims not only at a fanciful fairy story, but plans

to teach the inquisitive mind of childhood some of the secrets of Nature's kinetoscope,—the genesis of the butterfly from the cocoon, and the metamorphosis of the frog from the tadpole,—then the little ones have a treat indeed.

Illustration (reduced) from "Secrets of the Woods."

The half-tone illustration, from a photograph, is frequently a blemish in a modern book, harmonizing poorly with the artist's drawing in the same or the imaginative scenes of the text; but in "Dogtown," by Mabel Osgood Wright (Macmillan Com-

pany), in the splendid photographic illustrations by the author, we certainly (with the exception of a few cuts that have been worked up by hand and spoiled) cannot deny that they form the major part of interest in the book, which, altogether, forms a genuine analysis of American rural life.

#### OTHER "JUVENILES."

*Parunts knows lots more than us, I But they don't know all things I 'Cause we ketch 'em, lots o' times - Even on little small things.—RILEY.*

It is claimed that more than a quarter of a million copies of *Chatterbox* (Dana, Estes & Co.) have been sold in America alone, and even a greater number in England, so it is wise perhaps to presume that the editor knows his business, but it does seem that, in these days of exquisite illustrations, the pictures in this book should be a little more artistic and lifelike.

Among the useful or information-giving class of books are: "The Boy, How to Help Him Succeed," by Nathaniel C. Fowler, Jr. (Oakwood Publishing Company); "What a Girl Can Make and Do," by Lena Beard and Adelia Beard (Chas. Scribner's Sons). "Entertaining Santa Claus" is a juvenile cantata for Christmas, libretto by Rev. J. W. Carpenter, music by Charles H. Gabriel (Jennings & Pye). "The Bible for Children," arranged from the King James version, with a Preface by the Rev. Francis Brown, D.D., and an Introduction by the Right Rev. Henry C. Potter, D.D., Bishop of New York (Century Company), has been prepared with great care, and is handsomely printed.

We prophesy a great popularity for the rich treasury of six hundred pages of verse for the young, which Kate Douglas Wiggin and Nora Archibald Smith have collected under the title of "Golden Numbers" and McClure, Phillips & Co. have issued in faultless style.

There are not as many editions of classics issued this year as usual, but Andrew Lang follows up his success of his multicolored fairy books with "The Book of Romance," illustrated by H. J. Ford (Longmans, Green & Co.), wherein he relates the Arthurian legends, and introduces us to the Knights of the Round Table in picturesque narratives.

## NOTES ON THE NOVELS OF 1902.

**I**N grouping the novels published this year, it is noticeable that the vogue of the historical romance and story of adventure, and the widely published wealth and fame that have come to the most successful authors in this field, are still operating to bring more novel writers into it than into any other. Not only are the newer writers placing their faith in the kind of story which has proved so fortunate for Mr. Churchill, Miss Johnston, and Mr. Major,—a review of the titles and authors of the past year or so shows that there is a very large number of the authors who had previously maintained a respectable success or better in some other field of fiction-writing, who have been lured by the apparent avidity of the public for swashbuckler tales into trying their hand on the story of adventure.

Nor is there any decrease in the second large group of stories which are chiefly distinguished by their faithfulness to the local color of some American community,—which leave us with a picture of the life and surroundings of our brothers in some corner of this big and varied country. The one class of fiction that is conspicuous by its quantitative weakness is the "problem story."

What Dr. Talcott Williams said, two months ago, as to the absence of any great, overwhelming successes in novel-selling this year is still true at this writing. A number of novels, chiefly those by authors who have made great successes in previous years, have piled up sales which would have been thought excellent five years ago, but no novel in 1902 has sold in America anything like so well as "Richard Carvel," "The Crisis," "When Knighthood Was in Flower," "To Have and to Hold," or "David Harum." Several of the most important works of fiction of the year,—such as Mr. Owen Wister's charming story, "The Virginian," and Miss Edith Wharton's "The Valley of Decision,"—have been commented on by Dr. Williams in his article in the October REVIEW OF REVIEWS.

In the energetic, and often daring, attempts of the publishers to start their novel on a runaway course of sales some new devices are apparent in the mechanical make-up of books. For instance, there is a notable increase in the number of novels embellished with pictures from the best illustrators, and a striking increase in books with illustrations in color,—a natural outcome of the successful experiments made in the more sumptuous popular magazines in this style of illustration. With the possibilities of such sales of novels as have come in a few favored instances in the past two or three years, a publisher feels justified in making very large initial expenditures for enhancing the attractions of a fiction book if there can be adduced any good argument to show that these features may aid in catching the attention and favor of the reading public. In this way the selling of the great editions of popular novels may come to present the individual reader with something of the same sort of advantage he receives in purchasing and reading a copy of the great magazine of to-day,—in the phenomenal excellence of the mechanical work and art scheme made possible only by the division of the initial expenditures for these performances, resulting from a great circulation.

### HISTORICAL NOVELS AND STORIES OF ADVENTURE.

Prominent among the season's fresh stories of adventure, and of very adventurous quality, indeed, is Mr. Richard Harding Davis' "Captain Macklin" (Scribners). There seems to be a general opinion that this is the most successful of Mr. Davis' sustained efforts in fiction. The hero is a capital adventurer, with enough Irish blood in him to make a famous fighter and filibuster. The last of the "Fighting Macklins," he was dismissed from the United States Academy at West Point, drifts to New Orleans, and thence to Central America, where he becomes a dashing and delightful lieutenant of General Laguerre, himself an Irish-Frenchman, belonging to a dozen countries, and having fought for "every flag that floats." Captain Macklin is mixed up with some of the finest Central-American atmosphere of cartridge belt, Gatlings, cavalry charges, and mule trains that could be desired, and after enough fighting to be a surfeit for any average impetuous gentleman, he returns to New York, to take up a pretty love affair where he had left it off, and settles down to be an ordinary citizen at \$15 a week with Schwartz & Carboy, manufacturers of locks, hinges, and "agricultural things." The disgust of the born adventurer for this job is finely depicted, but before the captain can even start in on his duties, a cablegram comes from Laguerre, and the next French steamer carries the hero back to his well-beloved "free, homeless, untrammelled life of the soldier of fortune." "I wanted to see the shells splash up the earth again; I wanted to feel my leg across a saddle; I wanted to sleep on a blanket by a campfire; I wanted the kiss and caress of danger, the joy which comes when the sword wins honor and victory together; and I wanted the clear, keen view of right and wrong that is given only those who hourly walk with death." We are evidently going to hear more of Captain Macklin.

Mr. Cyrus Townsend Brady's last volume contains not only the complete novel written last summer, "Woven With the Ship" (Lippincott), but a number of shorter pieces,—*"veracious tales of various sorts,"*—enclosed in the same covers. The novel is essentially a story of naval adventure, and is intended for a character sketch of a fine old admiral, "the veteran sailor, the young officer, the innocent woman that all loved, and—dare I say it—the mighty ship." Mr. Brady calls this book a war story without any war, a sea story without any sea. It could not, however, be called a love story without any love, for there is a great abundance of that commodity in the telling. Of the shorter stories, Mr. Brady assures us that each of them is founded on fact. One is suggested by a real diary the author had the privilege of inspecting, another deals with the historical mystery as to what became of a certain cargo of slaves captured by Decatur in the Mediterranean, while others are inspired by neglected chapters in history and biography.

Miss A. C. Laut's "Heralds of Empire" (Appletons), following her successful story, "Lords of the North," chooses a large field for its romance. It carries the reader's interest from the snow-bound Hudson Bay territory to the Boston of witchcraft time, and to the

London of Charles II. The great question of the national future of North America occupies the faculties and efforts of the picturesque figure Radisson, the gamester, adventurer, and hero, "who juggled with empires, and changed allegiance as he would his coat."

The famous journey of Lewis and Clark, 1804-06, up the Missouri, the Columbia, and to the Pacific, is the inspiration of Mrs. Eva E. Dye's novel, "The Conquest" (Chicago: A. C. McClurg & Co.). She has aimed to embody in fiction the great epic of the struggle for America,—the story begins in 1774, and covers the entire period to 1838. Daniel Boone, Lord Dugmore, and other prominent personages of that birth period of the Republic are active in the situation besides the participants in the Lewis and Clark expedition. Mrs. Dye, herself a resident of Oregon, has made a special study of the country, the times, and records that concern Lewis and Clark. The subject of the novel is a timely one, in view of the centennial of the expansion of the United States to the Pacific, and the celebration of this great achievement in the St. Louis World's Fair.

Mr. Charles W. Buck, of Louisville, former United States Minister to Peru, has constructed a romance of the land of the Incas in "Under the Sun" (Louisville: Sheltman & Co.). The author has been a careful student at first hand of the Western coast of South America, and is exceptionally well equipped to reproduce in this work of fiction the romance and poetry of the picturesque days of Pizarro. There are thrilling and highly dramatic incidents in the story as he tells it.

The indefatigable Mr. Crockett brings us two new books for 1902, one of which, "The Dark of the Moon" (Harpers), is easily grouped with the historical novels. The scene is Scotland, at the time of the rise and downfall of the Levellers; there is the interesting tangle of gypsies, soldiers, lords, lovers, and sweethearts in Mr. Crockett's own style, and the not less interesting untangling of the same. Several of the characters have figured before in Crockett tales,—"The Standard Bearer" and "The Raiders."

In "The Coast of Freedom" (Doubleday, Page & Co.), Miss Adele M. Shaw has aimed to give a picture of life in New England in the time of William and Mary, and Governor Phips, as well as a story of adventure. The witchcraft craze, led by Cotton Mather, and the piratical expeditions with which the hero, Roger Verring, was concerned, give ample opportunity for highly colored action and incident, of which there is a plenty and well told.

Mr. Francis Lynde is a new writer, hailing from Tennessee, with a study on Lookout Mountain, Tenn. "The Master of Appleby," his first novel (Bowen-Merrill Company), is a story of the American Revolution. It is full to the brim of stirring incident. The scene is laid in the Carolinas, and the story deals with that part of the Revolutionary struggle in which the Catawba and Cherokee Indians were involved.

Miss Molly Elliott Seawell's "Francezka" (Bowen-Merrill Company) is a tale of France in the days of Louis XV. The story is told by an honest old soldier, Babache, whose idol is Count Maurice de Saxe. The contemplative spirit of the old warrior gives a pleasant contrast and easement to the turbulent scenes without which historical novels are not. Besides the military hero of the book, the Count de Saxe, and his adventures, there is the sentimental hero, Gaston Cheverny, and the heroine, Francezka. The villain is Gaston's own brother, who resembles him marvelously. Regnard

kidnaps the hero, impersonates him, and takes his wife. The plot is only untangled to end in a wholesale tragedy.

As one who knew Mr. S. Levett Yeats' proclivities might shrewdly guess from the title, "The Lord Protector" (Longmans, Green & Co.), is an historical novel centering about no less a person than Oliver himself. The lovers of the tale are harried by the Lord Protector, and they are not happy till his death and the advent of a "gracious king."

Mrs. Elizabeth Wormeley Latimer, too, appears with an historical novel, for which task her well-known historical work and study have prepared her. The hero of her story, "The Prince Incognito" (Chicago: A. C. McClurg & Co.), is Rinaldo D'Este, cousin to Louis XV., who falls in love with a Protestant sweetheart. To escape the rigid laws of France against the marriage of Catholics and Huguenots, the prince gives up his rank and title, and escapes to the New World with his young wife.

In the "Gate of the Kiss" (Boston: Lothrop Publishing Company), a richly-colored story is wrought from Jewish history by Mr. John W. Harding. The time is the reign of King Hezekiah, when that monarch had repudiated the domination of Nineveh, and refused to pay further tribute to Sennacherib. The variegated colors of an Eastern court, the Assyrian pomp and splendor, make a luxuriant background. Historical figures, Isaiah and Sennacherib, dignify the narrative, which has its passionate love tale interwoven with the larger fabric of events.

The Viking days, with their great deeds, their hazy outlines, and their large heroic figures, make an admirable ground for the writer of romantic novels, and it is easy to see how Miss Ottilie A. Liliencrantz has come to be enamored of the race that furnished her with the material for her successful story, "The Thrall of Leif the Lucky" (Chicago: A. C. McClurg & Co.). She has made a careful study of the Viking traditions, and has aimed to reproduce, in her book, this life of the Anglo-Saxon race in its boyhood. She maintains, in a foreword, that "for every heroic vice, the Vikings laid upon an opposite scale an heroic virtue." The volume is charming in its manufacture, and is handsomely illustrated in colors.

#### STORIES PICTURING THE LIFE OF AMERICAN COMMUNITIES.

New York society, the so-called "Four Hundred," furnishes the settings and characters for Mr. Julian Ralph's novel, "The Millionairess" (Boston: Lothrop Publishing Company). The lady who gives the title to the book, Miss Laura Lamont, shows how fine a woman can be and still remain in New York society. There are others in the plot who show how silly, if not degraded, New York society can be, and the residuum of Mr. Ralph's impressions of the metropolitan smart set are scarcely more favorable than the recently published views of Mr. Henry Watterson. Beekman, who plays millionaire to Miss Lamont's millionairess, is an attractive figure,—the wealthy young bachelor, who performs notable feats in journalism, exploration, big-game shooting, rather than keep a racing stable or spoil his naturally good health in dissipation. A desperate and unprincipled cousin of the millionairess, Mr. Jack Lamont, a weak young clergyman helping Laura in her philanthropic work in model villages, and some women enemies of the heroine, who plot to

harm her reputation, make trouble and scandal enough before the millionairess and Courtlandt Beekman are safely married. Mr. Ralph's very wide experience as a journalist, and his direct, vigorous style of telling the tale, have enabled him to construct an eminently readable novel, and the adventures of his millionairess make, too, for very wholesome thought upon the tendencies of a community which is coming to contain so many people who have more money than they easily know what to do with.

Mr. Booth Tarkington follows up his "Gentleman from Indiana" and "Monsieur Beaucaire" with "The Two Vanrevels" (McClure, Phillips & Co.), a cheerful, fresh, love story of old-fashioned times in the Middle West. The plot is chiefly composed of the troubles which arose from the two Vanrevels getting mixed up. For though one was a most indubitable hero, while the other was as indubitable a scamp, they were sufficiently alike in form and feature to make a fairly successful tangle in a love story. The time is that of the Mexican war, but Mr. Tarkington successfully withstands the temptation to make an historical novel.

Mr. Charles G. D. Roberts' little heroine in "Barbara Ladd" (Boston: L. C. Page & Co.) begins her troubles by running away from her New England home, at the age of fourteen, with the idea of taking refuge with a favorite Uncle Bob. She does not find him, but she has a canoe ride with a boy who takes himself and her very seriously, and who, after many things had happened, marries her. The chief interest in Mr. Roberts' story is the exquisitely tender note he strikes when the shifting scenes bring his characters into contact with the woods, the fields, and nature.

Mr. Jack London has drawn his heroine boldly enough in "A Daughter of the Snows" (Lippincott). Frona Welse is the name of this engaging and imperturbable young lady, and she goes right up into the Yukon mining country without the sign of an escort or chaperon,—into places where no white woman had ever been seen except vaudeville "queens." Mr. London makes out a most attractive, if not an entirely convincing, figure of this cool, handsome young woman, who does not know fear or mock modesty, and his book presents a clear, bold picture of life in the Alaskan gold country.

Mr. Harrison Robertson's new Kentucky story, "The Opponents" (Scribners), begins with the ruin of the hero's home, and ends with his tragic death many years later, when Tunstall is on the verge of finding happiness again. The distinction of the book is in the vigorous description it contains of latter-day Kentucky political warfare.

Another new novel in which politics figure even more essentially than in Mr. Robertson's story is "Margaret Bowlby," by Edgar L. Vincent (Boston: Lothrop Publishing Company), who, as a member of the New York Legislature, had an opportunity to study at first hand the workings of the State "machine." The hero, Robert Kemp, is a young mine superintendent, in love with the daughter of his employer, Captain Bowlby. He opposes his employer politically, and fights the "machine" to a finish, ending up with the winning of his sweetheart and the governorship of the State. The inner working of the Albany ring will be explained by this story in an easy course of study.

The tendency of the novelist in these days of rapid construction, to choose a timely subject is seen again in Mr. W. F. Gibbons' "Those Black Diamond Men" (Revell). It is the life and work in the Pennsylvania

anthracite coal regions that the story portrays with an evidently close acquaintance with the community and its conditions. The story shows how much of the trouble in the mining country has been due to the over-importation of foreign labor, and the herding together of great bodies of Italians and Slavs. It pictures, too, the heroism of the miners and their wives when they are called on to make sacrifices in a common cause.

A quiet New York village, old-fashioned and Calvinistic, is the community Mr. Henry E. Rood essays to picture in "Hardwicke" (Harpers). The shrewd old Presbyterian deacon, Hardwicke, brings a new minister to the town, the Rev. Ernest Robertson, and the young divine's theology is some hemispheres broader than the accepted tenets of his congregation. The shock of all this is heightened for Mr. Hardwicke by finding his daughter in love with the lax young man, and the irate father drives Miss Hardwicke out of his house. With the aid of a rich and good-natured, but dissipated, young man the lovers are happily united.

Mr. Le Roy Armstrong, in "The Outlaws" (Appletons), has surrounded the digging of the old Wabash Canal, in Indiana, with something of an epic glow. His book makes another chapter in the tale of the building of the West. Dan Rank, the hero, finds the construction of the canal devolving upon himself alone, and sees it through with heroic courage and energy in spite of many obstacles. There are some dashing incidents in the pursuit of the horse thieves, the part of the story that gives the novel its name,—and, naturally, a pretty love story to lighten the stress of the pioneer labor and fighting.

"The Rustler," by Miss Frances McElrath (Funk & Wagnalls), is daringly conceived. The hero, Jim, "a cow-puncher," becomes a rustler, or cattle thief, when he fails to win his sweetheart, an Eastern woman visiting Jim's boss. With his band of desperadoes he carries off his innamorata to the Hole-in-the-Wall country. There the coquette evolves into a missionary, who finally converts the whole band, Jim included. The book gives a good picture of the life and manners of the Wyoming cattle ranches, and of the conditions which made the "Rustler War" of a few years back.

It is a quiet back-country New Hampshire village that Mr. F. L. Pattee finds his story, "Mary Garvin" (Crowell) in. The son of the village blacksmith is engaged to the quiet, sensible daughter of a farmer, the lady whose name makes the title. A "summer boarder" girl, with riches and nerves, shows Luke new possibilities in the field of femininity, and he is tempted away from his country sweetheart for a time. The quaint humor of the farmhand character and the quiet simplicity of the setting of the whole tale make it a pleasant book.

Somehow the title of Mr. F. Hopkinson Smith's last story, "The Fortunes of Oliver Horn" (Scribners), suggests a rollicking story of the sea, but it is something very different. We are introduced to the luxurious and fascinating graces of the best Virginia life in the fifties of the last century, and to an Oliver Horn who is a painter and not a mariner. His voyage is to New York,—to make his fortune,—and the atmosphere of both the Northern and the Southern cities is reproduced by a writer who knows them well. Margaret, the sweetheart, is an engagingly unconventional young lady, and the whole story has a swing and directness that tend to confirm the rumor that it is founded on the events of Mr. Smith's own life.

Mr. Frank Lewis Nason is a mining engineer, who publishes his first novel in "To The End of the Trail" (Houghton, Mifflin & Co.). It is the big, free life of the Colorado mining camps that gives this story its distinction. There is a grim humor in his "tough" characters, and very much the same sort of raw vice and virtue that we remember in the mining communities of Bret Harte's stories.

Miss Frances Charles has chosen Arizona, a new field, for her essay in fiction, and a plot even more unusual,—for the story is built around the curious hatred of a rich old farmer for his son. There is something of the breeziness and vigor of the big silver country in the book, which is called "In the Country God Forgot" (Little, Brown & Co.).

There is a strong and engaging figure drawn by Herbert M. Hopkins in "The Fighting Bishop" (Bowen-Merrill Company), the stern and strong-willed Ohio pioneer, who destines his seven sons for the church. The domineering nature of the bishop drives his boys into various directions, but all different from the path he had laid out. The Civil War breaks out, and the bishop espouses the Southern cause, while his sons are ardent Unionists. So the strong man's troubles grow, until two of the sons die on the field of Gettysburg, and a girl softens the bishop's heart. The Ohio farmer's life of the sixties is well pictured in this unusual story.

Miss Nancy Huston Banks' new volume, "Oldfield" (Macmillan), is a quiet and reposeful story of Kentucky life. The quaint charm of the little old ladies, Miss Judy and Miss Sophia, and the delicate characterization of their old-fashioned figures, mark a greater care in literary workmanship than one is wont to find in the volumes of "current fiction." Whether "Oldfield" will be a "best selling" book or not, it is a story with distinction, and deserves reading.

"The Master of Caxton," by Miss Hildegard Brooks (Scribners), is called by the publishers "a story of the good old-fashioned sort." It is also a sensible and shrewd portrayal of Southern life of to-day, markedly free from maudlin sentimentality. The plot chiefly involves Cassandra, a Southern girl, who has been adopted by a wealthy Northern woman. When the heroine comes into her fortune she gives it up rather than remain an exile from her home and a stranger to her brothers.

Mr. J. P. Mowbray's new book, "Tangled Up in Beulah Land" (Doubleday, Page & Co.), takes us to a new scene, the wilds of Pennsylvania, where, Mr. Mowbray shows us, it is possible to construct a good tangle of incidents for a plot, as well as in more effete communities. The character Polly is exquisite, and Mr. Mowbray is, as always, clever, and, as always, keenly sensitive to the literary possibilities of nature.

The career of a successful surgeon in the city of Chicago is the theme of Mr. Frank H. Spearman's "Doctor Bryson" (Scribners). The author was himself educated to be a physician, and such a motive came naturally for his first novel. The atmosphere of the book is thoroughly that of Chicago, and it amounts to a present-day study of life and manners in that city.

The Rev. Alfred H. Henry is a Methodist minister who, during a five years' incumbency at Salt Lake, studied the early history of the Mormons in Utah as a basis of his novel, "By Order of the Prophet" (Revell). The story is built on the love of a fine young Christian girl for a Mormon missionary, and the tragedy in her life when, by order of Brigham Young, the husband

was obliged to practice polygamy. The dark intrigue and turbulence of the founding of the Mormon colony give an abundance of action to the tale, which makes a useful contribution to the history of this anomalous valley of Utah.

The wide, blizzard-swept prairies of Dakota, and the brave, hard life of the Northwestern farmer of a quarter-century ago, color strongly the "Biography of a Prairie Girl," by Eleanor Gates (Century Company). Indeed, the whole volume is a veracious picture of the struggle with the soil and the wind and the sun, the homely pleasures and privations of the prairie folk, and the narrative is subordinate.

Mr. Frederic Remington can reproduce the godless life of the frontier West, of the miner, the scout, the soldier, with inimitable truth and humor, whether it is pictures he is making or stories he is telling. His novel, "John Ermine" (Macmillan), tells the tale of a white foundling among the Indians, who is delivered over by the redskins to an old-man-of-the-mountains for an education, and who becomes a famous scout for the United States soldiers. The book is illustrated, of course, with Mr. Remington's drawings. The text and illustrations together give a perfect picture of frontier life in Nevada and the great plains.

It is an isolated ranch on Puget Sound that Ella Higginson uses for her story, "Mariella of Out-West" (Macmillan). This writer has great talent for conveying the spirit of the far Northwest country and the life of which she is a part, and this story is a worthy effort to give us understanding of that majestic land.

#### A FEW VOLUMES OF SHORT STORIES.

Books of short stories are few and far between, relatively speaking. They are reputed to be little in demand by the fiction-reading public.

Mr. Samuel Minturn Peck has been known as a writer of graceful verses showing a keen appreciation of the varying moods of nature in his Alabama home. He now appears, for the first time, with a volume of prose sketches in fiction, "Alabama Sketches" (Chicago: A. C. McClurg & Co.), chiefly in dialect, negro and white. The little stories are pleasant and true to life, and form a worthy volume in the series of books of Southern sketches projected by the publishers.

Mr. Robert Barr's gay and slightly fantastic touch is seen again in the stories collected in the volume "A Prince of Good Fellows" (McClure, Phillips & Co.). The anecdotes and traditions of the picturesque monarchs of Scotland furnish themes for the tales.

Miss Josephine Dodge Daskam has made a great success of her stories of children, seven of which appear in the present volume, "The Madness of Philip" (McClure, Phillips & Co.). The author has somehow the knack of getting at the same view of life the little ones take. The most amusing of all the tales is "Ardelia in Arcady," which tells of the sudden translation of a little slum girl from the dirt and hubbub of the tenements to the country, and how the rich cream disgusted her, and the cows frightened her, and things generally went wrong until her heart yearned for the Bowery sights and sounds.

The "Children of the Frost," who give the title to Mr. Jack London's volume of short stories (Macmillan), are the Alaskan Indians and Eskimos of the great northern barrens,—“the bad lands of the Arctic, the deserts of the Circle, the bleak and bitter home of the musk-ox and the lean plains wolf.” Mr. London gets

right into the lives and hearts of these primitive folk, and tells the stories from their point of view. It is a new field, and is exploited by a writer who has a quick sympathy for the dramatic possibilities of these lonely humans and the wide expanse of nature in which they are lost.

Mr. H. A. Hinkson's book, "The Point of Honour" (Chicago: A. C. McClurg & Co.), is a collection of short stories of the doings of certain rollicking, fighting Irish gentlemen of the days when dueling and hard drinking were the proper thing for your true gentleman.

"Melomaniaes," by Mr. James Humecker (Scribners), introduces us most sardonically to the lives and loves of musicians and opera singers of Symbolist and Bohemian cults. They leave us rather wishing we knew less than the author of these mysteries. The tales are doubtless exaggerated in their irony; the diseased phases of Nietzsche, Wagner, Schopenhauer, and Ibsen are reproduced almost too daringly for pleasure.

Excellent literary work is shown in Mr. Samuel Gordon's "Strangers at the Gate" (Philadelphia: Jewish Publication Society). The eighteen stories are thorough and artistic stories of Jewish peasant life, that stand out in their conscientious workmanship from the run of current fiction. Mr. Gordon is a worthy compeer of Mr. Zangwill.

Miss Elizabeth C. Jordan's "Tales of Destiny" (Harpers), are essentially stories of New York men and women, chiefly young men and women, whether we meet them traveling in Russia, dancing at a ball in the Latin Quarter, or walking in Madison Square. Miss Jordan has a good eye for the dramatic incident, whether as editor or story-teller. She is becoming well known in the latter capacity, as well as in the rôle of conductor of *Harper's Bazar*.

#### FIVE NOVELS OF HUMOR AND SATIRE.

Mrs. Kate Douglas Wiggin is more delicious than ever in the "Diary of a Goose Girl" (Houghton, Mifflin & Co.), whose chief fault is too much brevity. Mrs. Heaven, the landlady in the quaint old village to which the goose girl betakes herself, is a she-Polonius, only surpassed in amusing solemnity by the geese themselves that fill out the *dramatis personæ*. Anybody that can read the "Goose Girl" without pleasure is past comfort.

The perennial Mr. John Kendrick Bangs gives us for 1902 a new budget of fooling, this time in a sort of Mount Olympus up-to-date, where the gods of Greek and Roman mythology disport themselves amazingly in modern surroundings. The book is called "Olympian Nights" (Harpers).

Mr. Ernest Crosby's Tolstoyan ideas concerning peace and war are well known, but his sympathizers and opponents have not before seen his philosophy taught by such a novel method as "Captain Jinks" (Funk & Wagnalls), a satirical story burlesquing American militarism with an unsparing pen. We meet, thinly disguised, many of the notabilities and post-bellum incidents of the Spanish War.

"Elizabeth Pullen," the author given on the title-page of the new story, "Mr. Whitman" (Boston: Lothrop Publishing Company), is none other than Elizabeth Cavazza, well known to American readers from her shorter pieces. "Mr. Whitman" is a quaint and whimsical tale in something of the Stockton style. Mr. Jeremiah Whitman, a practical American business man and wholesale dealer in tanners' supplies, is traveling

in Italy when he has the apparent misfortune to be captured by brigands. His practical mind is at once occupied in a project to put their operations on a good business basis, and he organizes them into a "Society for the Relief of Travelers from Superfluous Luggage," he being treasurer, secretary, and freight agent, and "at all times constituting a quorum."

Mrs. Ruth McEnery Stuart's new story of negro character is "Napoleon Jackson" (Century Company). This colored gentleman is formed by nature for a life of rest, and to his wife is given the honor of supporting the family. Miss Stuart is as successful as usual in this humorous vein of hers.

#### FICTION WITH VARIOUS MOTIVES AND SCENES.

The possibilities of London's Kensington Gardens, with their baby carriages, nursemaids, and very young youngsters, have scarcely been suspected before they were used in Mr. J. M. Barrie's new story, "The Little White Bird" (Scribners). There is no definite story told,—or, rather, no story definitely told. There is no hero save David, a little boy, and no heroism and no love story,—except that wherever a little boy, his mother, and Mr. Barrie are there must be these things. The poetic glimpses, now pathetic, now humorous, of child-nature, woman-nature, and man-nature given in these half-whimsical records of the author's dealings with David, and his mother, "Mary A—," show Mr. Barrie at his very best, and it is clear that no one else in the world could do such a book nearly so well. There is throughout the volume the subtle charm of the tenderness of a strong man who knows children and loves them.

In "One's Womenkind," Mr. Louis Zangwill (New York: A. S. Barnes & Co.) has made a story that will "help women to understand men by teaching women how men fail to understand them." The scene is laid in London. The hero, Hubert, is constantly on the stage of the story, and is a very attractive and well-drawn figure.

The author of that truly wonderful dog story, "Bob, Son of Battle," Mr. Alfred Ollivant, publishes another canine epic in "Danny" (Doubleday, Page & Co.). The grim, great-hearted Scotch laird, the love he and his servants come to have for the irresponsible foundling terrier, "Danny," and the tragic death by poisoning of the dog, make a tale with pathos enough for even those who have not come under the spell of dog-companionship.

The search for happiness is the burden of Dr. Henry Van Dyke's nine stories published in the volume called "The Blue Flower" (Scribners). Dr. Van Dyke has told the stories in allegorical fashion, after the manner of the German novelist in "Heinrich von Ofterdingen." Different men search for a different thing in the hunt for happiness, and each story shows a different ideal of the searcher. The dominant characteristic and the greatest charm of all the tales is Dr. Van Dyke's passionate love for nature and his fine use of his acquaintance with the woods and fields and skies and their inhabitants. The volume is illustrated with full-page drawings in colors.

Mr. Marion Crawford's new novel "Cecilia" (Macmillan) deals with a love story in modern Rome. Cecilia is an exceptional type of Italian girl, who not only dances well, but thinks, reasons, and dreams poetically. Guido d'Este, of royal birth, and his bosom friend, Lamberto Lamberti, a somewhat rugged sailor and fighter, strive

for the hand of Cecilia, and make the story in the strife.

The hapless reconstruction days of the South, with their carpet-baggers, negro riots, and wholesale corruption, furnish the theme for Mr. Joel Chandler Harris' novel "Gabriel Tolliver" (McClure, Phillips & Co.). It is understood that the story is largely founded on the events of the boyhood of the author of "Uncle Remus." The old-fashioned, simple, and reposeful life of the Georgia "Shady Dale" of this story contrasts finely with the hurlyburly of the times, and in the pretty love story, — a boy-and-girl affair, — Mr. Harris shows that his hands are deft in other than folklore work.

Mr. Crockett, not satisfied with giving us "The Dark of the Moon" this season, has added "The Banner of Blue" (McClure, Phillips & Co.), in which David Clendening, a religious enthusiast, and his daughter are the chief figures. The story is decidedly well told, and gives an excellent picture of Scotch life and manners, from laird to peasant.

Mr. Edward Marshall, author of "Lizette," a story of the Latin Quarter (New York: Lewis, Scribner & Co.), is the brave journalist who was so terribly wounded in the Santiago campaign of the Spanish War. His first novel, just published, tells the love affair of a New York banker's son, who turns artist and finds a real and fine love in a little grizette of the Latin Quarter. The story has much tenderness and pathos.

Mr. Roy R. Gilson has utilized the small boy in his volume of short stories, "In the Morning Glow" (Harpers), to tell tales on the rest of the family, from grandfather down.

Mrs. Mary Stewart Cutting's "Little Stories of Married Life" (McClure, Phillips & Co.) are direct, simple little pictures of the home life of the average men in and about a great city that have an engagingly light and sympathetic touch. Mrs. Cutting is a resident of a New Jersey suburb of New York; she has only of recent years attempted anything ambitious in fiction, but has been known as a writer of children's stories. The present volume is inspired by just the problems, fatigues, pleasures, and temptations that beset the average "commuter" into New York. They are sympathetic, wholesome, and true.

Miss Alice Woods is clever enough in "Edges" (Bowen-Merrill Company), a story illustrated with the author's own drawings, and very *chic* they are. These sketchy portraits of the heroine and the bright, witty dialogue of the story are quite unusual in their quality. Miss Eleanor Lloyd Allen and the young man with whom she takes up in an exhilaratingly unconventional way, are both artists, recently emerged from the art-student phase, and with fresh memories of "the Quarter." The young lady visits the gentleman, who is something of a recluse, under circumstances which exclude the conception of a Mrs. Grundy, each finds the other exceptionally interesting and "different," and the rest of the course of true love is run rather more smoothly than is usual with two people with so much spice and cleverness in their make-ups. The tasteful, yet rather daring, appearance of the book, with the pleasant free-hand art of its cover and the tinted paper, is thoroughly in keeping with the temperament of Eleanor Lloyd Allen. Miss Woods is a talented young woman of Indianapolis, daughter of the late Judge William Allen Woods, of that city; this is, we believe, her first literary bow to the public. Her ability as an artist has been recognized for several years.

Mr. David Graham Phillips has written in "Her Serene Highness" (Harpers) a pleasant romance of the Anthony Hope type. A young Chicago millionaire, traveling in Europe, and a German princess are the pair who make the story, which has a boar fight, a duel, and other effective romantic aids to interest.

Mr. John Luther Long's shorter stories have charmed us into expecting something very agreeable in this full-grown novel, "Naughty Nan" (Century Company), nor are we disappointed; although there is not a very important story to tell. Nan is too fascinating to allow the interest to flag. She is very wicked in the matter of dealing with men's hearts, but not otherwise. It is a type this writer well understands.

The attempt to abolish rents in New York sixty years ago furnished the political struggle that makes the story of a "A Downreuter's Son," by Ruth Hall (Houghton, Mifflin & Co.). The juvenile characters of the books are much in evidence, and are well handled.

Shalisha Pilgrim, the heroine of Mrs. Henry Dudeney's new novel, "Spindle and Plough" (Dodd, Mead & Co.), is a landscape gardener by profession, with an epic love for her craft and for nature. The contrast of her strong, fine nature with the shallowness about her, — especially in her weak mother, — and the final surrender of her self-sufficient nature to the need of a lover, make the story. The scene is laid in England.

The "Disciple of Plato," by Alligood Beach (Boston: Roberts Publishing Company), has the scene laid in Paris, very much so indeed. The atmosphere of Parisian morals, or lack of them, hangs rather heavily over the story, which is told, however, with much skill, and is handsomely and effectively illustrated.

It is a curious story, full of dramatic situations, that Dr. Charles Frederic Goss has just published, "The Loom of Life" (Bowen-Merrill Company). A young girl in our South, but born in Greece and of Hellenic ancestry, is betrayed by her loving Southern nature into trusting her lover too much. When the shock of his desertion has embittered her, and has brought up the pagan Greek in her, she pursues him and has him ruined, — when a softer, more Christian spirit triumphs over her hate.

"Roger Drake," by Henry Kitchell Webster (Macmillan), is the story of a Captain of Industry told in the first person. The successful "Captain" confesses at the end of his biography that the long struggle "had left a scar," and doubtless many a millionaire has had to admit the presence of the bondage that making money has brought. As an effort to imagine the life struggle of a great man of business from the inner point of view, Mr. Webster's book has decided merit.

The story of "Adam Rush" from the night of his birth to the moment when Constance says "Yes" is a very pleasant one as told by Mr. Lynn Roby Meekins (Lippincott), and the quiet charm of the life at Wheatley Hundred is well depicted.

Mr. Charles Harriott's new story, "Love With Honor" (John Lane), introduces us to a London scene, and a London Bohemia, and ends its love story with becoming prettiness.

A love story well told, the scene in colonial Virginia, is "The Wooing of Judith," by Sara B. Kennedy (Doubleday, Page & Co.).

Mr. A. E. W. Mason's new story, "The Four Feathers" (Macmillan), begins in military company in London, and takes us to Egypt and into the campaign against the Dervishes.

# INDEX TO PERIODICALS.

Unless otherwise specified, all references are to the November numbers of periodicals.

THE YOUTH'S COMPANION, BOSTON, MASS.

## THE MACMILLAN COMPANY'S HOLIDAY BOOKS

### The Best Books for Gifts

#### JOHN FISKE'S

#### ESSAYS: HISTORICAL AND LITERARY

The most representative work left by the Author of "The Destiny of Man," etc.

*Two vols. Cloth, 8vo, \$4.00 net. (Carriage 40 cts.)*

1. SCENES AND CHARACTERS IN AMERICAN HISTORY.
2. IN FAVOURITE FIELDS.

These Essays show the late JOHN FISKE's many-sided genius as no volume hitherto published has. Among them are the best examples he has left of his careful, scholarly, purely literary style; of the care and profundity of his methods of historical research; of the powerful critical analysis shown by the author in his "American Political Ideas," while others are in his best light, reminiscent style.

#### DR. EDWARD EVERETT HALE'S MEMORIES OF A HUNDRED YEARS

By the Author of "The Man Without a Country," etc.

*Two vols. Profusely illustrated. Cloth, \$5.00 net.  
(Carriage 40 cts.)*

Undoubtedly the most generally interesting biographical work published this fall. DR. HALE's long and active life has been in touch with almost every prominent man and woman in social and political life. The illustrations include portraits, copies of rare prints and letters, etc., in facsimile.

#### JACOB A. RIIS' *New Book*

#### THE BATTLE WITH THE SLUM

By the Author of "How the Other Half Lives," etc.  
Uniform with "The Making of an American."

*Illustrated from the author's photographs and drawings  
by THOMAS FOGARTY. \$2.00 net. (Carriage 25 cts.)*

There are conditions analogous to those described in this book existing in every great American city, and it is of broad general interest, describing the means in use now and in the past for helping the poor in their uphill fight against the evil influences of crowded conditions of life.

*When net books are delivered from the publishers, carriage, either postage or expressage, is an extra charge. Write for the Christmas and Portrait Catalogues at*

**THE MACMILLAN COMPANY**

**66 FIFTH AVENUE  
NEW YORK**

## THE MACMILLAN COMPANY'S HOLIDAY BOOKS

### New Illustrated Books

MRS. EARLE'S *New Book*

#### SUN DIALS AND ROSES OF YESTERDAY

GARDEN DELIGHTS WHICH ARE HERE DISPLAYED IN VERY TRUTH, AND ARE MOREOVER REGARDED AS EMBLEMS

By ALICE MORSE EARLE, Author of "Old-Time Gardens," "Stage-Coach and Tavern Days," "Home Life in Colonial Days," etc.

*Crown 8vo, gilt top, \$2.50 net (postage 20 cts.)*

*Large paper edition (100 copies), \$20.00 net.*

Of Sun-dials is this book, but not wholly a relation of their history, existence, and manufacture; of Roses, but not alone the story of their presence in the garden by the side of the Sun-dial; an exhaustive history of both from a standpoint of sentiment and service.

MISS ROSE STANDISH NICHOL'S  
New Garden Book

#### ENGLISH PLEASURE GARDENS

Invaluable to those who would develop a style suited to special needs.

*Profusely illustrated. Cloth, 8vo, \$4.00 net.*

MR. CLIFTON JOHNSON'S  
New Illustrated Book

#### NEW ENGLAND AND ITS NEIGHBORS

By the Author of "Among English Hedges," "Along French Byways," etc.

*Profusely illustrated. Cloth, Cr. 8vo, \$2.00 net.*

MISS FRANCES CLARY MORSE'S New Book on

### Travel and Description

#### ANCIENT ATHENS

By **ERNEST ARTHUR GARDNER**, Yates Professor of Archaeology in University College, London. Formerly Director of the British School at Athens. Author of "A Handbook of Greek Sculpture," etc., etc.

*Profusely Illustrated. Cloth, 8vo, \$5.00 net. (Carriage extra)*

This handsomely illustrated book is a companion volume in its make up to Mau's "Pompeii." Its object is to enable both those who have visited Greece and those who have not to realize

the past and present appearance of the town and its monuments. For this purpose the book is very fully illustrated, as far as possible, by means of photography. Above all, the author has endeavored to give a direct record of the impressions derived from a familiarity with the sites and buildings described.

*Illustration cut down from ANCIENT ATHENS.*

#### F. MARION CRAWFORD'S

*Brilliant Pictures of Rome*

#### AVE ROMA IMMORTALIS

By the Author of "Saracinesca," "Rulers of the South," etc.

*With new illustrations and maps. Revised edition in one volume. Cloth, \$3.00 net.*

#### PROF. AUGUST MAU'S

*Authoritative Work on*

#### POMPEII:

*ITS LIFE AND ART*

Translated by FRANCIS W. KELSEY, University of Michigan.

*New Edition, Revised, Copiously illustrated, \$2.50 net.*

#### STORIES IN STONE FROM THE ROMAN FORUM

Stories by ISABEL LOVELL, which invest the historic buildings around the Forum with a rare degree of human interest.

*Cloth, 12mo, \$1.50 net.*

### Illustrated in Colors

#### JAPAN: A RECORD IN COLOR

By MORTIMER MENPES. Transcribed by Dorothy Menpes.

*New Edition.*

*Cloth, 8vo, \$6.00 net.*

#### THE HOLY LAND

Pictured by JOHN FULLEYLOVE and described by John Kelman.

To be complete in four volumes, of which three are now ready and the fourth is to be issued shortly. Cloth, \$20 *net*; half-morocco, \$30 *net*.

"Whether for learner or expert, there is no dictionary that offers such an immense array of information."  
—WILLIS HATFIELD HAZARD, in *The Churchman*.

*Sold by subscription only. For particulars of special cash and installment offers address*

**THE MACMILLAN COMPANY**

**66 FIFTH AVENUE  
NEW YORK**

## ANNOUNCEMENT

**B**Y the purchase outright of entire editions, amounting to 300,000 volumes, the Review of Reviews Company is enabled to give its subscribers two Christmas offers for 1902 so unusual that every reader of this Magazine must be interested—if not for himself, for friends who would appreciate such a chance.

That a Shakespeare library, including the Macmillan Company's new Eversley Edition of the great poet's works and the charming Connoisseur's Collection of Shakespeare Prints, can be offered at a saving of nearly \$17.00, and in little monthly payments at that, is possible only because the Review of Reviews gives the margin of profit on the book sales to its subscribers, getting its award in the fact of their continuance as readers.

We believed that people with the tastes of Review of Reviews readers would welcome an opportunity to get the Macmillans' new Shakespeare at a price even more attractive than that asked for the unknown editions now on the market. Therefore we bought the entire Eversley Edition, and offer it to you, with the beautiful collection of Shakespeare prints, at a price never before given for the like products of a great standard publishing house—with the further privilege of paying in monthly installments of \$1.

The Science books, once seen, are at once recognized as an actual intellectual necessity, like the Review of Reviews. Every one who has seen them is instantly impressed with their invaluable aid for twentieth-century people. These Masterpieces of Science are only 50 cents a month, and this also pays for a two-years' subscription to the Review of Reviews.

THE REVIEW OF REVIEWS CO.

# The Eversley Shakespeare

Complete works in 11 volumes, in handsome red cloth, including Mr. H. W. Mabie's biography of Shakespeare.

Regular price  
of the publish-  
ers (*The Mac-*  
*millan Co.*) \$17.00

## The Connoisseur's Collection of Rare Shakespeare Prints

150 interesting Shakespeare prints in a beautiful portfolio.

Regular price of  
the publishers  
\$10.00

"CERTAINLY in disseminating this compact and admirable Eversley Shakespeare, the Review of Reviews Company is doing the public a high service, and I wish to offer my share of the thanks due. I am of the unlearned, and to me the Notes and Introduction are invaluable; they translate Shakespeare to me, and bring him within the limits of my understanding. Most people have limits similar to mine, and need these generous helps; here they have their opportunity to supply their lack."

*St. Clemens.*

(Mark Twain.)

"PROFESSOR HERFORD'S edition is admirable in every respect, and cannot fail to be widely useful when brought before the great public in this way."

*Bliss Perry*

Editor *Atlantic Monthly*.

"THE auspices under which it is published give guarantee that the work is well done."

*Henry Van Dyke*

Princeton University.

"I HAVE had time only to give it a casual examination, but am much pleased with it. The mechanical work is excellent, and the whole arrangement in regard to classification is thoroughly satisfactory."

*Carroll D. Wright*

Carroll D. Wright,  
formerly U. S. Com-  
missioner of Labor,  
President Clark University,  
and Member Strike Commission.

Nowadays it is easy to get cheap books on easy payments, and it is easy to get standard works from standard publishers at standard prices.

Below is offered an opportunity to get the Macmillan Company's last published standard set of Shakespeare's Works at about one-third the regular price, and on easy payments at that.

THE new Eversley complete edition of Shakespeare, in red cloth binding, with Mr. H. W. Mabie's biography of Shakespeare added in uniform style (regular price \$17.00), and Mr. Seymour Eaton's Connoisseur's Collection of Shakespearean prints (regular price \$10.00), are offered at a saving of \$19.00 to two-year subscribers to the REVIEW OF REVIEWS.

Furthermore, the entire book and subscription money may be paid in small monthly payments.

A remittance of 50 cents brings the entire Shakespeare library to you immediately; the balance may be paid \$1.00 a month for only fourteen months. This covers the subscription to the REVIEW OF REVIEWS for two years (price for two years, \$5).

Can such an offer be passed by in the book-buying season?

Every household must have a set of Shakespeare. It should have the best, and when the best is offered at such a reduction of price, and in such convenient payments, there is nothing left to be said.

In every case the books and portfolio can be returned in five days if not satisfactory, in which case the remittance will be refunded.

*If you do not care to avail yourself of the installment plan, a check or money order for \$14.25 will complete the purchase price and pay the expressage.*

"I HAVE examined the edition with some care at that point. The text is founded on the labors of the classic Shakespeare scholars; Professor Herford's Introduction is an admirable analysis of the motive, characters, and development of the play; and the notes at the bottom of the page just suffice to explain unusual words or unaccustomed references without insulting the intelligence of the ordinary reader or leading the scholar off into philological or historical disquisitions."

*J. S. Schuman*

President Cornell University.

**Our Christmas Offer**  
**Including a two-years'**  
**Subscription to the**  
**Review of Reviews**

**50 cts DOWN and**  
**\$1 a MONTH**

or, \$14.25 cash.

*The Edition de Luxe* is printed on larger paper, giving wider margins, bound in half-morocco and marbled boards, gold top, silk head-bands, and is limited to 500 numbered sets. \$2 down and \$2 a month for eleven months, or a check for \$22 for the set, the prints, and the subscription.

**The Review of  
Reviews**

The magazine that keeps one "up with the times" has come to be a necessity for intelligent Americans who want to progress. It is often remarked by a subscriber that Dr. Shaw's editorial "Progress of the World" is alone well worth the \$2.50 per year charged for the magazine. But entirely in addition to this there are the timely contributed articles in each number, nearly a hundred valuable portraits and pictures, including the unique cartoon department, and the reviews of the best articles from the most important magazines all over the world. Thus, whatever other magazines are desired for their stories, pictures, etc., the REVIEW OF REVIEWS is considered indispensable.

**The Connoisseur's Collection of Rare  
Shakespeare Prints**

The most refined lovers of literature and of books agree that it is in much better taste to have the illustrations for such a classic as Shakespeare separate from the book. We have been fortunate in obtaining for our subscribers the entire edition of the Connoisseur's Collection of rare Shakespeare prints, edited and published by Mr. Seymour Eaton, Librarian of the Book-lovers' Library. The sumptuous and attractive portfolio contains no less than 150 prints of rare and interesting Shakespearean subjects, and was alone sold for more than we charge for the books and the portfolio together.

**THE REVIEW OF REVIEWS CO.**  
**13 Astor Place, New York**

"SHAKESPEARE'S WORKS and the Bible have been the corner stones of the language, and if we are to keep the language in its purity and strength, present generations must be thoroughly familiar with these. In connection with the good work which Dr. Shaw is doing, this Eversley Edition is most eminently fitting. It places within the reach of moderate purses prints that have been hitherto unobtainable."

*Winston Churchill*

Author of "Richard Carvel."

THE EVERSLEY IN HALF LEATHER.

**The Eversley  
Shakespeare**

Dr. C. H. Herford, Professor of English Literature in the Univ. of Wales, was selected by the Macmillan Company to edit the best-made and standard edition of Shakespeare's works, to include every advantage made possible by modern scholarship. The handsome volumes of the Eversley Edition have a beautiful, clear type-page and type, and are in every way worthy of the greatest literature in the English language, which they contain. On each page there are discriminating explanations of the puzzling phraseology that may occur. The handsome binding is in red. Mr. Mabie's recent life of Shakespeare has been added to the set in uniform type, paper, and binding.

"THE books are of convenient size and excellent workmanship. The text is excellent and the work of the Editor admirably done. Of course it will require a good deal of study and long use to learn of the merits of a new edition of Shakespeare. But I have no doubt yours will stand the test."

*Geo F Hoar*

(Senator Hoar.)

"THE size of the volume is convenient both for carriage in the pocket and for reading; the Introductions seem to me especially valuable for the general reader, and Mr. Mabie in his interpretation of the Life of Shakespeare, as in all his criticism, by his fine sympathy, gets, as it were, within the poet, and himself sees, and enables his readers to see, life and its problems with the poet's own eye."

*Lyman Abbott*

Dr. Lyman Abbott.  
Editor Outlook.

**The  
Review of  
Reviews Co.**

I accept your  
Shakespeare  
(cloth binding) offer  
with the understanding  
that the set and  
portfolio may be returned  
within a week if not satisfactory.

Cut out coupon and send with 50 cents in stamps.

R.R.D.

## WHAT EMINENT MEN ARE SAYING OF THE SCIENCE BOOKS

"It seems to me Mr. Iles has done an excellent thing in making a collection of short and popular scientific articles from the immense mass of literature on the subject, and has shown excellent judgment in the selection.

"SIMON NEWCOMB,  
Professor Astronomy,  
Johns Hopkins University."

"I am sure that this popular form of putting up scientific matter will prove of very great benefit.

"CARROLL D. WRIGHT."

"The selection made by Mr. Iles seems to me admirable, and the books are worthy of a very wide circulation. They will interest the old and the young, men of science, and students. I shall be very glad to commend them wherever I have an opportunity.

"D. C. GILMAN,  
Ex-Pres. Johns Hopkins  
University."

"Of the popularizing of a surface science-knowledge there is no lack at the present time; but the popularizing of scientific thought in its higher reaches is still to be done. Mr. Iles' work and yours I look upon as nearly the beginning of it; and a most excellent beginning it is.

"J. N. LARNED,  
Former Pres. American  
Library Association."

"They seem to me the aptest venture in publication which I have noticed in recent years. I am sure that the demands for them will be very large.

"E. BENJ. ANDREWS,  
President Univ. of Nebraska."

"In these days, when 'new-grown' and 'forced' fiction is scattered everywhere, it is refreshing to see something substantial and of permanent value offered to readers.

"EDWARD R. SHAW,  
New York University."

"Thoughtful people who want to give point and direction to their reading must welcome, in this compact and ordered form, these chapters upon science.

"MERRILL E. GATES."

### Eminent Men Consider These Books Invaluable

The new library of scientific achievement, "Masterpieces of Science," is receiving the most flattering commendations from notable men. Indeed, it is hard to see how any alert, ambitious American man or woman, boy or girl, will refuse the opportunity to obtain this new set of books, absolutely necessary as they are to enable the average person to understand the times we live in and the modern wonders of science.

### THE EDITOR

Mr. George Iles is the editor; he is the author of "Flame, Electricity, and the Camera," of which the late JOHN FISKE said:

"I have read the proof sheets of your book with an intense interest, growing into red-hot enthusiasm. It is one of the most fascinating books that I have seen in the last ten years. Your points are so well taken, so happily and richly illustrated with examples, and their bearing on the main argument is so skillfully kept in view, that the result is, in my mind, a truly great book."

### The Subjects of the Six Volumes

The six volumes are illustrated, of a charmingly convenient size and shape for real reading, are well bound in handsome red cloth, and printed clearly and beautifully from new plates. They are devoted to:

- |   |                       |
|---|-----------------------|
| I. The Skies and the Earth                  | IV. Explorers         |
| II. Invention and Discovery                 | V. Health and Healing |
| III. The Naturalist as Interpreter and Seer | VI. Mind              |

## ***Designed for the Average Man and Woman***

This invaluable library of scientific achievement not only furnishes the reader with a perspective view of the building of modern science; it gives him the masterpieces of the greatest scientists, the highest flights of their imagination and intellect. Mr. Iles has edited the library for the average man, so that there is nothing too technical to be fascinating reading for the average man or woman who wants to understand the world we live in, and the wonders of the telephone, the telegraph, the camera, the steam engine, of modern medicine and modern mind-study.

## **The Science Books Can Only Be Purchased Through Us**

You will decide that you must have these books sooner or later. Why not order them at once, while you can get them at such a great reduction and in 50-cent payments in connection with a subscription to the REVIEW OF REVIEWS? *They cannot be purchased at all except through us.*

## **TERMS AND BINDINGS—A DE LUXE EDITION**

Send 50 cents and the books will be expressed at once, carriage prepaid. You can return them any time within a week if you do not like them. If you keep them, send 50 cents a month for 12 months. You will receive the REVIEW OF REVIEWS every month for two years (regular price \$5).

If you do not wish to pay in installments, \$6 pays in full for the books and the subscriptions.

We have a few *de luxe* half-leather sets at a slight advance in price,—that is, \$1 down and \$1 for ten months, or \$10.00 in cash, the magazine subscription being included.

## NEW BOOKS OF REAL WORTH

### UNKNOWN MEXICO

Carl Lumholtz

A record of five years' exploration among the tribes of the western Sierra Madre; in the Tierra Caliente of Tepic and Jalisco and among the Tarrascos of Michoacan. In two elaborate volumes of 1,000 pages, illustrated with artistic treatments of 530 photographs taken by DR. LUMHOLTZ, together with 16 plates lithographed in full color and three maps, all illustrating the explorer's remarkable discoveries. In two volumes, \$12.00 net. (Expressage extra.)

### ALL THE RUSSIAS

Henry Norman

Travels and Studies in Contemporary European Russia, Finland, Siberia, the Caucasus, and Central Asia. With over 100 striking and timely illustrations, being all artistic treatments of photographs, with few exceptions the products of the author's own camera.

8vo, \$4.00 net. (Postage, 26 cents.)

### THROUGH HIDDEN SHENSI

Francis H. Nichols

Profusely illustrated from photographs taken by and for the author, and a map of the route. An account of a journey, in the autumn of 1901, from Peking to Sian, in the province of Shensi, China, thence southward down the Han River to Hankow. It is essentially a story of untraveled roads over which few white men have ever ventured.

8vo, \$3.50 net. (Postage, 18 cents.)

### ACROSS COVETED LANDS

A. H. Savage Landor

Author of "China and the Allies," etc. With more than 150 illustrations from photographs and sketches by the author while on his journey. A travel work of absorbing interest, studied with the freshness of view and keenness of observation characteristic of Mr. Landor's former well-known works, and, as in those works, full of unusual incident.

In two volumes, \$7.50 net.

### THE AMERICAN MERCHANT MARINE

Winthrop L. Marvin

The story which Mr. Marvin tells in this volume has the interest of a romance, especially the chapters dealing with the East India trade and with the whaling fishery. The historical narrative is full, and is enlivened with the records of many personal experiences which give it a popular interest not usually found in books on this subject.

\$2.00 net. (Postage, 17 cents.)

Two New American Novels of Human Interest

## The Loom of Life

**By Charles Frederic Goss**

Author of "The Redemption of David Corson."

"Mr. Goss' splendid powers have been demonstrated afresh. This book alone is strong enough, big enough, important enough, enough suggestive and informing, to make a reputation for any one.

"He has already a large audience created by his earlier book, 'The Redemption of David Corson.' The new book will at once find favorable and eager readers."—*The Living Church*.

Price, \$1.50, postpaid.

## The Long Straight Road

**By George Horton**

Author of "Like Another Helen."

"Not a long way after Balzac, with all that Frenchman's capacity for 'catching the manners living as they rise.' It may be said in all truthfulness that we have now an American 'Comedie Humaine,' root, branch, and stalk thoroughly American, and as thoroughly typical of a certain phase of our life and living as are Balzac's delineations of French life and manners."—*Los Angeles Express*.

Illustrated. Price, \$1.50, postpaid.

There is one Great Book for Children this year

This charming idea of a life of Santa Claus will make an instant appeal to every child, and the story is so delightfully told that the book is sure to become a children's classic. With many full-page pictures in colors by MARY COWLES CLARK, and a gayly illuminated cover. Cloth bound. Price, \$1.00, net. If mailed, add 15c. for postage.

FOR

## A PARTIAL ANNOUNCEMENT

### The Government of the United States

A series of articles of commanding interest and importance on the various departments of the United States Government. They are not mere descriptions of the routine of the departments, but treat with authority their many new and varied developments, responsibilities and duties.

The scheme will include among others the following:

THE EXECUTIVE OFFICE, by James Ford Rhodes.

THE TREASURY, by Frank A. Vanderlip.

THE UNITED STATES SENATE, by Henry Cabot Lodge.

THE SCIENTIFIC WORK OF THE GOVERNMENT, by Prof. S. P. Langley.

THE SUPREME COURT, by Justice David J. Brewer.

THE NAVY DEPARTMENT, by Capt. A. T. Mahan.

THE WAR DEPARTMENT, in two articles, by Gen. W. H. Carter and Judge C. E. Magoon.

CIVIL ADMINISTRATION IN THE EAST, by Gov. William H. Taft.

### Letters of a French Ambassadors at the English Court

Madame Waddington, French Ambassadors to England in the eighties, contributes a series of remarkable personal letters to her family, written in the brightest and most vivid English. Nothing could surpass the liveliness of her descriptions of the court ceremonies and the picturesque figures of the various functions. They will be fully illustrated.

### General Gordon's Reminiscences of the Civil War

General Gordon, of the Confederate army, is one of the few survivors of the great leaders of the Civil War, and his reminiscences are the most interesting contribution remaining to the story of the great struggle. The articles are full of the spirit and vividness which have made his lectures famous. Fully illustrated.

### The Contents of Scribner's

"There is something about *Scribner's* which one does not find in the other magazines of the day. It seems to have a progressive spirit back of it."

—*Cincinnati Commercial Tribune*.

"The feature of *Scribner's* which distinguishes it from the other American periodicals is the attention bestowed upon practical topics which touch directly upon the life of the people."

—*San Francisco Chronicle*.

"We believe it is more equal in the quality of its fiction than any other American periodical."

—*Indianapolis News*.

"*Scribner's* is the most uniformly readable of the high-class magazines."

—*New Orleans Picayune*.

"With each year *Scribner's* grows better and at the same time takes on a stronger individuality."

—*Brooklyn Eagle*.

"*Scribner's* is pure gold within. The promise for next year insures the wealth of a great library coming into our homes in instalments."—*The Universalist Leader*.

"Well in the forefront of the most popular of our magazines stands *Scribner's* at all times."

—*Boston Courier*.

# MAGAZINE

## 1903

25 Cents  
a Copy

### FOR NEXT YEAR

#### Mrs. Wharton's Novelette

A new story by Edith Wharton will be published in *Scribner's* during the year—a novelette about the length of her story "The Touchstone." It is entitled "Sanctuary," and is most effective and unusual in idea, and distinguished by the qualities that make all that she writes in the highest degree interesting.

#### Illustrations in Scribner's

"Illustrations which are not only artistic, but which speak of the very latest and freshest ideas in current art."

—*New York Tribune*.

"*Scribner's* is an art magazine of the highest excellence. The color plates and other illustrations are revelations of the high state of perfection to which letter-press printing has latterly attained."

—*St. John's News and Advocate*.

"The color work is by far the most beautifully done and the most technically perfect that has ever been produced. This issue (August) will remain the standard of all color work for some time."

—*From the editor of a photographic publication*.

"Allow me to extend to you my sincere congratulations on the appearance of the August issue of your magazine. In my opinion it is the acme of twentieth-century magazine making."—*From the art editor of another magazine*.

"... The most beautiful color work in the November number that I have seen in this country printed from relief plates."—*Extract from letter from an expert in color work*.

"This magazine stands at the head of the list for excellence and high-grade literature. Its illustrations are *par excellence* and the lovers of the beautiful may always revel in it."

—*American Baptist Flag*.

#### John Fox's New Novel

The first serial of the year is Mr. John Fox, Jr.'s, novel, "The Little Shepherd of Kingdom Come," a story that begins in the Tennessee Mountains and has its course before, during and after the Civil War. It is Mr. Fox's longest and best story. Each instalment will be illustrated.

#### Short Fiction

Richard Harding Davis, Mrs. Wharton, Miss Daskam, J. B. Connolly, Mrs. Andrews, Guy Wetmore Carryl, F. Hopkinson Smith, Thomas Nelson Page, Arthur Cosslett Smith, Nelson Lloyd, A. T. Quiller-Couch, and many other well-known writers will be represented in the pages of the Magazine by stories short and long, and illustrated by artists whose names and best work have come to be identified with *Scribner's*.

#### Art Work for 1903

The coming year will surpass all preceding ones in the interest and distinction of the art material, which will include the work of new artists of talent as well as that of well-known favorite illustrators. Among those who will contribute illustrations are Howard Pyle, Maxfield Parrish, Walter Appleton Clark, A. B. Frost, H. C. Christy, F. C. Yohn, Henry Hutt, E. C. Peixotto, Henry McCarter, Edward Penfield, Jules Guérin, Henry Reuter-dahl, W. Glackens, Jessie Willcox Smith, Violet Oakley and others.

# Revell's New Fiction

....SEND FOR OUR UNIQUE ILLUSTRATED HOLIDAY LIST....

First  
Edition  
50,000.

By Author of "Black Rock," "The Sky Pilot," etc.  
**Glengarry School Days**

First  
Edition  
50,000.

By RALPH CONNOR. Illustrated. 12mo, cloth, \$1.25.

The new story fittingly supplements "The Man from Glengarry" (now 140th 1000).

"His material is magnificent in its contrasts and opportunities. Ralph Connor is a man to keep in mind as one of the most virile, faithful and wholesome writers of to-day."—*Public Ledger*.

"His men are sturdy giants of the forest, whose power breathes from every word."—*Tribune, Chicago*. "His field is unquestionably his own."—*Herald, Boston*.

*A True Story of Indian Life*

## Two Wilderness Voyagers

By FRANKLIN WELLES CALKINS. Cloth, \$1.50.

The author of "The Mississippi Bubble" says: "Mr. Calkins has done something new. He gives us Indians, but they are not merely buck-skinned manikins. He gives us the West, but without pose—a white story done in red."

*A College Girl's Story*

## Janet Ward A Daughter of the Manse

By MARGARET E. SANGSTER. Cloth, \$1.50.

Mary E. Wilkins says: "A really meritorious book for girls is, since Miss Alecott laid down her pen, so unusual; but here is one which meets well the need. . . . An absorbing story; it is full of interest for the general public as well."

*A Vivid Mormon Story of the Occupation of the Great Salt Lake Basin*

## By Order of the Prophet

By ALFRED H. HENRY. 12mo, cloth, illustrated, \$1.50.

"He writes with conviction and with a commendable reserve power. There is nothing lurid or sensational or overdrawn about his picture—it is simply tragic, pitiful, heart-rending—a page torn from the story of a ruined life. None of the previous attempts is worthy of being placed in the same class with this really strong story."—*Commercial Advertiser*.

*By Author of "Fishin' Jimmy"*

## Aunt Abby's Neighbors

By ANNIE TRUMBULL SLOSSON. Fully illustrated. 12mo, cloth, \$1.00.

"A book you will read and treasure, laugh over and cry over, read at odd moments, or study and mark and learn from. You'll give it away and have to get another copy."—*S. S. Times*.

*By Author of "A Lily of France"*

## The Little Green God

A Satire on American Hinduism. By CAROLINE ATWATER MASON. 16mo, cloth, 75 cents.

"Has only one fault—it is n't long enough.—Would that other story-tellers could write so pungently or engrossingly as to make readers long for more. She handles her material with rare skill."—*Boston Globe*.

*Where Coal is King*

FIFTH EDITION

*The Coal-Miner's Story*

## Those Black Diamond Men

A Tale of the Anthrax Valley. By WILLIAM F. GIBBONS. 12mo, cloth, illustrated, \$1.50.

Jacob Riis says: "It interested me greatly. . . . More power to his elbow."

"It is a series of dramatic human scenes, sometimes with thrilling incidents, sometimes of tragic intensity, sometimes touched with humor. It is written from plain, heartfelt interest in the 'black diamond' men, and the brisk action of the story holds the attention firmly."—*The Outlook*.

*A Tale of Two Continents*

## A Chinese Quaker

By NELLIE BLESSING-EYSTER. Cloth, \$1.50.

"In this 'unfictitious' novel Mrs. Eyster has embodied oriental picturesqueness with occidental progressiveness, and the romantic element is charmingly interwoven."

*San Francisco Examiner*.

*A Story of Power and Purpose*

## Fool's Gold A Study of Values

A Novel by ANNIE RAYMOND STILLMAN. \$1.50.

"A veritable literary inn. . . . A plot that is out of the ordinary. . . . Displays unusual skill. . . . A wholesome stimulant after the incessant cries for recognition from so much that is pernicious."—*Boston Transcript*.

# Revell's Gift Books

....SEND FOR OUR UNIQUE ILLUSTRATED HOLIDAY LIST....

By PROFESSOR GEORGE ALBERT COE, Ph.D.

## The Religion of a Mature Mind

Studies in Modern Problems by the Author of "The Spiritual Life." 12mo, gilt top, \$1.35 net.

A brilliant, readable, thought-provoking discussion of some practical religious problems in the modern spirit. The essential truths of evangelical religion in the conceptions of to-day. Prof. Coe meets all questions fairly, searchingly, and with practical purport.

"The most important contribution to religious thought for the current year."—*Chicago Chronicle*.

### This is for You

Love Poems of the Saner Sort. Selected by WILLIAM S. LORD. Decorated cover, deckle edges, gilt top, \$1.00 net.

An exquisite gift book for every one. The verse selected is of the sweetest sentiment and highest literary value. As complete a gift as it is possible to devise.

### The Evolution of a Girl's Ideal

A Little Record of the Ripening of the Affections to the Time of Love's Coming. By CLARA E. LAUGHLIN. 50 cents net.

Margaret E. Sangster says: "A fascinating study. . . . A sort of revelation and interpretation, frank, ingenious and original."

By JAMES M. LUDLOW, D.D., Litt.D.

## Incentives for Life: Personal and Public

By Author of "Deborah" "The Captain of the Janizaries," etc. 12mo, gilt top, \$1.25 net.

Discusses the determining factors in a life of purpose. Progressive, comprehensive and versatile. Practical because of its concreteness; philosophical because it deals with basal truths. The abundance of metaphor and illustration gives it vivacity, forbids dullness, and renders it stimulating and suggestive.

### Rollicking Rhymes for Youngsters

By AMOS R. WELLS. Illustrated in colors by L. J. Bridgman. 4to, cloth, illustrated, \$1.00 net.

L. J. Bridgman, whose unique illustrations in "Guess" last year made him famous, has united with Amos R. Wells to produce this ideal child's book. Mr. Wells is already well known as a writer for children.

### The Gift of the Magic Staff

The Story of Paul's Journey in Two Wonderlands. By FANNIE E. OSTRANDER, Author of "Baby Goose." Illustrated, \$1.00 net.

An ideal blending of the healthfully fanciful fairy element with the healthful teaching of elementary morals. In a most entertaining way Miss Ostrander takes the child through many delightful experiences.

"Since 'Bob, Son of Battle,' no better study of dog nature."—*Outlook*

## My Dogs in the North Land

By EGERTON R. YOUNG. Illustrated and decorated. 12mo, cloth, \$1.25 net.

"We are strongly tempted to characterize it as the best book about dogs that we have ever read. There are reasons in plenty for this judgment. We most enthusiastically commend the book to all dog lovers. It will delight them beyond measure."—*Syracuse Herald*.

By Author of "Araminta and Arabella"

### The Queen of Little Barrymore Street

By GERTRUDE SMITH. 75 cents net.

"Leaves an inexplicably pleasant impression. There is a note of joyousness, rare in modern books, that is kept up consistently throughout, and a pretty picture of a perfectly happy little girl that gives the book distinction."—*The Sun*.

An idealized Study of the Human Body

### The Story of a Living Temple

By F. M. and M. H. ROSSITER. \$1.00 net.

"One of the few works that can be put into the hands of young people with propriety and positive benefit."—*Detroit Free Press*.

"It is a success both as a piece of literature and as a scientific work."—*Christian Advocate*.

**FLEMING H. REVELL COMPANY, PublisherS**  
New York, 158 Fifth Ave.—Chicago, 63 Washington St.—Toronto, 27 Richmond St., W.

## THE HUDSON RIVER

From Ocean to Source. By EDGAR MAYHEW BACON, author of "Chronicles of Tarrytown," etc. 8vo. 100 illustrations, including a sectional map of the River. Net, \$4.50. (By mail, \$4.80.)

## THE ROMANCE OF THE COLORADO RIVER

Being an account of the discovery and of the explorations from 1540 to the present day, with particular reference to the two voyages of Powell through the Great Canyon. By FREDERICK S. DELLENBAUGH, author of "North America of Yesterday," etc. 8vo. Fully illustrated. Net, \$3.50. (By mail, \$3.80.)

## FAMOUS HOMES

Library Edition. Two vols. Royal 8vo, in a box, net, \$7.50. Vol. I.—Famous Homes of Great Britain and their stories. Edited by A. H. MALAN, describing, among other castles, Lyme, Battle Abbey, Blenheim, Cawdor Castle, Holland House, Charlecote, Chatsworth, Belvoir, Warwick. Vol. II.—More Famous Homes of Great Britain. Among others described are Cotehele, Knole, Blickling, Mt. Edgcumbe, Wilton, Naworth, Inverary.

## ST. AUGUSTINE

And his Age. By JOSEPH MCCABE, author of "Peter Abélard," etc. 8vo. 1/2 vellum, with portrait. Net, \$2.00. (By mail, \$2.20.) A vigorous and attractive study of the man, Augustine, and of his time.

## LAVENDER AND OLD LACE

By MYRTLE REED, author of "The Spinster Book," "Love Letters of a Musician," etc. 12mo. Cloth, net, \$1.50; red leather, net, \$2.00; gray ooze leather, net, \$2.50; lavender silk, net, \$3.50. (Postage, 10c.) A love story of New England which is characterized by humor, delicacy, and absorbing interest.

## WILLIAM MORRIS

Poet, Craftsman, Socialist. By ELISABETH LUTHER CARY, author of "The Rosettis," "Tennyson," etc. 8vo. Nearly 40 illustrations, including one in color, and 13 photogravure plates. Net, \$3.50. (By mail, \$3.75.)

## FAMOUS FAMILIES OF NEW YORK

Historical and biographical sketches of families which in successive generations have been identified with the development of the nation. By MARGHERITA ARLINA HAMM. 2 vols. Royal 8vo. 200 illustrations. 1/2 vellum, net, \$15.00; full morocco, net, \$25.00; full crushed levant, net, \$45.00.

## ITALIAN LIFE

In Town and Country. By LUIGI VILLARI. Number 7 in Our European Neighbors series. 12mo. Illustrated. Net, \$1.20. (By mail, \$1.30.) A delightful book in a delightful series. "Full of information, comprehensive, and accurate."

—*Syracuse Herald.*

## THE PAPAL MONARCHY

By WILLIAM BARRY. Number 64 in the Story of the Nations series. 12mo. Fully illustrated. Net, \$1.35; half leather, gilt top, net, \$1.60. (Postage, 15c.) The rise and fall of the Hierarchy, the characters and careers of Pontiffs, and the results of Papal influence on history during the period 590 to 1303, is the subject of Dr. Barry's volume.

## TWENTY-SIX HISTORIC SHIPS

The story of certain famous vessels of war and their successors in the navies of the United States and the Confederate States from 1775 to 1902. By FREDERICK STANHOPE HILL, late U. S. N., author of "Twenty Years at Sea," etc. Introduction by Rear-Admiral Belknap. 8vo. Fully illustrated.

## THE YOUTH OF LA GRANDE MADEMOISELLE

(1627-1632)

By ARVÈDE BARINE. Authorized English version by L. G. MEYER. 8vo, with about 25 illustrations from contemporaneous sources. Net, \$3.00. (By mail, \$3.25.) All French history is interesting; but there are few pages so fascinating as the kaleidoscopic career of La Grande Mademoiselle. Her memoirs give unique and valuable pictures of life at the Court of Anne of Austria, and of the wars of the Fronde.

## An Exquisite Christmas Gift

*"If you ever read a book  
you will enjoy The Critic"*

### The CRITIC

is an ably edited and splendidly illustrated magazine devoted to literature and art, and to the deeds and views of writers and artists. It is probably the best guide to the book buyer or reader, as its staff of reviewers is most eminent, each being a specialist.

### The CRITIC

represents in its general papers the main events and tendencies in the world of art and letters, as viewed by the most eminent writers in all civilized lands. Its treatment of art gives just the information desired by educated persons,—never over-technical, but always stimulating, and always in the interest of the best traditions.

### The CRITIC

in the justly famed "Lounger" established a department which has been copied, perhaps, more frequently than any other feature of a magazine. Its paragraphs contain the interesting news items, the side lights, the small news of bookdom, together with free-lance comment, quip, and criticism. THE CRITIC is a necessity to any one who wishes to be informed as to the best in modern letters and art.

*"If you ever buy a book  
you need The Critic."*

Until January 1

**The Critic**

# MODERN ELOQUENCE

*A Library of the Best After-Dinner Speeches, Classic and Popular Lectures, Famous Addresses, Reminiscence, Repartee, Anecdote, Story, and Illustration.*

THOMAS B. REED, Editor-in-Chief

MODERN ELOQUENCE enters the literature of the Twentieth Century the most unique and attractive set of books published for a quarter-century. It is a new view of the times, public men, and questions, through the utterances of the representative men of brain and achievement of the last fifty years—a Library

containing the brilliant deliverances, often on occasions of international interest, of the foremost men of modern times—their public Addresses, Lectures, After-Dinner Speeches, and *bon mots*, presented in artistic and durable form.

Herein vital questions, historical personages and events, literatures, religions, financial problems, political theories, statecraft, discoveries, and inventions, individual rights, and class and social relations are ably and eloquently discussed. Leaders of thought and creators of great enter-

**1 Fifty Great Classical and Popular Lectures**, gathered from diversified fields, and representing the highest type of spoken thought—Lectures which have held spellbound hundreds of thousands of persons who paid liberally to hear them. Every lecture is given complete, and most of them are here published for the first time; they are humorous, pathetic, critical, ethical, reminiscent, and expository, and deal with History, Science, Travel, Biography, Literature, Art, Philosophy, etc. They are marked by elevation, vigor, and catholicity of thought, by fitness, purity, and grace of style, and by artistic construction.

**2 About 150 Scholarly and Finished Addresses** delivered on special occasions, including notable Literary, Scientific, and Commemorative Addresses and Eulogies. These addresses represent the most eloquent and polished utterances of the most scholarly men of the last half-century, and, aside from their encyclopedic importance, possess an inestimable value to the lover of beautiful and classic English.

**3 About 300 Famous After-Dinner Speeches**, constituting the first collection of POSTPRANDIAL oratory ever published. They abound in wit, wisdom, and humor, and are

enticingly entertaining. **BUT THEY ARE MUCH MORE**; American literature does not elsewhere afford so valuable an exposition and discussion of the important events and questions of our national history.

**4 The brightest and most pungent collection of Anecdote, Reminiscence, Repartee, and Congressional Cloak-Room Stories**, such as only men like Thomas B. Reed, Champ Clark, Senator Dolliver, Congressman Allen, et al., could provide.

**5 Special Articles** by special authorities, on the various features and forms of oratory, reminiscent, suggestive, and instructive.

**6 Analytical Index and Cross References**, giving the book an encyclopedic value. In a sentence, the contents of the ten volumes are literally treasure-trove—Lectures of inestimable value, perhaps heard but once; Speeches that have set the world agog; Anecdotes that reveal the public character and the tendencies of the hour like reading by lightning flashes; and special articles which make this work a most notable contribution to English literature.

*For an hour—for a whole evening in the easy chair at home—for the study of style and diction that have electrified brilliant assemblies, for the man ambitious to become a successful or popular public speaker, and for the one who has to prepare a toast or an address, this work is a never-failing source of charm and inspiration.*

**SPECIAL OFFER** A large and handsome portfolio, containing 11 sample full-page photogravures and chromatic plates, and 80 specimen pages of brilliant After-Dinner Speeches, Lectures, Addresses, Anecdotes, etc., will be sent free of charge on request. With this we will also submit a special proposition which easily will place this great work in your possession. Use attached Coupon.

# The ART INTERCHANGE

SHOULD BE IN EVERY HOME

Now in its twenty-fifth year. (Established 1878.)

BETTER  
THAN  
EVER

It is the Oldest, Best, Most Progressive, and Practical (as well as the largest) Art and Household Monthly Magazine published. Indispensable to Art Workers, and an invaluable guide in ALL BRANCHES OF HOME DECORATION.  
*NO HOME COMPLETE WITHOUT IT.*

Each number lavishly and beautifully illustrated and accompanied by large, full-size design Supplements and exquisite fac-similes of oil and water-color paintings.

\$4 a Year  
Six mos. \$2  
35 cts. a copy

FOR the ensuing year THE ART INTERCHANGE will surpass all former volumes, and the color-plates to be given for china painting, oil and water-color painting, as well as adapted for framing, will be superior to any heretofore published. More than the usual quantity and variety of working designs for china-painting and for all manner of decorative purposes will be given. All designs, both in color and black and white, are accompanied by thorough directions for their treatment, all departments being under the ablest designers and writers. A department of especial value is the Instruction Department. Here all subscribers can at all times make known their wants in whatever field of work or study they are interested, and they will be carefully and conscientiously answered in all details, and advised as to proper methods by capable and reliable authorities. Space will not permit of our full prospectus here, but, for the asking, our descriptive, illustrated, thirty-two page Catalogue will be sent to any address.

AMONG THE REGULAR DEPARTMENTS CONSTANT ATTENTION WILL BE GIVEN TO:

Fine Art  
Illustration  
Wood-Carving  
Art Criticism

# BOOKS WORTH

Some books are designed for entertainment, others for information. This series compact and readable. In this busy, bustling age it is required that the information which books possible. These volumes are replete with valuable information, compact in form, and books on the subjects of which they treat. No one wishing to have a fund of general They average 200 pages, are 6 x 4½ inches in size, well printed on good paper,

**EACH 50 CENTS**

## ETIQUETTE

By Agnes H. Morton. Success in life is often marred by bad manners. A perusal of this work will prevent such blunders. It is a book for everybody, for the select sets as well as for the less ambitious. The subject is presented in a bright and interesting manner, and represents the latest vogue.

## LETTER WRITING

By Agnes H. Morton. Most persons dislike letter writing because they fear they cannot say just the right thing. This admirable book not only shows by numerous examples just what kind of letters to write for all occasions, but it teaches the reader to become an accomplished original letter writer.

## QUOTATIONS

By Agnes H. Morton. A clever compilation of pithy quotations, selected from a great variety of sources, and alphabetically arranged according to the sentiment. It contains all the popular quotations in current use, together with many rare bits of prose and verse not usually found.

## THINGS WORTH KNOWING

By John H. Bechtel. Can you name the coldest place in the United States or tell the probable cost of the Nicaragua Canal? What should you do first if you got a cinder in your eye, or your neighbor's baby swallowed a pin? This unique, up-to-date book answers thousands of just such interesting and useful questions.

## PROVERBS

By John H. Bechtel. The genius, wit, and spirit of a nation are discovered in its proverbs, and the condensed wisdom of all ages and all nations is embodied in them. This volume contains a representative collection of proverbs, old and new, and the indexes, topical and alphabetical, enable any one to readily find what is required.

## SLIPS OF SPEECH

By John H. Bechtel. Who does not make them? The best of us do. Why not avoid them? Any one with the desire for self-improvement can. No necessity for studying rules of rhetoric or grammar when this book can be had. It teaches both without the study of either.

## TOASTS

By William Pittenger. What would you not give for the ability to respond to them? No need to give much when you can learn the art from this little book. It will tell you how to do it; not only that, but by example it will show you the way.

## DEBATING

By William Pittenger. There is no greater ability than the power of skillful debate. Here are directions for organizing debating societies, and suggestions for all who desire to discuss questions in public. Also a list of over 200 questions for debate, with arguments both affirmative and negative.

## PRONUNCIATION

By John H. Bechtel. What is more disagreeable than a faulty pronunciation? No defect so clearly shows a lack of culture. This volume contains over 5,000 words on which most of us are apt to trip. They are here pronounced in the clearest and simplest manner, and according to the best authority.

## PRACTICAL SYNONYMS

By John H. Bechtel. Any one with the least desire to add to his vocabulary should have a copy of this book. It is designed mainly to meet the wants of the busy merchant or lawyer, the thoughtful clergyman or teacher, the wide-awake schoolboy or girl.

## PUNCTUATION

By Paul Allardyce. Few persons can punctuate properly; to avoid mistakes, many do not punctuate at all. A perusal of this book will remove all difficulties and make all points clear. It is practical, concise, and comprehensive.

## CONVERSATION

By J. P. Mahaffy. Some people are accused of talking too much. But no one is ever taken to task for talking too well. Of all the accomplishments of modern society, that of being an agreeable conversationalist holds first place. What to say, and just how and when to say it, is the general aim of this work.

## HYPNOTISM

By Edward H. Eldridge, A. M. There is no more popular form of entertainment than hypnotic exhibitions, and every one would like to know how to hypnotize. By following the simple and concise instructions in this complete manual any one can, with a little practice, readily learn how to exercise this unique and strange power.

## NURSING

By S. Virginia Levis. No household is exempt from sickness. Not every one can have a professional nurse, but no one need be without this valuable work. The fullest particulars are given for the care of the sick, not only in the simple, but also in the more serious ailments of life.

The books mentioned are for sale at all bookstores, or they

**THE PENN PUBLISHING COMPANY**

# THE HAVING

lines both features. The information is not only complete and reliable, it is compact contain shall be ready to hand and be presented in the clearest and briefest manner unequalled in point of merit and cheapness. They are the latest as well as the best information or who has the desire for self-improvement can afford to be without them. handsomely bound in green cloth, with a heavy paper wrapper to match.

**EACH 50 CENTS**

## CONUNDRUMS

By Dean Rivers. Conundrums are intellectual exercises which sharpen our wits and lead us to think quickly. This book contains an excellent collection of over a thousand of the latest, brightest, and most up-to-date conundrums, to which are added many Biblical, poetical, and French conundrums.

## WHIST

By Cavendish. Twenty-third edition. "According to Cavendish" is now almost as familiar an expression as "according to Hoyle." No whist player, whether a novice or an expert, can afford to be without the aid and support of Cavendish. No household in which the game is played is complete without a copy of this book.

## PARLOR GAMES

By Helen E. Hollister. "What shall we do to amuse ourselves and our friends?" is a question frequently propounded. This complete volume most happily answers this puzzling question, as it contains a splendid collection of all kinds of games for amusement, entertainment, and instruction.

## MYTHOLOGY

By John H. Bechtel. The average person dislikes to look up mythological subjects on account of the time occupied. This book remedies that difficulty because in it can be found at a glance just what is wanted. It is comprehensive, convenient, condensed, and interesting.

## ASTRONOMY

By Julia MacNair Wright. Can you tell what causes day and night, seasons and years, tides and eclipses? Why is the sky blue and Mars red? What are meteors and shooting-stars? These, and a thousand other questions, are here answered in a most fascinating way. Illustrated.

## BOTANY

By Julia MacNair Wright. The scientific subject of Botany made as interesting as a fairy tale. Not only is the subject treated with botanical accuracy, but there is given much practical information pertaining to the care and treatment of plants and flowers. Illustrated.

## MAGIC

By Ellis Stanyon. This complete volume contains full and intelligible descriptions of all the well-known tricks with coins, handkerchiefs, hats, cards, flowers, etc., together with a number of novelties not previously produced. The tricks are all easily performed, and but few require apparatus. Illustrated.

## FLOWERS

By Eben E. Rexford. Every woman loves flowers, but few succeed in growing them. With the help so clearly given in this volume no one need fail. It treats mainly of indoor plants and flowers, those for window-gardening, all about their selection, care, light, air, warmth, etc.

## DANCING

By Marguerite Wilson. A complete instructor, beginning with the first positions and leading up to the square and round dances. A full list of calls for square dances, the etiquette of the dances, and 100 figures for the german. Illustrated.

## PALMISTRY

By Henry Frith. Palmistry is one of the most popular subjects of the day. More people would be interested in it if they properly understood it. This volume furnishes full and trustworthy information on the subject, and by means of it any one will be able to read character fully and accurately. Illustrated.

## LAW, AND HOW TO KEEP OUT OF IT

By Paschal H. Coggins, Esq. Most legal difficulties arise from ignorance of the minor points of law. This volume furnishes to the busy man and woman information on just such points as are likely to arise in every-day affairs, and thus forestalls them against mental worry and financial loss.

## ELECTRICITY

By George L. Fowler. An interesting and thoroughly reliable presentation of the subject for the amateur or skilled electrician. If you wish to install an electric door-bell, construct a telephone, wire a house, or understand the workings of a dynamo, this volume will furnish the required information. A practical book of inestimable value to every one.

## GOLF

By Horace Hutchinson. No one desiring to keep up with outdoor athletics can afford to be without a knowledge of Golf. This book gives a complete history of the game, together with instructions for the selection of implements, and full directions for playing. A convenient glossary, together with the rules and etiquette of the game, is appended.

**Special Offer of 500 Sets**

THIS NEW 1902 EDITION

Contains Hundreds of Illustrations, Together with over 100 Full-page Photogravures and Half-Tone Etchings of Famous Historical Paintings, by TRUMBULL, CHAPPEL, and other Great Artists, making a most valuable collection of historical illustrations.

NO American home, however obscure and humble, can afford to be without some readable, authentic, and patriotic narrative of the struggles and triumphs of that land whose name has become, in all the world, the synonym of liberty. Such a work is Dr. Ridpath's **Popular History of the United States**. It is a compendium of the stirring facts of our history woven into a narrative so brilliant and dramatic as to leave an ineffaceable impression on the mind of the reader.

**Reads Like  
a Romance**

**A Holiday Gift That Would Be  
Appreciated**  
**ONLY 50 CENTS REQUIRED**

**OUR OFFER:** The work is issued in five royal octavo volumes, and is bound very beautifully and durably in heavy cloth, with half-seal stamping, which we offer to send *Free for Examination*, express paid, on receipt of 50 cents, balance to be paid in twelve monthly payments of one dollar each. We also bind it in the elegant half-calf style, gold top, for 50 cents per month additional.

**An Easy Way to Secure a Matchless Set of Books**  
**That Should be in Every American Home.**

**MAIL THIS COUPON TO-DAY**

HENRY G. ALLEN & CO., 150 Fifth Ave., N. Y.:  
I accept your special offer to REVIEW Readers of Ridpath's  
History of the United States, and enclose 50 cents as initial pay-  
ment. Send full particulars, and if satisfactory, will order the  
set, otherwise the 50 cents is to be returned to me.

HENRY G. ALLEN & CO., Publishers

The images rise from these pages like the creations of fiction. The great acts of our national drama are set on the historical stage like the scenes of the *Histories* of Shakespeare, and the imagination is borne onward without effort or weariness.

**500,000 COPIES SOLD**  
**OF THE FIRST EDITION**

**This is the GREATEST SALE ever recorded of a his-  
torical work, and shows the wonderful popularity  
of the author and the great merit of the work.**

In its five volumes will be found all the main facts of our history from the earliest times down to the terrible ending of the McKinley administration—told with marvelous historical accuracy, and yet in a vivid and brilliant style which carries the reader on and on without mental effort.

- 150 Fifth Avenue, New York

**Dr JOHN LORD, LL.D.**  
*Artist-Historian*  
*Author of*  
**"BEACON LIGHTS OF  
HISTORY"**

"**A**RTIST-HISTORIAN," the unique title given by the world of letters to Dr. John Lord, is perhaps as complete a description of the man and his work as could be given in a far lengthier biography.

He it was who, combining the accuracy of a Gibbon with the fascination of a Plutarch or a Prescott, has clothed the dry bones of historic annals with flesh and blood reality.

Emerson said: "There is properly no History, only Biography." Dr. Lord spent fifty years of enthusiastic research and productive energy in writing just that thing—the world's biography!

Unique among the world's writings, grand in its conception, colossal as an undertaking, marvelous in its execution, "Beacon Lights of History" has been accorded by right its place among the master-productions of all time.

It is History in a new form; it is romance that is reality; it is the "human" history, the recital of the life-stories of the leaders of every age by one who unites the profundity of the Scholar, the impartiality of the Judge and the accuracy of the Historian with all the vivacity and charm of the acknowledged Wit and Raconteur.

Instead of a mass of dull data, he portrays the lives of the great so that they really live, and pictures in so graphic a manner the ways in which they moulded the history of their times as to leave an impression that is indelible. One *cannot* forget the vivid scenes and stirring action with which he fills the pages.

Instead of the History of Rome with Cæsar in it, he gives us Cæsar—with Rome around him! He has chosen the most brilliant stars of civilization as sub-

jects, and by them he illumines the whole course of history.

From the dawn of recorded time he has brought his work to a natural end with the leaders of the present age—with never a lapse of that personal element, biography; never a gap in the human record; never a lessening of his hold on the interest of his readers.

That the last feature is absolute, witness the years which Dr. Lord spent on the lecture-platform, holding spell-bound hundreds of thousands with the wonderful action and charm of these same word-pictures—spell-bound too, in spite of a famously insignificant presence and a worse than imperfect delivery—solely because he was what his hearers called him, “Artist-Historian.”

In the preparation of a single lecture Dr. Lord not infrequently read or consulted as many as 300 books. But he had the unique art of compressing into a few spirited pages the fire and stress which many, even great writers, cannot compass in a volume. While the reader is carried along with the pleasant ease of fiction he gets the essence of many learned libraries.

There is no educated class to whom “Beacon Lights of History” does not appeal. Specialists use it as a reference work, particularly in connection with the condensed list of authorities for further research, given at the end of each lecture. Lawyers have declared the chapter on “Moses” the ablest article on moral law they ever read, and that on Roman Jurisprudence sheds light on the whole realm of civil law.

Dr. Lord's *illustrations by comparison* are a striking feature. For example, he compares the Apostles Peter and Paul in certain aspects with Luther, Knox and Latimer; Mohammed the Prophet with George Fox, the

Quaker; Michael Angelo, the daring artist, with Godfrey the Crusader. These and hundreds of similar parallels shine brilliantly through the pages and cast their searching side-lights into unsuspected corners.

“I have no time to read,” say you? The very class Dr. Lord writes for! He *saves* time. His long life of labor along a single line has *winnowed the wheat from the chaff*—his peculiar gift.

In brief, Dr. Lord has been the pioneer in writing history by means of biography. The day of dry annals and formal records is past. That keen critic Andrew Lang writes: “Biography is the true link between the past and the present, and its universal favor is assured.” The possessor of “Beacon Lights of History” need have no other histories or biographies of whatever time or country, and as a profound student of Dr. Lord's work writes, “*‘Beacon Lights’ is destined to become as indispensable in the home of culture as is the Century Dictionary and Cyclopaedia.*”

Over five hundred thousand volumes of the work have already been sold in its various incompleeted forms—5, 8 or 10 vols.—and now that it appears in its final 15 vol. form, bringing the work quite down to the present day, and with the addition of some 160 illustrations in Photogravure and Half-tone, the publishers are gratified that they are able to present the great work in a form as worthy as its enduring qualities deserve.

Its scope is now as complete as its author desired when he began his labors over half a century ago, ranging from the earliest times to this very year, concluding with a masterly record of the life-work of Prof. Virchow, whose services to science bespeak his inclusion among the “Beacon Lights of History,” and whose death Sept. 5th is the final recorded history in these volumes.

WITH the issuance of the first edition of the now fully-completed "Beacon Lights of History" the publishers announce the forming of the

## "BEACON LIGHTS" HISTORY CLUB

of limited membership. A certain number of sets have been reserved for this introductory purpose, and *members may secure them at a very considerable reduction from the regular prices*, and upon easy payments, monthly, if preferred.

### *The Sale of Memberships begins December 1st*

when the first copies from the press—the fairest, clearest impressions—will go to the earlier subscribers.

A full description of the work itself, specimen lecture, illustrations, etc., and details of this special introductory offer, will be sent free, on receipt of the coupon below.

## ONE DOLLAR

—the membership fee—is the only payment necessary in joining the History Club, and upon your enrollment as a member the entire set of 15 volumes is sent at once.

## IMPORTANT NEW BOOKS

### Poe's Complete Works

THE "VIRGINIA" EDITION. 17 HANDY VOLUMES IN BOX.

THIS is the most complete and accurate text ever prepared. It is the only one based directly on Poe, and including all his writings. It contains a new volume of letters and a new biography. The text is edited by Prof. JAMES A. HARRISON, of the University of Virginia, and contains introductions by HAMILTON W. MABIE and CHARLES W. KENT, and notes and variorum readings by R. A. STEWART.

"Unquestionably the most important issue of an American classic author for many years."—*New York Times Saturday Review*.

"Admirable both as literary work and as a piece of book-making."—*Henry Van Dyke*.

"Can never be superseded."—*Prof. John F. Genung*.

Cloth, \$12.50; limp leather, \$21.00; half calf, \$35.00 per set. Also made in De Luxe Library Edition, cloth, \$21.00; half calf, \$42.00 per set.

### Economics of Forestry

By BERNHARD E. FERNOW, late Chief Division of Forestry, U. S. Department of Agriculture, now Director New York State College of Forestry. 12mo. \$1.50 *net*. (Postage 15 cts.)

THE author treats forestry from its broadest and most important aspect, giving to the student of economics an authoritative work on this timely topic.

### The Coming City

By RICHARD T. ELY, Ph.D., LL.D., author of "Socialism and Social Reform," etc. 16mo, cloth, 60 cents *net*. (Postage 8 cents.)

A SMALL book concerned with the vital problem of municipal government as applied to the growing demands of the twentieth-century city.

### The Poetry of Robert Browning

By STOPFORD A. BROOKE, author of "Tennyson." 12mo. \$1.50 *net*. (Postage 15 cents.)

THIS study of the life and genius of Browning comes from a highly capable source. Mr. Brooke's previous work on Tennyson has shown his superior insight into the poetic animus of the times, and, therefore, his fitness for a similar book on the great companion poet of Tennyson—the one who alone challenges his supremacy in the Victorian era. The volume begins with an interesting contrast of the two writers, preparatory to a consideration of Browning and an interpretation of his spirit through his poems. It will prove of great utility to the Browning student, and a noteworthy addition to critical literature.

### Mind Power and Privileges

By ALBERT B. OLSTON. 12mo. \$1.50 *net*. (Postage 15 cents.)

A BOOK of peculiar and timely interest, endeavoring to locate the inner or "subconscious" mind, and discussing hypnotism, telepathy, Christian Science, and kindred topics in a psychological but popular way.

### Word Coinage

By LEON MEAD. 18mo. 45 cents *net*. (Postage 5 cents.) (Handy Information Series.)

A SUGGESTIVE and helpful study of new words, phrases, slang, and the various accretions of a live language. Will be found a useful supplement to the lexicon.

### Hawthorne's Romances

THE "LENOX" EDITION. 14 HANDY VOLUMES IN BOX.

A NEW printing of these classic stories, in volumes of convenient size, daintily bound and illustrated. Every volume contains an introduction by Prof. KATHARINE LER BATES, of Wellesley College. This is intended as a reader's edition, yet the commentary provides an excellent critical study of Hawthorne and his life as related to his works.

Cloth, \$10.50; limp leather, \$17.50; half calf, \$29.00 per set.

### A Daughter of the Sea

By AMY LE FEUVRE, author of "Heather's Mistress." 12mo. Illustrated by Piffard. \$1.50.

THIS gifted author here takes us to a rock-bound coast of England and introduces us to a heroine as untamed as a sea-gull, but who proves the good angel of a life-saving station. A wholesome story of religious tone.

### The Upper Currents

By the Rev. J. R. MILLER, D.D. 16mo. Plain edges. 65 cents *net*. Cloth, gilt top, 85 cents *net*. (Postage 8 cents.)

FULL of cheerful philosophy and words of inspiration. Straightforward lessons intended to incite to braver, stronger, truer life.

Complete Illustrated Catalogue sent on request.

THOMAS Y. CROWELL & COMPANY

426-8 WEST BROADWAY, NEW YORK

## A NATURE LIBRARY For Young and Old

The most fascinating and complete set of books about all sorts of animals in existence. Beautifully illustrated with seventy-two full-page color plates, many of them in from ten to sixteen colors, and over 2,200 black-and-white drawings.

The work is written by Richard Lydekker, F. Z. S., with sections by R. Bowlder Sharpe, H. A. Macpherson, F. O. Pickard-Cambridge, W. R. Ogilvie-Grant, C. J. Gahan, R. I. Pocock, M. Bernard and others.

With a preface by

**JOEL A. ALLEN,**

Curator of the American Museum of Natural History,  
and a general introduction by

**ERNEST SETON-THOMPSON,**

who says:

"It is easily the best and most reliable work in the field of popular Natural History."

### SEND THE COUPON

A FREE SPECIMEN-BOOK containing samples of the color-plates, black-and-white drawings, text pages, etc., with a full description of the New Natural History, and how you can have the entire set sent on payment of one dollar, will be mailed you if you cut off and send us the three-cornered coupon below **at once**.

## ALL ABOUT WILD ANIMALS

72 FULL-PAGE COLOR PLATES

Volumes are Royal Octavo—nearly 11 inches high, 3600 pages.

Young folks enjoy and study this Natural History because it is written in a popular and pleasing style, and it is so full of fine pictures by the best "animal artists" in the world.

No popular science work of recent years has been so highly praised both by scientific men and by persons who are interested in Nature Study for the young.

### Entire Set Sent on Receipt of One Dollar

Balance at \$2 a month

#### THE NEW NATURAL HISTORY

is a thoroughly popular scientific work.

Great pains have been taken to simplify the language and style and make it plain to the common understanding. A fraction of its space is given to structure and classification, but the great bulk is devoted to interesting facts about animals and stories of their singular ways of life. The whole of animal creation is covered. Every sort of land animal, water animal, bird and insect has its section or chapter.

We are able to offer this set of books, beautifully bound in half-morocco, for a short time at much less than the regular price and on "little payment" terms.

If you are at all interested in Nature Study, either for yourself or for your children, send us the coupon in the corner of the page **at once**, before the opportunity passes

**MERRILL & BAKER, Publishers**  
9 and 11 East 16th St., New York

From the **PHILADELPHIA LEDGER**:

"Little folks will revel in this Natural History."

From the **SCHOOL JOURNAL**:

"It would be hard to bestow too much praise on this Natural History."

From **THE CRITIC**:

"It gives the results of the most recent investigations in a popular form and is a reference work of the greatest value."

From the **BROOKLYN EAGLE**:

"The most promising attempt that has been made to popularize the study of Natural History."

From the **BUFFALO EXPRESS**:

"Superior to any work of the kind ever published in English."

From **THE WRITER**:

"The work is commended to every lover of nature."

R.R.

# Seventeen Years Ago

## THE UNION LIBRARY ASSOCIATION

Sprang into existence, and is now about the most popular book-selling establishment in the United States, as is evidenced by the fact that we last year enrolled more new members than in any previous year, the majority of whom joined upon the RECOMMENDATION OF OUR OLD MEMBERS TO THEIR FRIENDS. This is a rather ideal sort of constituency, but it is what we have been striving for during the past seventeen years. For the information of book-lovers who are not acquainted with

## The Union Library Association

and its workings we would say that—

1. It is made up of the largest body of book-buying book-lovers in existence.
2. It is a union of Home Library Builders, Reading Clubs, and Public Libraries associated together for the purpose of money saving in book-buying, the Association acting as *wholesale purchasing and supply agents* for its members, furnishing whatever they may desire in the Book, Stationery, or Periodical line at prices ranging all the way from Net up to 80 PER CENT. DISCOUNT.
3. It is, and has been for the seventeen years and over of its existence, the ADVOCATE of GOOD BOOKS and GOOD EDITIONS at LOW PRICES.
4. It is the largest mail-order book establishment in the United States, and is the only mail-order book house that is in a position to PROMPTLY SUPPLY any and all books sold in the trade.

### \$4.50 for \$1.50—Limited Offer

Each member is required to pay a Membership Fee; but if you join *now*, a Membership will cost you nothing—we simply ask you to purchase one of the following **Best-Selling Books** at the regular publication price, \$1.50, when you will receive a Certificate of Membership for three years (price \$3.00), the book selected, and our various catalogues, *all sent postpaid at our expense*. Moreover, if you order *now* your Certificate will be dated January 1st, 1903, though it will be in force at once. Our List of \$1.50 Books from which you have your choice is:

**Confessions of a Wife**, by Mary Adams.  
**Cecilia**, by F. Marion Crawford.  
**The Blue Flower**, by Henry Van Dyke.  
**The Two Vanrevels**, by Booth Tarkington.  
**The Virginian**, by Owen Wister.  
**The Mississippi Bubble**, by Emerson Hough.  
**Hearts Courageous**, by Miss Rives.

**The Leopard's Spots**, by Thomas Dixon, Jr.  
**The Intrusions of Peggy**, by Anthony Hope.  
**Audrey**, by Mary Johnston.  
**Dorothy Vernon**, by Charles Major.  
**Danny**, by Alfred Ollivant.  
**The Fortunes of Oliver Horn**, by F. Hopkinson Smith.  
**A Speckled Bird**, by Augusta Evans Wilson.

Or for \$1.25 (the regular price of the book), we will send you a three-year Membership and a copy of

### ABBOTT'S HINTS FOR HOME READING.

Book Buyer's Guide, and Book Record. In Three Parts. Complete in one crown 8vo volume, handsomely bound in limp cloth.

(This latter work is divided as follows: Part I. A Series of Papers on the Choice of Books, Plans of Reading, the Art of Reading, etc., etc., by Charles Dudley Warner, Hamilton Wright Mabie, Edward Everett Hale, and other well-known writers, edited with an introduction by Lyman Abbott. Part II. A Book Buyer's Guide to 3,000 of the best books for a Home, School, or Village Library, with retail price of each attached. Part III. A Book Record, in which may be recorded the data and comment of one's favorite books.)

Or send us \$3.75 (regular price \$7.50), and we will send you the **Review of Reviews** one year. Success one year, your choice of any one of the above-named books, and a **THREE-YEAR MEMBERSHIP IN THE ASSOCIATION, ALL PREPAID.**

The above books are, of course, the **REGULAR 12MO, CLOTH-BOUND EDITIONS** published by such leading houses as the Scribners, the Harpers, The Macmillan Co., Houghton, Mifflin & Co., etc.

### Catalogues Free

The Association some years ago inaugurated a Series of **SPECIAL SALES**, and issues several *Special Sale Catalogues every year, which are sent free to members*. **Special Sale List No. 30** has recently been issued, and contains over 1,000 volumes of standard books, from many of the best publishers, at discounts ranging **ALL THE WAY UP TO 80 PER CENT.** It will, therefore, be readily seen how important it is that you become a member immediately in order that you may be able to take advantage of this Special Sale. Those who take **Periodicals** will be interested in our **Wholesale Periodical Catalogue**, which has just been issued for 1903, and which contains the leading Magazines and OUR **BARGAIN CLUBBING OFFERS**. Our **Holiday Catalogue**, containing the leading books of all prominent publishers, suitable for Holiday purposes, is now ready, and with the other catalogues above named will be **sent free of charge to those who apply for membership immediately.**

The Association also does an immense business in **STATIONERY**, and furnishes all kinds of **visiting cards, writing papers, wedding invitations**, and other engraved work at wholesale rates, our prices in many cases being only about one-half those charged by retail stationers.

### Points to Remember

1. The Association is not an experiment, having been in existence for over seventeen years.
2. Its tens of thousands of members are in every State of the Union, and include numerous Public Libraries and Reading Circles, as well as a great mass of home library builders of all classes and conditions, for whether \$5.00 or \$500.00 per annum is spent, all book-lovers are alike eligible for membership.
3. Its Proprietors and Manager are old and experienced publishers and booksellers, and it is financed by over a QUARTER MILLION DOLLARS CAPITAL.
4. Its references are the Commercial Agencies, or any of the leading publishers in New York, Philadelphia, and Boston.
5. Its members receive prompt, careful, and intelligent attention. It carries in stock the books it catalogues, and is one of the best equipped and busiest book establishments in New York City.

**THE UNION LIBRARY ASSOCIATION**  
91 and 93 FIFTH Ave. NEW YORK

BOOKS ARE ROYAL OCTAVO, ABOUT 11 INCHES TALL,  
BEAUTIFULLY BOUND IN HALF RUSSIA.

# One Dollar is all

A Single Dollar (if you act at once) is all it will cost you to secure possession of RIDPATH'S History of the World. A great big set of 9 Royal Octavo volumes with 4000 illustrations, and many maps and color plates. The rest you pay in monthly payments of \$2.00 each.

If you'd like to own the best World's History in existence,—a history that's as interesting as a story-book and almost as reliable as the law of gravitation,—send for the free prospectus and specimen-page-book to-day, using the coupon below.

We've a pamphlet, prepared by the publishers of the history, which tells just what the work is, how it came to be written, and the sort of readers it aims to entertain and interest. This pamphlet also contains specimens of the illustrations and text pages, and if you're interested, and mail us the coupon, we'll send it to you free of cost.

Reading that pamphlet will settle in your mind, once for all, whether you need the history or not; and you'd best settle it NOW, for there'll be no more at 40% discount from the regular price after the few we have left are sold.

**John Wanamaker**

NEW YORK — PHILA.

Without cost to me, please send to address below the RIDPATH Sample-page-and-illustration book which contains specimens of the Race Charts, Chronological Charts, Colored Race-Type Plates, Engravings, Photo-Engravings, Tint-Block Color-Plates, Text-Pages, etc. I would like such material and information as you can send to assist me in finding out just what the history is and whether or not it will suit me to join the Half-Price Club and get it on the little-payment plan.

**NEWSPAPERS AND LEADING AUTHORITIES**

I have examined your Encyclopædic Dictionary, and find it a most complete and excellent work, one that should be found in every library and school, as well as in the counting-house.—HON. CHAS. A. SCHIEREN, ex-Mayor of Brooklyn, N. Y.

Not only are more words defined in this new Dictionary than in any other, but its definitions are more exhaustive.—CHICAGO TRIBUNE.

A standard reference book, treating every branch of knowledge and research in a masterly manner.—PHILADELPHIA PRESS.

It forms in itself a library for the busy man of affairs, the merchant ambitious to advance himself in his line, or the student or apprentice just making a beginning.—SCIENTIFIC AMERICAN.

At the very head of all contemporary publications of its kind, and firmly established as one of the few

great reference books of the world.—CHRISTIAN HERALD, NEW YORK.

In my opinion it will be found of great value to the public generally, and especially to professional men.

—HON. W. S. BISSELL, ex-Postmaster-General of the United States.

ALVIN H. GRAFF, Esq., Clerk Board of Education, Jersey City, N. J.:

"It is just the thing. It is typically American."

PROP. CHAS. C. STIMETS, Principal of Hasbrouck Institute, Jersey City, N. J.:

"I cheerfully give you my unqualified indorsement. It should find its way into every library."

HENRY M. PUFFER, Secretary School Committee, Shelburne Falls, Mass.

"I am fully satisfied that it excels all other works of its kind."

**Edition de Luxe**  
**Regular Price \$150**

The few remaining offered to REVIEW OF REVIEWS readers at less than one-third the original price, on small payments.

**Special Offer to Review of Reviews Readers of the few remaining**  
copies of what is conceded to be the most magnificent work of its kind ever attempted in America, and not excelled elsewhere.

# MIZRAIM, or ANCIENT EGYPT

By DR. SAMUEL AUGUSTUS BINION

Most superbly illustrated history ever published of the art and architecture of any country in the world. A fortune was spent on this work, which is the result of more than ten years of labor of author, artist, and engraver. It is superbly illustrated with 72 full-page plates, 20 x 26 inches, magnificently colored, and representing the temples, etc., exactly as they appeared four thousand years ago.

**EGYPT!** Whose civilization is the oldest known, and yet whose architecture is the wonder and admiration of modern times, and which "for nobility of conception, vastness of detail, and majesty of the highest order exceeds anything ever reared by human hands," has now for the first time been adequately shown forth in these superb volumes.

"I regard 'Mizraim' as a masterpiece. Its exquisite and excellent plates will refresh those who have seen the monuments or studied their history. Its letterpress admirably expounds what its grand plates so fascinatingly present. The book is a wise and satisfying investment."—WM. COPLEY WINSLOW, Hon. Sec'y Egypt Exploration Society.

The work has been endorsed by purchase after thorough examination, and at the regular price, by the British Museum, Metropolitan Museum of Art, Boston Library, and the leading libraries of this country.

**THE ENTIRE EDITION WAS LIMITED TO 800 COPIES AND THE PLATES HAVE BEEN DESTROYED.**

## OUR OFFER

The work is published in twelve parts, inclosed in four handsome half-morocco portfolios, regular price \$150. To the first subscribers who shall send \$3 we will send the entire work, balance to be paid in fourteen monthly payments of \$3 each. We can also supply it in two volumes, bound elegantly in half-morocco, by adding fifty cents to each of these payments. If you care to add to your library the most superb work concerning the most fascinating country in all the world, fill out or copy the following acceptance blank:

HENRY G. ALLEN & CO., 150 Fifth Ave., New York.

Gentlemen:—I accept your offer to "Review of Reviews" readers of the edition de luxe of MIZRAIM, and inclose \$3 as first payment, balance to be in 14 monthly payments of \$3 each. I reserve the privilege of RETURNING THE WORK WITHIN THREE DAYS AFTER RECEIVING IT IF NOT FOUND SATISFACTORY, in which case you are to return the \$3 paid.

**Alfred Ollivant**

**Danny**

A new story by the author of "Bob, Son of Battle" (54th thousand). While the dog is still the central character, the figures of the stern old Laird, last of the "stark Heriots," his fascinating child-wife, old Deborah Awe, and Robin are full of life and interest.

Illustrated. \$1.50

**Sidney Lanier**

**Shakspeare and His Forerunners**

The longest and most ambitious prose work left by the poet Lanier. It is a very vital and suggestive study of Shakspeare, the man and artist, contrasting the Elizabethan efflorescence with the beginnings of English literature.

Two large volumes, 700 pages, 100 illustrations. Cloth, net, \$10.00; three-quarter Morocco, net \$20.00. Limited edition 102 copies at \$25.00 net.

**Neltje Blanchan**

**How to Attract the Birds**

This new book, illustrated by 110 photographs from life, will be welcomed by the 50,000 readers of "Bird Neighbors," and the author's other books. Among the chapters are:

Attracting Bird Neighbors.  
Home Life.

Why Birds Come and Go.  
What Birds Do for Us.

Nature's First Law.  
Feathered Immigrants, etc.

Net \$1.35

**"J. P. M."**

**A Journey to Nature**

Henry Troth has made for Mr. Mowbray's very successful story sixteen fine photographic illustrations which help the reader greatly to get the nature feeling of the tale. These are reproduced photographically, and the book is printed on large paper, with handsome green and gold binding.

Net \$3.50

**A New Novel by "J. P. M."**

**Tangled Up in Beulah Land**

A brilliant and delightful story, continuing the fortunes of some of the characters in "A Journey to Nature," but introducing also the new figure of "Polly," the heroine, as fresh and captivating a damsel as one can imagine.

Decorated. Net \$1.50

**C. H. Caffin**

**American Masters of Painting**

With thirty-two full-page reproductions of paintings by Whistler, Sargent, Abbey, La Farge, Fuller, Martin, Brush, Inness, Wyant, Homer, Walker, and Tryon.

Net \$3.00

**G. H. Ellwanger**

**The Pleasures of the Table**

A delightful history of gastronomy from the earliest times, full of good stories, odd old recipes, and interesting facts. Twenty-four illustrations in tint.

Net \$2.50

**Memoirs of a Contemporary**

**Translated by Lionel Strachey**

Piquant French memoirs of Napoleonic times, by a sprightly lady who followed Marshal Ney to the wars dressed in men's clothes. Forty-eight illustrations in tint.

Net \$2.75

**The Variorum FitzGerald**

To be in seven volumes, four now ready. A superb work in three strictly limited editions—of which two are practically sold out. Particulars on application.

**The Elizabethan Shakspeare**

**Edited by Mark H. Liddell**

The most important edition of Shakspeare. First volume, "Macbeth," ready. Particulars on application.

## How Would You Like to Own

an ideal library containing the best of the plays of Shakespeare and Moliere, the poems of Goethe, Chaucer and Longfellow, the stories of Dumas and Dickens, the essays of Emerson, Schopenhauer and Macaulay, the humor of Aristophanes, Mark Twain, and Charles Lamb—in a word, a library containing the best of every author you ever admired or wanted to read?

**Charles Dudley Warner**

was the first to bring such a library within your reach in a superb set of forty-six books. It is, in truth, the **World's Best Literature**, and the largest private libraries cannot equal it in scope. With it you need never again be ignorant of any literary subject. The

### Famous Warner Library

not only includes masterpieces, but gives critical essays on noted authors by the greatest living writers.

**Governor Yates, of Illinois, said:**

"The distinguishing feature of the **Warner Library**—and the one which places it *above all other libraries*—is found in the critical and interpretative essays, which enable us to know and understand each great master as he was known and understood by his greatest exponent and biographer."

### Sixty Centuries of Books

**20,000 Pages** In these wonderful forty-six volumes will be found the brightest thoughts of the greatest authors,—complete novels and chapters in fiction, humorous sketches, poetry, philosophy, history, travel, science, oratory, letters, and essays. Translations from Persian, Hindu, Greek, Latin, and all the modern languages are included. In short, the thousands of large pages fairly teem with interest and delight.

**Course of Reading** A systematic course of reading and study, equal to a four-years' university course, has been prepared. It not only gives the system of reading, but furnishes the material itself, through the pages of the Library, and by means of an admirable Index. It is both teacher and text-book.

### The Famous Warner Library At Less Than Half Former Prices

On account of our superior advertising facilities we were able to secure control of the entire "Memorial Edition"—newly revised and enlarged—and will supply these splendid sets, **while they last**, at only a fraction above factory price—**less than one-half** the publisher's prices of the work. We will also accept

**SMALL MONTHLY PAYMENTS**, which will bring the outlay down to a few cents a day. But prompt action is needed to secure a set, as the demand is already very large. For handsome booklet and further particulars,

**Send This Free Coupon To-Day**

OFFICIALLY APPROVED BY THE NEW YORK CITY  
SCHOOLS, AND NEW YORK STATE REGENTS

**800 Illustrations** Photogravures of famous scenes and paintings, portraits, art plates, color reproductions of beautiful manuscripts—all these form a wealth of attractive material profusely illustrating the Warner Library.

**2,500 Synopses of Books** This valuable feature is unique with the Warner Library. Brief descriptions of all the world's great books are given in the space of a few hundred words each. No one has read or can read all the books which come up in the course of conversation. But these synopses will give the busy man the gist of them all; not only novels such as "Robert Elsmere," "Ben Hur," or "Quo Vadis," but poems, dramas, and technical works.

### Literary Values

By JOHN BURROUGHS. Notable essays, presenting Mr. Burroughs' views on literature and life. \$1.10 net; postage extra.

HOUGHTON, MIFFLIN & CO., Boston and New York

## If You Are a Pianist or a Singer

you are constantly buying sheet music—and paying high prices for it. It lies in ragged piles around the house and becomes scattered and torn. You lose money by buying music in that way, to say nothing of your loss of time and temper when searching for a particular selection. Why not buy your music in volumes, filled with the best selections, and thoroughly indexed? The "Library of the World's Best Music" is designed for your needs. Its eight volumes—sheet music size, but light and easy to handle—are crowded with the best vocal and instrumental music, carefully selected by an experienced corps of music editors. If you were to buy the music it contains, one piece at a time, it would cost you over \$200.00. Through our Musical Library Club—for a limited time—the entire set will cost you one-tenth of that amount, and you can pay in little payments of \$1.00 a month.

### The World's Best Music

This is the most comprehensive collection of music in existence. It contains 2,200 pages of sheet music—which is 500 more than any other musical library. It is fully indexed, so that any selection can be quickly found, and the volumes are specially bound so they open flat at the piano. All the world-famous composers are represented—including such names as Wagner, Liszt, Paderewski, Sullivan, Mozart, Handel, Chopin, De Koven, Strauss, and Gounod—but the selections have been so carefully made that none is too difficult for the average performer. The work contains 300 instrumental selections by the best composers, including popular and operatic melodies, dances, funeral marches, and classic and romantic piano music. There are 350 best old and new songs, duets, trios, and quartets. Among the selections are 100 new and copyrighted pieces by American composers—the kind of music that costs from twenty-five to fifty cents in music stores. To the student this Library is more than half a musical education. It exhibits, in correct form, all the various classes and schools of music, and it is a never-failing source of instruction and pleasure in the variety of its selections. As a musical cyclopedia it is unexcelled, for it contains 500 biographies of musicians and 400 portraits, many of the last being handsome chromatic art plates in colors. In number of pages of sheet music, number of biographies, and in number of illustrations, this Musical Library leads all others.

The Sets are Eight Volumes—9 x 12 inches in size—attractively bound in fine dark half-leather or blue cloth

### Our Special Half-Price Offer

Our Musical Library Club has secured an entirely new edition of the "World's Best Music" at a price slightly above the cost of paper and printing. On this account we are able to offer these sets at about one-half the regular subscription prices—payable \$1.00 a month. Through the Musical Library Club—direct from the publisher to the customer—you can secure a set for \$21.00 in cloth binding and \$25.00 for the half-leather.

These sets were previously sold for \$35.00 and \$40.00. The edition is small, so to avoid possible disappointment in failing to secure a set, cut off the coupon to-day, sign it, and mail it to us. We will then send you a set (express paid by us) for examination and use. After five days' examination, if you are not satisfied, return the books to us at our expense. But if you decide to keep the set, send us \$1.00 at the expiration of five days, and \$1.00 a month thereafter until the full amount is paid.

### A Christmas Present Free!

We have a small number of elegant oak-wood bookcases that are made especially to hold a set of the "World's Best Music." Their retail price is \$4.00 each, but we have decided to offer them as presents to prompt subscribers. To obtain one of the bookcases free with your set, it will be necessary to send your order before December 25th, when this offer will cease, unless you care to pay the regular retail price of \$4.00. This bookcase is a Christmas present from us, and does not increase the cost of the music in any manner.

## THE VARIETIES OF RELIGIOUS EXPERIENCE

Being the Gifford Lectures on Natural Religion, delivered in Edinburgh in 1901-1902

By WILLIAM JAMES, LL.D., etc., Professor of Philosophy at Harvard University, Corresponding member of the Institute of France and of the Royal Prussian Academy of Sciences. 8vo, gilt top, \$3.20 net. By mail \$3.40.

"This is not merely a clever and interesting work, it is a contribution of the highest value to a subject always pertinent, but never more so than at the present time."—*Christian World*, London.

"... Require and repay careful reading, and will make an epoch, we believe, in the thinking of many. It clears away by its inductive study and statement in terms of psychology many difficulties of thought."

—*Congregationalist and Christian World*, Boston.

"... Forms a perfect treasury of illustrations of the religious temperament in its various manifestations, with Professor James's brilliant comment."—*Christian Advocate*.

## THE SMALL END OF GREAT PROBLEMS

By BROOKE HERFORD, D.D., late Minister of Rosslyn Hill Chapel, London, sometime preacher to Harvard University. With portrait. Crown 8vo, \$1.60 net.

"They are remarkable utterances, and will find a welcome among devout hearts of all denominations."—*Literary World*.

"A series of illuminating and in the highest sense practical papers."—*Christian Work*.

## THE PATH TO ROME

By HILLAIRE BELLOC, late scholar of Balliol College, Oxford, Author of "The Life of Danton," "Paris," "Robespierre," etc. With 80 Illustrations from Drawings by the Author. Crown 8vo, 464 pages, gilt top. Net \$2.00. By mail \$2.20.

"The only practical solution is to place this volume alongside of Lamb and Stevenson on a shelf labelled 'Books of Delight.'... It must be counted among the most charming pieces of literature that have appeared for a long time."—*New York Times*.

## GODLY UNION AND CONCORD

Sermons Preached Plainly in Westminster Abbey in the Interests of Christian Fraternity

By H. HENSLEY HENSON, B.D., Canon of Westminster and Rector of St. Margaret's, Westminster. With an Explanatory Introduction by the Author. Crown 8vo, pp. xlvii.-282, \$2.00.

"... Ought to be read by every one who wishes to be informed concerning the conclusions of a modern scholar on a subject which is to occupy a foremost place in men's minds in the near future."

—*Church Economist*.

"In force, in learning, in eloquence, they are unusual and striking."—*Christian Advocate*.

## SEVEN ROMAN STATESMEN OF THE LATER REPUBLIC

The Gracchi, Sulla, Crassus, Cato, Pompey, Cæsar

By CHARLES Oman, M.A., Author of "A History of Greece," etc. With Portraits and Illustrations. Crown 8vo, pp. iv.-348. Net \$1.60.

"Every page of this brilliant book is worth reading, and we cannot wish a student better luck than to come across it before the austerity of the Germans has killed his interest in the history of Rome."—*Spectator*.

By Stanley J. Weyman

## IN KINGS' BYWAYS

By STANLEY J. WEYMAN, Author of "A Gentleman of France," "Count Hannibal," etc., etc. With a Frontispiece by George Varian. Crown 8vo, cloth, ornamental, \$1.50.

"In Kings' Byways' will be enjoyed by every one to whom the 'Gentleman of France' appealed; and, in point of art, the anecdotes greatly excel the novel."—*The Times*, London.

By Richard Bagot

## DONNA DIANA

By RICHARD BAGOT, Author of "Casting of Nets," "A Roman Mystery," etc. Crown 8vo, cloth, gilt top, \$1.50.

Mr. Richard Bagot has followed the "Casting of Nets" and "A Roman Mystery" with another study of the complicated social and religious intrigues which characterize certain circles of Rome. The plot of "Donna Diana" turns on the struggle between a young Englishman who wishes to marry the heroine, and her relatives, who desire to see her take the veil. Mr. Bagot describes the domestic and social life of Rome with care and detail.

By Andrew Lang

## THE DISENTANGLERS

By ANDREW LANG. With 7 full-page Illustrations by H. S. Ford. Crown 8vo, \$1.50.

"In the 'Disentanglers' the author has sought to combine humor and fantasy with a satire of contemporary society. . . . Two ingenious young Englishmen . . . set up an agency for the benefit of families, one member of which seems to be in danger of making an undesirable marriage. In the series of strange cases which these practitioners of a new profession were called upon to settle there is both unity of theme and variety of humorous adventure."

## BOOKS FOR YOUNG PEOPLE

# You Can't Give a Christmas Present Or buy one for yourself

which will be more appreciated, or of higher permanent value, or easier paid for, than the beautiful set of four volumes comprising

## The New Life of Abraham Lincoln

By IDA M. TARBELL

It will appeal especially to every American, for it contains the graphic life story, as never before told, of the struggles, triumphs, and tragic death of our first and greatest countryman.

Presenting the stirring scenes of Lincoln's life with accuracy and completeness, and as fascinating as a novel, it is a portrayal of the man and the most critical period in our national existence which no student of History should miss, and no American home can afford to be without. These are the books to place in your children's hands, for they will be a constant source of delight, ambition, and true patriotism.

The fame and name of Miss Tarbell is too well known to require an introduction. Her master work is now just ready for your inspection. Even before completion it received the most enthusiastic attention from the press and Lincoln admirers of National reputation.

The late Chas. A. Dana, the famous editor of the New York *Sun*, and Lincoln's Assistant Secretary of War, selected Tarbell's *Early Life of Lincoln* (the only volume then ready) as one of ten books indispensable to every American.

Among the new and splendid features the work contains a wealth of new material never before published, gathered from original sources during five years of the most painstaking research: new portraits, fac-similes of important documents, speeches, letters, telegrams, stories, anecdotes, are here presented for the first time.

The work is so lavishly illustrated that it is a life of Lincoln in pictures, as well as a written one.

### BUT THE COUPON BELOW

will bring you, on approval, free of cost, the *books themselves*. The four splendid volumes are better evidence of their merit and value as a holiday gift than anything we might say. If they are not what you want, send them back at our expense.

### THE SPECIAL CHRISTMAS OFFER

lets you purchase them 33⅓% below regular prices, and, better yet, requires only \$1.00 out of your Christmas pocket-book. The rest is paid in month-by-month installments after the Christmas drain is over.

### LINCOLN HISTORY SOCIETY

150 Fifth Avenue, New York.

### A CHRISTMAS GIFT FOR YOU, TOO

To insure prompt attention all who send us the coupon before Dec. 25, 1902, will be presented, upon receipt of their acceptance, with a fac-simile copy of Lincoln's personal note book, a unique and valuable gift.

*Absolutely  
FREE to  
Subscribers*

Nov. Number and Superb 25 cent Christmas Number of **LESLIE'S MONTHLY**, and **COLLEGE GIRL CALENDAR** for 1903, free to all who subscribe **NOW**.

Features of **LESLIE'S** for November and December:  
"The Mill," a new and striking story by DR. HENRY VAN DYKE. "The Autobiography of a Thief," a genuine personal narrative of intense human interest. "Richard Mansfield," a masterly sketch by the first of theatrical critics, WILLIAM WINTER. Stories by such authors as HARRY STILWELL EDWARDS, CHARLES BATTELL LOOMIS, EDEN PHILLIPOTS, EGERTON CASTLE and EMERSON HOUGH.

## LOOKING FORWARD—1903

### Three Splendid Novels.

"Glengarry Stories," a tale of sentiment. A better sequel to "The Man from Glengarry," by RALPH CONNOR. "The Amethyst Box," a story of mystery, as good as "The Leavenworth Case," by ANNA KATHERINE GREEN. "Dennis Dent," a novel of thrilling interest, by the creator of "The Amateur Crackman," ERNEST W. HORNING.

Each month will appear colored portraits of the best American actors and actresses, sketched from life and accompanied by frank and authoritative criticisms. Among the sketches made for early numbers are portraits of JOSEPH JEFFERSON, RICHARD MANSFIELD, and Miss JULIA MARLOWE.

# FRANK LESLIE'S POPULAR MONTHLY

## COLLEGE GIRL CALENDAR

The immense popularity of the Actress Calendar painted for **LESLIE'S MONTHLY** last year by Miss MAUD STUMM, the well known American water colorist, has led us to employ her extraordinary talent upon a calendar for 1903, picturing the American College Girl. Beautifully lithographed in twelve colors upon three sheets of heavy pebble plate paper, tied with silk ribbon, are the graceful figures of girls dressed in the colors of the great colleges. On each sheet is the appropriate college seal and the college yell. The whole carries out the complete college idea. Size 10 in. by 12 1/4 in.

Remember, if you mention the **REVIEW OF REVIEWS** the Beautiful American College Girl Calendar for 1903, and the November and December issues are given free, all charges prepaid by us, with each \$1.00 subscription to **FRANK LESLIE'S POPULAR MONTHLY** for 1903—that is, fourteen numbers and Calendar postpaid,

## LOTHROP FICTION

### THE SPENDERS

33d THOUSAND

By HARRY LEON WILSON

Price, \$1.50

**BOOK NEWS says:**

" 'The Spenders' is pre-eminently an American book,— American in name, American in bigness, American in crudeness, American in fearlessness, but, most of all, American in a great tender-heartedness, that comes out into the sunshine without fear and with joyousness."

## EAGLE BLOOD

By JAMES CREELMAN

10th THOUSAND

Price, \$1.50

**NEW YORK MAIL and EXPRESS says:**

"This is a book of action, of movement. It has its touches of humor, its moments of strenuous manliness. It is a good patriotic tonic, a wholesome book for Americans to read. And, next to that quality, the one that gives it most interest is undoubtedly that of picturesqueness."

## RICHARD GORDON

By ALEXANDER BLACK

7th THOUSAND

Price, \$1.50

**CLEVELAND WORLD says:**

"The heroine is everything that is charming and lovable which is possible in a woman, whether she belongs to the upper classes or not. The conversations are oftentimes brilliant, sparkling with wit and delicious humor."

## DOROTHY SOUTH

37th THOUSAND

By GEORGE CARY EGGLESTON

Price, \$1.50

**BALTIMORE SUN says:**

"No writer in the score and more of novelists now exploiting the Southern field can compare in truth and interest to Mr. Eggleston. In the novel before us we have a peculiarly interesting picture of the Virginian in the late fifties. Characters are clearly drawn, and incidents are skilfully presented."

LOTHROP PUBLISHING COMPANY, BOSTON

# Books for the Holidays, and After

**NOTRE DAME DE PARIS.** THE BERTHA GALLAND EDITION

By Victor Hugo

2 vols. 8vo, cloth,  
decorative, gilt top,  
illustrated (in box) \$3.00

Illustrated, by permission of Mr. D. Frohman, with scenes from the play and six portraits of Miss Galland as *Esmeralda*, taken especially for this edition.

**BARBIZON DAYS.** MILLET, COROT, ROUSSEAU, BARYE

By Charles Sprague Smith

Square 8vo, cloth,  
decorative, gilt top, with  
46 illustrations, \$2.00 net

These studies, written in the Forest of Fontainebleau, show the close relation between the life and surroundings of the artists and their creative work.

## THE BRADFORD SERIES

**PRACTICAL WISDOM.** LETTERS TO YOUNG MEN

By Sir Walter Raleigh, Sir Matthew Hale and others

**THE LADY'S NEW YEAR'S GIFT;** OR, ADVICE TO A DAUGHTER

By Sir George Savile

**FRIENDSHIP.** TWO ESSAYS ON FRIENDSHIP

By Ralph Waldo Emerson and Marcus Tullius Cicero

3 vols. 16mo, limp leather,  
gilt top (in box), each \$1.25

"Made in a style worthy of the subject."

—New York Observer.

Send for our descriptive Holiday List, in itself a beautiful book.

An *EXTRACT* from our *General Catalogue*, containing about 1250 of the most celebrated Subjects and 360 *Illustrations*, will be sent on application. Price 50 cents. Free to Educational Institutions.

**BRAUN, CLEMENT & CIE.**

# HEROES OF HISTORY

From  
360 A. D.  
down to  
Our Own  
Times

Sent FREE for Your Approval.

"History," as Lowell says, "is mainly the biography of a few Imperial men," the men who stand as beacon lights upon the hills of time. Their lives are more interesting than a romance, for what they have dared and what they have done is *fact, not fiction*. They are the real makers of history, and their achievements are recorded in "HEROES OF HISTORY," our

## New Library of Biography

These biographies afford the easiest, most pleasant and most fascinating way to become acquainted with the world's history for the past 2300 years. They kindle the imagination, brighten the intellect, broaden the understanding and indelibly impress important happenings upon the memory. **HEROES OF HISTORY** is a possession of life-long value and also constitutes

**A Superb  
Christmas  
Gift**

**25**

**Handsome  
Volumes**

We send them all to you at once for your approval, and *pay transportation charges*. We do this because we want you to examine the *entire work* at your leisure. When you note the **great names** whose deeds are recorded, from Alexander the Great to our own General Grant; when you mark the **distinguished historians, critics and literary celebrities** who have written the biographies; when you notice the **handsome binding, large clear type, excellent paper, numerous half-tone and wood engravings** printed on coated plate paper; when you observe the **convenient size and dignified appearance** of the volumes; when you do all this, we are confident that you will exclaim "*This is the work I want.*"

### Why You Need This Work

First of all because it is the **best**; because it is the **only** biographical library which adequately covers the field; the only library written by **really distinguished authors, historians and critics**, such as JAMES ANTHONY FROUDE, EDWARD A. FREEMAN, FREDERIC HARRISON, WASHINGTON IRVING, HEADLEY SPARKS, etc.; because no other library of biography contains the lives of all the following **REAL MAKERS OF HISTORY**: WASHINGTON, LINCOLN, NAPOLEON, GRANT, COLUMBUS, FREDERICK THE GREAT, CROMWELL, NELSON, FRANKLIN, WILLIAM THE SILENT, LIVINGSTONE, STANLEY, and JOAN OF ARC. Two widely advertised biographical works omit **all** of these. **HEROES OF HISTORY** is conceded to be the **latest, most complete**, and by far the **most authoritative** work of the kind in existence.

**Just Now Less  
Than Half Price**

We shall distribute over as wide an area as possible a portion of the first edition at a fraction—less than half—of the regular subscription price, and *make the books do their own advertising*. These special advertising sets will be quickly claimed by reason of the exceptionally **low introductory price**, and it is therefore safest for you to let us send you the volumes **at once**, in which case use the coupon printed at the right. *It costs you nothing to examine the work.* Remember, **we pay all transportation charges**, and the receipt of the volumes by you implies no obligation on your part to keep them unless you feel that they will form an **interesting and valuable** addition to your library, or unless you desire the work as a **holiday gift** for some one whose welfare you have at heart.

**The Perkins Book Co.**

296 Broadway,  
New York

**FREE INSPECTION COUPON**

Cut this  
corner off,  
sign and

|                               | Victor Hugo        |

Owing to the financial difficulties of an important publishing house we have been able to secure, at about the cost of paper, ink and binding, a few sets of the best of all libraries of literature, "THE LITERATURE OF ALL NATIONS AND ALL AGES."

This work has had a tremendous sale at the regular price, and stands to-day an authority in its field. The regular price of the work, its scope and character considered, is reasonable, yet

**Our Price for the Few Sets We Have is But One-Third of the Regular Price.**

The sets we have to dispose of at this special price certainly can last but a short time. In offering you one of these at the price quoted in the coupon we take the liberty of limiting your acceptance to ten days' time. The work requires little commendation; the editors are an absolute guarantee of its completeness. Knowing you will appreciate the real bargain these volumes are, and realizing the value and interest of the work, we will send the complete set of ten large volumes to you for your inspection and consideration. We will prepay all delivery charges, so it does not cost you anything to examine the work and see whether you like it or not. We believe it hardly possible that you will not desire to retain the volumes after seeing them, but if you should not you can return them at our expense.

**FIRST PAYMENT ONLY 50 CENTS. — Read Coupon Carefully.**

**TEN SUPERB VOLUMES.**

Nearly 5,000 Pages, 100 Artistic Demi-tints and 1,000 Illustrations.

**The Literature of All Nations,**

Edited by Julian Hawthorne, John P. Lamberton, Oliver H. G. Leigh, John Russell Young.

The title of this work indicates tersely its scope and mission; it gives the best thoughts of vanished ages—it offers the brightest picture of the present era. The editors, trained litterateurs, and each a specialist in his particular field, have gone over the whole record of human genius as traced on papyrus, brick, marble, brass, vellum, and paper. They have selected representative passages from every author that can interest a reader, and to each selection they have prefixed a biographical and critical commentary, enhancing its interest and value. Every department of literature is represented. Novelists, historians, poets, and orators are shown forth on this gigantic literary canvas, so to speak. The theories of the philosophers vie with the dreams of the moralists, and both are heightened by contrast with the beauties which flash from immortal verse.

CUT THIS COUPON OUT AND MAIL TO

**E. L. PARKS, Treasurer, 36 East 22d Street, New York**

You may send me for inspection and approval one set of the

**LITERATURE OF ALL NATIONS.**

10 large volumes, bound in the style indicated by having the "X" beside it.

## DENSLOW'S NIGHT BEFORE CHRISTMAS

ILLUSTRATED IN FOUR COLORS

The old classic story, illustrated by W. W. DENSLOW. Here is the best Christmas story ever told. The man is yet to be born who can write anything to supersede what has made St. Nicholas and his tiny reindeer living and breathing realities to millions of children throughout the world.

This edition is embellished not only by the quaint, refined humor of DENSLOW'S DRAWINGS, but these sketches are reproduced by the best methods known to the art of modern color reproduction and printing. It easily eclipses all other juvenile picture books of the year.

A large Quarto, handsomely bound in illuminated Board Cover. Price, \$1.50.

The History of Switzerland		

Hon. JOHN G. CARLISLE,

ex-Secretary of the Treasury, says: In my opinion the work is equal in every respect to the representations made by the publishers. It really constitutes an historical library, and will be of great and permanent value not only to students, but to all who may have occasion to investigate particular facts in the annals of the various nations of the world.

Hon. DAVID B. HILL,

ex-Governor of the State of New York, says: I have received from you the seventy-four (74) volumes of your "History of Nations" as per my order heretofore given, and they now have a place in my library at "Wolfert's Kloost." I find them to be a very valuable addition, and take pleasure in commending them to the consideration of all readers of history. No library, public or private, can well be regarded as complete without them.

Hon. FRANKLIN MURPHY,

Governor of New Jersey, says: I have received the History of Nations, and am pleased with it. The entire seventy-four volumes are by standard authors, and form a valuable addition to my library. The work is an important one, not only for students, but the general reader as well.

**74 Handsome Volumes Sent For \$1.00** Bought separately, the histories comprised in this splendid set would cost \$93.75. We offer them to REVIEW OF REVIEWS readers at half the regular price, and on the easy-payment plan, placing them within reach of all. Only 2,000 sets were ever made. **ONLY 1,000 SETS** can be offered to REVIEW OF REVIEWS readers. These go at \$50 per set. Only \$1 down, \$3 per month (\$45 for cash). For half-leather edition see below. You may return it if unsatisfactory. **Sent on Approval—Satisfaction Guaranteed.**

## A HANDSOME LIBRARY

The books are 12mo in size, bound in the finest grade of crash buckram, and the text is printed on a fine grade of water-marked laid paper. Deckle edges, gilt tops. The work is illustrated with several hundred engravings and photogravures, the latter being printed on vellum Japan paper. *We have a limited number of sets bound in elegant half leather, which we offer below at a very tempting price.*

## Ella Wheeler Wilcox Undertakes New Work

Favorite Author Becomes Associate Editor  
of The New Thought Magazine.

Best Writing She Has Ever Done Now Appearing in That  
Bright Publication.

The many friends and admirers of Ella Wheeler Wilcox will be interested to learn that this gifted author and thinker has connected herself in the capacity of associate editor with the New Thought magazine, and that hereafter her writings will appear regularly in that bright publication, of which the aim is to aid its readers in the cultivation of those powers of the mind which bring success in life. Mrs. Wilcox's writings have been the inspiration of many young men and women. Her hopeful, practical, masterful views of life give the reader new courage in the very reading, and are a wholesome spur to flagging effort. She is in perfect sympathy with

ELLA WHEELER WILCOX.

the purpose of the New Thought magazine. The magazine is having a wonderful success, and the writings of Mrs. Wilcox for it, along the line of the new movement, are among her best. Words of truth so vital that they live in the memory of every reader and cause him to think—to his own betterment and the lasting improvement of his own work in the world, in whatever line it lies—flow from this talented woman's pen.

The magazine is being sold on all news stands for five cents. It is the brightest, cleanest, and best publication in its class, and its editors have hit the keynote of all sound success. The spirit of every bit of print from cover to cover of the magazine is the spirit of progress and upbuilding—of courage, persistence, and success. Virile strength and energy, self-confidence, the mastery of self and circumstances, are its life and soul, and even the casual reader feels the contagion of its vigor and its optimism.

Free.—The publishers will be pleased to send a handsome portrait of Mrs. Wilcox, with extracts from her recent writings on the New Thought, free. Address, The New Thought, 14 The Colonnades, Vincennes Ave., Chicago.

ELEVENTH YEAR BEGINS IN NOVEMBER

## THE ART STUDENT

Instruction in **Learning to Draw, Learning to Illustrate, and Book Cover Designing**, by the editor, Ernest Knauff, Dir. of Chautauqua Soc. of Fine Arts.

ASHEVILLE, N. C., July 22, 1902.  
I am very much pleased with THE ART STUDENT. When I first opened the package I thought there was not much in a copy, but I soon found that I had suggestions enough in the thirty copies to keep me busy for a long time. I like the plain, sensible advice to students; the clear, concise directions as to methods and the like, and the many hints and suggestions both in type and picture.

If THE ART STUDENT's future is as bright and interesting as its past and present, long live THE ART STUDENT, and Ernest Knauff, its editor. I wish I had known of it sooner.

Yours respectfully, CURTIS B. THIBAUD.

## SOCIALISM AND LABOR

A new book by Bishop Spalding is always an event of interest to a wide circle of readers, but his latest book will appeal to a much larger number than usual because of its timely subject. The volume contains some of his most characteristic utterances.

Among the titles are the following:

SOCIALISM AND LABOR.	MOTION AND TRUTH.
THE BASIS OF POPULAR	EDUCATION AND PATRIOTISM.
GOVERNMENT.	ASSASSINATION AND AN-
ARE WE IN DANGER OF	ARCHY.
REVOLUTION?	LABOR AND CAPITAL.
CHARITY AND JUSTICE.	WORK AND LEISURE.

16mo, 80 cents net; delivered, 87 cents.

Other Books by Bishop Spalding:

Opportunity and Other Essays.  
Education and the Higher Life.  
Things of the Mind.  
Means and Ends of Education.  
Thoughts and Theories of Life and Education.

Each, \$1.00.

Religion, Agnosticism, and Education.  
Aphorisms and Reflections.

Each, 80 cents net.

ONLY A FEW DAYS MORE  
TO GET

The  
New **\$1.00 Magazine**

With its 12 Large Art-Color Reproductions of Famous Pictures Free  
FOR ONLY

**40 Cents**

Covering one year's subscription to the most unique and interesting dollar magazine published, with a special, did copyrighted color picture FREE EACH MONTH, costing fully 25 cents each in Art Stores, as a Supplement.

You'll be sorry if you do not order at once, because you'll want it directly you see it, and it will cost you.

**50 cents if you do not order before January 1.**

We have extended the limit to this date, to get the biggest subscription list possible before the first of the year; the price will positively advance to 50 cents on that date, and 10 cents a month thereafter until the regular price is reached.

This is the greatest bargain in Art and Literature ever offered to the American people. Just think—you get for only 40c. 12 great pictures and a real \$1.00 magazine for one year—

**The GRAPHIC MAGAZINE**

vividly interesting; handsomely printed on good paper; superbly illustrated—a magazine full of the best in Fiction, Travel, Adventure, Poetry, Science, Humor, Pathos—with unexcelled Home, Household and Children's Departments, and with many other features of surpassing interest.

**Just a Few Features of the Christmas Number.**

**HOW A CANNIBAL PRINCE CELEBRATED CHRISTMAS**, being a unique story of the most wonderful conversion on record—true, but stranger than fiction. By THOMAS BERNARD CRYSTAL.  
**CURIOUS CHRISTMAS CELEBRATIONS AND CUSTOMS IN MANY CLIMES**. How the holiday is observed all over the world and how many of our own Christmas expressions and customs originated. You'll appreciate Christmas more after reading this.  
**THE RACE OF A STRONG SOUL**. A powerful story of human emotions and pathos, by THOMAS MILBURN UPP  
**THE THEFT OF THE APPLES OF LIFE**. Another of the series of weird tales of Northern Mythology which made such a sensation in previous numbers.  
**PRINCESS FAIR FLOWER**. The remarkable story of the gratitude of a great white horse. All animal lovers will appreciate this.  
**THE LOVER'S STRATAGEM**. A thrilling tale of Venice in Olden Time and of a fierce Southerner's love.  
**MORE OF THE LESSONS IN NATURAL HISTORY AND ASTRONOMY**, which will be continued for some time, giving a course at home on the Marvels of Nature and Everyday Life.  
**THE WOMEN'S, CHILDREN'S AND HOUSEHOLD CHAPTERS**, edited by experts, are full of new and novel suggestions for amusing and educating the young, as well as entertainment and instruction for the grown folks; also valuable advice for ladies who desire to improve their looks. Necessary information about health. Valuable receipts and ideas for the Household and scores of other features.  
**THESE AND A SCORE MORE** of the out-of-the-ordinary features that have brought OVER 500 CONGRATULATORY LETTERS from subscribers and other editors since the first two numbers appeared.

**The Famous Free Picture for December**

is Hoffman's World Famous Painting, "Christ and the Rich Young Ruler," the most wonderfully descriptive picture of a Biblical character ever painted. It does not conflict with any creed and is worthy a place in every home.

Please remember that another great picture, by just as great an artist as this, will be given each month free. They are not chromos, but exact reproductions of the World's Masterpieces, and no Art Store in the country would sell them for less than 50c. each. **THE GRAPHIC MAGAZINE** is the only monthly magazine anywhere giving these great pictures away, and we had to contract for several millions to get them at all. You are therefore advised not to delay but to send your subscription at once, with 40c., in any form you wish, for

**"THE MAGAZINE THAT MAKES YOU FORGET TIME"**

will cost you 50c. after January 1st. Order now before the price advances. 14,800 subscribed before the price was advanced from 30 to 40 cents. 50,000 more will do so in the next two months, and we expect before long to have the biggest high-grade circulation in America.

**THE GRAPHIC MAGAZINE.**

13 Warren Street, New York.

P. S.—Owing to the great expense of producing the pictures and the costliness of the magazine itself no free or sample copies will be sent to anyone, nor any further information given by correspondence. If you are not entirely satisfied, your money will be cheerfully refunded. The Graphic Magazine Company is incorporated under the laws of the State of New York, and is composed of well known and responsible men in the publishing and advertising business.

## A Timely Gift and Special Offer

The President on His Favorite Horse

### Theodore Roosevelt—President

THE Life Story of a typical American, the most prominent personality, the most popular citizen of the Republic, told by the celebrated writers, Charles Eugene Banks and Leroy Armstrong, with introductory chapters by Gen. Joseph Wheeler and Opie Read. An authentic narrative embracing all the important events of the President's life from boyhood to the White House, prepared from official records and superbly illustrated with twenty-seven photogravures and duographs, illuminated title page. As Youth, Student, Assemblyman, National Delegate, Ranchman, Civil Service Commissioner, Assistant Secretary of the Navy, "Rough Rider," Governor, Vice-President, and President, step by step is given in the life progress of a plain, natural, unaffected and strong American, about whom the people everywhere want to know,—told with rare literary skill and accuracy; it reads like a fascinating historical romance, inspiring to all Americans, young and old.

Size, 6 1-4 x 9. 413 Pages.

Styles of Binding... The mechanical and artistic features of the book are unsurpassed. Full Buckram, \$1.50. Half Russia, Gilt Top, \$2.50. De Luxe Edition, \$4.50. Descriptive circular, showing size of illustrations, table of contents, etc., on application.

#### Special Offer to Readers of the Review

Until January 1st, with all orders received, I will send without extra cost the "Naval War of 1812," one of the President's most interesting publications, express charges prepaid to any address, money refunded if not entirely satisfactory; or will send for examination.

S. STONE, Commercial Nat'l Bank Building, CHICAGO

## Book Lovers

Should read the thrilling romance, rich in color, poetic beauty, and wise reflections—graphic, dramatic, and atmospheric—entitled,

**Under the Sun,  
or, The Passing of the Incas.**  
A Story of Old Peru.

From the pen of HON. CHARLES W. BUCK,  
Formerly United States Minister to Peru,  
lawyer, poet, and publicist.

Illustrated by a reproduction of Montero's  
famous masterpiece,  
"The Funeral of the Last Inca."

Cloth, \$1.50. Ask your bookseller.

Sent postpaid to any address.

SHELTMAN & COMPANY,  
Publishers, Louisville, Ky.

## \$1.00 Worth of FREE Music

If there is a piano in your home we will send you without charge **seven splendid musical compositions**, two vocal and five instrumental. Three of these selections are copyrighted and cannot be bought in any music store for less than \$1.00. With them we will send four portraits of great composers and four large reproductions of famous paintings of musical subjects.

### Why We Make this Offer

We make this offer to reliable men and women to enable us to send information regarding our Library of the **World's Best Music**, which is absolutely the best collection of vocal and instrumental music ever published. It contains more music, more illustrations, and more biographies of composers than any other musical library. It is for general home use and enjoyment, as well as for students. Send your name and address, and **ten cents in stamps** to pay for postage and wrapping. When writing, kindly mention this periodical.

# BATTLE OF GETTYSBURG

Sent on approval to responsible people. The Finest Steel Engraving the World Has Ever Known.

Painted by James Walker.

Engraved by H. B. Hall, Jr.

Congress voted \$50,000.00 to pay for making this famous masterpiece. Colonel Bachelder, the historian and military topographer of the United States for this battlefield, spent 12 years in collecting data and producing this engraving. One thousand (1,000) officers, including 47 generals, met the artist on the battlefield to confer and secure absolute accuracy of arrangement. The picture represents five miles of battlefield—the movements and position of the troops are truthfully shown. It is on heavy Steel Plate Paper, 24 by 42 inches in size. Generals Meade, Hancock, Longstreet, and others, who helped to make this picture, have testified to its absolute correctness. The edition is limited and the present prices will soon be doubled. With each engraving we send an Outline Key giving 200 references, showing locations of the Generals, Corps, Divisions, Regiments, Companies, Cavalry, Infantry, and Artillery at time of Pickett's charge.

Original selling price of India Proof . . . \$50.00

If you do not own a complete Shakespeare, or if you own a set and the Notes are not sufficiently full and clear, if there are no satisfactory Glossaries, no Critical Comments, or no helps to the study of the plays, send your address and six cents in stamps to pay mailing expenses, and we will forward you a handsomely printed booklet containing

"How to Study Shakespeare"  
"Why Young Men Should Study Shakespeare"  
"Shakespeare, the Man"

The first is by Hamilton Wright Mabie, the eminent Shakespearian scholar. The second is by Prof. C. A. Smith, of the University of North Carolina. The third is a brilliant and unique essay by Walter Bagehot. This alone is sold by other publishers at 50 cents a copy. With the booklet we will send a fine portrait of Shakespeare. These essays are of great value to both general readers and students of Shakespeare. We make this offer to enable us to give you some information regarding the **best Shakespeare ever published**, and it is made only to reliable men and women. Send name and address and six cents in stamps to pay mailing expenses. When writing, mention this periodical.

## American Academy of Dramatic Arts

FRANKLIN H. SARGENT, President.  
A practical training school in conjunction with Mr. Chas. Frohman's Empire Theatre and travelling companies.  
Apply to E. P. STEPHENSON, Carnegie Hall, New York.

## The PRATT TEACHERS' AGENCY

70 Fifth Avenue, New York  
Recommends teachers to colleges, schools, families.  
Advises parents about schools.

WM. O. PRATT, Manager.

NEW YORK CITY.

## KELLOGG'S BUREAU

HAS EARNED ITS REPUTATION THROUGH THE  
QUALITY OF THE TEACHERS SUPPLIED.  
HIGH GRADE TEACHERS NOW WANTED FOR ALL  
KINDS OF POSITIONS.

Is there a position open in your school? Do you want a better position or know where a teacher is wanted? If so, write full particulars at once. Every letter confidential. Reference manual and form for stamp.  
H. S. KELLOGG, MANAGER.  
No. 61 E. 9th Street, NEW YORK.

NEW YORK, Albany, 81 Chapel Street.

## Albany Teachers' Agency.

Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Rents and sells School Property.  
HARLAN P. FRENCH, Proprietor.

It is admitted by all eminent authorities that  
Organic health and nerve energy MUST PRECEDE  
any possible permanent muscular development.

## Osteopathic Self-Treatment

Insures Ideal Physical Culture and Restoration to Health.

This is the only scientific system whereby **MUSCLES, ORGANS and NERVES ARE DEVELOPED TOGETHER** and established in health on a harmonious and physiological basis. Mere muscular enlargement at the expense of organs and nerves, accounts largely for the well known fact that most athletes are short-lived. The Osteopathic system is an advance far beyond all mere muscular systems, for **IN ADDITION** to muscular development **IT DIRECTLY** strengthens the organs and steadies the nerves. It is especially adapted to persons of sedentary habits, nervous temperaments, weakened constitutions, and those with specific diseases. Ten minutes each day devoted to Osteopathic Self-Treatment and Exercises will produce perfect physical development and health. Write for free treatise.

**THE OSTEOPATHIC INSTITUTE,**

## The American Boy

Biggest, Brightest, Best Boys' Paper in the World.  
Hesekiah Butterworth says, It enters into their life

**Trial: 3 months for 10c**

**Regular: \$1.00 a year**

Boys are enthusiastic over it. Clean, inspiring stories. Information, encouragement, advice. Games, Sports, Animals, Stamps, Printing, Photography, Debating, Science, Puzzles. How to make boats, traps, etc. How to make and save money. How to succeed. Meets universal approval. The only successful attempt ever made to lead a boy in right directions, and at the same time chain his interest. One hundred pictures each month. See it and be surprised at the feast of good things for that boy.

Address **SPRAGUE PUBLISHING COMPANY**  
286 Majestic Building, Detroit, Michigan

## The Atlantic School of Osteopathy

Is the only thoroughly equipped Osteopathic College in the east. Its clinical and laboratory facilities are equalled by only the larger Universities, and in its faculty are the brightest minds obtainable in Osteopathic work today. The curriculum embraces not only the course dictated by the Associated Colleges of Osteopathy, but also additional studies, which long experience has shown to be essential to successful practice. Individual attention is

given each student by the heads of departments, and thorough competency is the only possible result. To anyone contemplating the adoption of this profession, we would be pleased to forward our latest annual. Address,

Atlantic School of Osteopathy, Wilkesbarre, Pa.

## STOP FORGETTING!

Let the Dickson School of Memory Teach You to Remember.

The Secret and Art of Memory reduced to a Science so that the ordinary mind can retain facts as easily as the more gifted. My method will enable you to do more in a week than the hard-working sloven will in a month, thus saving time and doubling salary. Teaches you to think, to concentrate your mind, to converse, to speak without notes, to recall instantly names, faces, business details, books, study, etc.

Simple, easily acquired, sure of results. Book-let and Trial Copyrighted Lesson FREE. Write today.

**THE DICKSON SCHOOL OF MEMORY,**  
755 The Auditorium, Chicago, Ill.

MARCUS LUCIUS QUINN,  
*Mus. Doc., Ph. D., Director,*  
has received high honors from the most  
distinguished musical institutions  
of Europe.

**E**ARNEST SEEKERS after real education in Music; ambitious workers who are not satisfied with the superficial methods of oral instruction; music lovers, whether beginners, advanced pupils, teachers or professional performers, should

## STUDY MUSIC BY MAIL

with DR. MARCUS LUCIUS QUINN, one of the greatest living teachers and most profound thinkers in the realm of Music since Sebastian Bach. The Quinn Correspondence Method of Musical Instruction (copyrighted and controlled exclusively by this School) is the only modern system that is strictly scientific and in accord with the Natural Laws of Education, discovered by Pestalozzi and Froebel, and applied

by the Great Masters to the Science and Art of Teaching Music.

## We Enroll by Exclusion

accepting only those who are sincere in their desire to learn what music really is. We have no chart or other device that will enable anyone to "short cut" the way to superficial knowledge. Our students are made to realize that there is something more to music than mere digital acrobatics. Ordinarily the pupil is launched into the sea of Music by being required to practice "finger exercises." This is entirely wrong; it is like requiring a student learning a spoken language to practice repeating the words until he can pronounce them very rapidly, but not allowing him to learn their meaning. We teach your head as well as your hand; give you NOT rules and exceptions, but LAWS and reasons. Among our correspondents are graduates

## From the Best Conservatories

in Europe and America. They testify that our instruction by mail is in every way superior to oral class-room methods. Verbal corrections are soon forgotten. Writing renders ideas permanent in the student's mind. We leave nothing to the memory. Each correspondent receives individual attention and instruction suited to his particular needs. Dr. Quinn will enroll correspondents in

PIANO, ORGAN, COMPOSITION, HARMONY, COUNTERPOINT,  
ORCHESTRATION, and the ART of TEACHING MUSIC ❧ ❧ ❧

No triflers or curiosity seekers need apply; only those wanted who have sufficient intelligence and moral stamina to apply themselves in the right spirit to this most fascinating study. To workers we positively guarantee wonderful results. You will be surprised and delighted with our method. Music, as taught by Dr. Quinn, is more than a splendid accomplishment; it is a valuable means of mental culture and a liberal education in itself. We have something you need. Let us tell you about it.

# POWELL

**If You Are Earning Less Than \$25 a Week  
I Can Double Your Salary or Income.**

EVERY young man or woman, and every business man who wishes to earn double the present income, should write for my prospectus telling all about the Powell System of Advertising Instruction, and giving strong testimony as to its unquestioned superiority. All the great magazines wishing instruction for new members of their staffs invariably subscribe for my Course, which is opposed to the earlier methods of teaching. There is no other course like it, and no other that has accomplished so much good. My students are prize winners, and command the highest salaries, because, as the authorities of advertising say, "they are taught by the most skillful expert." See my full-page ads. in November and December Success for important information.

My instruction system is so superior to all others that I always court investigation. The more skeptical you are the better I am pleased, because I have bushels of proof to finally convince you. If you are a hard-headed business man, and wonder whether I am really an expert, you may be interested in the testimony of the Secretary of the Severne Wine Co., Himrod, N. Y., who says that my instruction and advice increased his business about four-fold, by actual test. I will gladly send you his letter, together with my complete and instructive Prospectus and full explanatory matter, if you will only write me.

My address is

**GEORGE H. POWELL, 167 TEMPLE COURT, NEW YORK.**

# You Can Make Money in Traction Securities

Office of CLAUDE ASHBROOK, Stock Broker (Member Cincinnati Stock Exchange)

REFERENCE: ANY BANK OR TRUST COMPANY IN OHIO

**T**RACTION securities furnish the safest and surest channel for investment. It is with satisfaction that I am able to point to the earlier numbers of this series of market letters, which commenced in February last and have been continued weekly in the Cincinnati papers, and have also been published from time to time in New York, Montreal, Chicago, Cleveland, Columbus, Indianapolis, Louisville, Philadelphia, and Pittsburgh papers.

I am able to point to thousands of investors in the markets of the various communities referred to, who have been influenced by the opinions and advice given in these market letters,

## For They Have All Made Money.

Here are the results which speak for themselves. The rise in quotations since February have been brought about by giving the public the facts.

	Low 1902.	High 1902.
C. N. & C. St. Ry.....	Par	142
Southern Ohio Traction.....	58	93
Cin. Dayton & Toledo.....	20	43
Detroit United Railway.....	56½	97
Toledo Rwy. & Light.....	28	41½
Northern Ohio Traction Preferred	85	95
Northern Ohio Traction Common.	40	65

The primary object in view is to investigate thoroughly the intrinsic merits of the security, start the price as low as possible and take the public in at the start, to let the legitimate demand from investors regulate the advance in price, and not to force it by manipulation.

Great are the opportunities for making money in traction securities. The element of risk is almost entirely eliminated; reactions in price are trivial, and are invariably followed by high record prices. The earnings constantly increase from 10 to 30 per cent. over the previous year's showing, and stocks that to-day are quoted at 30 will sell at par in less than five years.

## Central Market Railway,

### A CITY PROPERTY.

The Central Market Railway is located entirely within the city limits of Columbus, the capital of Ohio, which has increased 42 per cent. in the last decade, and is now the 28th largest city in the United States, having a population of 130,000. The road extends from the north to the south city limits.

Its strategic importance, as well as its present and future value, is so great that, after personally making a thorough investigation of the line and carefully analyzing its statistical facts, I find that the stock offers unusual opportunities to the investor.

Total miles of track operated 31, 16 miles of which are owned and 15 leased, having power house and equipment sufficient to operate same. There are ahead of the Preferred Stock \$500,000 of Bonds, being the full authorized issue. Authorized capital, \$1,500,000, half Preferred and half Common. Of the authorized Preferred issue \$250,000 is retained in the Treasury for future extensions or acquisitions, so that there is but \$1,000,000 in Bonds and Stock to pay interest and dividends on. The Common Stock is all issued. Franchises are for 25 years.

## 6% Preferred Stock.

The Preferred Stock is non-cumulative, and receives dividend of 6 per cent. per annum, payable quarterly, in March, June, September, and December, the first dividend having been paid in September, and the second declared payable on December 1st. It can now be purchased around 90, and will, in my opinion, advance to 120, as the income yield would be 5 per cent. at that figure.

## Common Stock at 27½.

From the best figures obtainable the surplus applicable to Common Stock dividends will be about 3½ per cent. the first year, which would entitle it to a value of \$60 to \$75 per share. The Common Stock can now be purchased in the open market at 27½. I consider it a most excellent purchase, and believe it will undoubtedly double in value in a year. I claim, and justly, too, that there is no other field

## For Making Money

equal to the Traction, which will demonstrate their earning power in good and bad times alike. Unlike the history of Steam Railroads, the Traction seek locations of thickest population, and do not have to wait for the contiguous territory to grow up and reach a state of development sufficient to support them. They begin to earn money from the initial trip of the original car, and what is more, their earnings are increasing each year from 10 per cent. to 30 per cent. in gross receipts, and this increase is compounding. Thus, a property like the C. D. & T., which shows 2½ per cent. for its stock this year, will show 7 per cent. for its stock in five years, computing the increase in gross receipts at the minimum of 10 per cent. per annum, and its operating expenses at the maximum, 60 per cent. of its gross receipts. The element of

## Risk is Eliminated

in a Preferred Stock such as Central Market, where the actual conditions existing so plainly prove the earning power.

The fixed charges for Bond interest are but \$25,000 per annum, and 6 per cent. for the Preferred Stock calls for but \$30,000 a year, so that the property would only have to earn \$55,000 a year above expenses to cover Preferred Stock dividends.

Quotations for Central Market Stock are established on the Cincinnati Stock Exchange. Par Value of shares \$100. I am prepared to furnish both Preferred and Common Stocks in amounts to suit purchasers from one share or more at existing market quotations. The transfer Agent for the above Stock is the Central Trust & Safe Deposit Co., of Cincinnati.

# THE HOUSE OF HAYES

## Clerical Service for the Investor

Our organization is of service to the investor in two ways .

First—In advising, counselling, and presenting information.

Second—In clerical work, registering bonds, collecting interest, notifying proper authorities before interest comes due that interest should be on hand at stated time, notifying clients when bonds mature—especially as in the case of call bonds.

In short, we have a complete and thorough organization, fully equipped to save time and trouble for our clients, who feel secure in knowing that their interests are being properly cared for in our hands.

These are only some of the ways in which our organization is an advantage to the investor. If you are interested

"THE ONLY SAINT SHE KNEW ANYTHING ABOUT FOR A LONG TIME."

## A SAINT AND A SINNER.

BY JOSEPHINE DODGE DASKAM.

THE SAINT was a few years older than the Sinner, but at the beginning of their acquaintance they were both very young. The Sinner had her little failings, doubtless, but nobody ever accused her of failing to know her own mind, and on being introduced to the SAINT, she promptly and ecstatically licked him—her method of expressing intense affection. He was green at the time—a rich bottle-green—and it came off all over the Sinner, and she was disciplined. Dear, dear—it was so long ago!

He was the only SAINT she knew anything about for a long time: she might have developed into a grand and noble person if he had come four times as often as he did, and been a Weekly instead of a Monthly. For you must have guessed that he was St. NICHOLAS, and she—well, at least I do not chew the books I like now!

Were you born around the Centennial year? Then of course somebody gave you a copy of "Baby Days"—only you accent it like this: "*Baby Days*." I say "of course." If you didn't have it, that explains, partly, why you are not so intelligent and prosperous as I am to-day.

It is the first literature that I remember: I didn't know then that it was a collection from St. NICHOLAS.

I have a deep respect for those infantile wonders who grow up on the Old Masters. To peruse Shakspeare at five and Milton at seven must thrill the young reader almost as much as his relatives.

But I was thwarted in an earnest endeavor to chew the cover of Emerson's "Essay on Friendship," and after that I fell back on "*Baby Days*," and licked the favorite pages into an honorable illegibility.

Do you remember the adorable "little girl quite well and hearty" who "thought she'd like to give a party?" So far, so good. The only trouble was that the guests were so "shy and wary" that "nobody came but her own canary."

And then do you remember "*Milmy-Milmy*?" Everybody I

know seems to have been brought up with her, just as I was. She was a fascinating, kind-hearted girl-giantess who picked up a farmer and his oxen as he was plowing one day, and took them home for toys. But she meant well, and returned

them when her giant relatives told her what they were.

Whoever selected that poem for St. NICHOLAS showed genius—its calm, logical humor suited exactly a child's somewhat exacting mind.

"MILMY-MELMY, THE KIND-HEARTED GIRL-GIANTESS."

Now I insist that it is not the light of other days that gilds for me some otherwise characterless doggerel. Those things were funny, they were clever, they were well illustrated; and

I should laugh at them to-day if I read them.

And could anybody forget the inspiration that put one of the sweetest cradle-songs ever written away in the back of that heavenly book? My aunt used to recite it to me,—I have forgotten if I understood anything but the rhythm:

Rockaby, lullaby, bees in the clover,  
Crooning so drowsily, crying so low!  
Rockaby, lullaby, dear little rover!  
Down into wonderland,  
Down to the under-land,  
Go, oh, go!  
Down into wonderland go!

I asked a woman to-day if she knew Holland's lullaby, and she said, "Oh, the one about the bees in the clover? It was in the dear old St. NICHOLAS, wasn't it? Did he write that? I know it backward,—I don't know why. Did you use to have St. NICHOLAS? We were brought up on it." It was because I was brought up on it that I am remembering all these things now, on the good SAINT's behalf. I agree with Shakspeare and the soap gentlemen that if we must be advertised, we would better select our loving friends for that purpose.

Perhaps you don't realize that the collected classics of young people's literature are almost synonymous with the tales St. NICHOLAS gave us? One doesn't, till one counts up.

#### THE DEAN OF GIRLS' WRITERS

"Eight Cousins" had long been bound in half-years when I got to it, and I stole it from a Sunday-school library: it was red-and-

gold. The picture of the heroine in "Donald and Dorothy" I selected as my ideal of female loveliness: I used to pray that I might resemble her at sixteen. As for "Juan and Juanita," the happy Indian runaways, when I remember the fascinating meals they cooked for themselves over camp-fires, a wonder seizes me that I write this, now, from an uneventful suburb!

#### MY BROTHER'S SIDE OF IT

My little brother, indeed, was with difficulty persuaded to accept the shelter of the parental roof at the time of that seductive serial; it needed all the politeness and domesticity of the "Bunny Family" as read to him at bedtime to keep him with us. Of course the numbers that held "Daddy Jake, the Runaway," were his by all natural right, and Mr. Page's "Two Little Confederates" made the Civil War alive for him.

#### REAL WIT AND HUMOR

And Frank Stockton's fairy tales,—alas! we cannot have them any more. How witty they were! "How the Aristocrats-Sailed A way"—I can't remember who they were nor whether they sailed, but they were worth reading about!

And "Davy and the Goblin!" I tried to read it to my brother, but I laughed so that he very properly complained that he couldn't understand a word; and then our mother tried, and she laughed harder. You can't have forgotten

"'I'M A COCKALORUM,' SAID HE,"  
FROM "DAVY AND THE GOBLIN."

A capital ship for an ocean trip  
Was the Walloping Window Blind!

That lyric has given Family Proverbs to its generation. Which, of course, reminds one of the "Lady from Philadelphia." When you refer to her—as all well-educated persons occasionally must—do you remember that "Peterkin Papers" were achieved in St. NICHOLAS?

## THE IMMORTAL RED SASH

And oh, "Lord Fauntleroy!" I made fun of you, I despised your sash and your curls, I should certainly have demoralized you if I had known you, for you were far, far too good to live—but I read you regularly whenever I picked you up! I don't know why—perhaps for the same reason that everybody else did—because you were so readable.

And "Sara Crewe!" You I cannot forget, for we went through deep water together. It was when they had given up spanking, and merely sighed, "That will do; you may go to bed for the day."

"AND OH, 'LORD FAUNTLE-ROY!' I READ YOU REGU-  
LARLY, PERHAPS FOR THE  
SAME REASON THAT EVERY-  
BODY ELSE DID."

One day—it was the third that week—I ran hastily down the kitchen stairs, and while they were yet calling after me, packed a slight luncheon to refresh my durance vile. I could grab only two hard green apples and some cold potatoes. With trembling hands I arranged the letter in a sandwich, and seizing the last ST. NICHOLAS, I fled up the back stairs to my room. It was cold and cheer-

less there, and the winter afternoon was dark. I lit my candle, and sitting up in bed, with the counterpane wrapped around my shivering shoulders, I munched the green apples and read "Sara Crewe."

Wonder of wonders, our fates were all too similar! She was unjustly treated—so was I. She was cold—so was I. She was insufficiently fed—I had but a potato sandwich! And oh, such delicious meals as Somebody brought across the roofs to her, such eider-down quilts, such exquisite surprises! In fancy I shared them. Supposed to be suffering the tortures of an accusing conscience, I was having one of the afternoons of my life! You must have had some such experience; was it with ST. NICHOLAS?

"AND 'SARA  
CREWE!'"

## "LETTING IN THE JUNGLE"

Then the "Jungle Books!" When the hooded cobra fought with the valiant Rikki-Tikki-Tavi her last fight, and Little Toomai heard the midnight stamping of the elephant dance, we knew we were reading Literature! There are plenty of people, you know, who think that the work Mr. Kipling did for ST. NICHOLAS will outlast most of his other stories.

"RIKKI-TIKKI-TAVI  
... WE KNEW WE  
WERE READING  
LITERATURE."

And yet they tell me that everybody doesn't read ST. NICHOLAS. I think they must be mistaken—everybody I know always had it. It never occurred to me that children could grow up respectably without it.

## A HOUSEHOLD NECESSITY

I supposed every family had ST. NICHOLAS, just as they had a soup-tureen and "Alice in Wonderland," and a rubber-plant and a bathtub. When it comes to that, you know, if one doesn't take it for the children—what does one take?

We all write for it, you see. Nobody considers himself much of a writer who hasn't appeared there. It's a kind of Authors' Recommendation. I tried to convince one of the editors recently that there were people of note who hadn't won their spurs there, but it was useless—he had me every time.

Although, of course, I may be a little prejudiced. When one has "been read to" out of it, and taught one's nurse to read out of it, and read it one's self, and ended by writing for it, and getting delightful letters about one's stories from readers of the kind one used to be—perhaps one regards it too easily as a necessary feature of household life.

## THE THINGS WE LEARNED FROM IT

And yet, when I recall the harmless and contented hours spent in converting towel-racks into music-cabinets and shoe-boxes into handkerchief-cases, after advice in its December numbers; when I see again in memory the attentive little class of girls that gathered once a week to hear my mother read to them short sketches of the great painters and mu-

sicians, cut out from ST. NICHOLAS and mounted on cardboard, with photographs of paintings and music-makers; when I regard those Sunday-school library volumes of it that I simply haven't the heart to take back

to their rightful owners—I wonder how, **after** all, you *do* get on, you families that **haven't** got it!

For the strange thing about this article is —it's all quite true!

## The best possible Christmas present for a girl or a boy is a year's subscription to St. Nicholas Magazine

ST. NICHOLAS is thirty years old! Did you **use** to have it when you were young? Do you remember how good it was? It is just as good as ever—**yes**, it grows better and better. And are you taking it **for** your own boys or girls, or for your nephews and nieces? If not, why not begin *now*?

### IN 1903

ST. NICHOLAS will have a splendid serial story about King Arthur, written and illustrated by Howard Pyle, and stories by Miss Alcott (never before published) and by the author of "Mrs. Wiggs," by Ruth McEnery Stuart, and by many other writers you know and like. And the departments! You do not know about them, perhaps, but the "St. Nicholas League" and "Nature and Science" and "Books and Reading" are the most popular departments ever known in a young folks' magazine.

## St. Nicholas as a Christmas Gift

Let us send you the November and December numbers (November begins the volume, December is the great Christmas Number) and a handsome certificate—these you give at Christmas, and the numbers from January on, for a whole year, go directly to the recipient of your gift. *By this offer you get fourteen numbers for the price of twelve.* Price \$3.00. Subscribe through dealers or remit to the publishers, The Century Co., Union Square, New York.

## The next best Christmas gift is a set of the bound volumes of St. Nicholas for the past year

Two beautiful books, crowded from cover to cover with complete stories, pictures, poems, jingles, puzzles—1,000 pages of happiness. Sold everywhere, or sent prepaid by The Century Co., Union Square, New York, on receipt of \$4.00.

# M U S I C

The Pianola solves the problem of music in the home.

Its production was the crowning achievement of musical activity in the century just closed.

Within the home, where there is a Pianola, music reigns supreme, and every member of the household may be a performer. The piano is available to all. In its rhythmic tones the busy man forgets his cares. The hostess finds relief from thoughts concerning entertainment for her guests; and happy young folks respond with feet or voice and in a dance or song find wholesome recreation underneath the family roof.

Of music man never tires. Every new example of the art awakens new emotions in his breast. One piece may lose its freshness, but with the next comes back, enhanced, the pleasure of the first.

The owner of a Pianola need never fear it may grow tiresome. The music for it has no limit. Its repertoire, enormous in extent, magnificent in variety, absolutely precludes such a possibility.

Eight thousand one hundred and thirty-one pieces at present, and new selections added monthly at the rate of two hundred and fifty, makes a collection such as the world has never heretofore seen brought together.

In view of this, how apparent it is that one can never tire of the Pianola.

The Pianola's self is not the question. The music it makes possible is the consideration, and every new selection renews again the novelty and freshness of the instrument.

Without the Pianola, what possibilities are hidden within the piano?

Before the Pianola came, how very few there were who even caught a glimpse into the grand world of harmony. Toiling laboriously to reproduce a small part of the great compositions of the masters, even the best pianists were sadly limited.

The iron rules of technique, the inexorable necessity of long hours spent in daily practice, forbade *pianists* the pleasure of roaming at will throughout the world of music. To all the rest of human kind the masterpieces of the grandest art that is known to man were buried treasures.

This is what the Pianola does for man.

To those who never yet have felt the fascination of pouring forth the best emotions of their souls in music, or those who *used to play*, but have been weaned by other cares from practice, it brings a joy that any time before it came the wealth of all the world could not have bought.

The music of the world is free to all.

For those whom classic pieces interest, Scarlatti, Bach, Haydn, and old Händel have written oratorios and fugues. Unhappy Schubert speaks to them in the sweet tones of Rosamunde. Beethoven, master of masters, thrills alike the listeners and the performer with his *Appassionata* or beautiful Fifth Symphony.

Chopin bemoans the fate of Poland in his Nocturnes or breathes the fiery valor of his countrymen in Polonaise.

Mendelssohn, Rubinstein, Moszkowski, Liszt, all help to weave tone-pictures for ear and mind alike to revel in.

For other tastes, where settings of the stage have served

to spur the fancies of their favorites, great Wagner comes and, lifting them aloft above the clouds, transports them to the mighty Halls of old Walhalla, in Ride of Walküres, or takes them to the cool, green depths of classic Rhine in Nibelungen Ring.

Verdi, Mascagni, Suppé, and Gounod have all bequeathed to man a wealth of melody, each tone of which is precious to the lover of the opera.

To owners of the Pianola, both this and music of a lighter strain is possible. A waltz by Strauss, a Sousa march, a song, a rag-time hit, a part of Florodora are ever at his call, and always fresh, not needing practice.

The most gifted pianist the world has ever known has but a small fraction of this repertoire.

The Pianola is the universal means of playing the piano.

Universal, because there is no one in all the world, having the use of hands and feet, who could not learn to use it with but little effort.

To operate it is simplicity itself.

Adjustable to any piano, the Pianola stands before it when in use, and plays the keys with tiny, felt-tipped fingers.

The striking of the notes of the selection, in proper time and place, is no concern of the player. This is correctly done by perforated rolls of paper (the form in which the music for the Pianola comes).

The player's only task is to decide how slow or how fast the notes shall sound, how loud or how soft he wants them, also he uses the sustaining-pedal. Three little levers serve to impart the player's wishes to the Pianola. On these his fingers rest.

Should the air be familiar, the player's taste will dictate the expression. But if it is strange or difficult, a very simple set of markings on the moving music-roll direct the proper movement of the levers.

A little child can do all this and give correct expression to the compositions played.

Simple it is, but in its simplicity it is musically artistic. Paderewski, Hofmann, and other great artists find pleasure in the Pianola and use it because they can so perfectly control the elements which go to make up "expression."

The Pianola thus is found to be a pleasure-giving instrument for all, both tyro and musician, enabling them to play on the piano with absolute correctness and with human feeling.

More could not be asked of mortal ingenuity.

Less never would have served to place the Pianola where it stands to-day—the greatest and most widely popular of musical inventions, the only practical solution of, and the Royal Road to Music in the Home.

The Pianola can be seen and played at our new exposition-rooms, Fifth Avenue and Thirty-fourth Street, New York, and at the warerooms of any of our agents throughout the country, and a personal opinion formed by both the novice and the skilled musician upon the benefits to be derived from its assistance.

A handsomely illustrated and descriptive brochure (catalog M) will be sent to those desiring information by mail, and all questions answered through our correspondence department.

The price of the Pianola is \$250. Purchasable by monthly payments if desired.

*We have no agents or branch stores. All orders should be sent direct to us.*

## Reduced Prices on Suits and Cloaks

A short while ago a woolen manufacturer came to us for orders. He was willing to make up his finest woollens at considerable reductions, if we would give him a large enough order to keep his mill running during the dull season. We gave him an order for the newest fabrics for Winter and early Spring wear, and shall make these goods into suits, skirts, and cloaks *to order only*, and pass them on to you at *one-third less than regular prices*.

Nearly all of our styles and materials share in this sale.

Note these reductions :

Suits in the newest models, made of up-to-date materials and lined throughout, suitable for Winter and early Spring wear; former price \$10, reduced to \$6.67.

\$12 Suits reduced to \$8.

\$15 Suits reduced to \$10.

\$25 Suits reduced to \$16.67.

Latest designs in Skirts, with just the proper style to them; former price \$5, reduced to \$3.34.

\$6 Skirts reduced to \$4.

\$7.50 Skirts reduced to \$5.

\$10 Skirts reduced to \$6.67.

Handsome Costumes of Black Velvet Cords and Corduroy, former price \$17, reduced to \$11.34.

\$19 Costumes reduced to \$12.67.

\$21 Costumes reduced to \$14.

Jackets, former price \$10, reduced to \$6.67.

\$15 Monte Carlo Coats reduced to \$10.

\$18 Monte Carlo Coats reduced to \$12.

Rainy-day, Traveling, and Walking Skirts, indispensable for wet weather; former price \$6, reduced to \$4.

\$7.50 Skirts Reduced to \$5.

\$9 Skirts reduced to \$6.

Reduced Prices on Rainy-day Suits, Traveling Suits, Raglans, etc.

We are also closing out a number of Sample Suits, Skirts, and Cloaks (which were made up for exhibition in our Salesroom) at one-half of regular prices.

The Catalogue, Samples, and Reduced Price List, giving interesting information about this sale, will be sent free at your request, but you must write quickly, for the sale will last for a few weeks only, and the choicest goods will be sold first. Your order will be filled to your liking—if you think not, send back the garment promptly, and we will refund your money. It's your good will we want most.

If not found at Druggist's, sent by mail (\$1.00).

**CROSBY'S COLD AND CATARRH CURE.**

The best remedy in existence for cold in the head and sore throat. By mail, 50 cents.

THERE are hosts of things so suitable for Christmas presents that we are all more or less bewildered over a choice. It would seem, however, that the useful gift should find most favor.

Let your present to someone this year be an Angle Lamp. At a like cost there is nothing which will bring so much genuine or lasting pleasure. Its beautiful, brilliant light—superior, in fact, to gas or electricity—will keep you gratefully in mind during the long Winter evenings. And then it's a light that never smokes, smells or gives any trouble, and costs so little to maintain—about eighteen cents a month! Many of the best homes, stores, churches and institutions use it exclusively. We gladly send handsome catalog free.

## The Gift of Gifts

## There is a Reason

LONDON LANCET, the great medical authority, says of **Grape-Nuts**: "The grains are brown and crisp, with a pleasant taste. . . . The preparatory process undoubtedly converts the food constituents into a much more digestible condition than in the raw cereal. . . . The features worthy of note are the excellent proportion of proteid, mineral matters and soluble carbohydrates per cent. Our analysis shows that it is a NUTRITIVE OF A HIGH ORDER, since it contains the CONSTITUENTS OF A COMPLETE FOOD and in an EASILY ASSIMILABLE STATE."

Edward M. May, M. D., of Mt. Zion, Ill., says: "I desire to inform you of my short but very satisfactory experience with Grape-Nuts as a food. I had nervous dyspepsia for over a year, and lost flesh to 122 pounds. I concluded it was time to throw physic to the dogs in my case, and looked around for some concentrated, palatable prepared food. I got hold of Grape-Nuts and began using it four times a day, exclusively for breakfast with milk; for luncheon and dinner as dessert. The heartburn, waterbrash, palpitation and other symptoms soon disappeared, and I can now eat a square meal and feel good afterwards. I weighed yesterday and had gained 18 pounds in a month. And the end is not yet."

## FEW MEN KNOW WHAT SHAVING WITH PLEASURE IS

They have a vague idea, but to enjoy it—to experience the pleasure, to realize it—they must be supplied with razors made by practical cutlers of long repute, where every touch denotes artistic skill of highest character.

### Our Masterpiece Razor

fills every requirement necessary to make every man that shaves himself enjoy it, and transforms what would be a disagreeable task into a delightful pleasure.

### A Royal Christmas Gift

If you wish your father, brother, grandfather, husband, uncle, or son to thoroughly enjoy the art of shaving, present him with a pair of **OUR MASTERPIECE RAZORS**, which we will sell for \$5.00, or a single razor for \$2.50.

## 1819

This firm has made razors since 1819. Our business came to us by inheritance. Our father made razors; our grandfather made razors; we make nothing else. We grind razors, we hone razors, and use the best material money can buy. We have no agents; we sell direct to consumer; we deliver free; we warrant every razor to be precisely what we say it is, and have but one price.

Send for our pamphlet, "All About Good Razors." It's free.

**C. KLAUBERG & BROS., 175 William Street, New York**

Upon receipt of price we will forward the **Exerciser and one Free Lesson** in Remedial Gymnastics, to any address prepaid, and will refund the money if you return it as unsatisfactory.

The value of the Whitely Exerciser is greatly enhanced by our **INDIVIDUAL LESSONS** in Remedial Gymnastics and Development Work, given under the personal direction of Dr. A. Linder, B. S., D. O., the noted Swedish Physical Cultivist. No other method yields such beneficial results in so brief a time and for so moderate an expenditure. This is proven in innumerable cases of men, women, and children who are now strong, graceful and healthy by reason of using the Whitely Exerciser. These lessons are not stereotyped and general, but are prescribed by the doctor to meet each one's personal requirements upon the receipt of a full and confidential statement of your physical condition.

The **WHITELY EXERCISER** is made in five grades—\$2, \$3, \$4, \$4.50, and \$5, and one **FREE** lesson is given with each Exerciser. Sold by all dealers or sent C. O. D. on receipt of price. Send for "Physical Education," by Dr. Anderson, of Yale. The new Whitely Booklet free upon request.

# STEVENS

**PARENTS** should encourage their girls and boys in every sport which will take them *out-of-doors*, and give them the necessary articles for their enjoyment. As *shooting* is one of the most fascinating and instructive of sports, why not on *Christmas* morning present them with one of our

## "FAVORITE" RIFLES

and then teach them how to use it. We have other models of RIFLES in our "**Stevens-Maynard, Jr.**," "**Crack Shot**," and "**Ideal**." We also make a large line of PISTOLS and SHOTGUNS in SINGLE and DOUBLE barrel. You need not worry about accidents, as our ARMS are *absolutely reliable* and *fully guaranteed* for ACCURACY and DURABILITY.

All Dealers in Sporting Goods can furnish our FIREARMS. If you cannot find them don't accept a substitute, but write to us.

**FREE**—Our new 128-page catalog is full of valuable information, and will be mailed to any address on request.

**J. STEVENS ARMS & TOOL COMPANY**

No. 435 Main Street

CHICOPEE FALLS, MASSACHUSETTS

# Christmas Diamonds On Credit

The \$5 or \$10 which you would pay for a cheap and trashy gift for the loved one's Christmas, would make the first payment on, and secure the immediate delivery of a beautiful Diamond ring, brooch, locket, earrings, stud, scarf pin, cuff buttons, watch or other article selected from our million dollar stock. A Diamond is a gift that will last forever and every day be a well-spring of delight to the wearer, and a perpetual reminder of the giver and his generosity.

**HOW TO DO IT:** Send for our handsome, new, illustrated Catalogue which shows thousands of beautiful things for Christmas—all goods being reproduced by photograph—select what you like and we will send it to your home, place of business or Express office, where you may examine it critically. If you like it and want to keep it, pay one-fifth of the price and send us the balance in eight equal monthly payments.

**REMEMBER:** We pay all Express charges, give a written guarantee with every Diamond; make liberal exchanges, allowing the full price paid in exchange for other goods or a larger Diamond, or cheerfully refund all that you have paid, if the goods are not entirely satisfactory.

**IT IS SAFE** to send us money with order, but you need not pay a penny until you get the goods if you prefer not to do so. We are the largest house in the world in our line of business and one of the oldest—Established in 1858. Our references are any bank in America. For instance: Ask your local bank how we are rated in Dun's or Bradstreet's book of commercial ratings. You will be told that we stand at the top in credit, promptness and responsibility.

All you need to do is to make a selection, and enjoy all of the advantages of our **Liberal Credit System**. There is nothing disagreeable to be anticipated, no publicity, delay, security, interest, or in fact anything that you would not experience in shopping at your home store. Our Catalogue explains every feature of our system, terms, goods and prices; is a work of art and worth its weight in gold to any Christmas purchaser. A postal card today will fetch it.

**TO CASH BUYERS:** If you wish to buy a Diamond for cash, we will allow you a discount of eight per cent. Wear it one year or less, then if you wish bring it back and get spot cash for all you paid—less ten per cent. the reasonable cost of doing business. For instance: suppose you buy a fifty dollar Diamond and wear it one year; you could then send or bring it back and get \$45 in cash. It would thus cost you but \$5 to wear a splendid Diamond a whole year, or less than ten cents per week. This is only one of the many unique and liberal innovations originated by us in selling Diamonds to distant customers. We make every transaction pleasant, satisfactory and absolutely safe, for we will cheerfully refund any money sent us, if goods are not exactly what you desire.

Write today for our Catalogue, or tell us what you would like to have us send for your examination. There is no time to lose, for very soon we will be overwhelmed with rush Christmas orders from every corner of the country. Do not wait until the rush begins.

## "OUT-OF-SIGHT" TROUSERS RACK

*Saves time, saves space, saves trouble, and saves your trousers.*

**NOTHING ELSE LIKE IT**

Keeps your trousers always in shape—smooth, as if just ironed. Occupies small space. Easy to put up. Simple to operate. Does not mark nor stretch the material. Keeps all proper creases, does not form others. Holds one to ten pairs, each pair readily get-at-able. Hangs all your neckties, too. May be quickly taken apart, put into your trunk, and put up anywhere.

**Price complete, \$2.00 Delivered**

# INGERSOLL

## DOLLAR WATCH

THIS Christmas, with a sleigh full of Ingersoll Watches, and one more in hand to time his rounds, good old St. Nick will gladden the hearts of youngsters all over the land.

### The Ingersoll DOLLAR WATCH

is the ideal Christmas gift—a proud possession which is practically useful as well. It is a mechanically perfect timepiece, which will teach the value of time and the habit of promptness. An INGERSOLL is the boast of every man who once carries it. It is the best and most serviceable watch for the boy, and carries the strongest guarantee ever given with any timepiece. Ask your dealer for an INGERSOLL and see that you get it. If you don't, send us a dollar, and you will receive one by return mail, postpaid.

Booklet Free. Address Dept. 28.

### "West Point" Military Hair Brushes

These "West Point" Military Hair Brushes  
are something entirely new, and are the finest of  
anything in hair brushes. The backs are of solid,  
genuine African snake ebony and California  
rosewood (state which kind), the most expensive  
woods, and are the very latest effects, having re-  
placed the solid black. These handsome brushes  
have the finest stiff white Russian bristles, extra  
long, securely held by our patent fastener, and  
cannot pull out. These brushes are purchased  
by our most critical customers. At retail they would cost from \$6.00 to  
\$8.00. Our wholesale price is \$3.50, express prepaid. If not entirely  
satisfactory, return them at our expense. Order now, stating which  
wood is desired. BORN MFG. CO., 201 Mullen, Grand Rapids, Mich.

## Physical Culture Simplified

By Prof. ANTHONY BARKER

**FOR ONE DOLLAR** you may secure instruction in Physical Culture as complete as has ever been offered for twenty dollars. This book is the result of my experience of fifteen years as instructor of Physical Culture.

The system of instruction it includes is illustrated with 55 full-page half-tone engravings from life. The various exercises outlined are described and illustrated in such a manner that they may be readily understood. It covers every condition, and is as practical and valuable to women and young people as it is to men. For delicate people and those in poor health there is no remedy so effective as the right kind of exercise. It has received unsolicited the endorsement of physicians from all parts of the country.

Send \$1.00 and a copy will be immediately forwarded. If not satisfactory, return the book and your money will be refunded.

**ANTHONY BARKER, Dept. R, 1164 Broadway, N. Y.**

### GUARANTEE :

Our special box of Cigarillos is sold on the following conditions: We ship all orders Express Prepaid. You are to give them a thorough trial by smoking a package of ten, and, if not entirely satisfactory, return the balance at our expense, and the FULL amount of your remittance will be refunded by return mail.

Here's a case of the child getting to be as big as its father. Originally we made up this special box of Cigarillos for a few of our regular customers, but they noised it about, and we have had to make them a feature. Now, if you ever smoked the ordinary "little cigars," we won't blame you for being prejudiced against pretty nearly everything of the kind—but you never smoked any that are made as ours are—of pure Havana. Sometimes we think they are too good for a little cigar. At all events you cannot go wrong in sending for a box on trial.

### SMOKE TEN "ON US"

and if you don't find them better than any other "little cigar" you ever smoked, just send back the remaining ones, and we'll send back your money without one word of question.

#### We Pay ALL Express Charges.

They are put up in packages of ten, handsomely wrapped in gold foil, and packed in a substantial box. Remit \$2.50 for box of 100, by check, P. O. or Express Money Order, or registered letter.

### CIGARS ON APPROVAL Without Payment in Advance.

With each box of Cigarillos we send complete Catalogue showing all our pure Havana styles and sizes, from \$2.50 to \$15 per hundred, from which you may make a selection for shipment on approval, without payment in advance. These will be shipped to you, Express charges paid, and you may smoke several as a trial without charge.

Every cigar we manufacture is pure Havana tobacco, made by Cuban workmen, and sold direct to thousands of individual smokers and clubs, in every State, to whom we can refer. We supply pure Havana Cigars at 40 per cent. lower than the usual cost. Catalogue on request.

TO THE

## MEDITERRANEAN, THE ORIENT, AND BIBLE LANDS

FROM NEW YORK, FEBRUARY 4, 1903

THOS. COOK & SON have specially chartered the magnificent new twin-screw steamship "MOLTKE," of the Hamburg-American Line—the most luxurious 12,000-ton ocean steamship afloat—for an Oriental Cruise upon a more complete and comprehensive scale than has ever before been planned.

S. S. "MOLTKE," 12,000 TONS

The "MOLTKE" is a floating palace, with a Gymnasium, Grill Room, 30 Bath Rooms, and superb appointments throughout. The Route includes Madeira, Gibraltar, Algiers, Malta, Constantinople, Smyrna (for Ephesus), Beyrout (for Damascus), Haifa (for Galilee, etc.), Jaffa (for Jerusalem, Bethlehem, etc.), Alexandria, Cairo (for the Nile), Naples, Pompeii, Vesuvius, Rome, Nice, Monte Carlo, etc.

Grand Cruise of 70 Days at Lowest Fares Ever Offered, including Shore Excursions, Hotels, Carriage Drives, Guides, etc. The membership is limited to 500, although the "MOLTKE" has comfortably carried 2,500 on one voyage.

Send Postal for Descriptive Book.

## EGYPT AND THE NILE

That there is a fascination about travel or winter sojourn in EGYPT is universally acknowledged. Its climate is perfect—warm, dry, and bright. Its Pyramids, ruined cities, and marvelous Temples and Tombs are among the most wonderful and impressive productions of human skill in any age, and on their pictured walls are preserved strangely minute and interesting records of a civilization extinct many centuries ago. Among these famous relics of the past the *Elite* of American and European society gather every season, and modern luxury and the pursuit of pleasure have reached their limit. The gaiety and brilliance of the Egyptian season are proverbial, for Egypt is undoubtedly the premier Winter Resort of the world. It is also a health resort of the greatest value.

### COOK'S NILE STEAMERS

The finest and best-appointed steamers on the Nile, especially built for the service, offer the only convenient and luxurious way to visit Egypt and enjoy to the full all its pleasures. Throughout the season there are sailings every few days from CAIRO to the FIRST CATARACT, connecting with the service for the SECOND CATARACT, KHARTOUM, and the SOUDAN. We have also a large number of Private Steamers and Dahabeahs for charter to families and small parties on moderate inclusive terms. Plans can be seen and berths reserved at any of our offices in America. Accommodations should be reserved AT ONCE. A postal will bring our pamphlet.

# THE WORLD'S STANDARD CALCULATING MACHINE

## LOCKE ADDER

The Locke Adder has become the standard calculating machine of the world simply on its merits. It is now recognized as a necessity in the modern business office.

Don't pay a high price for a calculating machine. It's entirely unnecessary. The Locke Adder costs you only \$5.00 and it will perform all computations that any higher priced machine will do and more than many of them. **\$5.00** Remember that it is the only machine that Adds, Subtracts, Multiplies and Divides and sells for \$5.00.

My machine came to hand all right and I am much pleased with it. I find it very valuable in calculating, checking estimates, pay rolls, etc. **H. E. COWAN, C. E. Chattanooga, Vt.**

The Locke Adder is all you claim for it. **C. S. McCLELLAN, Dallas, Texas.**

The Locke Adder received and I am highly pleased with it. **C. W. BRANDBOG, Walcott, N. Dakota.**

I have just received the Locke Adder and immediately put it into practical use, and am very pleased to inform you that it meets my requirements just as well as a \$125 machine. **H. E. FLEMING, (with Howard Ice Co.,) Watertown, Mass.**

It would be impossible for me to get along without the use of the machine. It is worth its weight in gold.

**CHAS. W. THOMPSON, Special Agt. U. S. Dept. Labor, Boston, Mass.** We are glad to be able to advise that the Locke Adder is eminently satisfactory and a great help to our bookkeepers. **HONOLULU PHOTO SUPPLY CO., Honolulu, Hawaii.**

The chief value of the machine to me is that I know results are correct. Whenever you wish a good word for the Adder you may be sure I will give it. **E. C. TEAGUE, Hebron Academy, Hebron, Maine.**

**Quickly Pays for Itself** in simplifying details, saving work and preventing errors. Adds all columns simultaneously, capacity 999,999,999. Easily learned and lasts a lifetime. Bookkeepers enthusiastic—employers endorse it. Price \$5.00 prepaid. Send money order, or draft to-day.

**SENT FREE:** Illustrated descriptive booklet explaining everything. No trouble to send it—write.

*An index at  
your  
fingers' ends*

—you write names, or information upon cards, instead of in books; you can then arrange, add to, take from, or rearrange these cards in as many ways as you like. New cards are put in in exactly their proper place—"dead" cards are taken out, so that only "live" matter is handled (with books you scratch off names, and make so many mutilations that you often skip good names)—no indexing, the cards help to form their own index—with plenty of guides you can put your finger on the exact card you want almost instantly. Our Card System will keep any records and keep them better, neater, handier, and afford quicker reference. **Send for Catalogue 28D.**

### THE FOX KEY DIP

IT is necessary to press down the keys  
of a Fox Typewriter only  $\frac{1}{2}$  inch,  
by a light 2 ounce stroke, to make a  
perfect type impression on the paper.  
In other makes the key dip is  $\frac{3}{4}$  to  $\frac{7}{8}$   
of an inch.

The difference in a days work means  
a physical saving to the operator and  
lessens the wear and tear on the ma-  
chine.

This is one reason why a Fox Type-  
writer and typewriter operator last  
longer and do more work with less  
wear and weariness than is otherwise  
possible.

The Fox combines *all* the up-to-date,  
*good* features a typewriter should have.

Send for *free* catalog,  
handsomely illustrated,  
with full information about  
our "Free on Trial Plan."

an **absolutely harmless** germicide. It subdues the inflammation of the mucous membrane of the stomach, thus removing the cause of the disease, and effects a cure.

For any stomach trouble it will do good and generally cure.

Used and recommended by leading physicians.

Sold by leading druggists.

**FREE** I will send by mail on receipt of 20c., to cover **actual postage**, a liberal sample, that will prove the claims I make to your entire satisfaction. This preparation cannot harm you, and in most cases gives wonderful results. Address

*Prof. Charles Harchant*

57-H Prince Street,

New York.

TO MANY PEOPLE

## Diabetes Spells—Despair

IT IS THE SAME WITH

## Bright's Disease

Write to us and ask for particulars concerning our free analysis. Let us give you the actual facts concerning your present condition. There may be absolutely nothing the matter, and no one will be more glad to prove it than we are. If examination should indicate any hint of these diseases we will not preach any ill-advised doctrine of despair, but we will show you **something better—a real, permanent, effective system of treatment that cures**, and has cured hundreds already. The signed letters from prominent people in our book must convince any reasonable person. We have no patent medicine to sell. Our remedy cannot be bought at stores. No charge for book or analysis.

**THE TOMPKINS-CORBIN COMPANY,**

27 West 24th Street, Dept. M, New York.

## ASTHMA Can Be Cured

This is an established fact, in spite of opinion and experience to the contrary.

If you could call at our office, see the names of the fifty-two thousand who have been under our care, read the letters and reports received from these patients, and write directly to them and ask about our treatment, you would be astonished at the large proportion who are so thoroughly cured that they eat, sleep, and stand exposure without the slightest return of Asthma symptoms. Their restoration to renewed health and vigor makes it a pleasure for them to live.

Change of residence or the use of "Reliefs" cannot cure, because they are wrong in principle: they suppress symptoms instead of removing causes. Our treatment takes all the Asthma out of your blood and nervous system, so that nothing remains which can cause an attack. This is all clearly explained in **BOOK R**, which will be sent **FREE**. Write for it at once. Address

**P. HAROLD HAYES, Buffalo, N. Y.**

## WARM FEET

Our **Magnetic Foot Batteries** are real blood circulators. They Magnetize the iron in the blood and set up a rapid circulation in the feet and limbs, producing a **warm, genial glow**, and preventing the loss of vitality by insulating the body from the damp, cold earth. They defy Rheumatism, aches and pains in the feet and limbs, chilblains, cramps, sore and tender feet, and cause a pleasant, agreeable feeling of life and vigor equal to the days of youth. More people become sick and die every year as a result of cold damp feet than from any other cause.

You can have

### WARM FEET ALL THE TIME

by wearing these insoles, \$1.00 a pair or three pair for \$3.00 by mail. They are thin and can be worn in any shoe. They do not lose their power.

Give size of shoe with your order. Send for our new book, disclosing the wonders of Magnetism; free to any address.

**THE THACHER MAGNETIC SHIELD CO.,**

Chicago, Ills.

## HER SIGHT RESTORED By Dr. Oren Oneal Without the Knife.

Growing blind from Cataracts that had been forming for five years, Mrs. E. A. Warren, 806 Michigan Avenue, Evanston, Ill., sought Dr. Oneal and commenced treatment with

### The Oneal Dissolvent Method

In a few weeks her sight was much improved, and in a few months she was entirely cured. "I could see to do nothing," she said, "and oculists I had consulted told me that I must wait to go entirely blind, when they would operate and, maybe, give me sight. Dr. Oneal told me he could cure me, and he did; no pain or knife—just mild medicines that didn't hurt, but which dissolved the cataracts like mists. God and Dr. Oneal be praised."

Thousands of others have been cured by The Oneal Dissolvent Method. **Cataracts, Optic Nerve Diseases—All Causes of Blindness—are Cured.** Dr. Oneal gives positive assurance he will in no way hurt your eyes.

Dr. Oneal's new book accurately describes and illustrates every eye disease, and tells how you can be cured at home at small expense, sent free with Dr. Oneal's advice.

**CROSS-EYES STRAIGHTENED**—a new method—without knife or pain. Over 7,000 cases cured, Miss Mable Tansey, 688 W. 12th St., Chicago, cured; write her. Nothing sent C. O. D. unless ordered.

**OREN ONEAL, M.D., Suite 802, 52 Dearborn St., Chicago.**

# EYE DISEASES

P. C. MADISON, M. D.  
America's Master Oculist.

## HEADACHE, NERVOUSNESS, BRAIN FOG, Irritable Temper Caused by Eye Strain

are prevalent American ailments, especially among our merchants, bankers, financiers and those who constantly use their eyes by close application. In a great majority of cases they can be traced to eye strain. We too often submit to improper treatment at the hands of inexperienced oculists and family physicians. Nervous breakdown and permanently impaired eyesight are the result of improper treatment of eye strain and defects of vision. I have spent over 25 years in study and scientific research and have investigated every method of treatment of eye diseases and defects. As a result I have perfected

## THE MADISON ABSORPTION METHOD

by which I cure all the above diseases and defects of vision, Granular Lids, Optic Nerve Diseases, Cataracts, Spots, Scars and all other eye diseases or causes of blindness without knife, pain, risk or inconvenience, and restore the eye to its normal function. I want to hear from those who have been disappointed by repeated failures of other methods. I guarantee a cure when others fail. I have thousands of letters from cured patients.

Mr. F. S. Frazee, Onarga, Ill.; John Stewart, 2614 Lexington St., Mrs. Geo. A. Coffman, 1155 W. Taylor St., E. E. Daw, General Yardmaster C. B. & Q. R. R., Chicago, and thousands of others cured. Write them.

**I STRAIGHTEN CROSS-EYES.** No knife, pain or risk, and I restore lost vision by a method known and used only by me. Successful in upwards of 10,000 cases. Not one failure. Miss Alice E. Shoup, Secor, Ill., writes:

*Dear Doctor:—I presume you would be pleased to hear from me in regard to the condition of my eyes, which you straightened in 1892. The treatment was an entire success, as my eyes have remained perfectly straight for the past ten years. I can cheerfully recommend any one afflicted with cross eyes to go to you to have them straightened, as the treatment is so quickly given and without pain, as you do not use the knife, which you know has such a terror for the patient.*

**MY HOME TREATMENT** is designed for those who cannot come to my office. It is perfectly harmless and so perfected that you can cure yourself at home. It has been successful in cases not benefited by other treatments.

**CORRESPONDENCE.**—If it is not convenient for you to call, or if you live outside of Chicago, write me a full description of your case as you understand it, and I will freely answer any questions you may wish to ask. I make no charge for consultation and examination. I have no branch office or agents. My treatment may be imitated but not equalled. It is not known or used by any one but me.

**MY LATEST BOOK**—"Diseases of the Eye, Their Cure Without Surgery," is FREE. It tells you what you want to know and gives testimonials of other prominent people whom I have cured of eye diseases and defects and other causes of blindness. Letters in any language promptly answered.

P. C. MADISON, M. D., Suite 205, 80 Dearborn St., CHICAGO

**A Solid Investment** Based on Real Estate actually Owned,  
free from Indebtedness, producing Coffee, Bananas, Pineapples, etc., and  
yielding a good Profit each Year. : : : : : : : :

The LAGUNA CHICA PLANTATION COMPANY offers an opportunity to invest in the most perfect plantation in Mexico, having direct railroad communication with the United States and the leading cities of Mexico.

The plantation is already largely developed; the Coffee crop last year paid an **Eight per cent. dividend**. We have 225,000 Coffee trees in bearing, 250,000 Banana plants, 60,000 Pineapples, 2,000 Orange trees, 2,500 lemon trees, etc., besides other improvements in the way of buildings, machinery and live stock, making **Each \$100.00 share worth \$150.00**!

We need funds for additional improvements. Shares may be purchased at par, \$100.00 each, for cash or on Monthly Installments of \$2.00 per month for fifty months. Installment Stockholders receive dividends the same as full-paid stockholders, in proportion to the amount paid in. This is **not a speculation**, but a legitimate business undertaking, managed by men who enjoy the highest reputation for responsibility and reliability. Rigid investigation will convince the most skeptical.

If you are interested, we shall be pleased to send you Prospectus, References, and Reports of parties who have visited the plantation.

LAGUNA CHICA PLANTATION CO., 844 Fullerton Bldg., St. Louis, Mo.

**NERVOUSNESS** Exhausted or Debilitated  
Nerve Force from any Cause  
Cured by **WINCHESTER'S SPECIFIC PILL.**

It contains no Mercury, Iron, Cantharides, or any injurious ingredient whatever.

This Pill is purely vegetable, has been tested and prescribed by physicians, and has proven to be the best, safest, and most effective treatment known to medical science for restoring Vitality, no matter how originally caused. Our remedies are the best of their kind, and contain only the best and purest ingredients that money can buy and science produce; therefore we cannot offer free samples.

Price, **ONE DOLLAR** Per Box, **No Humbug or Treatment Scheme.**  
by Sealed mail.

**PERSONAL OPINIONS:** Dear Sirs: I have used a bottle of your Hypophosphites of Manganese for liver and kidney complaints in my own person and received much benefit, so I will enclose five dollars and will ask you to send me as much as you can by express prepaid for that amount, until we can get it through the regular channels. I am confident it is just what I have been in search of for many years. I am prescribing your Hypophosphites of Lime and Soda, and am pleased with the preparation. Yours sincerely, Dr. T. J. WEST.

I know of no remedy in the whole Materia Medica equal to your Specific Pill for Nervous Debility.—ADOLPH BEHRE, M.D., Professor of Organic Chemistry and Physiology, New York.

Send for free Treatise, securely sealed. **Winchester & Co., Chemists, 620 Beekman Bldg., New York.**

## To All who Suffer from Spinal Deformities

**85 per cent. cheaper** than the old methods. **100 per cent. better.** Weighs ounces where others weigh pounds. For Men, Women, and Children; none too young, none too old to be relieved. We offer the only Scientific Appliance ever invented for the relief and cure of this unsightly condition; cured the inventor, Mr. P. B. Sheldon, of curvature of the spine of THIRTY YEARS' standing.

Throw away the cumbersome and costly plaster-of-paris and sole-leather jackets.

Our Appliance is light in weight, durable, and conforms to the body as not to evidence that a support is worn. It is constructed on strictly scientific anatomical principles, and is truly a godsend to all sufferers from spinal troubles, male or female. We also make Scientific Appliances for protruding abdomen, weak back, stooping shoulders. Send for free booklet and letters from physicians, physical instructors, and those who know from experience of our wonderful appliances. **SATISFACTION GUARANTEED.** Write to-day for measurement blank. Don't wait.

I am permanently cured of a weak and deformed spine by the use of the Philo Burt Company's appliance. Previous to procuring the appliance I was unable to stand on my feet. After wearing it for six weeks I could walk with crutches. To-day I can do as much work as any able-bodied man. I cannot say too much for your appliances, they are so light and comfortable and can be removed so easily.

Mr. List writes above after six years' experience; the latter two he has worn no supporter or brace whatever.

**PHILO BURT MFG. CO., 45 12th St., Jamestown, N. Y.**

## THE INTERNAL BATH

By means of "THE J. B. L. CASCADE TREATMENT" gives  
**HEALTH, STRENGTH, VITALITY**

The J. B. L. Cascade is the only appliance specially made for the successful practice of the Internal Bath. It is simple in construction, absolutely safe, invariably effective, and can be applied by any person.

The fundamental principle of the internal bath and its appliance, the J. B. L. Cascade, is, roughly stated: Every disease arises from the retention of waste matter in the system—Nature's drainage being clogged. In the vast majority of cases the clogging is in the colon or large intestine. Positively the one harmless and efficient means of clearing away this waste is the internal bath given with the J. B. L. Cascade.

The statement of fact in the last sentence is deceptively simple, for there is no device or invention in medicine which, for far-reaching beneficence, for scope of usefulness to sick and well, surpasses the J. B. L. Cascade. There is room here merely to touch upon its field, the vastness of which may be suggested to you by pondering on the question: "If external cleanliness is essential to health, how much more important is internal cleanliness?"

The internal bath is a sovereign remedy for ninety-nine per cent. of all diseases. Its action prevents and cures

**Appendicitis, Billiousness, Dyspepsia, Typhoid, and all Malarial Diseases, Headaches, etc.**

The only treatment that gives immediate relief in cases of over-indulgence in eating and drinking.

This wonderful treatment is in successful use by 200,000 people. It is endorsed and prescribed by eminent physicians. An abundance of letters from grateful people bear witness to its astonishing merit.

### CONVINCING EVIDENCE

"The most perfect system of medical treatment that the wisdom of man has yet discovered."  
Burcham Mills, Ala.

Rev. J. B. RICHARDSON.

"I still keep recommending the 'Cascade treatment' in my pastoral work. I consider it the greatest discovery of the closing century, bringing Joy, Beauty, and Life to so many that had almost despaired of ever again feeling the tingle of health in their bodies."  
New Plymouth, Idaho.

Rev. W. L. STRANGE.

"I am using it for bladder and kidney trouble, and it has afforded me the most wonderful relief. My satisfaction is so great that I shall do all in my power to induce others to use it."  
Owens, De Soto Co., Fla.

Rev. J. H. HYMAN.

"I have been using the 'Cascade,' both myself and family, for about three years. I am delighted with it, but that does not express it. I shall do all I can to persuade others to use it."  
Tignall, Ga.

Rev. J. H. FORTSON.

We want to send free to every person, sick or well, a simple statement setting forth this treatment. It contains matters which must interest every thinking person. If you live in New York you are earnestly invited to call; but if you cannot call, write for our pamphlet, "The What, The Why, The Way," which will be sent free on application, together with our great special offer for this month only.

**TYRRELL'S HYGIENIC INSTITUTE, Clerk 1 T, 1562 BROADWAY, NEW YORK**

# PREPARE FOR SUCCESS

# OHIOANS REMARKABLE INVENTION

Physicians declare that no water is pure or safe to drink unless distilled; that filtering simply clears—does not purify, and boiled water is full of dead germs, etc.—more poisonous than before. Water from wells, cisterns, hydrants and streams kills 250,000 people annually. Causes 500,000 cases of Dyspepsia, Stomach and Bowel Troubles, Kidney and Bladder Diseases, Gravel, Constipation, all kinds of fevers—Typhoid, Malaria; also Rheumatism, Woman's ills, Blood diseases, etc. Investigate, and you'll find **SAFETY LIES ONLY IN DISTILLATION** of all drinking water, before using. Boiling or filtering are merely subterfuges of no value. **EVERY FAMILY** can now without expense or trouble, distill their drinking water (the **ONLY KNOWN METHOD** for making it **ABSOLUTELY SAFE, PURE, DELICIOUS**, and removing all the impurities) by using the

### "PURITAN" New Process WATER STILL Automatic

A new remarkable device. So simple a child can operate. 72,000 already sold. Customers delighted. Entirely different and far superior to any filter. Simply set it over your cook stove, gas or oil stove, fill with any kind of water and let it boil. Clouds of steam are drawn into dome, aerated with oxygen, and condensed, furnishing plenty of pure distilled drinking water for family use, clear as crystal, soft, sparkling and delicious. All impurities, soil, fever and disease germs, alkali, lime and other health-wrecking minerals left in the boiling water at bottom of still. Use distilled water 10 days and you'll be astonished at the improvement in your health, feelings and complexion. Prolongs life, prevents disease and we guarantee it to cure or benefit every ailment. **DISTILLED** is the only safe water for families, infants, children, invalids, athletes—Endorsed by best physicians and the famous **Balston** for families. Invaluable for Tourists, Surgeons and all **Balstonites**.

Health Club, (11,000,000 members)—used exclusively in the U. S. Navy. **ALL READERS** should have one of these remarkable Stills. Ready for use when received. To be returned at our expense, and your money refunded, if not just as advertised—and the best Cabinet made,—what could be more fair?

## QUAKER FOLDING BATH CABINET

800,000 SOLD ANNUALLY. PRICES REDUCED For 60 Days.

**DESCRIPTION:**—It is an air tight rubber walled room in which one comfortably rests on a chair and with the head outside breathing pure air, enjoys at home for 3c each, all the cleansing, curative, invigorating and purifying effects of the famous Turkish, Hot Air, Hot Vapor baths, perfumed or medicated if desired. Better and cheaper than any treatment at Turkish Bath Rooms, Sanitariums and

Hot Springs. It's not a cheap flimsy affair, but a genuine Cabinet, substantial and durable. Finest goods, handsomely finished, has every improvement, real door on hinges, heavy steel frame, galvanized, best antiseptic covering, rubber lined, only Cabinet large and roomy inside, plenty of room for hot foot bath and to sponge and towel the body while inside. Folds flat, 1 in. space. Easily carried. Weighs 10 lbs.

**HOW CAN YOU DOUBT ITS MERIT,** when such prominent people as—Rev. C. M. Keith, Editor "Holiness Advocate"; Congressman John J. Lents; U. S. Senator, Hon. Chauncey M. Depew; Rt. Rev. Bishop J. O. Hartsell; Chas. Stoddard, of "Munsey's Magazine"; S. J. Raymond, U. S. Treas. Dep't, Washington; Alice B. Stockham, M. D., Chicago; and 1,000,000 others use and recommend it?

THIS 85 QUAKER CABINET COMPLETE, REDUCED TO \$3.50

### THOUSANDS OF PROMINENT PEOPLE PRAISE IT.

**John W. Pritchard,** Editor "Christian Nation," New York City, writes: This Cabinet Bath is refreshing and invigorating to a degree surprising, and is in fact, "Tired Natures Sweet Restorer."

**W. L. Brown,** Oxford, Ohio, says: My father was down in bed for months with rheumatism; this Cabinet did him more good than \$50.00 worth of medicines.

**Horatio Page,** M'g'r "New York Weekly Witness," and "Sabbath Reading," writes: I must heartily endorse your Quaker Cabinet. It cured a bad case of rheumatism with which I had been afflicted for years. It paid for itself in a week. Should be in every home.

**Simon Tompkins,** a retired capitalist of Columbus, O., 1031 E. Broad Street, says: I am satisfied it saved my life. I was down with a dangerous case of pneumonia and its use promptly cured me.

**Wm. J. C. Dulaney,** No. 8 E. Baltimore St., Baltimore, Md., Publisher "Methodist Protestant," writes: For Lagrippe, rheumatism, kidney troubles, dropsy, skin diseases and bad colds, I believe the Quaker to be the best thing yet discovered. I use it weekly. Know many others who do and have yet to hear of one who does not praise its virtues. I write this because it has always met my expectations.

**O. C. Smith,** Clerk Board of Health, Mount Healthy, O., says: Since using this Cabinet my catarrh, asthma and other troubles with which I have been afflicted for 20 years, have not returned. Worth \$1,000.00 to me. I have sold 120 Cabinets and many of my customers have cured Lagrippe, measles, croup, kidney troubles, eczema, blood and skin diseases, diabetes; in fact, almost every ailment, and all are delighted with the Cabinet. My wife finds it excellent for ailments peculiar to her sex and invaluable for our children.

**Rev. Fred. D. Hamilton,** of Buffalo, says: This Cabinet did my wife more good in five weeks than three years of doctoring and a fortune spent at Hot Springs and health resorts. Cured her of female weakness, nervousness, as well as kidney troubles and dropsy, with which she had long suffered. It is a God sent blessing to humanity.

**John Curtis Malone,** N. Y., says: The doctors told me I had the worst case of eczema ever seen. My kidneys, liver and heart were bad and blood was in awful shape—your Quaker Cabinet has done wonders for me. Beats medicine. My friends are surprised at my cure—I want the agency.

**Julian F. Tanner, La Fayette, La.,** writes:—Your Quaker Cabinet has cured me of a stroke of Paralysis when the best doctors failed to do me any good.

**Prof. Alden,** Ft. Thomas, Ky., says: No man with \$3.50 in his pocket, can afford to be without this grand invention. He owes it to his family and children.

**SPECIAL** Select the Cabinet you wish, send us \$1.00, and we will send it to your express office, subject to examination. If perfectly satisfied, pay express agent the balance. We carry 10,000 Cabinets in stock and ship by express same day your order is received. Remit by Bank Draft, Express Money Order, P. O. Money Order, Certified Check or Registered Letter.

**AGENTS, SALESMEN, MANAGERS WANTED**—MEN AND WOMEN—BIG WAGES—at home or to open offices or parlors, to appoint agents or travel. You supply it. Most liberal terms and commissions. Plenty **SPECIAL 1903 PROPOSITION, NEW PLAN, TERMS, Etc., FREE.**

**ASPLENDID XMAS GIFT.**

**The World M'f'g Co., 585 World B'ld'g, Cincinnati, O.**

**THE ONLY BATHS** that PRESERVE HEALTH. PREVENT Colds, Fevers, Lagrippe and Disease. Make clear skin, pure blood, strong nerves, clear brain, healthy bodies. Make you sleep sound. Beautify complexion.

### WE POSITIVELY GUARANTEE RESULTS.

1,000,000 users, 27,000 physicians recommend the Quaker, and it will cure Nervous Troubles, and Debility, Sleeplessness, Obesity, Lagrippe, Neuralgia.

**CURES RHEUMATISM**—(We have offered for 5 years a standing reward of \$50.00 for a case not relieved.) Cures Woman's Troubles, Headache, Gout, Piles, Dropsy, Diabetes, Blood and Skin Diseases, Liver and Kidney Troubles.

### SO SIMPLE TO OPERATE.

Before retiring, light stove, step in Cabinet, close and fasten door, sit down and you enjoy a temperature of 100° to 150° F. according to how you regulate stove. All done in one minute. Stay in from 15 to 30 minutes—open top curtains, cool off gradually while you sponge and towel the body. Impossible to catch cold or weaken the system. Perfectly safe and harmless.

**SOAP and WATER** simply washes the surface of the skin, while Vapor baths opens the 5,000,000 pores all over the body, stimulating the sweat glands, washing out all the poisons in the blood, and the impure acids, salts, etc., which if retained overwork and weaken the heart, kidneys, lungs, liver, causing disease, debility and sluggishness.

**IT WILL CURE A HARD COLD** with one bath, and prevent Lagrippe, Fevers, Pneumonia, Lung Fever, Asthma. Is really a household necessity. With the Cabinet if desired, is a

### HEAD AND COMPLEXION

#### STEAMING ATTACHMENT.

(the best ever offered) in which the head, face and neck is given the same vapor treatment as the body. Makes clear skin, beautiful complexion, cures and prevents pimples, blotches, blackheads, skin eruptions and diseases. Invaluable for Asthma, Catarrh and Bronchitis.

We're an old firm, responsible, Capital \$100,000.00, do just as we agree, are the largest and oldest manufacturers of Bath Cabinets in the World.

**DON'T FAIL TO SEND FOR BOOKLET ANY WAY.**

This \$10.00 Double Walled Quaker Cabinet complete, REDUCED TO \$6.10 Our Finest and Best

# Just a Moment, Please

R. F. ROBERTSON, PSYCH. D.

I WANT to have a plain, straightforward talk with you. Are you successful in all your undertakings? Do you know that your success in business, your happiness in life, depends upon your mental and physical power; your ability to surpass others in thought, in action? Do you know that a clear brain, a bright eye, a magnetic personality, depend largely upon the amount of rich, pure blood in your veins, the nerve force in your nerves? This gives you momentum; it gives you power; it puts you in a position to lead where others follow; to accomplish and achieve where others fail.

## MY FREE OFFER

I teach men and women how to develop a fine physique, good digestion, bright eyes, great physical and mental power. I have just published an elegantly illustrated treatise, which gives you invaluable information in regard to yourself. It tells the true secret of acquiring that physical grace, that attractive personality, that vital energy, which has been a prominent characteristic of most great and successful men and women. It is intensely interesting to the young as well as the old; it describes a process of quick development, which took me years to perfect. It will positively prove a revelation to you. For a limited time it will be sent to any address absolutely free. It is highly endorsed by prominent ministers of the gospel, lawyers, doctors, and business men. Write for it to-day.

A. OLIVER, of 58 West 104th Street, New York City, writes: "Every one who values his health and happiness should have your course. It not only develops great physical power and vitality, but it brightens the intellect, quickens the perception, and puts one in prime condition to fight the battles of life, to achieve success and win in his chosen vocation."

MRS. MOLLIE MALIN, of 713 East 5th Street, Kewanee, Ill., writes: "Before taking up your course in Physical Culture I had tried several others, but they were intended for prize-fighters, blacksmiths, etc., and nearly killed me. When I took up your course I had almost lost confidence in everything, but I commenced to feel better immediately, my weakness began to disappear, my hearing commenced to return, and I gained in strength. I cannot tell you the inestimable benefit your course has been to my life."

If you have not time to write a letter, drop me a postal card, but do it now. Hundreds write: "Your free treatise is grand; you have just what I have been searching for." Address

# Found At Last

## The New Philosophy of STOMACH TROUBLES

I AM in possession of a scientific method of treatment for stomach trouble, abdominal diseases, and reflex nervous conditions without the use of opiates, pepsin, cathartics, or such medicines. My method is not a theory nor a physical-culture fad, but is strictly medical treatment based on scientific knowledge, research, and experience—an absolute, accurate discovery—The New Philosophy of Stomach Troubles. I claim to have the one method that will do the work, and my best recommendation is that I am successful in curing my patients. Whatever your complaint may be, chronic constipation, indigestion, dyspepsia, mal-nutrition, headaches, nervousness, mental despondency, sleeplessness, difficulty of breathing, deficient blood circulation, etc., place yourself in my care. Nine-tenths of all diseases are caused by the imperfect working of the digestive system. My specialty is the permanent curing of these derangements, and I have so thoroughly mastered these troubles that I can treat patients by correspondence at any distance with surprising success.

Write me to-day regarding your case, and I will furnish a long list of references of such patients as ministers, professional men and women, and prominent business people, who have used my treatment with satisfactory results.

I particularly want to hear from men and women who have become discouraged because of the repeated trials and failures of other methods to effect permanent cures for them. Address me confidentially.

**DR. A. H. SWINBURNE**

Dept. R. St. Clair Bldg. MARIETTA, OHIO

## SIR THOMAS LIPTON

says: "For sure, large, and permanent returns nothing equals a tropical plantation."

This is emphatically true of Mexican plantations, and one of the largest and finest is the MOTZORONGO. Most Mexican plantations are capitalized at \$300 per acre; the Motzorongo at \$8. Our 165,000 acres, with \$500,000 improvements, are *actually worth now* every dollar of the company's entire capitalization. We have a \$300,000 sugar mill, 200,000 coffee trees eight years old and in full bearing, 40,000 cocoa trees, 15,000 acres of cleared land, and 50 square miles of pasture fenced for cattle and hogs. We have railroad transportation. From 400 acres of cane now planted and other crops we confidently expect a net profit of \$90,000 in 1903. Thereafter the dividends will increase annually for 10 years and continue for life. A \$1,000 investment will insure you a comfortable living as long as you can use it.

For the purpose of cancelling its bonded indebtedness the company offers \$400,000 of its stock at par,—\$10 per share,—and this is the only stock that will be sold at par. Every stockholder who has visited the plantation has increased his holdings.

Write for a prospectus to the fiscal agent,

**THE REVIEW OF  
 REVIEWS CO.,**  
 13 Astor Place, - N. Y. City.

## Join the Art Jewelers' Library! Members Buy Everything at Wholesale

**THE ART JEWELERS' LIBRARY** is the logical outcome of a growing demand on the part of discriminating people whose wants cannot be supplied adequately from the meager stocks of retail dealers. Nothing is listed that does not conform strictly to the decrees of Dame Fashion. Everything offered members has a distinctive art value aside from being the production of reliable makers.

**SPECIAL OFFER TILL CHRISTMAS. \$5.00 VALUE FOR ONLY \$2.45**

**T**HE regular membership fee, which entitles holders to all portfolios already issued and to be issued for the next year, will be waived to readers of the REVIEW OF REVIEWS accepting this special offer of **\$2.45** for this exquisite little clock (postpaid) prior to Christmas. This clock is solid brass case, richly gold-plated, bevel glass front and sides, ivory dial. Accurate timekeeper. You get an engraved and numbered membership certificate in addition to the clock.

### Two Weeks FREE Trial

After two weeks, if not perfectly satisfied with this clock (and convinced of the great value of your membership privileges), return the clock with membership certificate for cancellation, and we will cheerfully *refund the \$2.45*.

**SPECIAL  
25c  
OFFER**

Your name and address sent us will bring you our special 25 cent offer, and show you how your Christmas money can go one-third farther. A postal will do.

**Parker Pen Co.** 38 Mill Street, Janesville, Wis.

## OXYDONOR In the Home

**Oxydonor** is a marvelous invention. In it is embodied Nature's Law for the "healing of the Nations."

Oxygen is Life's Necessity—without it man dies; but when the blood is well filled with it, man lives in the full enjoyment of health. Oxydonor compels the whole organism to drink freely of oxygen from the air, and sets in operation an energizing, irresistible vital force, which eliminates disease of every form by natural process.

Oxydonor has been successfully used in all climates and for all diseases, including Rheumatism, Catarrh, Asthma, Paralysis, Locomotor Ataxia, Indigestion, Nervous Prostration, Blood and Skin Diseases, etc.

Oxydonor will last for life and serve the family. Send to-day for free books containing prices and reports from persons restored to health by this superior method.

**Prof. Charles A. Hoyt**, Principal of Grammar School No. 2, Jersey City, N. J., writes: "I met with a railroad accident in 1863 which caused severe injuries to my head and shoulders. I had not been free from pain from that day on to 1899, when I bought Oxydonor. In less than three months my shoulder was better, and after six months the pain had entirely disappeared, and has not returned. We have used Oxydonor for several acute cases with quite wonderful results."

**Col. R. B. Hamilton**, Provincial Board of Health, Registrar General's Office, Toronto, Canada, writes: "My experience with Oxydonor has been most satisfactory in every respect. Personally I can vouch for its efficiency in acute cases such as La Grippe and a severe strain, in both instances its action being remarkably quick, and the results agreeable and permanent. For more chronic affections, such as Neuralgia and Rheumatism, my wife has experienced very great local benefit."

**Rev. Albert E. Blackwell**, 34 Terry St., Rozelle, N. S. W., Australia, writes: "Dr. Sanche's Oxydonor has proved most beneficial in Croup, Anemia, Nervous Exhaustion, and Influenza. I have also found it very helpful in relieving the nervous strain occasioned by my pulp and other infirmities."

### Beware of Dangerous Imitations.

The name "**Dr. H. Sanche & Co.**" is stamped on the **genuine**. Look for that name.

## FOR CHRISTMAS

This Useful, Dainty Little Book

**65 CENTS, POSTPAID**

A Handsome Leather Perpetual Vest-Pocket Memorandum Book, with the famous S. & T. "Unimatic" Loose-Leaf Device, by which one or many leaves may be instantly removed from any part of the book, without disturbing those remaining.—First practical method of keeping pocket memoranda, addresses, etc., safely, conveniently, and systematically. When open, the leaves lie perfectly

flat. The back, its thickest part, is less than  $\frac{1}{2}$  inch thick.

### "A Card Catalogue for the Vest Pocket"

Teaches you to be methodical. Helps you to acquire the habit of "having a place for everything—and keeping everything in its place."

**HERE IS A CHANCE** to become familiar with the modern convenience of the loose leaf. We have applied that system to the vest pocket. As a Christmas gift, it will be a permanent reminder of the giver.

The recipient's **NAME IN GOLD** for only 10 cts. additional! Regular charge for such lettering, 3 cts. per letter. Write plainly the name of your friend and send at once.

**PRICES**—Bound in genuine black Cowhide Seal Grain Leather; with 50 leaves. Size of leaf, 2x4, open end, 65 cts.  $2\frac{1}{2} \times 4\frac{1}{2}$ , open side, 75 cts. If your stationer has not got it, sent *postpaid* to any address in the U. S. or Canada, on receipt of price.

Write for catalogue of the best Loose-Leaf Goods.

**\$1.00 PER SECTION** and upwards  
(without doors) buys the

**"Macey" SECTIONAL BOOKCASE**

the only kind having absolutely "Non-binding, Self-disappearing doors." (Patented.)

**ON APPROVAL**—There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval" subject to return at our expense if not found at our factory price 40 to 100 per cent. greater value than is obtainable anywhere at retail. We prepay freight to all points east of the Mississippi and north of Tennessee and North Carolina. (Freight equalized to points beyond.) Ask for Catalogue No. "F-1."

**GOLD MEDALS—HIGHEST AWARDS.**

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal,—the highest award at both the Pan-American and Charleston Expositions.

**CAUTION**—Do not be misled by the deceiving advertisements of imitators. No other sectional bookcase has a self-receding door that is absolutely non-binding and automatic—the basic patents completely covering these features are owned by this company exclusively and no other bookcase can embrace the same valuable features. In the lawsuit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered a sweeping decision in our favor.

# IVERS & POND PIANOS.

Louis XV. Model. Style 112.

## Christmas Announcement.

By communicating with us immediately you can possess our beautiful catalogue of pianos, unexcelled from an artistic standpoint, and which will wear a lifetime. Also full information as to how one of these gems of art can be placed in your home before Christmas, even though you live in the portion of the United States farthest distant from "the Hub." Our plan includes our making a personal selection of a piano of the style you may choose, the same care being taken by us in every way as if we were selecting the piano for our own home; sending it to you on approval, not to be retained by you unless perfectly satisfactory. If desired, instead of all cash at once, you can make a small cash payment down and monthly payments barely more than rent

till it is paid for. Practically renting a piano till accumulated rent buys it. Mail us your name and address and we will immediately send you a catalogue, and (if we have no dealer in your locality) prices for cash or time, and valuable information showing you how simple, safe, and in every way to your satisfaction our method is. Old pianos taken in exchange at a liberal valuation.

## IVERS & POND PIANO CO.,

109 Boylston Street, - - - BOSTON, Mass.

## FREE! SAMPLE GAME FREE!

The Owl combination Game Board furnishes the greatest amusement to all. Comes in two styles: No. 1, 100 games, \$3.95; No. 2, 75 games, \$2.95. Size of boards, 28 3/4 inches square. # Blasius

If you knew how richly toned, how exquisitely cased, how instantly responsive to the touch, how lasting and how reasonable in cost the Blasius is, you would not be satisfied with any other piano.

"I have never heard a piano that equals the Blasius in the magnificent volume and power of its rich, rolling bass; the fulness, clearness, and sweetness of its treble; the evenness of tone through all its octaves."

"It is like a grand church organ for power and volume and a brilliant sweet-toned piano, in one."—LEONARD WELDON, Amsterdam, N. Y.

May we send you engravings of the beautiful new styles? No matter where you live, we have a plan enabling you to easily purchase the Blasius; on trial two weeks, if you desire.

"How to Buy a Piano," a book of valuable information for piano purchasers, sent on request.

## Colonial Mantels \$12 AND UP

The newest and most artistic **Fireplace Mantels** are made of **Ornamental Brick** in Colonial, Elizabethan, Renaissance, Empire, and other styles. There's no other kind so good. They are extremely artistic and decorative as well as useful. Leading architects consider them superior to other kinds. They look the best—last longest—are not too costly. Any capable brick-mason can set them with our plans. We make six colors of the brick, viz.: Red, Buff, Cream, Pink, Brown, and Gray. When you build or remodel, send for Sketch Book of 59 designs of mantels costing from \$12 up.

Ours are charming—our customers say so.

# Neal's Enamels

THE GENUINE

## "It Looks Like New"

Enamel a chair with **Neal's Enamel** and you make it appear as if it had just come from the store. You can make it just the color you like, too. Why not have a change in some of the furniture that has become shabby or that you don't like? Get a can of Neal's Enamel and apply it yourself. It is so inexpensive that the cost is hardly to be considered. The difference in the furniture will be wonderfully pleasing.

### Free to Housekeepers.

Send us your name and the name of your druggist, hardware or paint dealer of whom you regularly buy, describing the woodwork in your house and number of rooms, and we will send you a can of **Neal's Pure White Enamel**—enough to cover a chair, waste basket or large picture frame. We only ask five two-cent stamps to pay for postage and packing. We also send our booklet, "**Enamels and Enameling**," with sample colors, **FREE** on request.

**\$5.75** Good value at \$7.00.

The style and worth of a \$10 Mahogany Rocker are here combined at one-half retail cost.

Our price direct, on approval, freight paid as stated, is **\$5.75** You save \$4.75.

Keep it in your home five days, examine it critically, if not satisfactory in every respect, return at our expense—you are not out one farthing.

Don't imagine that

## HARDWOOD FLOORS

are all alike. Quite the contrary. Some never look well. Some look well at first, but soon give out because not honestly made. Others look well at first and continue to look well because they are honestly made. We guarantee our floors against all defects that may ever arise from faulty material or workmanship, and our guarantee is good. We can satisfy you on this point. We could not afford to do this unless we did our work well. All we ask is that the floors have reasonable care. We furnish wax and brushes for keeping floors in order. We will tell you all about these things if you will write us. Catalogue free.

 CHICAGO, ILL.

If further particulars are desired a complete descriptive booklet will be mailed for the asking  
 The Sidway Table is sold by first-class furniture houses in all parts of this and foreign countries

# APOLLO

## MASTER PIANO PLAYER

Beethoven, Mendelssohn, Handel, Mozart, Bach, Wagner, Chopin, Rubinstein, Liszt, Schumann—ten great masters of music.

**Apollo**—ONE great master piano player, the GIANT of the keyboard. No other instrument plays these masters more lovingly or with such ravishing tone-color and depth of emotion. Its mastery of the intellectual and technical difficulties of piano playing is now being testified to in all parts of the world. The happiest home is where the APOLLO lives. The happiest Christmas where its music is heard—a Christmas gift of which any one may well feel proud. Everybody can play it.

Plays 82 notes of the piano, or 17 more notes than any other piano player, and 82 notes *better* than any other piano player.

Send for illustrated booklet D. It tells you how to get an Apollo Piano Player FREE for Christmas.

**THE MELVILLE CLARK PIANO CO.**  
 399-405 W. MADISON ST., CHICAGO.—101 FIFTH AVE. NEW YORK.

## Coal famine a blessing

to those who have  
been led to inves-  
tigate the wonder-  
ful fuel economy  
of

### Hot Water and Steam

and not this only—the economy of fuel is the lesser gain—the healthful, convenient, comfortable *control* of temperature at all times is the *great* gain. And this great gain is all paid for—for you—in the fuel economy. The apparatus is now simply and cheaply erected in old homes. Need not be connected to waterworks system. Send to-day for valuable information.

## 200 Egg Incubator For \$12.80

The simplest, most perfect incubator made in  
the world. This is a new one at a remarkably  
low price. It is an enlargement of the famous

### WOODEN HEN

and made as thoroughly good as  
any incubator on the market. It  
will hatch every fertile egg,  
and stand up to regular usage  
as well as the most costly.

Write for free catalogue  
with 14 colored views.

GEO. H. STAHL, Quincy, Ill.

**W**HEN building or altering your house, comfort and health should be considered first—the decorative scheme may be worked out later on. Good sanitary plumbing, and the dainty, cleanly appointments of a modern bathroom equipped with

## "Standard" Baths and Porcelain Enameled Ware.

bring the lasting satisfaction of beauty and comfort from the first occupancy, and increases the selling value.

Cleanliness and perfect sanitation demand that the bath tub, lavatory and water closet have a surface that is hard, smooth and absolutely non-porous. "Standard" Porcelain Enamel provides these features in the highest possible degree and is the only material which will not craze or crack with long usage. Every piece bears our guarantee label (printed in green and gold) and has the trade-mark "Standard" or the initials "S. S. M. Co." cast in relief on the exterior. None others are genuine.

This illustration is from a photograph of a modern bathroom fitted with "Standard" Porcelain Enameled Ware as follows:—

5 ft. Plate 166-G "Shawmut" Bath Tub, complete	\$37.15
18 x 34-inch Plate 1000-M Lavatory, complete	23.25
Plate 3140-G Paragon Water Closet, complete	24.00
<b>Total approximate cost</b>	<b>\$84.40</b>

We will send free on request our book entitled "Modern Bathrooms," which illustrates and describes many designs of interior arrangement and equipment, from photographs of actual bathrooms, with prices and other information of value to home builders or those contemplating remodeling.

**STANDARD SANITARY MANUFACTURING COMPANY, Box D, PITTSBURG, PA.**

## Your Home May Burn

to-day. True, you have insurance—but haven't you jewelry, keepsakes, insurance policies, etc., that insurance will not replace?

**We make fifteen styles and sizes of**  
**MEILINK'S FIRE AND**  
**WATERPROOF VAULT**

the smallest 14 ins. high, weight about 75 lbs.; the largest 22 1/2 ins. high, weight about 400 lbs.; prices from \$8.00 to \$23.50.

Freight paid by us east of the Mississippi River and north of the Tennessee line; equalized beyond.

All are made of heavy steel plate, with extra heavy iron framework, finished in four coats, hand-polished black enamel, lettered and ornamented in gold, with hinges, lock and combination heavily nickel-plated. Fully as ornamental as the best piece of furniture.

From the smallest to the largest we guarantee them.

Now, like our 14 ins. high, weight 75 lbs.

**ONLY \$8.00.**

## Apprentice Electrician to Superintendent through the I. C. S.

When I took up the I. C. S. training in electrical engineering I was an apprentice in an electrical instrument-making establishment. As I proceeded with my studies, I advanced in my work and soon raised myself to be instrument maker. Later, I accepted a better paying position as a designer of arc lamps. Here I advanced very rapidly and was soon put in charge of the testing room. I left this place to accept a position as electrician with the Long Island Railroad's trolley line at Rockaway Beach, and a month later was placed in charge. **My salary is now seven times as much as when I enrolled.** ROBERT W. BRODMAN,

22 Second Ave., College Point, N. Y.

## CLEVELAND HYDRO-CARBON LIGHT

BURNS 84% OF AIR AND 16% OF HYDRO-CARBON GAS.

**EVERY LIGHT IS A COMPLETE GAS PLANT IN ITSELF.**

Generating and burning its own gas.

More light at less cost than any known system of lighting. For all houses wishing economical independence. Gives a steady white light, more brilliant than electricity, and softer. Excels any town gas service; gas cannot escape. It gives ten times the light of a kerosene lamp at half the cost, with no smoke and no odor. Nothing to get out of order. No accident of any kind possible.

**YOU CAN TEST BEFORE PAYING.**

Knowing that if you give one of our lights a test you will at once recognize it as being far beyond anything in the line of house lighting, we will send you one of our Pendant Lights—C. O. D., \$4.00, express prepaid, with mantle, chimney, and fluted porcelain shade, ready to light; test it three nights, and if not found satisfactory and most brilliant and inexpensive light you ever saw, return to express agent, whom we instruct to refund your money and return light at our expense.

NOTE.—If west of the Mississippi River enclose 50 cents for expressage. If west of Denver, \$1.00.

**A RARE CHANCE FOR AGENTS.**  
WRITE AT ONCE FOR TERRITORY.

Write at once for our full description and instructions on the new system of Cleveland Lights.

MOTHERS, MAKE HOME HAPPY.

# "COMBINOLA"

The Wonderful  
Combination Game Board

One Board, One Bulk, 53 Games

A rich store of Fun and Education

All the best games combined on one board. Among the many is National Exports, the great Educational Game—the Amusement Success.

While playing "National Exports" you become familiar with the vast export wealth of our grand country and the amount of the various commodities that go to each country in the world—a supremely interesting, exciting and instructive game. This educational feature alone is worth many times the price of "Combinola" to you and to your children.

Big and little games for big and little people.

Sold by all good dealers in five grades as follows:

No. 10, first 10 games, \$2.00	No. 13, first 35 games, \$3.50
" 11 " 20 " 2.50	" 14 all 53 " 4.50
" 12 " 25 " 3.00	

Complete with golf clubs, highly polished rings, ships, ship's holders, croquet mallets, cues, ten pins, national flags, corner covers, chess discs, indicators, etc. A single cardboard game usually sells for 50 cents; at this rate "Combinola" would cost \$26.00. Its price is but \$4.50, or 8 1/2 cents per game. The most elegant game board, and the greatest bargain in games ever offered. "Combinola" is durably made and most artistically finished in hard wood. It is an exceedingly handsome board and suitable for the drawing room.

"COMBINOLA" makes a most pleasing and valuable holiday present for old and young. The whole family can enjoy it.

If your dealer does not keep "COMBINOLA" we will send it by express prepaid as far west as Omaha, pro rata beyond, on receipt of price. Send for circular and free book of rules. Address

# AN INTERESTING ADVERTISEMENT AND WHAT WILL COME OF IT

In a recent issue of a very prominent publication, I published an advertisement which reads as follows:

**"A SAFE INVESTMENT:** Those who have modest sums saved for a rainy day, and who don't want to lose in uncertain ventures, yet who are willing to investigate an enterprise, that is conducted on honor and with every guarantee of certain profit, will learn something of interest and to their profit by addressing E. M. Armstrong, 313 Chamber of Commerce Building, Chicago. Gilt edged references in abundance."

I received a number of inquiries in answer to this announcement. The advertisement states nothing about the character of the investment, for I depended entirely upon the faith that the readers had in the publication, and confident that they would understand that no advertisement that had behind it any unreliable or improper motive could appear in the columns of this paper for any money and I wasn't disappointed in the result.

To tell you in an advertisement all about the investment in which I am interested would take too much space and cost too much money, but I will say this, that it is one of the safest investments that has been recently offered to the public and it will bear the most rigid investigation, and will pay those interested large profits, for many years to come, at least calculation twenty years. I myself have invested practically all that I have in the world in the enterprise. It involves tens of thousands of dollars on my part and will make me very wealthy. A limited amount of stock is offered for sale by the directors and a few investors can be accommodated.

It is an enterprise that is endorsed by many of the most reliable and best posted business men in the country. The members of the Directory Board comprise men, who would not under any circumstances allow their names to be used in connection with unreliable ventures. To get the stock, you would send your money to one of the soundest Banks in the West, who is the Depository of the Company. These points I mention that you may appreciate that the enterprise is on the soundest basis and that you would be doing business with parties whose statements are reliable.

It does not matter whether the amount you have to invest is \$50, or \$500, or even more. This proposition will repay you many times for the trouble of writing for further particulars and for your convenience I attach a coupon, which please sign your name to and address to me in an envelope under a 2c stamp. If you do not wish to mutilate your paper you need not cut out the coupon, but address me by letter or postal.

# 33 Per Cent Paid *by the* Mexican Plantation Ass'n

1603 Title and Trust Building, Chicago, Ills.

**20 Year Old Rubber Tree Yielding  
12 Pounds of Rubber, Worth 75c  
per Pound. 200 Trees to the Acre,  
\$1,800 per Acre.**

bearing. It gives you the chance of reaping profits that ordinarily take years, and in this particular instance five of the necessary years of waiting for the clearing, planting, and development of the plantation have passed. Let us explain to you the merits, safety, permanency, and profits of an investment in these shares.

We are simply farmers, operating a large farm in Mexico, the same as would be done in the United States if we could raise rubber, coffee, or vanilla in this country. But not a pound of rubber, a grain of coffee, or an ounce of vanilla can be grown in the United States. For particulars address as below:

## MEXICAN PLANTATION ASSOCIATION,

1603, Title & Trust Bldg., Chicago, Ill.

Gentlemen:—Inclosed find \$.....in payment of.....shares of  
stock in your Association, as per advertisement above.

Name.....

Address.....

State.....

**T**he Mexican Plantation Association is the oldest American Company of its character in Mexico. It was organized in 1897, and owns over 6,000 acres of land, which has since been cleared and planted to permanent products of enormous value in the world's markets, such as rubber, vanilla, coffee, etc., besides over a million pine-apple plants. Fully equipped with permanent buildings, including a large canning plant, the most complete and modern of its character in Mexico. The property of this Company enjoys an enviable reputation, and is the equal of any plantation of similar character in the world. Within a year and a half after its organization the entire stock of the Company was sold, and a

## BOND OF \$100,000.00

was signed by Charles W. Clark, of Butte, Montana, and James A. McDonald, Vice-President of Senator Clark's greatest copper mine in Arizona, as a guarantee that the Association would fulfill its contracts with purchasers of stock in the clearing and planting of this property. After five years of operation, this contract has practically been completed, and the permanent crops of coffee, rubber, vanilla, etc., will, within a short time, come into annual bearing.

For the year 1899 this Association paid to its stockholders a dividend of 6 per cent.; also a further dividend for the same year of 3 per cent. For the year 1900 they have paid to their stockholders two 6 per cent. dividends. For the year 1901 they have paid two more 6 per cent. dividends. These dividends in many instances might have been doubled, but no shipping facilities have been afforded the Association for the marketing of the products raised on the plantation. Since the sale of the stock a million-dollar water transportation system is being brought to the door of their plantation. This will double the earning powers and add many hundreds of thousands of dollars to the value of the plantation.

When the permanent crops of rubber, coffee, vanilla, etc., are in bearing, the earning capacity will be enormous, and increase for a lifetime.

When these shares were sold a contract was made with each purchaser which is like an insurance policy—in case of death the money is refunded. Since the organization of this company, in 1897, thirty-seven deaths have occurred, the members carrying, in some instances, as high as from ten to twenty shares each; also some others who have met with reverses in business, their money has been refunded. These few shares will now be sold by the Association at \$350 per share, or acre, cash; or half cash may be paid by responsible parties and balance in three and six months, making them fully paid and non-assessable.

It is one of the finest investment opportunities before the American public, and it enables you to become a member in an old-established and successful tropical plantation, with a known profit record for years, which can with safety be relied upon to increase enormously when the permanent crops come into

**NEW YORK**

**You are the Judge**

**THE CECILIAN THE PERFECT PIANO PLAYER**

**THE EVIDENCE OF ITS PERFECTION**

**ITS "TOUCH" is absolutely non-mechanical.**  
The connection between the mechanical finger which strikes the key and the lever which operates the finger is entirely different from that found in any other player, and produces a "touch" upon the piano key indistinguishable from that of the most capable human pianists.

**ITS "POWER OF EXPRESSION" is limited only by the feelings of the operator.**  
New devices, giving the operator perfect control over *both* bass and treble, and making the most delicate effects in tone shading easily possible, are found in the Cecilian.

These facts we are ready to PROVE, if you will give us the opportunity.  
Write us for booklet giving full description. Address:

## AND "SUCCESS"

THE publishers of Success take pleasure in announcing that they have contracted with Doubleday, Page & Co., publishers of Mr. Carnegie's great book, "The Empire of Business," (price of regular edition \$3.00.) for a special "Success Edition" at a price so low as to make possible the following extraordinary proposition:—

### Our Great "Carnegie" Offer

We offer an annual subscription to **SUCCESS** and "The Empire of Business" for only \$1.50.

The Success edition of "The Empire of Business" is the only low-priced edition which will be issued this season, the regular edition being sold by the publishers at \$3.00. It will be printed from exactly the same plates as those used in the regular edition, and upon a beautiful new paper, first introduced this year. The book contains 350 pages, and is substantially and beautifully bound in heavy cloth, gold stamping.

## Success for 1902-3

The Great Home Magazine of America

For Every Member of the Family

Success is unique. No paper approaches it in interest and value for every member of the family. In less than two years, its circulation has jumped from 75,000 to \$300,000. It is read with interest by the business man and "the mother"—by the young man and woman—by the boys and girls—and by the children. All find something of interest in every issue.

In so small a space we can give you no idea of the treat in store for our readers during the next twelve months. The best authors, politicians, scientists, artists, and men of action in all departments of life have been engaged to enrich the columns of Success. No expense is ever spared in our editorial department. "The best is none too good" is our motto.

\$1.00 a year. Ten cents a copy.

## The Beautiful Success Calendar

THE publishers of Success have issued an exquisitely engraved twelve-leaf Calendar. This Calendar is one of the finest examples of the famous Colortype Process, which excels lithography in its beautiful soft tones and colorings. The twelve designs are original paintings made for Success by America's leading artists, and represent subjects of general and inspirational interest. The original of the one for December, herewith shown in miniature, is a most exquisite painting by the famous artist, J. C. Leyendecker, representing "The Three Wise Men of the East."

### SENT FREE

The Success Calendar will be sent entirely free of charge and postpaid to any reader of this magazine who will cut off and send to us this calendar advertisement, or who will send postal card mentioning the REVIEW OF REVIEWS to

## Why I wrote "Searching for Truth"

I wrote "SEARCHING FOR TRUTH" for my own satisfaction rather than to please the general reading public. It does satisfy me and it evidently does not please some of the public. Thus I am doubly satisfied, for I would hardly care to be approved of by certain types of humanity. For I tell truth which they would conceal.

No adverse critic has as yet taken issue with any one direct statement, argument or assertion, which I have printed. They prefer to carp at the bulk and the style and the purpose.

As to size, they get a big book for a small price—why object?

As to style, philosophy never needed it.

As to purpose, I only wish to clear away immediate cant—is that so unworthy? But why make such a fuss about it?

Simply because public ignorance on vital questions exasperates the looker-on. Simply because indignation will be aroused by the sight of open fraud—mental as well as financial?

No wonder interested parties demur. Some of them make a profit out of prevailing conditions. Some of them fear to lose a profit. Perhaps that is why many publishers refused to consider this work on its merits, and why certain periodicals have refused to advertise it. Some publications have been delightfully inconsistent and have barred any sort of announcement in their pages. One would think the truth were immoral—or at least unwise.

Perhaps it is—but a few of us will take our chances.

No one should read "SEARCHING FOR TRUTH" who is not interested in the view of a business-man on questions of Theology, Morality, Progress—both individual and general. But we live in a business age and I am satisfied if I only reach the men who *do* things.

There is considerable use of the letter I in this announcement, but don't let that prejudice you against the book. There is not one single I in the 600 pages.

Yours truthfully,  
The Author.

"SEARCHING FOR TRUTH" by a successful American business man, deals in a sensible, businesslike manner with religious and philosophical questions. Ask your bookseller. If he can not supply, it will be forwarded upon receipt of the price, \$1.50.

# WATER

While the use of water for general purposes has been common for millions of years, its use for domestic purposes in country houses, except in a very limited way, is a matter of recent growth. It is within the memory of quite young people when a country house with a bath-room in it was unusual, and its owner was a somewhat distinguished individual. During the past thirty years, however, conditions have changed, and the country house of even the most modern kind now includes in its necessary furnishing a bath-room and running water in the kitchen. There have been many ways of supplying this water, most of them crude and unsatisfactory. Steam has been employed, but this necessitates the employment of a skilled engineer, thus putting it beyond the reach of people of moderate means. Windmills have been and are used,

chiefly on the score of low first cost. Those unfortunates who have depended upon windmills for a water supply have at times had water and at other times have not. We began our experiments with the Hot Air pump about sixty years ago. The first engines were moderate successes, but by numerous and costly experiments the present Rider and Ericsson Hot Air Pumps were evolved, and for twenty years we have had no reason for making any changes excepting minor details. About 30,000 are in daily operation in every part of the world; chiefly, however, in the United States. The prices range from \$108 to \$518. For small places, where the water is taken from a shallow well and delivered to tank in the attic, the smallest pump we make is large enough. Where deep artesian wells are used, and the water forced up to a reservoir through a great length of pipe, the largest engines are necessary. Any servant or any twelve-year-old boy in a few minutes is a competent engineer. As the motive power is AIR their safety is absolute. Their simplicity and economy are marvelous. The following list, taken at random from our books, will go far to prove the merits of our pumps, as it is unlikely that the people named would buy a Rider or Ericsson if a better thing could be obtained:

J. Pierpont Morgan, New York.

Khedive of Egypt.

Whitelaw Reid, New York.

W. K. Vanderbilt, New York City.

George Vanderbilt, New York City.

Frederick W. Vanderbilt, New York City.

Chauncey M. Depew, New York City.

Charles Lanier, New York City.

H. H. Westinghouse, of the Westinghouse Machine Works, Pittsburg.

King Edward VII.

Mayor Seth Low, New York.

Andrew Carnegie, New York.

H. O. Havemeyer, New York City.

H. M. Flagler, New York City.

Colgate Hoyt, New York City.

W. C. Whitney, New York City.

Bruce Price, New York City.

John H. Converse, of the Baldwin Locomotive Works, Philadelphia.

Sultan of Turkey.

Ex-Senator D. B. Hill, Albany.

Secretary John Hay, Washington.

L. C. Tiffany, Cold Spring Harbor, N. Y.

Valentine Blatz, Milwaukee, Wis.

George B. Post, Bernardsville, N. J.

R. L. Agassiz, Hamilton, Mass.

Joseph Jefferson, Buzzard's Bay, Mass.

E. P. Allis, of Allis, Chalmers Co., Milwaukee.

A call at any of our stores or a letter to any of them will bring catalogue "O," descriptive of the pumps.

In writing it would be well to mention depth of well, height to which water is to be pumped, and probable daily requirements. Fuel of all kinds, liquid and solid, can be used.

## RIDER - ERICSSON ENGINE CO.,

35 Warren Street, New York.

239 Franklin Street, Boston.

692 Craig Street, Montreal, P. Q.

22 Pitt Street, Sydney, N. S. W.

40 Dearborn Street, Chicago.

40 North 7th Street, Philadelphia.

Teniente-Rey 71, Havana, Cuba.

## Some Holiday Handkerchiefs

A dozen or half-dozen Handkerchiefs make a fine gift in themselves. It is also a pretty idea to give the perfume of a flower to a Christmas gift by dropping a perfumed Handkerchief in with the larger gift. Nos. 710, 712, 713, and 714, shown above, will be sent by mail, postpaid, at 50c. each. Nos. 76 and 77 at 25c. each. A very complete catalogue of Handkerchiefs and Gloves will be sent upon request.

**JOHN WANAMAKER, New York**

**SAMUEL WHITEHALL, M.D.**

The one physician in all the  
world who really conquered

## **RHEUMATISM**

### **FREE TEST TREATMENT**

It is difficult to realize that a remedy at 50 cents a box will permanently cure the worst cases of chronic and acute rheumatism. *But this is true.* The Whitehall Rheumatic cure sold by druggists everywhere at 50 cents is doing this in 99 cases out of 100. *I pledge my word there is not one iota of exaggeration in this estimate.* And to help you realize that this is true I will forward, free, a proof treatment. I do not guarantee a cure free, but I do guarantee to convince you this remedy will cure you. The free proof treatment will make you feel like a new being at once. No cost, remember, to be convinced of the realness of this grand fact that your rheumatism can be cured at home, easily, simply, pleasantly, and at trifling cost.

S. WHITEHALL, M.D.

**Address The Dr. Whitehall Megrimine Co.,  
119 Main St., South Bend, Ind.**

### **NOW UNNECESSARY TO SEE HIM**

*Rheumatic discoveries of the great specialist now  
easily obtainable by anybody.*

Dr. S. Whitehall was for thirty odd years an active general physician, and always a student of the earnest researchful sort, one of the kind of students who, backed by years of practical effort, have always produced the world's best results in science. His experience with rheumatism occupied many years of special study. His final success with it made him notable among American specialists. *The Physician's Gazette* said of him in 1892:

*"An astute student and sturdy character of Indiana, who reflects credit upon the medical science of that progressive State."*

A large practice, yielding \$100 to \$500 each for guaranteed cures, was brought to an end by the doctor's advancing years, and the success obtained in combining all elements of the former expensive treatment into one single formula selling to the public in drug stores everywhere now at fifty cents.

Would it not be advantageous to have a bank account in **CHICAGO**? It is a great money center and the money is not absorbed in speculation. The lowest rates of interest can always be had on loans for legitimate business. The saving of exchange and the convenience of a checking account at this center are obvious. If you have not an account in **CHICAGO** or desire to change, **THE NATIONAL BANK OF NORTH AMERICA** would be glad to correspond with you.

NATIONAL BANK OF NORTH AMERICA

# As an act of humanity

I ask you to tell me a friend who needs help.  
That is all—just a postal—just the cost of a penny.  
Tell me to-day the name of some sick one.

## Tell Me The Book to Send

Then I will do this:—I will mail that sick one an order—good at any drug store—for six bottles of Dr. Shoop's Restorative. He may take it a month to prove what it can do. If it succeeds, the cost is \$5.50. If it fails, *I will pay the druggist myself.* And the sick one's mere word shall decide it.

It is but a trifle I ask of you—just a minute's time—just a penny postal. And I ask it to aid a sick friend.

It is a remarkable thing that I do in return—something that nobody else ever offered. And I do it for a stranger.

Won't you do that little—and to-day—if I will do the rest?

You ask what good it will do.

That month's test will tell. It is true that my Restorative may fail. There is sometimes a cause—like cancer—which medicine cannot cure. But the very fact of my offer must prove that failures are rare, for if they were common the offer would ruin me.

In the past twelve years I have supplied my Restorative to hundreds of thousands on just those terms, and 39 out of each 40 have paid gladly, because they got well. I have found that the cured ones are fair—and not a penny is wanted from the rest.

A sick one who neglects such an offer is unkind to himself, for success means health, and 39 out of each 40 secure it. Failure means nothing lost.

My boundless faith in this remedy is born of a lifetime's experience. I have tested it in hundreds of

the most difficult cases that physicians ever meet. I have watched it succeed—countless times—when the best of other treatments failed.

I know what it will do.

My success comes from strengthening the *inside* nerves. I bring back the nerve power which alone operates all the vital organs.

I don't doctor the organs, for the best results of that method are only temporary. I give those weak organs strength to do their duty by restoring the only power that makes them act.

There is no other way. You cannot restore a weak engine by doctoring the machine. You must give it more steam—and *inside* nerve power is the steam of the body.

Tell me a friend who needs this help. The test will harm no one under any condition. And it may be that the sick one can otherwise never get well.

Simply state which book you want, and address  
Dr. Shoop, Box 208,  
Racine, Wis.

Book No. 1 on Dyspepsia.  
Book No. 2 on the Heart.  
Book No. 3 on the Kidneys.  
Book No. 4 for Women.  
Book No. 5 for Men (sealed).  
Book No. 6 on Rheumatism.

Mild cases, not chronic, are often cured by one or two bottles. At all druggists.

Copyright 1902 by Hart Schaffner & Marx, Chicago and New York

THIS typical fall scene on the Paris boulevards, drawn for us by A. Guillaume, most famous of the French artists in "pen-and-ink," shows a Hart Schaffner & Marx fur-trimmed overcoat. The picture not only illustrates the characteristic style and distinction of our clothes; but it proves that they are known and approved wherever good clothes are a requisite.

A man's clothes are known by the company they keep.

Our Style Book, showing correct fashions for men, is well worth sending a two-cent stamp for. In buying clothes, look for the label—H S & M—in the coat; a small thing to look for, a big thing to find.

 COMPLEXION of paint and powder only imitates one of Nature's gifts. The natural complexion can not be improved upon, but may be helped by keeping the skin clean and clear with a pure soap, thus increasing its brilliancy and preserving its health. Ivory Soap, which is made of vegetable oils and other healthful materials, is so pure that it is a safe soap to use constantly.

IT FLOATS.
